These conspirators succeeded in getting possession by fraud of some of the tally sheets and poll books there present, and then took them into a private place and, by the use of acids and erasers, decreased the record of votes which the people had given for certain Republican candidates and transferred those votes to Democratic candidates. They organized that board of canvassers in the interest of the conspiracy over the protests of the honest men upon it. They canvassed the votes according to the changes they had made, and certified the result in this way, in spite of the remonstrance that was made, and thereby two Democratic candidates were declared to have been elected who had in fact been defeated. One of these, if I mistake not, ascended the bench and actually undertook to pass upon the property rights of his fellow-citizens until the force of public sentiment drove him into retirement.

The people of Indianapolis, regardless of party, arose in their might and organized a nonpartisan committee of one hundred to enforce the law against these wrongdoers. They went to the grand jury room of the State court and knocked there, but were denied admission, for the same power which had perpetrated this crime had also gained control of that grand jury room. They then went to the Federal grand jury room and were admitted.

An indictment was found against the wrongdoers, and they were put on trial in the Federal court. The first jury failed to agree, but on a second trial the ringleader was convicted. Subsequently another one of them was tried in the court and convicted, and both were sent to the penitentiary to expiate the crimes which they had committed. One of them, Simeon Coy, appealed to the Supreme Court of the United States, and that high tribunal affirmed the judgment of the lower court.

Sir, there has scarcely been an election in the State of Indiana for national officers for years that the people of both parties, Republicans and Democrats, have not to some extent invoked the aid of these laws. Federal supervisors and marshals have been present at the polls, and the machinery of the Federal and of the State governments has worked harmoniously and without friction. Sometimes, after these elections, there have been prosecutions in the United States courts at Indianapolis of men who violated the election laws, in which convictions were secured. This was the case in the election of 1888, and, I think, also in 1884. An examination, sir, of the records of the Federal courts elsewhere will doubtless disclose many convictions for similar offenses.

But, Mr. Speaker, the efficiency of a law is not to be determined solely by the number of convictions for its violation. Its deterrent qualities are also to be considered. Judged by this standard the Federal election laws are valuable in many of the States. It is highly probable that in numberless instances men have been prevented from invading the right of suffrage for fear of arrest and prosecution under the United States statutes. Indeed, sir, Mr. Cox, in his report, to which I have heretofore referred, states this to have been the case in the city of New York at the Presidential election of 1876, and attributes it to the activity and efficiency of the United States marshals and supervisors.

But it is said, Mr. Speaker, that these laws are expensive, and that for this reason they ought to be repealed. Why, sir, it costs every individual in this country for the necessities, the comforts, or the luxuries of life, and the same thing may be said with respect to government, which is, after all, nothing more nor less than an aggregation of individuals banded together for the common good. This vast machinery of the State can not, of course, be run unless it is oiled and lubricated. It costs money, sir, to enforce the various United States statutes against crimes and felonies. Would you repeal them on this account? It costs heavily to administer the Australian election system, the most expensive election system that the country has ever seen; but is this a valid reason why it should be destroyed?

Mr. Speaker, I beg the gentlemen on the other side of this Chamber to remember, that if these laws are expensive to the people in whose interests they were framed, they are also expensive to the scoundrels who are sometimes convicted for their violation. To the first class these enactments are full of compensation; to the second class they are loaded with penalties and retributions. Repeal, sir, is therefore, to say the least, a two-edged sword which requires to be handled with discretion and dexterity. Let gentlemen beware, then, lest in their impatient zeal to lift necessary burdens from the shoulders of their honest and law-abiding countrymen, they do not, in fact, lift burdens which are justly imposed from the backs of the element which is wholly given over to the perpetration of crime. These laws, sir, are worth all they cost if they but throw around the ballot box the slightest measure of protection. The people will not complain of the expense; nor do I envy, sir, the miserly and sordid soul which would put these salutary enactments up for auction at a stock exchange or seek to measure their worth by the paltry standard of dollars and cents.

If these laws are expensive, why do not gentlemen amend them so as to reduce the cost to the lowest possible point consistent with their faithful administration? Mr. Speaker, the answer is plain. It is not amendment, but repeal which is sought. Expense is but a pretext. Destruction is the purpose.

Again, we are informed that these laws are grounded in force; that they bear oppressively upon the citizen, and that they deprive him of his liberty. Mr. Speaker, there is a distinction between that force which is wielded by lawless hands for wrongful purposes, and the force which is marshalled under the white banner of authority and is exerted for the public good. It is this distinction, sir, this adaptation of force to the benefit of the people, which robs it of its asperity and makes it a city of refuge to which they can resort for protection.

There is no force behind these laws except in the same sense and upon the same principle that force is behind every law upon the Federal statute books, from the highest and most important down to the lowest and most trivial. Why, sir, to what end did the Constitution confer upon Congress the right to regulate the election of Representatives if it did not of necessity carry with it the power to frame election laws and to enforce their execution by the strong hand of authority in case they were violated? Is this Government a myth or is it a reality? Is it a shadow or is it a substance? Has it the power to maintain its existence, to preseve the integrity of its laws, to shield its citizen in the enjoyment of his constitutional rights? Is it optional with the citizen whether he will obey the law? May the statutes be violated with impunity and with a consciousness that no penalty will be inflicted for the wrongdoing? If your answer, gentlemen, to these questions be aye, will you be kind enough to furnish me, along with that answer, your definition of what constitutes anarchy?

It was held under the fugitive-slave law, Mr. Speaker, that if the United States officers were obstructed in their efforts to arrest the fleeing slaves and return them to bondage, they might call in the posse comitatus to aid them. I do not remember that any of the gentlemen who are now protesting so vigorously against these enactments because they admit of the employment of force in case of necessity, ever felt outraged by this holding. They were willing to employ the power of the Government to reclaim the bondmen, but they are opposed to its use for the preservation of fair elections. I had the curiosity the other day, sir, to go over the debate which occurred in this House at the time these election laws were passed, as I found it in the Congres-

sional Globe of that period. The members on the Democratic side who opposed their passage fairly stood by the bier of liberty and in a paroxysm of grief bade it farewell forever. They made this Hall ring with their dire predictions. It was said that the Treasury would be impoverished, the sovereignty of the States absolutely destroyed, the citizens driven from the polls at the point of the bayonet, and the civil authority everywhere subordinated to the military. Mr. Speaker, how far have these prophecies been fulfilled?

There may have been cases of individual hardship here and there. Citizens may have been wrongfully arrested in some instances, although the record will show that in every such instance they were speedily discharged; but I undertake to assert that in their general effect and operation, wherever they have been permitted to go into operation, these laws have not oppressed the honest citizen, but have been in the interest of a free ballot and a fair count. If I am wrong as to this, furnish me a bill of particulars. Do not simply cite a partisan report which merely shows that in this particular instance or in that isolated case these laws have been abused. This is incident to all laws. The same may be said of every State law on the subject of elections in every State in the American Union. But show me where, under the general scope and operation of these laws, they have ever prevented citizens from exercising their constitutional rights. Mr. Speaker, these laws have interfered with only one class of persons—the violators of law. Honest men have been benefited by them.

Let me call attention to another fact in this connection which speaks volumes. No Republican ever claimed that these laws were oppressive or that they invaded the individual liberty of the citizen or at all deterred him in the exercise of his rights. It is the Democrat alone who has constantly made these assertions. How light, Mr. Speaker, must have been the oppression of laws which, having been on the statute books for twenty years, have nevertheless wholly failed to prevent the Democratic party from asserting its power?

Why, sir, these enactments were passed in 1870 and 1871. Since that time there is one section of this Union which has been solid for the Democratic party, whose electoral vote has been cast for it, whose Senators have been of that political faith, whose Members elected to this House have with but few exceptions been Democrats. For the greatest portion of the time since the period named the Democratic party has had the majority of the Members elected to this very body. Time and again it has carried doubtful States. Twice it has elected a President. And to-day it is in absolute control of the entire lawmaking branch of this Government. Yes, light, indeed, must have been the repressive power of these laws under which the party claiming to have been oppressed by them has been able to triumph so signally. This fact is far more significant, sir, than any sporadic cases of the abuse of law which can be cited; it speaks volumes against this charge that these statutes have ever interfered with the rights of the citizen.

The Democratic party has no constructive genius, Mr. Speaker. It has neither performed nor proposed anything within the last forty years which was worthy of adoption. Its tendencies are all destructive—destructive of that which is good. It can never hope to commend itself to the people by the character of its legislation. Already it has broken some of its promises, and there are others which it is alike fatal for it either to keep or to break. Its tenure of authority will be brief indeed if it submits its claim for retention to electors who are free to express their choice at the polls. The Democratic managers above all others are profoundly conscious of this. Hence the pending measure. Its very title, sir, is a misnomer. It reveals only half the truth, and is therefore a falsehood. It should be entitled "A bill to repeal all national laws making violations of the right of suffrage a crime, and to thereby permanently intrench the Democratic party in power." This is its real object. These election laws are in the way of continued Democratic supremacy; they are the only remaining barriers against fraud. While they exist they make it difficult for the repeaters of New York to empty themselves into the voting precincts of New Jersey on the morning of election day, and for the repeaters of Jersey City, in a spirit of broad comity, to take possession of the election booths of New York in the afternoon of that day. For these reasons they must go.

Mr. Speaker, the statements that these laws are unconstitutional, that they have failed in their practical operation, that they are expensive, and that they oppress the people are mere false pretenses. The real ground of many gentlemen's objection to them is to be sought for and discovered in quite another direction. It is predicated on that pernicious dogma of "States rights" of which Mr. Calhoun was probably the ablest exponent—in that constant assumption for the "sovereign State" of powers which are beyond its proper and legitimate domain—in that jealousy of the Federal Government which seeks to strip it of its rightful authority, and to rob it of its clear prerogatives.

Sir, I have in my heart nothing but sincere pity, nothing but the most profound compassion for that political astigmatism, that unpatriotic shortsightedness of vision which can see with perfect clearness the full proportions of a sovereign State rising in the foreground, but which can only see in blurred and indistinct outlines that still grander structure, the Federal Government, which, rising in the distance, towers to the skies, inspiring respect and admiration from abroad and insuring union, tranquillity, and prosperity at home—that edifice upon which are riveted the glistening eyes of hope and expectation from the downtrodden and oppressed in every clime under the burning sun—that edifice which if we are true to ourselves will be the realization in this age and upon this continent of the wildest dream of the idealist in his longings for a perfect system of self-government among men.

I have nothing in common, sir, with that narrow and contracted sentiment which singles out for its homage a particular star from the bright galaxy of stars which beautify and adorn my country's flag. I protest, Mr. Speaker, against the unwise and dangerous policy which constantly seeks to augment the centrifugal force in this nation; a policy which, carried to its legitimate consequences, will break the Republic into fragments and scatter them to the four winds of heaven; and which slights and ignores the centripetal force in the State, which can alone cement into a harmonious whole commonwealths which never ought to become discordant.

Sir, I denounce on this floor—I shall continue to denounce it here so long as the constituency which has already honored me far beyond my merits sees fit to return me to this body—any effort, by whomsoever exerted, and from whatsoever quarter directed, to strip the Federal Government of those powers with which it was clothed by the fathers, or to deprive my countrymen of a single one of those blessings which in the unrestrained exercise of its lawful authority it is so amply able to bestow upon them. I wage war, unceasing and relentless war, upon the idea here advanced, and which I have heard advanced time and again in this Chamber since I became a member of this body, that the Federal Government is something wholly apart from ourselves; something entirely outside of the civil polity under which we have our existence as a people, which not only brands it as an alien, but even denounces it as a public enemy, to be feared and dreaded, or else to be grappled, overthrown, and destroyed.

Sir, the Federal Government is not to be despised or hated, but rather to be loved and revered. It is not the author of the calamities which afflict us, but is rather the beneficent source of many of the blessings which are ours. It is not to be grudgingly maintained, or denied our confidence, or banished as though it were a contagion; but is rather to be trusted implicitly, for in trusting it we only trust ourselves, only testify to the faith which we have in ourselves; for, Mr. Speaker, be it known and understood, this Federal Government was not created by the States, but it was created by the people of the States. "We, the people of the United States, in order to form a more perfect union," is the language of the preamble of the Constitution, and not "we, the people of the States." The people created it with their own hands; they fashioned it after their own liking, and they are as veritably present in these halls to-day in the person of their Representatives, as they are in the halls of any of the General Assemblies of the States. There is no more genuine or sublime instance of self-government by the people, sir, to be found any place upon the globe, than that which is exhibited in the operations of this mighty General Government of ours when our election laws are observed.

Mr. Speaker, I do not subscribe to the doctrine that the Constitution is a mere compact entered into by high contracting parties which reserves to each party the liberty to judge of its infractions and the mode and manner of redress, which accords to either the right to withdraw from it at pleasure, as was taught by the resolution of 1798, the nullification of 1832, and the wrongful rebellion of 1861. But I insist, sir, that this is an indissoluble Union, having accorded to it at the time of its creation powers adequate for its protection and sufficient to enable it to carry out the holy mission for which it was designed. I insist that the Federal Government operates directly upon the people, and not indirectly and through the medium of the States, and that the time has not yet come when the mere caprice of a petty State is the constitutional limit of its life, or even the constitutional limit of its authority.

Mr. Speaker, I fear that there are some gentlemen in this Hall, particularly on the other side of the Chamber, who entertain very erroneous ideas concerning the functions of the Federal Government, and who are not specially enlightened as to the extent of its powers.

I fear that they have read with such avidity the teachings of

Mr. Jefferson that they have failed to notice the limitations which he imposed to his doctrines, and that they have even failed to observe that such a man as Alexander Hamilton once lived on this continent. I suspect that they have been so absorbed in studying the peculiar tenets of Calhoun that they have not had leisure to read the patriotic and statesmanlike utterances of rugged old Andrew Jackson, when nullification menaced the existence of this Republic.

I trust, therefore, that I may not be deemed too presumptuous, if I suggest to these gentlemen the propriety of their entering at once upon a reëxamination of this whole subject, and that the reëxamination be conducted in a more impartial and catholic spirit than characterized their original inquiry, and with a view, if possible, of arriving at a just conception of the National Government and of the extent and magnitude of its powers. It may not be amiss for gentlemen to learn something of that theory of government in which George Washington believed, and which he asserted in every act of his great life: which is taught in every page of the Federalist, and which John Marshall, an illustrious son of Virginia, comprehended so well and expounded with such vigor and ability from the bench in the days when the Republic was in its infancy; that theory which Daniel Webster made luminous by his great mind, through the medium of his eloquent tongue; for which Ulysses Grant and the patriotic men who followed his leadership faced danger and death upon the sanguinary fields which intervened the boom of Sumter's guns and the crowning glory of Appomattox, and which Abraham Lincoln loved and cherished up to the very hour of his tragic death.

But if gentlemen can acquire nothing from books, if the force of individual example is wholly lost upon them, let them turn to nature and find there an object lesson which may enable them to grasp the central truth for which I am contending here to-day. Let them come out of the mildew and mold of the ancient tomb, where they alone have been mourning over the dead dogmas from which the best thought and the noblest impulses of the country have long ago parted company. Let them cease their piteous tears and wild lamentations, and forego their senseless efforts to resurrect this ghastly corpse. Let them raise their eyes hopefully from the dull and uninspiring sod of their immediate surroundings, and, looking beyond the narrow limits of their States, see stretched out before them a vast extent of territory whose eastern and western limits are the boundaries of a continent, and which, starting from the great fresh-water lakes upon the north, stops only at the restless waters of the Gulf of Mexico.

Let them behold its hills and its valleys, its mountains and its plains, its noble rivers and its great lakes, its diversified soil and climate. Let them note that the vast mineral wealth which abides in the bosom of the earth and ministers so freely to the wants of sixty-five millions of homogeneous people overruns the lines of the various States and knows nothing whatever of segregation. Let them observe those splendid rivers which bear on their bosoms the commerce of this prosperous people, fret on their winding course to the open seas, not the mere shore of a single State, but the territory of a great Republic. Let them behold the lofty mountains that fringe and adorn our seaboards, and see them spurning with impatient disdain the restraints of a single Commonwealth and demanding for their ramification the freedom of a mighty empire.

Mr. Speaker, let the gentlemen contemplate all of these, and they will find reflected and reasserted in nature's law the full extent of that paramount Federal authority which stands out in bold relief in every line of the Federal Constitution, from the first word in its preamble to the last word in that sublime amendment which constitutes its fitting termination.

Sir, conceding that my own party has been guilty of violations of the right of suffrage, not being mean enough to insist that all the wrongs committed against a free ballot have been perpetrated by any one party, I, nevertheless, avow that the Democratic party has done more to violate the sanctity of the ballot, more to destroy the equality of representation, more to corrupt the public conscience, and more to defy the public will than any other party or than all the other parties that have ever existed from the time of the formation of the Government down to the present hour. [Applause on the Republican side.]

For years the Democratic party enjoyed on this floor an advantage in representation equal to three-fifths of the slave population over the other sections of this country, a representation based upon men who were not permitted to vote, a representation based upon property in one section of the country and denied to property in every other section. It has been the gainer by revolution, the gainer by the emancipation and enfranchisement of the slave. It now enumerates five-fifths, instead of three-fifths, as a basis for its representation, and yet still deprives those who constitute this basis of the right to express their opinions at the ballot box.

It was the Democratic party that in 1850 broke faith with this nation and repealed the Missouri compromise, which had stood for thirty years as a solemn pledge that in no Territory within the Louisiana purchase north of 36° 30′ should slavery ever be permitted. It was the Democratic party that overran Kansas with border ruffianism and sought to force upon her unwilling people a system against which they rose in earnest protest, and which, failing in this, next sought to bribe her into the acceptance of that system through the medium of the English bill by the promise of extravagant grants of the public land. It was the Democratic party that denied the right of popular sovereignty as advocated for the people of the Territories by Stephen A. Douglas and which hounded that distinguished Democrat to his political grave.

It was the Democratic party which in 1861, when a Republican President had been elected under the sanction of the Constitution and the laws, appealed from the ballot box to the cartridge box and menaced the existence of the Government with a valor that was heroic, because it was American, upon the blood-red battlefields of the Republic. It was the Democratic party which after the war was ended inflicted those unspeakable barbarities upon the newly enfranchised but helpless citizens which met with the condemnation of honest men everywhere; barbarities from the memory of which we can never escape, and which impartial history will assuredly charge against us when she comes to record the story of those times. It was the Democratic party which in 1868 committed in the great city of New York the unblushing frauds which no man will have the temerity to deny. It was the Democratic party which perpetrated in the State of the gentleman from Illinois [Mr. BLACK] the election frauds, to screen the perpetrators of which Mackin committed perjury, for which crime he was convicted and sent to the penitentiary though ably defended by the most distinguished lawyers which the State could produce.

It was the Democratic party which forged the Morey letter and sent it out to California on the very eve of a Presidential election to deceive the people there and secure the electoral vote of that State for the Presidency. It was the Democratic party which raised a figure 2 to a figure 5, and a figure 7 to a figure 9, at Fourth ward, precinct A, in the city of Cincinnati, Ohio, when Foraker was a candidate for governor against Hoadley, in order to compass the defeat of the Republican candidate, and to which villainy George Hoadley, to his honor be it said, hesitated not to administer a stinging and merited rebuke.

It was the Democratic party in the State of Indiana which committed the frauds at the election of 1886 which resulted in the conviction of Simeon Coy and his coconspirator, which frauds I have already described. It was the Democratic party which excluded from the office of lieutenant-governor in that State the legally elected Republican candidate and put a usurper in the place, and maintained him there by violence and intimidation after a Democratic attorney-general had rendered his opinion to a Democratic governor that a vacancy existed in the office, to be filled by the people at the polls, and after the Democratic candidate had been defeated at the election.

It was the Democratic party which passed the infamous legislative and Congressional gerrymander of 1885 in this Hoosier State—a State, sir, in which the two great political parties were about equal in point of membership; a State which had been a hotly contested battle ground between them for many years, carried first by one party and then by the other, and always, except in the rarest instances, by a very narrow plurality. Yet by that gerrymander the Democratic party made the State Legislature so assuredly its own that nothing short of an absolute revolution can ever dislodge it, and took unto itself ten out of the thirteen Congressional districts. When the supreme court held this unjust apportionment to be unconstitutional, a Democratic Legislature, which had been elected under it, assembled and practically reënacted it. And yet gentlemen stand here and talk about the disposition of the Democratic party to give us free and fair elections.

It was the Democratic party, sir, that contrived and passed the legislative gerrymander in Michigan, and also the legislative gerrymander in the State of Wisconsin, which the supreme court of that State decided was unconstitutional; immediately afterwards the General Assembly of the State, which was Democratic, met in special session and enacted a new apportionment which was as illegal as the first one, and the supreme court also declared it to be unconstitutional. It was the Democratic party which gerrymandered the State of South Carolina, putting all the black Republicans into a district known as the "black Seventh;" which defied all the laws of proportion, cutting in twain counties and townships, in order to do it; which, in order to save all the remaining Congressional districts to itself, gave

to this one a population of 40,000 more than the average of the other Congressional districts of the State; which gave it five or six colored Republicans to one white Democrat. Yet scarcely had this been done until the Democratic party proceeded to take this district away from the majority by the most unblushing frauds which have ever come to the knowledge of this House. If this is denied, I have here proof that it was done when Robert Smalls was kept out of his seat in this body, in the admissions of the Greenville Daily News, a leading Democratic newspaper in the State of South Carolina, which, in its issue of November 20, 1886, immediately following the Congressional election referred to, said:

We hoped South Carolina was to have political peace, and that the advertising she will have in the future would be favorable and for her good; but the hope is destroyed by the unnecessary victory won for us in the Seventh or "black" district.

We doubt if there has ever been a more unwise or absurd proceeding than the fight against Smalls and the methods used in making it. The Democratic party of the country has gained one member of the House of Representatives to assist at the organization. He is part of a small majority, but his vote is not needed to make a majority, and can not make a two-thirds vote. He is a gentleman of good sense and unstained character, but nobody claims for him that he has such remarkable ability that his presence on the floor of the House will add more than his own unnecessary vote to the strength of his party. The State did not need a Democratic Representative from the black district. Six of her seven Representatives and both her Senators are Democrats.

Against the lack of useful results in the defeat of Smalls there is an endless train of bad results. The Republican newspapers and politicians are given a strong case, and they will make the most of it. They will charge that we carved the State into districts on curious lines, and by dividing counties to throw the colored vote into one district, and, not contented with that, have gone into that district and stolen the one Representative. They will not only charge it, but they will prove it. Our side may, and doubtless will, prove that the county boards acted within the law in throwing out many boxes and hundreds of votes for irregularities. But the fact will stand out bald and unquestioned that Smalls had been defeated by the official negligence of Democratic officials, appointed by Democratic authority. The inference that the negligence was a prearranged plot to deprive the majority of its weight will be too plain and clear for resistance. The State will be put before the country as being party to a plain, deliberate, and wanton fraud.

We do not believe the Democratic party of the country will accept the responsibility for this election, and we know it ought not to do it. The facts and figures will be brought out and put before the world, and if the Democrats in Congress give Col. Elliott the seat they will be held before the world as aiding and abetting a crime and receiving its results. From what has been printed in Democratic newspapers regarding the election in the Seventh district the Democrats could not afford to sustain the result as declared if Col. Elliott's vote made their majority in the House. The chances are nine to one that South Carolina will not only be abused and denounced by the Republicans, but that this piece of work will be repudiated by our party in the country, and we will have the stigma fixed on us by the combined voice of foes and friends.

The harm is not only in the future. This election destroys the work of years. We have claimed persistently that all the doubtful methods we have used in elections were justifiable as being necessary for self-preservation, to defend our families and property from barbarism and corruption. That claim is just and true, and on it we have won toleration and sympathy. Now our enemies—and we have plenty of them—will point to this election as evidence that we have been lying, and will cite its wantonness to prove that we have been inspired only by greed for power and the determination to deprive the negro of political rights.

The effect on the material prosperity of the State in repelling immigrants and capital must be bad. The effect on the people of the State must be bad. It is useless to preach honesty and integrity while the leading and most trusted men of the State publicly use and sanction such methods as have been used to count out Smalls.

"It's an ill bird that fouls its own nest." Our nest has been fouled without reason or excuse. We wish to avoid our share of the fouling as far as possible by proclaiming as publicly as we can that we condemn the proceedings in the black district, and hold no sympathy with them or those connected with them. They are two much like Republican methods to be agreeable to us.

There is no more complete rascal than Robert Smalls. There are few better gentlemen than Col. William Elliott. But the use of flagrant unfairness to defeat the choice of the colored Republicans in the one Congressional district allotted to them is contrary to the honorable traditions and principles of our people and party, a miserable political blunder, and a moral wrong.

Mr. Speaker, the great wrong done to Thomas E. Miller, the Republican candidate for Congress in this district at the election of 1890, his persistent efforts to obtain his right to a seat in this House through a contest, and the shameful failure to even give him a hearing in this body are facts too fresh in our recollection to require any extended notice on this occasion.

In the election which took place only a year ago between the Populists and the Democrats in the State of Alabama, the implements which had been previously used by them both so unsparingly against the Republicans were employed against each other. These two parties there grappled each other madly by the throat and struggled for the ascendency with a bitterness and dishonesty almost unparalleled by anything in American politics. Let me read the language of a prominent Democratic newspaper upon this very subject. I read from the Birmingham Age-Herald, published in Alabama, which shortly after this election used the following language:

It may with truth be said that in half the counties of the State, the only question as to who or what party will count the other out is one of opportunity and opportunity only. Conscience has fled, nay, more, it is almost to the point that in the primaries inside the party, the manipulator is in as high demand as in the elections at law. This condition of things is utterly demoralizing. We go on, year after year, persuading and encouraging our young men to do a thing we know will inevitably destroy their character, their credit, and their repute.

Sir, is there a man on this floor who doubts that the Populist candidate for governor in Alabama was overwhelmingly elected at this election? And yet everyone knows that he was cheated and defrauded out of the office by the methods referred to in this article.

Mr. Speaker, let me read you another statement as to the condition of affairs which has existed down there in Alabama. I refer to the condition existing in what is known as the Fourth Congressional district of that State—the "black fourth" as it has always been called. In the Democratic apportionment of the State which was enacted in 1874, in order to enable them to appropriate to themselves all the other Congressional districts this district was created by the Democratic Legislature and turned over to the "black Republicans," conceded to them because of their great majority of about 4 to 1. Yet, notwithstanding all this, the Democratic party, year after year, systematically deprived these black electors, by fraud and chicanery, of their Representative. Why, sir, in one instance even a Democratic House, on the unanimous report of its Committee on Elections, unseated the Democratic beneficiary of this illegality and seated his Republican competitor.

Not very long ago, perhaps a year ago, the Democratic party entirely deprived the voters of this district of the right to elect their Representative by regerrymandering the State. When this unjust apportionment was pending before the Legislature, and being discussed in the public press, the Age-Herald, from which I have already quoted, in its issue of February 10, 1891, used the following language with respect to the Democratic electors of this district, and the way in which they had borne this great colored majority:

And they have borne it; worn it as became men, though their broad shoulders have been stooped by the load and the sweet air been poisoned by its exhalations. They have been the byword of their enemies in the nation, and the tides of progress and wealth passed by them on the other side because of the evil name these enemies made for them. They have been patient and long-suffering; they have felt the cruel necessity of corrupting the sacred ballot box and seen the awful tendency of this hard thing to inoculate the public confidence and the private principle, to wither and blast the pure motives and fair ambitions of the youth. Worst of all, perhaps, they saw the pestilence spreading beyond their gates, and the things shrunk from and practiced through necessity, taken up where the need was not, and made the indefensible instrument of political gain.

Mr. Speaker, I submit also in this connection an extract from the Evening Journal, another prominent Democratic newspaper published in Alabama, which, in discussing this proposed gerrymander, declared in its issue of February 10, 1891, as follows:

There is not a Democratic member of the General Assembly of Alabama who would, unless compelled to do so by some legal or moral force, act as an inspector or manager of an election in the Fourth Congressional district, nor would he desire his son to do so, nor anyone else for whom he had any respect or reverence. He knows what it means. He knows what he would risk, or his boy would risk. He knows that, while this is true, the white people of that district will never consent to be controlled or dominated by the negroes. Knowing all these things, the Alabama Legislature should give the district the relief asked for, and no longer expect them to bear burdens they themselves would not bear, and burdens for which the people everywhere are beginning to have less and less sympathy and toleration. The Journal speaks plainly, but truly. Relief is not only asked for the black Fourth, but demanded.

Mr. Speaker, it was the Democratic party which, in 1876, by intimidation and violence, drove the Republican voters from the polls in Louisiana, a State in which the blacks greatly outnumbered the whites, and by this method sought to secure its electoral vote for President; which denounced the returning board for throwing out the precincts where this wrong had been perpetrated, although such action was authorized by the law and was taken upon evidence duly furnished; which counted these unjust returns in the Legislature against the Republican candidate for governor and thereby defeated him. This intimidation was admitted, sir, in 1883 by Governor McEnery and Senator Eustis upon the stump in Louisiana. It was sandwiched between the Democratic majority of 47,000 for Seymour in the State in 1868 and the stupendous and fraudulent majority over Warmouth for governor that was given only a few years ago—a majority greater than the total vote for Mr. Cleveland at the preceding Presidential election.

It was the Democratic party which was the author of the cipher dispatches, and which sought to purchase electoral votes in Florida for Mr. Tilden, through the Marbles and Woolleys and Coyles, whom it sent down there for that purpose; which attempted the same thing in South Carolina through its emissary, Smith Weed, who also proposed to throw her Presidential electors into separate prisons to prevent them from casting their votes as such for President. It was the Democratic party which also attempted bribery of an electoral vote in Oregon, and sought to prevent that State from casting one of her three votes for the Republican Presidental candidate, although all three of the Republican Presidential electors had been overwhelmingly elected at the polls. It was the Democratic party which established

the Electoral Commission to settle the controversies which grew out of this Presidential election in 1876—established it against the votes of two-thirds of the Republican Senators and Representatives in Congress, but which, when that august tribunal rightfully decided against it, assailed some of its members with malignant fury, and has ever since, with unblushing impudence and mendacity, claimed that it was cheated out of the Presidency.

Why, sir, my desk here is covered with extracts from Southern and other newspapers, running back through the last twenty years, in which it is conceded that the right of suffrage is utterly disregarded in many localities.

Mr. Speaker, let me say, in conclusion, that it is meet and proper, that it is entirely in accordance with the eternal fitness of things, that the party which has perpetrated these innumerable wrongs against suffrage should be the one to introduce into this Chamber and press to passage on this floor the iniquitous measure now under consideration. This measure, sir, is the climax to a long career of Democratic crime. It is the cap-stone to the lofty tower of Democratic infamy. Let the gentlemen enjoy their victory to their hearts' content. Let them revel in the pleasures which it affords, with nothing either of mental or of moral reservation. Let them gloat over this, the first victim of their newly acquired but misdirected power. It has always been their custom to turn a deaf ear to the indignant protests of justice and to the cry of the downtrodden and oppressed in matters like this. Certainly, Mr. Speaker, there is no reason why such light and trifling things should disturb their orgies now.

Nor is there here present any power which is adequate to their restraint or capable of setting bounds to their excesses. Let them not, however, fondly imagine from this that their lease of authority is either to be illimitable or omnipotent. The hour of retribution will come. It may come tardily, but when it arrives it will do its work perfectly and well, for—

> Though the mills of God grind slowly, yet they grind exceeding small;
> Though with patience He stands waiting, with exactness grinds He all.

No doubt gentlemen will smile at this prediction. I have no doubt that the prophecy seems to them utterly impossible of fulfillment. I know what a difficult thing it is, sir, to stand in the very presence of victory, to taste the joys which it brings, and to feel the exaltation and strength which it inspires, and yet to realize that defeat is rapidly approaching, or, indeed, that defeat can ever come at all.

But, Mr. Speaker, a great wrong is being here inflicted, a blow as cruel as it is unnecessary is here being struck at the integrity of the ballot and the right of free and equal representation. The issue involved is one which is destined to take a deep and abiding hold upon the convictions and moral nature of men, a hold far deeper and more abiding than any mere question of finance or of economics can possibly obtain. The great majority of the American people, sir, love and are devoted to the Republic. They will not be content to stand idly by and see its laws violated, its foundations crumbled, and its very existence imperiled. Sooner or later the public mind will pass from the shadow of its eclipse. Sooner or later the public conscience will be quickened. Sooner or later the wrath and indignation of the American people will be aroused When that supreme and inevitable hour comes the true sovereignty of this country will not fail, sir, to assert itself; assert itself, I trust and believe, in a peaceful manner and through constitutional and legal channels, but assert itself, nevertheless, with a power like unto the eruption of a volcano or the force of a mighty whirlwind. It will lay its hands upon this ignoble party which has so basely prostituted the opportunity with which it was intrusted for the public good, and will hurl it headlong from power, and, summoning back from the wilderness of its temporary exile that grand party of achievements, that party which gentlemen affect to despise, but whose *morale* is unimpaired by defeat, and whose laurels are undimmed by adversity, it will put into its hands a new commission, and, under the providence of Almighty God, will make it the happy and efficient instrument to restore these stricken laws, and to reassert and reëstablish throughout our entire system those splendid principles of political equality which are dear to every patriotic American heart, and without which this great nation can not and ought not to exist for a single minute. [Prolonged applause on the Republican side.]

Mr. Speaker, I now yield my place on the floor to the venerable gentleman from Kentucky [Mr. BRECKINRIDGE], whose chief delight seems to have been to interrupt me during the progress of my remarks by boisterous conduct upon his side of the Chamber, and I assure him in advance that I will not imitate the bad example he has set me, but will endeavor to listen with respect to every utterance he may make, even though his remarks may not commend themselves to my judgment. [Applause on the Republican side.]

Issue of One Hundred and Twenty-five Million Dollars of Treasury Notes.

STATEMENT

OF

HON. J. L. McLAURIN,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 4, 1893.

On joint resolution (H. Res. 15) authorizing the issuing of $125,000,000 of Treasury notes under the acts of 1862 and 1863, as follows:

"Whereas failures, bankruptcy, and business distress are witnessed throughout every section of the United States in consequence of an inadequate volume of currency to maintain equitable prices and make necessary exchanges; and

"Whereas under present statute laws the Secretary of the Treasury has ample authority to issue United States notes in sufficient quantity to relieve the present financial stringency: Therefore,

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That $25,000,000 of United States notes issued under the several acts of 1862 and 1863 be, and the same are hereby, declared lost or destroyed, and the Secretary of the Treasury is directed to credit the redemption account with said amount.

"That the Secretary of the Treasury at once cause to be prepared, signed, and delivered to the Treasurer of the United States $125,000,000 of United States notes as authorized by the acts of 1862 and 1863, the same to be credited to the general fund and to pay current expenses: *Provided*, That the amount so issued shall not exceed $450,000,000, the amount authorized to be issued under the several acts of 1862 and 1863."

Mr. McLAURIN said:

Mr. SPEAKER: I avail myself of the indulgence of the House, and submit a recent argument made before the Committee on Banking and Currency:

Mr. CHAIRMAN AND GENTLEMEN OF THE COMMITTEE: It is with a good deal of diffidence that I appear before the Banking and Currency Committee to submit any resolution upon the financial question, as I appreciate my own inexperience and ignorance upon many questions which go to make up our financial system. All the more so, Mr. Chairman and gentlemen, because I feel that this committee is not likely to look with favor upon the proposition which I have submitted. At the same time I appreciate the spirit of fairness and courtesy which prompted you to set aside a portion of your valuable time in which to give me a hearing, and I shall not impose upon your good nature. I feel that no gentleman upon this committee expects or needs enlightenment from me upon what is the purpose, effect, and scope of this resolution.

I listened with a great deal of interest to the able argument of Mr. OATES yesterday, and I am convinced that if some scheme of the kind which was proposed by him could be put into operation that, as a permanent thing, it would be greatly to the advantage of our Southern people, but in proposing this resolution I had an eye to something which would be immediate. The need, however, for legislative action of this character is not so great now as it was a few weeks ago when the resolution was introduced, because there has been a revival in business conditions in the South and elsewhere.

We were called together by the President in an extra session to devise a speedy means of relief for the great stringency which existed in the money market, and we were told that the cause of the panic was the operation of the Sherman act, but contrary to what was expected and predicted the business conditions have improved each day as it becomes more and more apparent that the Senate will not consent to the unconditional repeal of the Sherman act. In some way the lost confidence of the business world, about which we heard so much, seems to have been in a measure restored by the nonaction of the Senate.

My purpose at the time in the introduction of this resolution was to try and suggest some means to enable our people to market their crops. There was witnessed every day in nearly all the towns of the cotton belt, the sight of wagons, loaded with cotton being brought into the market and then driven back home, not because there was no demand for that cotton, but because there was no money with which to buy. In many sections of the country, owing to the money famine, the banks associated themselves together and issued clearing-house certificates. These began to circulate as money, and our people soon began to feel the good effects of even a crude currency of that kind. Business interests of all kinds began to brighten, and there was a feeling of hopefulness everywhere.

After I received your invitation the other day to appear before your committee and speak upon this resolution, I wired Governor Tillman to send me one of the clearing-house certificates, which some of your committee have already seen. It is not necessary for me to take the trouble to read it, but I will in-

troduce it in evidence, so that any one can see it. It is as follows:

No 1197. 5

COLUMBIA CLEARING HOUSE ASSOCIATION.

CERTIFICATE.

COLUMBIA, S. C., *August 19, 1893.*

This certifies that the banks composing the "Columbia Clearing House Association" have deposited with the undersigned trustees of said Clearing House Association securities of the approved value of seven ⅞ dollars to secure to the bearer hereof the sum of

FIVE DOLLARS,

lawful money of the United States, payable on or before the first day of January, 1894.

This certificate is issued in accordance with the proceedings of the "Columbia Clearing House Association," at a meeting thereof held on the 19th day of August, 1893; and is receivable for any and all dues to the banks which are members of said association, and is also receivable on deposit in any of said banks, and also in settlement of all balances due from one of said banks to another.

R. S. DESPORTES,
JOHN A. CRAWFORD, } *Trustees.*
W. J. MURRAY,

Countersigned:
C. M. TEW,
Secretary.

(Indorsed on back:) Payment of the within certificate is guaranteed by the following banks composing the "Columbia Clearing House Association," viz: Carolina National Bank, Central National Bank, Loan and Exchange Bank of South Carolina, Bank of Columbia, Canal Dime Savings Bank, Farmers and Mechanics' Bank.

The CHAIRMAN. That circulates as money?

Mr. McLAURIN. That circulates as money. Let me just in that connection say that here is a private letter which I received inclosing the certificate, and I do not think that there will be any objection to my reading it:

STATE OF SOUTH CAROLINA, EXECUTIVE CHAMBER,
Columbia, September 26, 1893.

DEAR SIR: In response to your telegram Governor Tillman sends you the inclosed certificate. He says you talk about them like they were nothing, but they are worth 100 cents on the dollar, and it takes that much gold, silver, or greenbacks to get them, as they are about all the money we have here.

Very respectfully,

D. H. TOMPKINS,
Private Secretary.

Hon. JOHN L. MCLAURIN,
Washington, D. C.

The grain-elevator men in the West, I see by the papers, associated themselves together in a similar way.

The CHAIRMAN. How many dollar's worth of those notes have been put in circulation?

Mr. McLAURIN. Seven and a half dollars——

The CHAIRMAN. No, you misunderstand me. How much is the aggregate volume of that currency?

Mr. McLAURIN. I could not answer that question; but I could get you the information. These are secured by farmers' notes. For instance, they go to each other and get indorsements, and——

Mr. HALL of Missouri (examining note). You mean there is $7.50 security deposited for every $5 of this money?

Mr. McLAURIN. I mean that for every $5 of that issue there is $7.50 of securities deposited, which have to be approved by these trustees, who are men in whom we have every confidence. For instance, here is a man who wants to borrow money, and there are a number of men who own plantations worth $8,000, $10,000, or $15,000, and he gets them to go on his note. We know these men are good for the money, unless everything should disappear and all values go. That paper is used as collateral upon which to issue these clearing-house certificates.

The CHAIRMAN. And these notes of private individuals are placed with these trustees as security for the final payment of these clearing-house certificates?

Mr. McLAURIN. Yes, sir. I suggested the indorsed notes as one form of security; they have other forms—bonds, or anything which is good security.

Now, the grain-elevator men in the West associated themselves together and issued elevator certificates, and they have gone into circulation as money, and these certificates in the West and the South were enabled to perform every function of money, they did perform every function of money, and they will continue to do so just so long as people have confidence in the organization by which they were issued.

Mr. WARNER. Let me interrupt you just a moment. As I understand it, these certificates are issued upon securities to the extent of 50 per cent above the face of the certificate?

Mr. McLAURIN. Yes, sir.

Mr. WARNER. Generally speaking, upon that kind of commercial paper those who deposit their notes properly indorsed receive from the banks these certificates?

Mr. McLAURIN. Yes, sir. They use that, and they also use mortgages, bonds, and anything of the kind that is good security.

Mr. WARNER. But in the main it is commercial paper which is approved?

Mr. McLAURIN. Yes, sir.

Mr. JOHNSON of Indiana. For how many years back has this been done?

Mr. McLAURIN. Not until this panic; not until we were absolutely "stumped" by a want of currency, we saw loads of cotton and other produce come to market and fail to find purchasers.

Mr. JOHNSON of Indiana. It is a recent invention down there?

Mr. McLAURIN. Yes, sir. It got so bad during September in South Carolina that it was impossible to get meat in some localities, and I have a letter from my own town, a wealthy town for the South, a very prosperous town, where it is stated there has not been a pound of meat in the town for a week; we had to do something. It was a question of necessity.

The CHAIRMAN. Will you obtain from the trustees whose names are upon that certificate a statement of the aggregate volume of those notes which have been issued and furnish it to the committee to be published with your remarks?

Mr. McLAURIN. Yes, sir; I will do that with pleasure. I will ask the stenographer to make a note of it.

Mr. SPERRY. And the time and limit within which they circulate?

Mr. McLAURIN. If you will have the clerk submit any question you would like to have answered I will have it done promptly.

Mr. HALL of Missouri. These trustees might regard that as a business secret?

Mr. McLAURIN. No, sir; I do not think so. I think they will be glad to furnish the committee with any information they possibly can. These certificates have furnished the people with a means of exchanging their products and paying their debts and have served to relieve us from the stagnation in business affairs which existed. If left to themselves, Mr. Chairman, and had Congress never been called together, the good business sense and tact of our people, I believe, would long ago have ended the panic.

In that connection I will read here an item from the Washington Post of the date of September 25, which is as follows:

ISSUED IN LIEU OF MONEY—ELEVATOR SCRIPT HELD TO BE LIABLE TO A TAX OF 10 PER CENT.

ST. PAUL, MINN., *September 25.*

The elevator owners of Minnesota and South Dakota are agitated over the probability that they will in the next few weeks have to pay 10 per cent on certified checks, drafts, and due bills, furnished as a circulating medium in payment for grain.

It is learned that Special Agent Collins, of Chicago, has been here for several days. He has interviewed the officials of two Government depositories and other banks in St. Paul, and learned that they had accepted this class of paper for collection, receiving them in due course of business from country correspondents.

In Minneapolis, representatives of Charles A. Pillsbury and of the St. Anthony and Dakota Elevator Company, Brooks, Griffith & Co., and F. H. Peavey & Co. admitted they had issued these memoranda on account of their inability to obtain currency. These, they acknowledged, had been used instead of United States notes or legal tenders. They claimed, however, they had been legally advised that they would not be conflicting with the United States laws. Their action, however, is a clear violation of section 3413, internal-revenue laws.

Collector Johnson has located about $25,000 worth of these checks, on which the tax would be $2,500. But few returns have been received from country points, and until they are received it can not be determined what amount has actually been placed in circulation. Collector Johnson and A. G. Collins are both of the opinion that the companies are amenable to the law and will have to pay an assessment of 10 per cent, but before this is levied a full report of the amount of the checks issued and all the facts in the case will be sent to Washington.

Now, the Treasury Department came forward after our people had adopted an expedient of this character which affects nobody but ourselves; if these certificates are not good there will be nobody hurt but the South Carolina people and the Western people, and nobody is obliged to take them, it is nobody's business; it is a private business transaction, yet the Treasury Department rules that all of our certified checks, even due bills and certificates of clearing-house associations are liable to the 10 per cent tax.

Mr. JOHNSON of Indiana. Do you mean the Treasury Department did that?

Mr. HALL of Missouri. You refer to the First Comptroller?

Mr. McLAURIN. I do not know who did it; but even the threat tends to unsettle business transactions based upon these certificates.

Mr. JOHNSON of Indiana. Was it not Mr. Miller, of the Internal Revenue?

Mr. HALL of Missouri. I did not understand that the ruling applied to this more than to the New York clearing-house.

Mr. McLAURIN. That article in the Post so states it.

Mr. WARNER. I sincerely hope they will attack both New York and South Carolina, and that the 10 per cent tax will not be in existence three months from now.

Mr. McLAURIN. Now, Mr. Chairman and gentlemen, without any special knowledge on the financial question, but looking

at it simply as a lawyer and a man who claims to have a little common sense, it seems to me that this is the very strongest argument which could be adduced in favor of a resolution like the one that I have proposed. It is the practical operation of the *vis medicatrix naturæ*, being an effort of the financial body to throw off diseased conditions by the natural laws of trade and finance.

When the Government refuses to allow us to adopt an expedient of this character—in other words, refuses to allow us to help ourselves—she should come in, and give to the sick man the kind of medicine that his symptoms demonstrate is necessary. When she prohibits to everybody else, individuals and States, the power to issue due bills or any bills of credit, and arrogates to herself the full power to do that, it becomes her sacred duty to exercise that power wisely and to exercise it as fully as the business needs of the country indicate is necessary.

Mr. HALL of Missouri. And promptly.

Mr. McLAURIN. And by all means, promptly. Now, Mr. Chairman and gentlemen, in the introduction of this resolution I take the position that the Government without the enactment of another statute, under the laws already existing, has ample authority to give immediate and permanent relief. She can do just what the banks and grain elevators have attempted to do, except that she can do it much more thoroughly and effectually than they can, because she can issue the full legal-tender currency, which will be good for all debts, both private and public, at merely the cost of printing, and thus give to the country relief from the troubles which are now existing. The authority for this—and I have not been able to find any law which modifies or changes it—is epitomized in this book: "National Loans of the United States," page 156, which reads as follows:

The act of February 25, 1862 (12 Stat., 345), authorized the issue of $150,000,000 United States notes, not bearing interest, payable to bearer, at the Treasury of the United States, and of such denominations, not less than $5, as the Secretary of the Treasury might deem expedient, $60,000,000 to be applied to the redemption of demand notes authorized by the act of July 17, 1861; these notes to be a legal tender in payment of all debts, public and private, within the United States, except duties on imports and interest on the public debt, and to be exchangeable for 6 per cent United States bonds. The act of July 11, 1862 (12 Stat., 532), authorized an additional issue of $150,000,000 of such denominations as the Secretary of the Treasury might deem expedient, but no such notes should be for a fractional part of a dollar, and not more than $35,000,000 of a lower denomination that $5; these notes to be a legal tender as before authorized.

The act of March 3, 1863 (12 Stat., 710), authorized an additional issue of $150,000,000 of such denominations not less than one dollar as the Secretary of the Treasury might prescribe, which notes were made a legal tender, as before authorized. The same act limited the time in which Treasury notes might be exchanged for United States bonds to July 1, 1863. The amount of notes authorized by this act was to be in lieu of $100,000,000 authorized by the resolution of January 17, 1863. (12 Stat., 822.)

The length of loan indefinite; the amount authorized, $450,000,000; amount issued, including reissues, $1,640,559,947; the highest amount outstanding June 30, 1864, $449,338,902, sold at par. Interest none; outstanding June 30, 1893, $346,681,016.

Now, this statement reveals the fact that the Secretary of the Treasury could at any time issue greenbacks to the full amount of $345,000,000. It requires no act of Congress and even this resolution is unnecessary so far as the enabling power is concerned. He has the right to issue these notes at any time; and, in fact, I believe other Secretaries of the Treasury have exercised the right.

Mr. HALL of Missouri. Let me ask you right there. You say you have not found since 1863 an act which limits the amount of greenbacks in circulation?

Mr. McLAURIN. No, sir; I do not think the Voorhees act does it, and I have not been able to find anything which does.

Mr. HAUGEN. Did not the resumption act provide that greenbacks should be redeemed, and later was it not by a further act declared that they should be redeemed only down to a certain point—$346,000,000?

Mr. McLAURIN. In regard to fractional currency, I found, under the act of July 21, 1875——

Mr. HALL of Missouri. But is there not a provision in an additional act that the circulation of greenbacks shall not be redeemed to a less amount than $340,000,000?

Mr. McLAURIN. I say that there is, but it does not interfere with the $450,000,000, which is the maximum limit, beyond which they can not go. I have not been able to find any act that interferes with the $450,000,000 maximum limit to which they can issue the Treasury notes provided for in the acts of 1862 and 1863.

Mr. HALL of Missouri. The resumption act provided that the greenbacks should be redeemed in coin, and later when they had redeemed down to a point where there was $346,000,000 in 1878, it was declared that they should not be withdrawn from circulation below that point, but as they returned to the Treasury new notes should be given.

Mr. McLAURIN. The way I understand it is that they could not go below $346,000,000, and not over $450,000,000, and when brought in they shall be immediately paid out; they can not under the law be hoarded in the Treasury.

As I said, other Secretaries of the Treasury have taken authority to increase the amount in circulation, and my authority for this allegation is found in the Statistical Abstract, where, on the twenty-ninth page, you will find in 1873 that there was $356,000,000 in circulation, and that in 1874 there was $382,000,000 in circulation. Now, this shows an increase of $26,000,000. If they could increase it $26,000,000 in the emergency of the panic of 1873, why, in the emergency of the panic in 1893, could they not increase it $125,000,000, provided they do not exceed the $450,000,000 limit?

Mr. WARNER. I think the gentleman will find that the resumption act—I have not it by my side—but by inference from its permission, and the construction, I think, has been concurred in ever since, authorizing as it did the issue of bonds for certain purposes practically limited the power thereafter of the Secretary to that covered by the permission, and that the resumption act is at a latter date than the circumstances to which you allude.

Mr. McLAURIN. I understand that.

Mr. WARNER. And the act of 1878 modified in no particular whatever, and did not purport to modify in any particular whatever, the resumption act, but simply provided as to United States notes which might thereafter be redeemed: that they should not be canceled, but should be paid out and kept in circulation, thus leaving the greenback currency at the amount of $346,000,000, and upon the uniform ruling of the Secretary of the Treasury, which I think he is justified by the plain terms of the act of 1875, leaving no permission to issue further bonds after 1875 except under that act, as to which there has always been a doubt raised whether the act of 1878 did not cancel that as well.

Mr. McLAURIN. It is a question of construction; I understand that, but I was adverting to the act of 1873 and 1874 more in the nature of an argument than to cite it as a precedent.

Mr. HAUGEN. You have not made any inquiry of the present Secretary of the Treasury as to whether he regards himself in possession of this power to issue further currency?

Mr. McLAURIN. No, sir; I did not, because I thought if this resolution went through it would be a legislative construction act, and he would be spared the necessity of construing it himself.

Mr. HALL of Missouri. The report of September 1, 1893, of the Secretary of the Treasury shows that he is above the issue by $681,000. How does he explain that?

Mr. DAVIS. I want to make this point. When it was limited to $346,000,000, was there not an implied obligation it should be kept as much as that? I have here an argument made in 1888 by Senator Plumb showing at least——

Mr. WARNER. This is covered by the forepart of Mr. McLAURIN'S joint resolution.

Mr. McLAURIN. Yes, sir; I think it is.

Mr. HAUGEN. Mr. HALL states that the present Secretary of the Treasury has made a report, and it shows $346,366,000——

Mr. HALL of Missouri. I have no confidence in that report; I made that statement a good many times.

Mr. DAVIS. I will state this, further: I have here a second reply. I reply to his report in April, 1892, and he replied to me, and I replied again in October, 1892, and I show that he counts various moneys that are not in existence here at all. There is absolutely $50,000,000 more than there was in existence; and Senator Plumb showed how it was in regard to the gold.

The CHAIRMAN. The reduction to which you refer is accounted for, probably, by the act of Congress approved May 31, 1878. At that time Congress passed an act to prohibit the further retirement of United States legal-tender notes, and if you will pardon me I will have the text of that act put in the RECORD, so we will have it before us:

That on and after the passage of this act it shall not be lawful for the Secretary of the Treasury or other officer under him to cancel or retire any more of the United States legal-tender notes, and when any of said notes may be redeemed or be received into the Treasury under any law from any source whatever and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be reissued and paid out again and kept in circulation: *Provided*, That nothing herein shall prohibit the cancellation and destruction of mutilated notes and the issue of other notes of like denominations in their stead as now provided by law.

After the law passed the Secretary fixed the amount to be kept in existence at $346,000,000, and between the passage of the resumption act and the passage of this act there were retired greenbacks under the resumption law to the amount which has been stated. After that there has been no retirement, except poisibly the destruction, and while new ones were issued instead——

Mr. HAUGEN. You have before you the banking laws, and I would like to have you refer to the resumption act and see what it states in regard to the maximum. What is said in the earlier laws in regard to the maximum to be issued?

The CHAIRMAN. It is as follows:

And on and after the 1st day of January, anno Domini 1879, the Secretary of the Treasury shall redeem, in coin, the United States legal-tender notes then outstanding, on their presentation for redemption at the office of the assistant treasurer of the United States in the city of New York, in sums of not less than $50.

That was the authority to redeem them and there was no authority to reissue, and when they were presented for redemption they were canceled.

Mr. McLAURIN. I will take up the discussion of that section in which I provide that $25,000,000 be declared lost or destroyed. The reason I introduced a section of that kind was because I feared some trouble along the line indicated by Mr. HALL.

Mr. HALL of Missouri (to chairman, referring to book). That section was in this law; you inadvertently overlooked it; you went down too low.

Mr. HAUGEN. I wanted to find out what the maximum was.

The CHAIRMAN. I presume Mr. HAUGEN'S question refers to this part of the law:

And whenever and so often as circulating notes shall be issued to any such banking association, so increasing its capital or circulating notes, or so newly organized as aforesaid, it shall be the duty of the Secretary of the Treasury to redeem the legal-tender United States notes in excess only of $300,000,000.

This is the resumption act of January 14, 1875.

Mr. HAUGEN. Then the maximum of this act was changed afterwards from $300,000,000 to $346,000,000, that being the amount outstanding at the date of the later act.

Mr. McLAURIN. To resume the thread of my argument, I find a precedent for declaring $25,000,000 lost and destroyed and authorizing the Secretary of the Treasury to credit the redemption fund with that amount in the act of June 21, 1879. In that act you will see between $8,000,000 and $9,000,000 have been declared lost or destroyed, and again the Secretary of the Treasury, in his report of 1884, admits that $1,000,000 of Treasury notes were burned up in the Chicago fire. There are no means, however, of determining the exact amount, but some idea of the amount lost or destroyed may be formed by a comparison with the fractional currency.

The largest amount of fractional currency outstanding at any one time was $46,912,003, which was in 1874. In January, 1875, Congress passed an act providing for the retirement of fractional currency, and I suppose by this time it has all been retired and redeemed under the provisions of that act. On June 30, 1880, the amount outstanding was $15,589,888. On June 21, 1879, Congress declared that $8,375,954 had been lost or destroyed. Since then only $299,210.40 has been redeemed, and the probability is that the other $6,000,000 has been lost or destroyed. At least I can cite as high an authority as Mr. SHERMAN in support of the statement.

Now, here is proof that out of the $46,981,000 of fractional currency in circulation for a period of sixteen years, more than $15,000,000 has been lost or destroyed. Now, of these Treasury notes there is, say, an average of $400,000,000 in circulation for thirty years. Therefore the question would be, if $15,000,000 of fractional currency was lost in sixteen years out of $46,000,000, what amount would be lost out of $400,000,000 of Treasury notes in circulation for a period of thirty years?

The CHAIRMAN. I think you should take into consideration the difference between the fractional notes and the large notes. These fractional notes were very easily destroyed, being small, and they were lost very readily and were stuffed into pockets——

Mr. McLAURIN. Of course, they were not as valuable, being small amounts.

Mr. HAUGEN. Would it be fair to follow that out on the rule of three? In that case it would only be a question of time when they would all be destroyed.

Mr. McLAURIN. No, sir; but we can take into consideration, by way of comparison, the amount of fractional currency lost or destroyed, and in making my estimate I have not taken out anything like as large a per cent as that, as you will see. I have taken into consideration the difference in value, size, etc. This is the only guide, as far as anything like figures were concerned, on which you could possibly base any conclusion. Senators Plumb, STEWART, and some others have placed the amount at $50,000,000. Senator Plumb, in 1888, said:

No man can tell the volume of greenbacks outstanding. Nominally it is $346,000,000 and a fraction, but that volume has been subject to all the accidents which have occurred during the past twenty-five years whereby money has been consumed, worn out, and lost, and it is doubtful if the amount is really over $300,000,000 to-day.

The CHAIRMAN. Have you compared in this connection the amount of the old land notes which were issued by the Government and the amount of them which were subsequently returned for cancellation?

Mr. McLAURIN. No, sir; I have not made that comparison.

The CHAIRMAN. I think you will find nearly all of those got back safely. The rule you want to apply is the destruction of the national-bank notes, and that will bring you to a comparison with the greenbacks.

Mr. McLAURIN. I did not make that comparison. I adopted this other mode of argument and relied on Senators Plumb and STEWART as men who had given a great deal of attention to the subject and who ought to be authority.

The CHAIRMAN. You will find, if you compare the amount of the national-bank notes retired, that it is very small.

Mr. McLAURIN. Senator GEORGE, of Mississippi, also, in a speech of March 14, 1892, incidentally referred to this subject, when he states:

We have $100,000,000 in gold as a fund, as Senator Beck says, to guard the greenbacks. We have $346,000,000 of these greenbacks or legal-tender Treasury notes. Mr. Beck says, and he has never been successfully contradicted, that $50,000,000 is ample to guard the $346,000,000. If that be so, and he proves it, as I have read in the hearing of the Senate, it is clear that we may increase the volume of greenback currency double the $346,000,000, and it will remain a safe, sound, redeemable currency, equal to coin.

In this connection I will say, Mr. Chairman and gentlemen, I frankly confess my inexperience and ignorance upon many, perhaps too many, of the propositions which go to make up the great question of finance. Called together by the President in an extra session to devise means of relief, I began, as best I could, an honest study of the situation. The press and the people were clamoring for more money, and business failures were seen on every hand because of a declared want of money. My own people were driven to the necessity of issuing due bills and clearing-house papers, as I have shown, and, considering their welfare and finding laws upon the statute books which seemed to me ample to afford relief, I introduced this resolution.

Doubtless one objection that will be made to the resolution is that it increases the volume of paper currency, and this will be followed by the statement that the present panic was caused by a return and sale of securities which were held by foreigners, who feared that the volume of paper money would become so great that gold payment would not be maintained, and that the principal and interest or dividends of their holdings would be paid in silver or paper. I have heard that objection raised upon the floor of the House, and I have no doubt in the minds of many of the committee that this is one of the chief objections to a resolution of this character.

But, Mr. Chairman and gentlemen, if it be true that it was the return and sale of the property of the foreign security-holders in this country that caused the panic, then it is true that Congress has been called together to enact laws which will be satisfactory to foreign investors. Speaking for myself, I would say that I am too much of an American to be willing to see any such laws and thereby to have my own people suffer. It is best, perhaps, to meet that objection fairly and squarely at the beginning of my remarks. It is doubtless true that the return of these foreign securities from abroad is largely responsible for the panic.

It is well for us then to consider what kind of securities were held abroad and returned here and sold in such large quantities as to produce a panic. The bonded debt of the nation amounts to $585,000,000, of which $200,000,000 are held by national banks. A large portion of the balance is held in trust funds by estates and for investments of a similar character; but a small portion, as I am informed, of our national debt is held abroad by foreigners. This being true, it follows that the securities which were held abroad and returned here in these large quantities were either private or corporate bonds and stocks. This fact changes the entire face of the proposition, and because of that I make the broad statement, as my opinion, that at this period of our national existence we do not want to bid for foreign investments, and I will briefly undertake to give my reasons for making a statement of that character.

Foreign investments in this country are conclusive evidence of the fact that the necessities of the people here for the use of money are greater, their financial standing being considered, than elsewhere, and hence they are willing to pay a larger tribute for the use of the money. The only logical remedy for such a condition is to supply the people with a sufficient volume of domestic money, and thereby relieve them of the necessity of going abroad for their currency, and this my resolution seeks in part to accomplish. Foreign investments are dangerous to the best interests of our country, as is disclosed by the statement that the return and sale of those securities produced the present panic.

In other words, we are at the mercy of foreign security-holders who, from an unreasonable fear, or from malice, or any other cause, can at any moment produce a panic and cause our people to suffer. One of the chief objections urged against Chinese immigration is, that they never become naturalized. They come here and secure a competency, either great or small, and when it is secured they go back home. Just so it is with the foreign investor. He comes in here and reaps as much tribute as possible——

Mr. BLACK of Georgia. And he does not even come here.

Mr. McLAURIN. No, sir; he sends his money and he reaps all the tribute possible, and then at the very first token of alarm he takes his flight homeward and leaves us to work out our own destiny.

Mr. HAUGEN. Have you any statistics in regard to the amount of securities returned?

Mr. McLAURIN. No, sir; I have not. I am just making the statement on the general tenor of remarks, and——

Mr. HAUGEN. I think you are perfectly correct in that theory, while I doubt the efficacy of the remedy you propose.

Mr. McLAURIN. I thought that in the minds possibly of a part of the committee that was an objection I had to meet, and I wanted to show I was not unreasonable in making a proposition of this character, and that I had at least reasons which were to me of a satisfactory nature.

While the primary cause of the panic was a lack of domestic money which made possible this invasion of foreign capital, it is no less true that the immediate cause was the want of currency to maintain prices, and thus enable the people to continue the payment of tribute to foreign investors, as I will attempt now to explain. The stocks and bonds held abroad were principally those of railroads and other corporations. Those stocks were usually watered to the fullest extent they would stand. This watered stock is usually more or less divided in its ownership between the resident and the foreigner.

For years the people have been enabled to pay this unfair and exorbitant tribute. During this time the foreign investor received his dividend, and as long as he got his dividend he was content. In the meanwhile the stocks of the resident owner were pledged with a trust company and funds raised to start new enterprises. The stocks and bonds of these new ventures were often placed in the same way and other enterprises built upon that.

In this manner a perfect network of such deals were made, all depending upon the stability of the first. Statistics show that the railroads of the United States cost, on an average, $20,000 per mile, while they are bonded at $63,000; the patrons of the roads must pay the interest on this $43,000 of watered stock. As these corporations became more numerous and the watered stock greater, the demand for tribute upon the people also became greater, until it arrived at a point where they could no longer stand it. A fall in the price of products made a rigid economy on the part of the people who have to pay these dividends and interest a necessity. Hence there was less travel, less freight, less exchange of manufactured and other products. This economy and lessening of business brought about as an inevitable result less dividends, and the foreign investor became alarmed.

This alarm continued and increased until these investors threw their holdings upon the market. So long as the foreigner was content, the resident holders of these securities could manipulate his stocks with comparative safety, but when the foreigner began to realize upon his portion and the prices declined as a result, the resident holder and all of his interests began to suffer. It became necessary for him to keep his margins good, and in such a rapid decline as followed this became impossible, and he went down, and all the enterprises with which he was connected. In my judgment, it was a fear of the loss of permanent dividends, by reason of the poverty of the people, and not the fear of any particular kind of money used in the final liquidation, that caused the panic.

We are asked to enact laws which will protect the foreign investors in gold payments, forgetting that such laws would bring ruin and disaster upon our people. While we legislate to make the investment of the foreigner satisfactory to him, we are legislating lower prices for the productions of our own people and robbing the farmers and producers of this country of a just and equitable remuneration in return for the products of their labor. To this, so far as I am concerned, I will never consent, but I will oppose with all of the limited ability which I possess.

The fear of an increasing volume of paper money is either a cunning pretext or an absolute absurdity. The paper money outstanding is as follows: Gold certificates $80,414,049; silver certificates $326,206,336; Treasury notes (greenbacks) $346,681,016 (nominal?); Treasury notes of 1890, $149,881,958; national-bank bills (about) $175,000,000. The gold certificates are payable in gold deposited for their issue. The silver certificates are payable in the silver dollars deposited for their issue. The Treasury notes of 1890, issued in payment of the purchase of silver, are payable in silver dollars as is shown in section 3 of the Sherman act, which is as follows:

That the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act into standard silver dollars, until the 1st day of July, 1891, and after that time he shall coin of the silver purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury.

This leaves the Treasury notes amounting to $346,681,016 and national-bank notes amounting to about $175,000,000, or a total of $521,681,016 of paper money, whose final redemption can become a matter of dispute. Upon this point I would like to submit the following, although there are volumes of such statements. This is from Mr. Pierrepont, Attorney-General of the United States, and afterwards minister to England, in a letter in the New York Times of April 18, 1884, in which he says:

There is not an outstanding bond, coupon, or greenback issued by the United States which may not lawfully be paid in silver. Not one of them on its face or back, or in the statute authorizing the issue, or in declaration, or in resolution of Congress, has any proviso that they shall be paid in gold. And the act of February 20, 1878, directing the coinage of silver dollars, declared that such dollars shall be a legal tender at a nominal value for all debts and dues, public and private, except where otherwise expressly stipulated in the contract.

In the discussion of the silver question in the House, which if referred to escaped me at the time, as I have not heard it mentioned in the debate, there was a resolution which passed the United States Senate, January 25, 1878, and the House of Representatives on January 28, 1878, by a vote of 42 to 20 in the Senate and 189 to 79 in the House. It was to this effect:

That all the bonds of the United States issued or authorized to be issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as are a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditor.

The CHAIRMAN. What is the date of that act?

Mr. McLAURIN. This was a joint resolution which passed the Senate January 25, 1878, and the House January 28, 1878.

The CHAIRMAN. That was not an act, that was a concurrent resolution.

Mr. McLAURIN. I so stated. The national-bank currency can only be made a charge upon the Treasury through the Treasury notes, and the law expressly declares that such notes shall not be retired but shall be put immediately into circulation. But counting the entire volume of $521,681,016 with the amount of paper money which is provided for in my resolution, $125,000,000, we would have $646,681,016 in all.

If we deduct from this amount the amount lost or destroyed, $25,000,000, we would have in round numbers $575,000,000. This would give as a reserve 17½ per cent, which, under the circumstances, is plainly abundant, as can be briefly shown by the national bank statistics. I have a report here from the Comptroller of Currency which I will not read, but from which I can summarize the facts which I want in this way.

Mr. HALL of Missouri. What authority is there in law for the Secretary of the Treasury to issue any legal-tender greenback notes for money lost or destroyed?

Mr. McLAURIN. I hate to stop right here; I do not like to break the thread of my argument.

Mr. HALL of Missouri. Go ahead; I will come to that afterwards. I want you before you leave to make that clear.

Mr. McLAURIN. Now, to finish that point. The deposits in these national banks amounts to $1,556,761,230. I will not read all these items, but they amount to $1,754,222,429.

Mr. HAUGEN. What is the date of that?

Mr. McLAURIN. August 17. After deducting the clearing-house certificates and other items counted as currency that are unavailable for immediate use in payment there remains only $271,183,295 as actual reserve, or 15½ per cent. The situation then is as follows: The Government would be doing business with the full amount of $450,000,000 legal tender issued and the present amount of national-bank issues upon a reserve of 17½ per cent, while the banks would be conducting their business upon a margin of only 15½ per cent reserve.

I submit that it is unfair to demand of the Government more and a better reserve security than they are willing to put into practice among themselves. With this statement, based upon the facts and backed up by the business intelligence and experience of the banking interests, I submit that the fear of an increase of paper money is without any logical foundation.

Mr. HALL of Missouri. I want to read the only authority you have thus far cited. I read from the act of May 31, 1878, omitting the first part:

That from and after the passage of this act it shall not be lawful for the Secretary of the Treasury or other officer under him to cancel or retire any more of the United States legal-tender notes, and when any of said notes may be redeemed or be received into the Treasury under any law, from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be reissued and paid out again and kept in circulation: *Provided*, That nothing herein shall prohibit the cancellation and destruction of mutilated notes and the issue of other notes of like denomination in their stead as now provided by law.

Now, I wish to know if you have any authority outside of this statute for basing your resolution, which is that the Secretary of the Treasury shall keep the amount up to $346,000,000 for lost and destroyed currency? There is nothing said in this section about lost or destroyed.

Mr. McLAURIN. If it is lost or destroyed it does not need the Secretary of the Treasury to retire it, because it has retired itself.

Mr. HALL of Missouri. You think, then, that the word "retired," as herein used, means to include money lost?

Mr. McLAURIN. I think so. I think that the money has already been retired by fire and loss of various kinds and I have placed the amount far below what might be reasonably expected, so as to prevent any question of that kind; because, as a matter of common sense, if the money is gone it will never have to be redeemed, and as a business man, if you had debts charged against you which you knew that you would never be called upon to pay, you would credit your bills payable and not have it stand as a debit when it should be a credit.

Mr. WARNER. I presume the gentleman from South Carolina, in his argument, does not intend to make a point upon the peculiar wording of his resolution. What he intends is, by the first section of the resolution proposed by him, to indicate whatever legislation the committee may find necessary, to declare a certain amount of greenbacks to have been lost and destroyed and to authorize reissue, so that although the point is perfectly proper, I do not understand the gentleman from South Carolina means to confine his argument to the very wording of his resolution.

Mr. HALL of Missouri. I will say in explanation of this, I heard this objection made, and I wish to say I am favorably inclined to the gentleman's first section; but I want to hear him on that point, knowing that he has given it some examination and I have not.

Mr. McLAURIN. I thought of that, but I did not think it necessary, for this reason: I do not pretend to be an expert financier, but in looking around got this idea, and thought I would present my views by embodying them in a resolution; then as to technicalities, that is the business of this committee. I have plainly stated our troubles in South Carolina and elsewhere, and if you can give us help of any kind, we would be very glad to get it, without regard to the particular form in which the blessing is to come.

Mr. WARNER. If the gentleman from South Carolina will permit me, in view of a somewhat extended and very forcible presentation made by him in the early part of his remarks of the actual situation in South Carolina and the very effective way in which it was made, and especially in view of his own reference to the argument made by Col. OATES yesterday, I would like to know if I understand him correctly in this statement, that the means adopted by the bankers in Columbia, S. C., provided there was no question about its legality, were such as practically to solve the problem as to the shortness of currency, and that if they are permitted to do that in a legitimate way for themselves or if some plan like that proposed by Col. OATES, if some such plan could be adopted as a permanent matter, would that in your view be a satisfactory solution? But so long as the Government does not permit Col. OATES'S plan or the plan of the bankers of South Carolina to be carried into effect, I understand that you insist that the Government provide the greenback or currency which it does not permit you to provide for yourself?

Mr. McLAURIN. Yes, sir; that is one of the branches of my argument, but I go further and say that what the banks adopted as an expedient, the Government can do more thoroughly and effectually, and she ought to come in and do what the symptoms of this financial disease show is necessary to be done. The trouble with the certificates is, they might be subject to the manipulations of speculators. Give us a good legal-tender currency instead.

Mr. WARNER. The resolution presented by the gentleman, as I understand, provides for two things: First, a rehabilitation, if you may so call it, of currency that for one reason or another has become useless for the purposes of circulation. In that I may say I regard the suggestion as a very valuable one. The second one is, the increase of the amount of currency by an estimated amount of $100,000,000.

Mr. McLAURIN. Yes, sir.

Mr. WARNER. As I understand, that increase is to take the form of notes issued by the Government and paid out by the Government for its expenses, debts, etc.

Mr. McLAURIN. Yes, sir.

Mr. WARNER. Now, in view of the suggestion of the gentleman that this was proposed in the midst of a pressing emergency, may I ask him to dwell a little longer upon the precise means by which the placing of these notes to be issued and in the possession of the Government, by which the present or any other similar emergency would be met. Say they have got them in the Treasury here or in the Printing Office, there is no trouble about that?

Mr. McLAURIN. That is the milk in the cocoanut. There is no doubt about it. It is a question of emission. How are you going to get rid of them? I have thought of two plans, and one was suggested by the speech of Mr. GEORGE, from which I read a few moments ago. There are a large number of contracts under the Government which have been suspended for want of funds. It might be used in this way, to pay current expenses of the Government, etc. This idea is from the speech of Senator GEORGE, but my original intention at the time of the introduction of the resolution was this: We were in a tight place and we needed help, and that quickly, and I realized the fact that the only relief from this panicky condition was to come from the cotton crop of the South and the wheat crop of the West; that as soon as we could get these big money crops upon the market, gold would begin to come in, and everything would lighten up.

Now, I believe during Mr. Cleveland's Administration—and if I am incorrect I know the gentleman from New York will correct me—at one time, when there was about to be a panic in New York, $60,000,000 was deposited by the Administration in the Wall street banks without interest.

Mr. WARNER. I think that is a slight mistake, but at the same time I do not find any fault, because deposits have been made to relieve stringency.

Mr. McLAURIN. This is the argument that I make: Before this time, when there was a money famine or likely to be tightness in the money market, the Administration would go to the relief of the New York bankers, and when the Government gets in a tight place it expects the New York bankers to return the favor. Sometimes it is hard to differentiate between the Government and the New York bankers, to tell where one stops and the other begins.

Now, then, realizing the importance of marketing the cotton and wheat crops, I did not see why this currency could not be taken and deposited in the country banks. Why not put some of it in the Columbia banks, and if the Treasury wanted to have a proper understanding with those bankers, it could be placed in there coupled with the condition that they would charge farmers only 6 per cent. There is no better security in the world than a bale of cotton, for if there is any money at all in the country, it will sell for something, and this was the idea I had at the time the resolution was introduced.

Mr. WARNER. As I understand, the resolution provided only that a sum should be credited to the general fund to pay current expenses. This proviso was simply to define the amount of money, and not to indicate the use to which it was to be put?

Mr. McLAURIN. Yes, sir.

Mr. WARNER. And that the use contemplated by this was the deposit of the money so issued in different parts of the country that might need it in the emergency?

Mr. McLAURIN. That was entirely with the Secretary of the Treasury; a matter within his discretion.

The CHAIRMAN. Allow me to suggest that the indications are now that there will be a deficit of probably $50,000,000 and $25,000,000 coupons, which have been extended to be paid by the Treasury of the Government, and those two items must absorb $75,000,000, and it is conceded by all persons that our finances are rather lower than they should be for the successful administration of the Treasury Department. Mr. Foster testified before the Ways and Means Committee that the Treasury ought to have $50,000,000 more than it had in order to meet its obligations.

Mr. WARNER. I do not think the gentleman misunderstood me. My question was not as to the possibility of this Government using $125,000,000. My question was, how was it to be made immediately available? Because by the wording of his resolution "the same is to be credited to the general fund and to pay current expenses," and I wanted to know how that was to be paid out immediately.

Mr. McLAURIN. Yes, sir; that is the idea; and, in addition to what the gentleman has stated, it seems to me, as a matter of business, in place of the issue of gold bonds and selling them abroad to bring money here, it would be far better for the benefit of the people if Congress should issue these notes, which would bear no interest at all, and which our people would very readily accept, than it would be to issue gold bonds, sell them abroad, and pay interest upon them.

Mr. WARNER. A prompt use of this permission is practically a further issue of greenbacks to be loaned to local banks in parts of the country where currency is most needed?

Mr. McLAURIN. That is exactly it; better than I could have said it.

The CHAIRMAN. I desire to direct the attention of the committee to the constitutional authority to issue any more legal-tender notes than $460,000,000. The Supreme Court held in the legal-tender acts that issue was a war issue and grew out of the necessities of the war, and I think there was some doubt

whether they could increase the legal-tender issue under these acts mentioned in this bill and make them legal tender. I do not want you to answer that, but I merely direct the attention of the committee to this.

Mr. JOHNSON of Indiana. You spoke in the early part of your argument about the planter having brought his cotton to town and having been obliged to take it home because there was no money. Is this the first instance that has occurred in your history down there?

Mr. McLAURIN. This is the first time I have ever known of such a thing.

Mr. JOHNSON of Indiana. During this late money stringency, has there been any run upon your banks down there?

Mr. McLAURIN. No, sir.

Mr. JOHNSON of Indiana. Was money hoarded down there—such money as the people had?

Mr. McLAURIN. No, sir; we did not have it to hoard. We have been making cotton at a steady loss for several years, and I could tell you something about the banks there, to show you our people have confidence in our banking institutions. There is a bank in the little town in which I live, and at one time it did not have over $2,000 or $3,000 in it, but our people were not uneasy. They knew it was safe, and that it was honestly administered, and therefore we had no runs in South Carolina. I do not recollect but one single b nk failure in the whole State, in spite of all the stringency in money matters, and that was a bank which resumed very speedily—only suspended by reason of the failure of a bank outside of the State.

Mr. BLACK of Georgia. Was it a national bank or a State bank?

Mr. McLAURIN. It was a State bank, at Florence, but it very speedily resumed and is now perfectly solvent.

Mr. JOHNSON of Indiana. I understood you to say you did not suffer from a scarcity of money for marketing your crops?

Mr. McLAURIN. We generally have plenty of money to market the crops. Our terrible time in the South is in the summer and spring, when everything runs on credit, and that was why I was so much impressed with Col. OATES'S argument. He evidently understands the situation in the South.

Mr. JOHNSON of Indiana. What I am driving at is this: Whether there has occurred at various times recently in the history of your people a scarcity of money other than what you cite as having occurred in the last four or five or six months, or is that simply an unusual condition?

Mr. McLAURIN. It is an unusual condition. They will send from New York all the money we want to market the crop in the fall: there has never been any trouble about that. There is no scarcity of money at some price, but sometimes there is a little scarcity of change, and always a low price.

Mr. WARNER. You are dependent upon the actual currency being forwarded from New York about three months every year?

Mr. McLAURIN. Yes, sir.

Mr. JOHNSON of Indiana. You have never had any trouble about it before?

Mr. McLAURIN. Not until now, except with low prices.

Mr. JOHNSON of Indiana. Your remedy is designed to meet this specific trouble which existed?

Mr. McLAURIN. Yes, sir.

Mr. JOHNSON of Indiana. Then it is not necessary for the general condition which has prevailed there?

Mr. McLAURIN. No, sir.

Mr. COBB of Alabama. I would state that that the farmers had to pay too much interest for this money which comes from New York.

Mr. HAUGEN. How do you expect to get this money out of the Treasury?

Mr. McLAURIN. I just answered Mr. WARNER; by the way of the deposits of which I spoke.

Mr. SPERRY. You would have it sent down by express?

Mr. McLAURIN. No, sir; the question of the gentleman from Indiana was about the scarcity of money in general, and that opens up a big question: and whenever you come to study that and reason it out you will see what caused the organization of the Farmers' Alli nce and gave birth to the subtreasury bill and every measure of that kind. It is just like the working of the laws of evolution, and it is going on now and getting worse and worse, and will continue to do so unless there are some means devised to remedy it, by giving elasticity to the circulating medium.

Mr. SPERRY. You attribute the low price of cotton to the want of money, to the want of circulating medium?

Mr. McLAURIN. I certainly do.

Mr. SPERRY. Mr. CATCHINGS in his speech attributed it to two extraordinary large crops, and said that the agricultural associations throughout the South were trying to get together in some way and curtail the output of cotton.

Mr. McLAURIN. I listened to Gen. CATCHINGS'S speech and I thought it was one of the best speeches from his standpoint that was made on the floor of the House: but he did not state the condition of the South, and the causes of our poverty correctly, and I believe that if I had the time I could answer the argument, because it was the special pleading of a trained lawyer, from the Wall street standpoint.

Mr. SPERRY. The Statistical Abstract shows that the two crops of 1889 and 1891 were two of the largest crops you had, and that the surplus in sight was so great that it caused the low price in the market.

Mr. McLAURIN. The price is dependent upon the volume of money.

Mr. SPERRY. Rather than the volume of the product in sight?

Mr. McLAURIN. Yes, sir; that is my idea.

Mr. SPERRY. That is absolutely different from anything I know.

Mr. McLAURIN. Just let me ask you a question, if you will pardon me. From the Statistical Abstract of 1892—I do not know I can give the exact figures, but I can give you the idea. In South Carolina in 1873 there was 973,158 acres in corn and there was raised thereon 9,245,000 bushels, the value thereof being $8,690,300. In 1892 South Carolina had in corn 1,691,677 acres and raised thereon 16,713,000 bushels, the value thereof being $9,526,000. Thus we have in 1873 and 1893 an increase of over 63 per cent in the number of the acres, of 80 per cent in bushels, and less than 10 per cent in value. You can not account for this if the volume of money be not taken into consideration.

Mr. SPERRY. I do not understand you; perhaps the rest of the committee do.

Mr. McLAURIN. If I could get the Abstract I could explain it to you.

Mr. COX. He means that the increased price received from the crop of 1890 was not equivalent to the smaller crop of cotton made in 1880, when money was more plentiful.

Mr. McLAURIN. I do not want to undertake to go into all that; but I got the idea—I may be incorrect—that if you take the amount of money in circulation and the amount of crop made, and take the decrease in the amount of money in circulation and the increase in the crop, and run them down each year together, a man can not avoid the conclusion that the volume of money has an effect upon the price of products.

Mr. COBB of Alabama. Anything which influences its price at Liverpool has an effect upon the Southern prices. Does it control it?

Mr. McLAURIN. I think so. That is the place where the price for cotton is fixed for the world.

Mr. SPERRY. If it is true that the Secretary reported that there was more money in circulation in 1890 than in 1880, then, on your theory, it ought to be higher?

Mr. McLAURIN. I know the Secretary of the Treasury can get up some very pretty reports, but I agree with Mr. HALL that we have learned not to have a great deal of confidence in them. I do not believe that, on the average, there is over $1.50 per capita in circulation in South Carolina the year round.

Mr. WARNER. You mean outside of the bank reserve?

Mr. McLAURIN. Yes, sir. Now, you take it in New York, where it is stated there is $272 per capita in circulation, and in South Carolina, according to the same statement, there is $12.40. Well, I have no doubt that $272 in New York is about right, but there is not even the $12.40 in circulation in South Carolina.

Mr. SPERRY. Just wait one moment right there. I do not care how much per capita is in circulation. That is a greenback idea. My suggestion was that there was more circulation in 1890 than in 1880, and the Treasury statistics as given in 1880 and 1890 are on the same basis exactly and the bank reserves remained the same, and the detailed statements of the different classes of money remained the same, and relatively it is precisely the same in 1890 as in 1880, and with this difference there is more volume in 1890 than in 1880?

Mr. McLAURIN. And more people in 1890, too.

Mr. SPERRY. So, if the Treasury statement is not correct in 1890 it was not correct in 1880, but it was made up in the same way by the Department, and the point I am trying to make, and which I wish to bring to your attention, is that in 1890 there is more money in circulation according to the Treasury statement than in 1880 according to the Treasury statement. Now, on your theory that it is the volume of money which makes prices, will you explain to the committee why, in 1890, with a larger volume of money, prices are lower than 1880 when we had a smaller volume of money?

Mr. McLAURIN. I do not admit as a matter of fact there is as much money in circulation now; as a practical fact I can not admit that.

Mr. SPERRY. Then you dispute the detailed figures of the Treasury of the United States in relation to the amount of money in circulation?

Mr. McLAURIN. In circulation among the people; I know it is not in South Carolina.

Mr. SPERRY. How do you account for the fact that the New York banks are surrendering their circulation now?

Mr. McLAURIN. I do not know unless it is for speculative purposes or to produce another panic.

Mr. SPERRY. You would not conclude that they were surrendering that circulation because they could not properly use it?

Mr. McLAURIN. Well, I would not think they would keep it outstanding if they could more properly draw it in. I am certain they would do what they thought best for their own interest.

Mr. COBB of Alabama. I do not know whether I understood you. Do you mean the volume in circulation in this country controls the price of cotton in the South?

Mr. McLAURIN. No, I mean the amount in circulation for the purpose of buying that cotton; I do not care where it is.

Mr. COBB of Alabama. You agreed to my statement just now that the price of cotton in South Carolina was based on the price at Liverpool?

Mr. McLAURIN. Yes, sir.

Mr. COBB of Alabama. If that be true, how can your other statement be true, that the amount of volume in circulation in South Carolina fixes prices?

Mr. McLAURIN. I was answering Mr. SPERRY'S question then in regard to the correctness of the figures of the Treasury Department of the amount of money in circulation.

Mr. SPERRY. You said that when the crop was harvested you had an abundance of money, which came in there from New York?

Mr. McLAURIN. We had an abundance of money, but they fixed the price of our cotton by combination between Liverpool and New York, and sent just enough money to buy it at that price.

Mr. SPERRY. Then it is your opinion that Liverpool and the New York Cotton Exchange are in a combination?

Mr. McLAURIN. You know very well, and everybody knows, there is a combination of those exchanges to hammer the price of cotton down or up for speculative purposes, without regard to the amount of cotton produced.

Mr. SPERRY. You have the opinion that a great body of fiat money issued by this Government would break up all possible combinations to control prices?

Mr. McLAURIN. I am only in favor of fiat money to a certain extent.

Mr. SPERRY. Not unlimited?

Mr. McLAURIN. No, sir.

Mr. WARNER. I understand the gentleman that his proposition is to only meet an emergency?

Mr. McLAURIN. Yes, sir. I agree with what Mr. GEORGE says in that speech, and it seems to me very sensible. He says:

> We have a hundred million dollars in gold as a fund, as Mr. Beck says, to guard the greenbacks. We have three hundred and forty-six millions of these greenbacks or legal-tender Treasury notes. Mr. Beck says, and he has never been successfully contradicted, that $50,000,000 is ample to guard the $346,000,000. If that be so, and he proves it, as I have read in the hearing of the Senate, it is clear that we may increase the volume of greenback currency double the $346,000,000, and it will remain a safe, sound, redeemable currency equal to coin.

I do not make any such statement, but I say it would be safe on a reserve fund of 17½ per cent.

Mr. SPERRY. Is it your idea that the price of cotton is fixed in Liverpool?

Mr. McLAURIN. I have always heard that and always read it was true, and have no doubt it is so. They fix it low enough, God knows. It is fixed very much without any consultation with the man who makes the cotton, and at such a price that everybody makes a profit from it except the man who raises the cotton and who has the best right, therefore, to expect a profit.

Mr. SPERRY. Now, if the cotton price is fixed in Liverpool, that is a gold price?

Mr. McLAURIN. Yes, sir.

Mr. SPERRY. Liverpool draws London exchange to pay for cotton, and that is gold. If you state that the price of cotton is fixed in Liverpool in gold, how can any quantity of paper in South Carolina help you out?

Mr. McLAURIN. I do not want to go into a discussion of the whole financial system.

Mr. SPERRY. Only a little piece of it.

Mr. McLAURIN. Yes, sir. But my idea is this, that with a proper system of finance, with something that was fair and just, that we would break up the fixing of the price of our cotton in Liverpool, and that America can fix the price of her products here. My whole argument was directed against your allowing these men in Liverpool, foreigners, to come in here and fix the price of our cotton, wheat, or anything else, which they can only do by our adopting the single gold standard.

Mr. HAUGEN. You believe in manufacturing the cotton in this country?

Mr. McLAURIN. Yes, sir.

Mr. SPERRY. If you intend to break up Liverpool prices and London exchange, do not you think you ought to have more than $125,000,000?

Mr. McLAURIN. Yes, sir; but we will take that if we can get it.

Mr. JOHNSON of Indiana. But you think they could increase that quantity?

Mr. McLAURIN. Yes, sir.

Mr. JOHNSON of Indiana. Could you upset the Liverpool and London exchange with $125,000,000?

Mr. McLAURIN. No; I do not propose to do that.

Mr. HALL of Missouri. I object very much to the gentleman from Connecticut mingling and obscuring the distinction between price and value as utterly as he does. Nobody maintains for a moment that the price of cotton is fixed in Liverpool.

Mr. SPERRY. Do you understand there is any difference between price and value?

Mr. HALL of Missouri. Yes, sir; and everyone who has studied the works of political economists understands that thoroughly, and would agree with what I say.

Mr. SPERRY. Following the suggestion of the distinguished political economist from Missouri, will you describe to this committee the precise difference between the price and value of a commodity when it is put on an auction market?

Mr. McLAURIN. I have no doubt that the gentleman from Missouri can describe that with a great deal more accuracy and ability than myself, and I will yield the floor to him. I might say, however, that value is utility, pride is debt-paying power, and while the price is artificially fixed in Liverpool, the value of cotton is determined by the number of naked backs it will clothe, and is the same whether they get our cotton at 5 cents or 10 cents per pound.

Mr. HALL of Missouri. I am very glad to take the position. I maintain, with Prof. Taussig of Harvard, that the man who does not draw a distinction, and keep it fairly in his mind, between price and value is a mere tyro. Gentlemen, I claim that the political economists—and I do not pride myself on that—and the gentleman, I suppose, sprays down his blood by speaking of me as a distinguished political economist from Missouri——

Mr. SPERRY. You spoke of other political economists agreeing with you on the subject.

Mr. HALL of Missouri. I think there is not a single writer that I have examined, and I think I cited some fourteen in the argument I made on the floor of the House on this question——

Mr. SPERRY. And a very good argument it was.

Mr. HALL of Missouri. Thank you. I know in that argument I cited the leading political economists of the different universities of this country and abroad. I quoted Adam Smith, the professor of Amherst, the professor of Williams, and Yale, John Stuart Mill, Prof. Taussig of Harvard, Prof. Sumner of others, in which they lay down the doctrine and principle that any increase whatever in the volume of the circulating medium increases prices, and any decrease in the volume decreases prices. Now I am going to quote John Stuart Mill's exact language, and refer the gentleman to volume 3, chapter 5, section 4, where he states:

> That an increase of the quantity of money raises prices, and a diminution lowers them is the most elementary proposition in the theory of currency, and without it we should have no key to any of the others.

Now I take this illustration. There is a building, say here in this city, and if the circulating volume in the United States was $25 per capita, which it is not, and the price of that building in the market will sell for $10,000, increase the volume of that currency to $50 per capita in circulation, and the price of that building will be double that amount. If this volume per capita should be lessened, the price of that building will follow the lessening of the per capita. I can explain why that is. In increasing the volume of the circulating medium, that increases the value of the crops not a dollar; it does not affect the value of the crops at all, but it does increase the price the farmers receive, and price is what they pay their debts with.

Mr. HAUGEN. Is it not true in fixing the value of this house that it must be fixed where the house is located, and it can not be fixed in Liverpool or elsewhere, and for that reason it differs from the value of a commodity that finds its way to a general market?

Mr. HALL of Missouri. I say that the value of the house is not changed by the increase of the volume of money; the value remains the same, but the price is increased, and if that man has any debts to pay he pays his debts with price and not value.

Mr. COBB of Alabama. I would like to put this question, and have you draw a distinction: What is the distinction between the effect which the Liverpool market has upon our cotton crop and the increase or decrease of volume in our own States?

Mr. HALL of Missouri. The effect of increase or decrease of

volume in our own States is the increase or decrease of the price of products.

Mr. COBB of Alabama. Without reference to Liverpool?

Mr. HALL of Missouri. I can not say without reference to Liverpool, but a correct statement of the matter would be this, that by limitations and surroundings, the supply and demand being the cause in one instance, the same it is in other instances, then the price would be affected by the volume of circulation; it is a thing like real estate that is affected by the volume of the circulating medium.

Mr. COBB of Alabama. Then, if the cotton producer gets more for the cotton he pays more for anything he consumes.

Mr. HALL of Missouri. There is no question about that. But what I want to say is a report has been handed in from the United States Treasury and read in the United States Senate not over thirty days ago, in which it was stated that the volume of the debt of the United States to-day is $31,000,000,000, and that debt has to be paid by price and not by value; and this gentleman comes forward here and argues the proposition that we increase the volume of the currency——

Mr. COBB of Alabama. Would you advocate an inflation of the currency simply in view of the debtor and creditor relations?

Mr. HALL of Missouri. Understand me in this way; when I was asked by a National Alliance, the State Alliance, and by the suballiance known as my Congressional District Alliance, if I would agree to a per capita volume of $50, I said, "No, sir; I will only pledge myself to vote one way, that you shall have the right to pay your debts in the same value of money as when the debt was contracted, but if $50 or $20 enables you to repudiate one cent of your honest debt I shall never vote in Congress in favor of that proposition, but I shall demand, as far as my ability is, that you have the right to pay your debts in the same volume of money as when the debt was contracted; and that is a doctrine that is sustained by all writers, and is a doctrine that is sustained by the plainest tenets and principles of Christianity."

Mr. SPERRY. Mr. McLAURIN and I were not talking about this house on the other side of the street, but we were talking of cotton in Liverpool. Will you describe to this committee the difference between the price and value of cotton sold in the exchange of Liverpool?

Mr. HALL of Missouri. I will say, with all due deference, that I thought I made that question clear to everybody and I thought even to yourself, but I see I have failed.

Mr. SPERRY. You have drawn an illustration of some house on the other side of the street and——

Mr. HALL of Missouri. I said an increase of the volume of money in the United States does not affect the value of the cotton in Liverpool as between value and price; supply and demand control it; but the price of cotton is determined by the volume of the circulating medium in this country.

Mr. COBB of Alabama. Did you ever know cotton to sell in America at a price higher than the value in Liverpool?

Mr. HALL of Missouri. I will answer that, gentlemen, in this way: If you mean that the value of the cotton in the United States has never exceeded the value of the cotton in Liverpool, I answer you no; but if you mean the value of the cotton in Liverpool has not been different from the price of the cotton in the United States, I answer you yes.

Mr. COBB of Alabama. I am talking about what the farmer gets in his pocket which jingles as money. Does he get for his cotton 1 cent or part of a cent per pound more than the quotations from Liverpool every day? I do not care whether you call it price or value. I am talking about the money which he gets. Is it not a principle of political economy that where a considerable portion of a production of a country is exported, that that part of it which remains at home is always governed by the export price?

Mr. HALL of Missouri. There is no difference whatever on that question. That is an old settled doctrine that the price of the surplus exported fixes the price of the home product. Of course they are using the word price here in relation to the word value and in relation to the question here——

Mr. COBB of Alabama. I say that this distinction has nothing to do with the amount of money the farmer puts in his pocket.

Mr. McLAURIN. Gentlemen, I will state that I am indebted for your patient hearing and the courtesy with which I have been heard.

APPENDIX.

Mr. HARTER of Ohio has introduced a bill providing for an increase of currency by enlarging the amount which national banks may issue upon their deposits of bonds. We both have the same objective point, to wit, an increase of the volume of currency, with this difference:

Mr. HARTER proposes to give the benefit accruing from such increase to the national banks, in order to benefit a privileged class.

Mr. McLAURIN proposes the Government to make the increase for the benefit of all the people. In this connection I submit a table showing two things:

First. The enormous profits which have already accrued to this privileged class, called national bankers.

Second. A table showing, in connection with the questions of Mr. SPERRY of Connecticut, the effect of contraction upon the price of products.

BANK PROFITS.

The following table, showing the bank profits for a series of years, is given below. It is taken from the World Almanac, and is presumably correct:

Year.	Capital.	Net earnings.
1872	$465,676,023	$58,075,430.05
1873	488,100,951	65,948,578.00
1874	589,938,284	59,689,931.00
1875	497,864,833	58,949,224.00
1876	500,472,271	43,658,152.00
1877	486,324,852	34,857,960.00
1878	470,331,890	30,600,589.00
1879	455,132,056	31,551,860.00
1880	456,315,002	51,187,034.00
1881	458,934,485	53,632,563.00
1882	476,947,715	53,321,234.00
1883	494,640,140	54,047,148.00
1884	518,605,725	52,302,783.00
1885	534,699,605	43,625,497.00
1886	532,556,921	55,165,385.00
1887	578,462,965	64,509,869.66
1888	583,538,144	65,362,386.73
1889	590,322,518	59,618,205.07
1890	625,089,645	72,055,163.52
1891	760,198,201	75,763,514.00
Total earnings		1,081,988,586.98

The following figures, taken from the United States Statistical Abstract, issued by the United States Treasury Department, shows the effect of a contraction of the currency, and falling prices on farm products:

Year.	Products.	Aggregate crop.	Home value.
1867	Wheat.....bushels..	212,441,400	$421,796,469
1892	.....do.....	515,949,000	322,111,881
1867	Corn.....bushels..	768,320,000	610,948,390
1892	.....do.....	1,628,464,000	642,146,630
1867	Potatoes...bushels..	97,783,000	89,276,830
1888	.....do.....	202,365,000	81,413,589
1867	Hay.....tons..	26,277,000	372,864,670
1888	.....do.....	46,643,094	408,499,565
1867	Tobacco....pounds..	313,724,000	41,283,431
1888	.....do.....	565,795,000	43,656,665
1870	Cotton.....bales..	3,114,592	303,600,000
1891	.....do.....	8,652,597	366,863,788

Election Laws.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 4, 1893.

The House having under consideration the bill (H. R. 2331) to repeal all statutes relating to supervisors of elections and special deputy marshals, and for other purposes—

Mr. LANE said:

Mr. SPEAKER: I had intended to say many things upon the pending question, but, having listened to the protracted debate that has taken place, I have heard much of what I intended to say stated by my colleagues and I do not care to repeat it; therefore, I will detain the House but a very few moments on this occasion in presenting a few views somewhat different, perhaps, from any that have yet been presented.

So far as this bill relates to my people and myself, it was repealed on the 7th day of last November, and I am here merely to see that the proper judgment is rendered by this House. During my term of service in Congress I have never before been so happily situated as I am now. On almost every question that may come before the House I have positive instructions from my people, and when those instructions are carried out I will regard my work for this session of Congress concluded. One of my instructions is to see that this Federal election law is repealed. Another is to see that the McKinley bill is repealed and proper legislation put in its place.

A further instruction is, for the formation of a financial sy-

tem and a repeal of the act of 1873 demonetizing silver. If these things were done, and what is called the ordinary legislation of Congress disposed of, this House would deserve well of the people of the country.

In my judgment, Mr. Speaker, this law which we are now proposing to repeal should never have been placed upon the statute book. The effect of appointing a deputy marshal under this bill, from the time of its enactment to the present was to make him a hired assassin, or a hired spy, or a hired voter.

Every man who has ever acted as a deputy marshal under this law has occupied some one of these positions, and there is nothing that the American people despise so much as political tyranny. This law was never introduced or passed for the purpose of securing fair elections. It was never passed for the good of the people. It was passed by a party that had acquired control of this Government purely by accident. In the division of the Democratic party in 1860 the Republican party came into power, and every national election that it has carried from that time to this has been carried by fraud or by force. There never has been in this country at any time since the organization of the Republican party a majority of the legal voters in favor of the Republican party.

I have heard much in this and in other Congresses about the right of the majority to rule this country, yet strange to say for thirty years in this country the American people have been controlled and their Government exercised by a minority of the voters of the country. You can take every poll, examine the whole history, and you will find the fact to be that since the organization of the Democratic party a majority of the voters of this country have been Democrats all the time, and that every election since that of 1860, when the Democratic party divided, which has been carried by the Republicans has been carried by force or by fraud.

Why, my Democratic friends, I do not want you to make this public, but the fact is that the leaders of the Republican party know nothing about governing this country. They have no capacity for it. They do not understand the Government. They do not understand its organization. They do not understand the nature of the States nor their relations to the General Government. They have no conception of it. You see evidence of that everywhere. You saw it displayed here this session. The leader of the Republican party in this House (Mr. REED of Maine) was studying for two weeks to understand the difference between cloture by the Speaker of the House and cloture by a majority of its members. I think he tried his best to understand it, but he does not understand it yet. Yet gentlemen on the other side of this Chamber assume that all the parliamentary law of this country lies within the compass of his brain. The Republican leaders have no capacity to govern this country because they do not understand anything about it. [Laughter and applause on the Democratic side.] That is the trouble with them. Ask them what they regard as the crowning glory of this country, as its sublime essence, and what will they tell you? They will refer you to our standing Army, to our great Navy, or to our seat of government here in Washington. But, Mr. Speaker, when you reflect upon the matter Russia has a greater army, and England has a much larger navy. When the leaders of the Republican party look for the glory of our Government they look at this Capitol, at its powers to enact laws, and at the power of the General Government.

When a Democrat looks for the glory of his country he looks to the homes of its people, to its happy citizens, to its prosperity, to its schools, to its churches, to its domestic tranquillity. [Applause on the Democratic side.] The Republican party want to crown their officers and leaders, but the Democrat believes in crowning the humblest citizen. That is where he believes the crown should be. A Democrat believes that in this and every other country the people are the source of all power and that this Government was created by the people for their own use; and when properly understood it is the best form of government ever devised by man. Government is indispensable to the human family. When man was created by God he had conceptions of right and wrong.

In a state of nature man understands that he must be honest; that he must harm no one and that he must render to every man his due.

We read that when man was placed in the Garden of Eden, the very first time he disobeyed the law he went off and hid himself; he was ashamed of the act he had done. In a state of nature man understands some rights. But as the human race multiplies legal government becomes necessary. We must have government; and in fact we can have no government unless we have laws.

But our Government was not the first attempt in that direction. The world had existed for six thousand years before our fathers landed on these shores and before our form of government was created. There had been not only government but free government for hundreds and thousands of years before our attempt at free government was devised; but never before in the history of the world was such a form of government as ours devised. The first idea of our present form of government was conceived by the fathers of our Republic, for which they deserve the admiration of ourselves and of generations yet unborn.

In all free governments there are two classes, those who govern and those who are governed. The people being the source of all power, they desire to form a government within certain limitations; hence a convention of the people is called, and certain written propositions are agreed upon as a basis of government, and certain officers are named to make and execute laws. This written instrument is called a constitution or charter, or it might be called a lease of power granted by the people to those who are to exercise the powers of government.

The necessity for such a thing as a constitution grows out of the fact that the persons in power, as a general rule, assume more power from year to year than is to the interest of the people, and therefore a constitution is a limitation as well as a grant of power. In this country we have now forty-four State governments, and each State has a separate constitution, providing in various cases what the State officers shall do, and how his rights are reserved to the citizen. These provisions are simply a limitation on power; that is practically what they are. We have now forty-four States, but when the Government was formed we had only thirteen. These were separate sovereign States. It was thought wise by our fathers that there should be joint operation for certain purposes among these several States; that there should be joint action, coöperation. So the people formed in the first place, by treaty relation, a combination of all the States, called at first the old Confederation. It was afterwards deemed necessary to form a "more perfect union," and this "perfect union" was formed by the adoption of our present Constitution, which was done, not by the several States, but by the people.

When you look at the provisions of the Constitution you will see there are many grants of power while there are a great many more reservations of power, the reservations being more than two to one. These reservations declare what Congress shall not do; declare that certain powers shall not be exercised by the General Government. The powers conferred upon the General Government were bestowed in order to enable it more effectually and to enable the people of the country more effectually to transact their business with foreign nations. Certain powers were given to the General Government exclusively, as the power to regulate the coinage of money and to regulate its value, and similar powers. In the construction of these powers much argument and contention has arisen.

Our Government is unique—the most complete ever devised by man; yet, strange to say, our fathers, with all their wisdom, left a certain part incomplete. When I read that Constitution as a boy I had no trouble in understanding that this Constitution was perpetual, this Government was to go on forever. Yet, when I afterward read the speeches of the great Patrick Henry and some of his compeers, I saw that they had an entirely different view. They held that this was not a perpetual union, but that the power that had granted this authority had the right to withdraw it at pleasure.

This doctrine, in my judgment, culminated in the troubles of 1861-'65. Some of our people on both sides of the House say that the colored man was at the bottom of the trouble, that he brought on the great war. My friends, that view never occurred to me at all; I have never held that view for a single moment. I think the people of this country inherited the civil war as they inherited the Constitution.

The question whether the Union formed by the adoption of the Constitution was perpetual or not was left an open question by the framers of that instrument. It had to be settled in the fullness of time, and it was settled permanently. The liberty of the colored race may have been an incident of the war, but it could not be waged for that purpose.

The cost in treasure and blood was too great a sacrifice to be made for the liberty of that race. No, sirs; the future impartial historian will write it down as a war for the preservation of the Union.

And in that wonderful struggle for the preservation of the Union we saw the sublimest spectacle ever presented to the world. Multiplied thousands on both sides bravely struggling for what they thought to be right. In that sanguinary contest the American soldiery displayed a heroism and magnanimity never equaled in the history of the world. But peace came at last, as it always must come, and the grandest pageant of the entire drama was to see 1,500,000 men coming back from the red field of battle and dispersing, as the snow would dissolve under a June sun, and

engaging in the useful occupations of life. That was the sublimest spectacle seen by this country.

It is true that the human heart still takes great pride in the glory of arms, and even among Christians the art of war is regarded as an honorable pursuit, but to the more advanced Christian thinkers the command by the Prince of Peace to Peter, "Put up again thy sword into his place; for all they that take the sword shall perish by the sword," must be regarded as a command to all Christian nations to abandon the art of war forever.

And if war itself should be forsaken how much more should the spirit of hate and ill will engendered by war be abjured, and especially so when the object of such hatred are our own countrymen, flesh of our flesh and blood of our blood.

Some seem to count with delight the number of the slain who fell in the Wilderness or at Gettysburg and other battlefields, and desire to keep the memory of those events green with story and song. On one side we hear "In Dixie's land," etc., while another takes great pleasure in singing "Marching through Georgia."

Mr. PICKLER. Don't you?

Mr. LANE. No; I do not in the sense meant here.

Mr. PICKLER. Are you sorry we "marched through Georgia"?

Mr. LANE. No. You take pleasure in singing "Marching through Georgia;" but what does that history record. It records that in a country which had lived for one hundred years in prosperity homes were made desolate, women and children were driven to starvation, and a thousand miles or more of this beautiful country of ours laid waste. You enjoy it, I have no doubt; and so does the Indian savage enjoy the work he has done when he counts the scalps upon his belt.

Mr. PICKLER. You think that march was wrong?

Mr. LANE. No; I do not.

Mr. PICKLER. Then what are you finding fault with?

Mr. LANE. I am saying that after the lapse of thirty years the spirit of proscription and hatred should be abandoned.

Mr. PICKLER. Who brought this bill into the House to stir up passion and feeling between parties?

Mr. LANE. Why, the Democratic party brought it here, and we intend to put it through; and let me say to the gentleman and his political party that their lease of political life is ended.

Mr. PICKLER. We do not care a picayune for your bill; it is a "back number." We say that this Congress should attend to the business of the country, rather than stir up partisan strife.

Mr. LANE. My friend, what I want is that thirty years after the close of the war the spirit of the war shall cease in truth and in fact. Crimination and recrimination should stop. We have had too much of it.

Mr. PICKLER. You are making the most inflammatory speech we have heard yet on the floor. No Southern soldier ever pretended to make such a speech as you are making.

Mr. LANE. The gentleman does not understand me. [Laughter.]

Mr. PICKLER. The Southern soldiers were all right as far as fighting was concerned; they were mistaken. It is generally somebody else who makes the trouble now. I do not believe there is bitterness between the Union and Confederate soldiers.

Mr. TALBERT of South Carolina. Is not that the PICKLER who introduced the subtreasury bill?

Mr. PICKLER. Yes, sir; at the request of the Farmers' Alliance of my State I did. I believe in all of my constituents being heard, whatever their party.

Mr. LANE. Mr. Speaker, I decline to yield any further.

I had hoped, sir, that in my lifetime I would see this disposition to bloodshed and destruction all passed away from the minds of my countrymen. In my judgment, the day has arrived when the glory of the soldier is gone and a greater glory is here. The music that followed the soldier in his trail was the cry of the widow and the wail of the orphan. We have a higher civilization now, a grander destiny.

Are we still to live only with the thought of putting our hands in the blood of our fellow-men; and are we never satisfied, and are we never happy until we can feel his hot blood steaming up out of his heart? No, sir; thank God that day has passed. We want a higher type of manhood and a nobler civilization. We want no force in this country but the force of reason; no arms but the arms of love. We are all the children of a common Father. We live in this land. It is our common heritage. It is our own country, yours and mine. What is for your good and for your prosperity is for my good and for my prosperity. Why should we have laws in force to make strife and struggle between us, or such laws as we saw advocated in the last Congress (the force bill), when a gentleman rushed down the aisle like a cyclone stating that he wanted to put a bullet behind every ballot? Well, the other fellow, perhaps, would want to put a bullet behind his ballot, and then what is the result? That is murder; that is war; that is hell. That is just what it means. No; what we want is peace, peace and good will to all men. Nearly thirty years ago the "great commander," said: "Let us have peace." "Peace hath her victories no less renowned than war," and in her gentle path man is in his happy and natural state, while war is his corruption and disgrace. Our souls should thrill with a nobler impulse than the memories of battles lost or won.

Must the legislation of this body be always framed with a view to what transpired thirty years ago? Will we neglect the living present and a hopeful future in contentions about the past; about matters that we could not change if we would?

It is our duty to legislate for the present and the future; for a more exalted benevolence and extended happiness for mankind. The laws proposed to be repealed should have no place on the statutes of a free people.

Mr. PICKLER. Let me ask the gentleman a question. Do you not think the war is over?

Mr. LANE. Yes; thank God, it is over. What I am complaining of is that from the remarks we hear on this floor one would suppose that it was still going on. I notice here that every man on this side who gets up to speak seems to be apologizing because he was in the war, and somebody over there on the other side, every time he speaks talks about "doughfaces" and "copperheads" and "rebels" and all that sort of thing. Gentlemen, that makes controversy. It makes disagreement, it makes unpleasantness where we should have peace and good will.

Mr. PICKLER. We are not ashamed of the war. You seem to be.

Mr. LANE. Ah, Mr. Speaker, that is just where the gentleman makes his mistake. I am not ashamed of it. What I complain of is that you never let it rest. Why not talk of the war of the Revolution. Let me ask the gentleman, what did you regard as the noblest act in the life of Washington? In what aspect of his public life did he, in your judgment, stand highest? When he was at the head of his troops?

Mr. PICKLER. I do not regard him as any nobler than Abraham Lincoln. Do you?

Mr. LANE. I will tell you when I regarded him as the noblest. Not while leading his troops in the Revolutionary War; not when he was tramping over the frozen snow with his wasted columns fighting for the liberty of this country, but I regard him as the greatest and the grandest when he refused the gift of a kingly crown. That is what made him, in my estimation, the greatest man that ever lived.

Mr. PICKLER. Now, will the gentleman allow me, in all quietness and seriousness, to ask him a question? When you get right down to the honest fact, did not the Democratic party bring in this measure to repeal the Federal election laws simply to try to carry the elections in Virginia against the Populists?

Mr. LANE. I never heard of it before.

Mr. PICKLER. Is not that true?

Mr. LANE. No, sir; the Democratic party came here to repeal these laws, and they will be repealed.

Mr. PICKLER. Why do you want them repealed? Who is hurt by them? There is not a Southern man who does not say that the law is a dead letter. The laws are not in their way.

Mr. LANE. I hope not in any person's way.

Mr. PICKLER. Then why do you want to wipe them out?

Mr. LANE. I will tell the gentleman in a moment.

Mr. SPRINGER. For one reason, in the elections in Chicago they involve a useless expenditure of the public money.

Mr. PICKLER. If you can not have a fair election in Chicago without them, let them stand.

Mr. SPRINGER. They have involved an expenditure of over $200,000 there.

Mr. PICKLER. If you can have a fair election in Chicago for $200,000, it is cheap.

Mr. SPRINGER. We do have fair elections there.

Mr. PICKLER. Well, if you can have them at that cost, it will be a godsend to the country.

Mr. SPRINGER. We have as fair elections in Chicago as anywhere else in the world.

Mr. LANE. Mr. Speaker, in resuming, again I wish to say that I regard that man as the greatest who does the greatest good for the human family.

Mr. PICKLER. That is right.

Mr. LANE. I regard that nation as greatest that does the greatest good for our race; and I regard the State government as doing 99 per cent for the government of the people in this country. Why, in my part of the country three-fourths of the people have no connection with the General Government at all, unless it is in the matter of taxation. The school, the church, and the home are supported by the State. The sheriff and the

courts are supported by the State. All our local institutions are supported by the State. Therefore, the State is to use everything; and if you were to take away the government of the States of this Union, you would have the Government of England——

Mr. PICKLER. You would have a good deal less if you were to wipe out the National Government.

Mr. LANE. No one proposes to do that. But if you took away the State government you would have the same kind of a government that they have in England to-day, where a few days ago the House of Lords refused local self-government to Ireland, whose sons are famous in story and in song, and who have fought every battle except their own. Yet the House of Lords, the imperial House of Lords, refused them local self-government.

Mr. PICKLER. The gentleman is now commending a warlike people.

Mr. LANE. I am simply repeating history. Mr. Speaker, the very essence of self-government is the right to vote, and this right is conferred by the State alone; the General Government can not grant it. The distinctive feature of our form of government from all others on the face of the earth is its dual nature, two in one—each State within its sphere absolutely sovereign, capable of passing laws for the protection of the life and happiness of her citizens, and over the forty-four States floats the national flag, in which there is a star for every State; and the government of these States and nation together forms the imperishable Republic.

But, Mr. Speaker, I took the floor only for one purpose. I do not want to take up the time of the House, but I want to emphasize one point only, and that is that I am opposed to all arms and armed forces at the polls. It is not in accordance with the spirit of a free government. You can never sustain a free government along that line. This Government rests upon the will of the citizens, voluntarily expressed. To sustain my position I wish to read to my friend from South Dakota [Mr. PICKLER] an extract from Roman history. It is well to consult history sometimes.

Mr. PICKLER. That will be as pertinent as most of the gentleman's remarks upon this bill.

Mr. LANE. I think so. Rome was at one time a perfect democracy. Her people assembled together and made all their laws, and no freeman could be put to death in that nation until the question was brought before a public meeting and there discussed. Some few years before the Christian era a question came up about homes for the people, and that question was submitted at an election. Let me read what history says about it. I read from page 25 of Jones's History of Rome.

Tiberius Gracchus was in favor of a measure to give homes to the people. When the election day came the aristocrats, with their servants and hired voters, went armed to the polls, and as soon as they saw that Tiberius was surely chosen they raised a riot. The people, being unarmed, were driven off. Tiberius and three hundred of his friends were killed and pitched into the Tiber.

That is the effect of arms at the polls! Let me go down a little further in this history.

Ten years from the date last mentioned Caius Gracchus, a brother of Tiberius, secured an election where the proposition was to bestow the elective franchise upon all the freemen of Italy. On election day riots were raised by the armed mob and Caius Gracchus and three thousand of his friends were killed. This was the effect of having arms at the election.

Mr. PICKLER. Is that according to the Mississippi plan?

Mr. MONEY. The gentleman from South Dakota [Mr. PICKLER] asks whether that was according to the Mississippi plan.

Mr. PICKLER. Yes.

Mr. MONEY. When the gentleman says that, and in his interruptions of the gentleman from Mississippi [Mr. KYLE] yesterday, in my opinion, the gentleman shows himself to be in absolute ignorance of the conditions down there.

Mr. PICKLER. The gentleman from Mississippi [Mr. KYLE], whom I much respect, expressed great regard for the Australian ballot system of the State of Mississippi. I would like to ask the gentleman a question. Does the Australian ballot law in that State permit a judge to go into the booth and assist an ignorant man, if he does not know how to make up his own ballot?

Mr. MONEY. It does.

Mr. PICKLER. It is better than the Tennessee law, then.

Mr. MONEY. The law requires that he shall do it.

Mr. PICKLER. I give you due credit for that, then, in Mississippi. In Tennessee it is not so.

Mr. LANE. The election in Rome to which I am referring was held about eighty years before the birth of Christ, and that was the last election Rome ever held. Arms and elections do not go hand in hand. In the Roman forum where Cæsar stood and ruled 140,000,000 of people, to-day there is a cattle pen; and in the ancient temples of Rome the owl and the bat make the night hideous with their hiss and groan.

Her liberty, civilization, arts, and glory are all gone, and mainly due to the use of arms at the polls. Let us not imitate her example.

I want to call your attention to a sublimer illustration. I have here an extract from the speech of Edward Everett, delivered in 1835, before Amherst College. He says:

Beneath a free government there is nothing but the intelligence of the people to keep the people's peace. Order must be preserved, not by a military police or regiments of horse guards, but by the spontaneous concert of a well-informed population, resolved that the rights which have been rescued from despotism shall not be subverted by anarchy.

It must be preserved by the people. Remember, my friends, for twenty years——

Mr. MURRAY. Mr. Speaker, will the gentleman yield to me for a question?

Mr. LANE. Yes, sir.

Mr. MURRAY. I understand the gentleman to say that the polls must be kept free from military interference?

Mr. LANE. I do.

Mr. MURRAY. What, then, would you do with an armed mob at the polls that would beat the voters away?

Mr. LANE. You have the constables, the sheriff, and behind them the posse comitatus; and the militia behind them.

Mr. MURRAY. But suppose that they overcome the constable, the sheriffs, and the officers of the county?

Mr. LANE. You are supposing an unsupposable case.

Mr. PICKLER. What does the gentleman think of the fairness of Mississippi in requiring an ignorant colored man to explain the constitution of the State before he can vote?

Mr. LANE. I think that Mississippi has the right to do that if she thinks proper, and you have no right to interfere.

Mr. PICKLER. I ask the gentleman from Mississippi?

Mr. MONEY. You are entirely mistaken.

Mr. PICKLER. Is not the object to disfranchise them?

Mr. MONEY. It is not, and it does not do it either.

Mr. PICKLER. How many colored men are there who can read and can explain the constitution?

Mr. MONEY. That is not the question at all.

Mr. PICKLER. That is the question.

Mr. MONEY. I say it is not the question. I say that every man who can read the constitution can vote; therefore it is an extension of the clause; instead of being a restriction, it is an extension of the right to vote.

Mr. PICKLER. Your claim is that men who can read the constitution can vote; is it not a fact that nine colored men out of every ten can not read a word?

Mr. MONEY. That is a matter——

The SPEAKER. The gentleman from Illinois is entitled to the floor.

Mr. PICKLER. Is not that the fact?

Mr. MONEY. Yes, sir.

Mr. PICKLER. Well——

The SPEAKER. The gentleman from Illinois is entitled to the floor.

Mr. LANE. I was trying to keep it.

Mr. PICKLER. Mr. Speaker, I thought I was proceeding with the permission of the gentleman from Illinois.

The SPEAKER. The gentleman was not addressing the gentleman from Illinois, but was addressing the gentleman from Mississippi, who was not entitled to the floor. When a gentleman desires to ask another gentleman a question he must first address the Chair.

Mr. PICKLER. I think the time of the gentleman from Illinois ought to be extended, as he has been interrupted. I ask that it be extended.

Mr. LANE. I do not want any more time. I think these laws should be repealed as a means of preserving peace at the polls. We do not need it in my part of the country, because my country has a free ballot and a fair count. That is what you want. No man has the right to go to the polls armed any more than he has a right to go to church or to the courts armed. We do not allow it. The law of my State prohibits the citizen from carrying concealed weapons, and when our elections are held our people are as peaceable as when they go to church. In twenty years I have not heard of a fraudulent vote in my country, unless it was purely accidental—in a case where some young man voted, thinking he was of age when he was not. All parties there have the liberty to go and vote their sentiments as they see proper, but where you have men armed at the polls you have coercion and intimidation.

These election laws should be repealed and the question of elections should be left with the several States, where they properly belong. There is no constitutional authority for these election laws; they are unpatriotic, un-American, and the last traces of them should be erased from the statute books.

Election Laws.

SPEECH
OF
HON. CLAUDE A. SWANSON,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 7, 1893.

The House having under consideration the bill (H. R. 2331) to repeal all statutes relating to supervisors of elections and special deputy marshals, and for other purposes—

Mr. SWANSON said:

Mr. SPEAKER: I have listened very attentively to this discussion, especially to the speech of the gentleman from Iowa [Mr. HEPBURN], who has just preceded me. Belonging to a younger generation, which did not participate in and knew nothing of the passion and strife of the late civil war and just entering public life, I was anxious to know whether the heat and enmity engendered by that fierce conflict had subsided, and whether or not sectional animosity had yielded to a broad and high patriotism. I was desirous to know whether we of the South had to confront in the future, as we have done in the past, the enmity, abuse, and misrepresentations of a large and powerful party in the North.

I had hoped to find that the Republican party, taught by its recent misfortunes, sobered by the many woes and ills with which it had inflicted the fairest portion of this country, chastised by an outraged public sentiment at both North and South, East and West, would have abandoned its mission of sectional hate and bigotry and caught some inspiration of patriotism from the fraternity with which the American heart is now throbbing. But as this discussion has progressed these hopes have been disappointed.

The speech of the genial and pleasant gentleman just preceding me, occupying a prominent position in the councils of his party, clearly evinces the disposition of his party. I find exhibited by gentlemen upon the Republican side the same malignant spirit, the same offensive assumptions of superior virtue and patriotism, the same disposition to malign, misrepresent, and distrust the South which has ever characterized them. I find that if they again had power and opportunity they would inflict upon us ignorant, corrupt negro domination with all its dire calamities and disgraces. I find that their advent to power again would be marked by a reintroduction of the infamous force bill, with all its provisions subversive of the liberty of the citizens and of the States.

I am more and more convinced than ever that the return of perfect peace and harmony, of perfect confidence and friendship between all sections of this great country is dependent upon a complete disintegration of the Republican party and a destruction of that bigoted and narrowed spirit which animates it. To a thoughtful observer it is apparent that its death is certain and that its resurrection is impossible. It must fall because it stands antagonistic to the spirit and the genius of this age. It is preaching hate while the American heart is pulsating to the music of love and fraternity. It is endeavoring to kindle anew the smoldering flames of fratricidal strife, while the American people are gathering around the altar of a common country, drawn together by mutual forgiveness and admiration. With sectional isolation and lines stands a hindrance in the pathway of commerce, material prosperity, and development.

Against the march of liberal thought, generous sentiment, high-minded patriotism, and complete reconciliation of all sections stands opposed the Republican party, slowly retreating, but finally resisting every onward step. Having confidence in the ultimate triumph of justice and right, of fairness and good will, I believe the American people will proudly and triumphantly walk over the prostrate form of the Republican party to that high destiny which awaits them. [Applause on the Democratic side.]

This Congress, which will become memorable in the annals of our country, will mark a departure from the old to the new. We can but pity the fright with which the Republican owls of darkness watch the dawn of the bright day.

Mr. Speaker, I do not rise to indulge in crimination and recrimination between the different sections of this country. That is no part of a patriot. It is only productive of ill will and distrust. It is no part of one brother, even if the other is possessed of shortcomings, to hold these up to ridicule and exaggerate and magnify his brother's faults with view of creating an unjust estimate of his own virtues and merits. Such conduct is contemptible. I desire to impress upon the gentleman from Iowa and his associates a truth so pointedly expressed by England's great poet, "That throwing mud upon other people will never make thyself clean." [Applause.]

When you discuss majority rule it would be well for you and your party to explain the most infamous gerrymander of the age, by which the Republican party elects the two Senators from Connecticut, a gerrymander in which you give eighty Republican towns, with 31,624 votes, one hundred and eleven representatives in the Legislature, and four Democratic towns, with 44,431 voters—12,807 more votes than the Republican towns—only eight representatives. This is the iniquity with which your party retains its power in that State. When you eliminate this infamous abuse and injustice we will have some confidence in your talk for justice and majority rule. When your two Republican Senators in the other Chamber resign their seats and submit to the Democratic majority in Connecticut you might possibly be in an attitude to discuss fairness and majority rule. Until then your talk is only bombast, bespeaking unparalleled effrontery. [Applause on the Democratic side.]

Mr. Speaker, I do not rise to discuss the constitutionality of these statutes proposed to be repealed. That has been amply and ably presented. If I were able to do so, that portion of this argument needs no further elucidation. Neither do I rise to discuss in detail the objectionable features of these statutes and their encroachments upon the rights and liberties of the citizens and States. This has been so ably and eloquently presented that nothing I could say would add to what has already been said by gentlemen who have preceded me. The country has stamped these infamous statutes with its condemnation, and commissioned the Democratic party to destroy these evidences of sectional animosity and unwarranted assumption of powers by the Federal Government. We will quickly and gladly discharge this obligation. I rise to enter my protest against a spirit and inclination manifested by gentlemen on the other side. They have assumed the province not only of lecturing us of the South, but also of misrepresenting and abusing us.

We of the South claim and do possess as many elements of virtue and as high a regard for truth, justice, and right, and as warm and deep devotion to this Union as that possessed by any section of our country. We are better friends of this Union, and would make more sacrifices for its preservation and prosperity than those Pharisees upon the other side who sow discord and create prejudice for the elevation of self and party. Gentlemen may by such unpatriotic methods keep a few States in the Republican ranks, and their constituency inflamed for a few years so as to return themselves to Congress; but the day is fast approaching in this great country when those who entertain and propagate such pernicious views will encounter universal scorn and condemnation.

The time will come when the constituents that you now mislead and poison will awaken to a realization of what is right and just, and then their greatest humiliation will be that they should have been represented upon this floor by men so narrow in mind and so restricted in patriotism. For slowly and surely public opinion at the North is turning towards the South with feelings of sympathy for her many woes and misfortunes, and manifesting a disposition to treat the solution of the grave and difficult problem overshadowing her with justice and with fairness. I tell you, gentlemen of the Republican party, the time has passed in American history when you can treat the South as outlying provinces, to be dominated by ignorance, controlled by corruption, and pillaged by aliens and carpetbaggers.

If there is one thing upon which all portions of the country—North and South, East and West—are united, it is that the Republican reign of riot and robbery in the South shall never again be reinaugurated. Your recent experience upon the force bill designed for this deadly purpose should have taught you this. The capital sent South by Northern investors needs the same intelligent, honest, and economical government for its protection that our homes and property require. All sections of our country are so interwoven, so intimately connected, so mutually dependent, that you can not injure one section without affecting the other. The hand of the Republican party that stretches forth to bring blight and desolation upon the South ultimately wreaks ruin and disaster upon the North. It is an universal experience that malice, hatred, ill-will, or injustice always overreaches and destroys itself.

Gentlemen of the Republican party, you have made your history South, and it is blackened and darkened. You once before interfered in our local and State affairs with frightful results.

I am astonished that the gentleman from Iowa should have had the daring to allude to that record. His boldness in this and that of his associates can only be accounted for, and is very properly designated by Macaulay. In speaking of a faction at Rome, he said, "Never was a Claudian yet brave against aught but shame." This allusion to your infamous record South evinces that the greatest bravery of your party is bravery against shame and disgrace. [Applause on Democratic side.]

The figures of your own census reveal that you are either unworthy or incompetent to control affairs at the South. Note the

wreck you brought upon a great and prosperous country. The census of 1860 disclosed the South by far the wealthiest and most prosperous portion of the Union, being a little more than a third of the Union, yet furnishing about 44 per cent of its entire wealth. These dry figures, speaking volumes, can give us some conception of the wealth, power, and magnificence of the old South, which lies in our imagination and stirs our heart like the memories of a delightful but vanished dream, in all of its chaste beauty and lovely proportions, with its almost feudal splendors, its ancestral halls and homes of princely magnificence, its beautiful and good dames, its brave, high-spirited, and chivalric men, whose achievements, commencing with the majestic Washington and ending with the matchless Lee, have made resplendent and illustrious the history of our common country. [Applause.]

May God keep the young men of the South true and loyal to the lofty traditions and high ideals of the old South, and make us worthy descendants and heirs of its surpassing beauty, patriotism, greatness, and genius.

The census of 1870 revealed the South as the poorest and most poverty-stricken section of the entire Union, having only about 21 per cent of its aggregate wealth.

These dry figures in startling pathos tell how a great, generous, and noble people were reduced from power to poverty, from wealth to penury, from boundless profusion to miserable indigence; in terrible vividness they portray how the grand and magnificent old South has been mutilated, scarred, and pillaged by the misfortunes of war and excesses of Republican misrule. In a few years after this, with a fearlessness born only of a consciousness of right, the South arose and wrested her State governments from those destroying hands.

When this was done mark the progress. The census, just completed, discloses that the $3,000,000,000 possessed by the South in 1870 has been increased to over $11,000,000,000; that in agriculture, in mining and manufacturing industries, in new enterprises of every kind and character, in the growth and development of new towns and districts, in coming prosperity in future possibilities, the South far surpasses all other sections, and that the day is not far distant when her preëminence in wealth and power will be more fully recognized and established in a broader, safer, and more enduring basis than it was in 1860. This is what honest, intelligent, economical local self-government has done for the South.

There is but one danger that threatens the South and that is a return of ignorant negro Republican domination with its carnival of crime and corruption. I believe this cloud has been dispelled never again to return. I believe this Congress will witness the last expiring efforts of sectional hate and bigotry. I can not and will not believe that the kind, generous, and magnanimous spirit of America will approve efforts to heap further humiliations and calamities upon the South.

Gentlemen of the Republican party, you are and will ever be powerless to consummate upon the South your nefarious purposes. In days by gone, when we were far less powerful and united than we are to-day, with a daring born of self-preservation, we wrested our State government from negro Republican rule and supremacy, when they were hedged around and guarded by Federal bayonets and minions and protected by the hands of a great soldier more resolute and daring than any of his party, who shall ever again hold the helm of State. We are better prepared to-day, if the occasion should arise, to reënact this commendable rescue or to prevent such shameful desecration in a more determined and fearless manner.

If there is one principle to which every loyal Southern heart beats in unison, to which everything else is subordinated, which we hold as dear as life itself and which we would not sell for price, nor surrender for fear, it is that the worth, virtue, and intelligence of the South shall govern and control its destinies; that never again shall the fair South be overshadowed by the blight and infamp of negro misrule. We consecrate ourselves to that cause and principle, however great may be the pecuniary or political losses it entails, through whatever dangers, through whatever difficulties it may lead us. It is the ark of our covenant, it is the corner stone and guaranty of our property and civilization. To us it is the most momentous of all problems, the most paramount of all questions, admitting no compromise, sustaining no other solution.

Sobered by our great responsibilities, animated by a desire to preserve all that is dear and precious to us in home and country, stirred by a desire to do what is best for all sections and all concerned, we, the young men of the South, in the language of our fathers when they resisted British invasion, pledge to the cause, to this principle, "Our lives, our fortunes, and our sacred honor." God keep us true, steadfast, and loyal to this pledge, and the future holds no uncertainties for us; it will be as brilliant and cloudless as the matchless skies which circle our fair land. [Applause on the Democratic side.]

We pledge this in no unkindness to the negro. We propose to treat him scrupulously fair and just. We shall mete out to him to the utmost farthing justice and right. We shall exhibit to him mercy, tenderness, and kindness. We shall give him employment, educate and elevate him upon a higher intellectual and moral plane, equip him to discharge the high and sacred duties of citizenship, but we propose to govern, guide, and control him, to utilize him in the upbuilding and regeneration of the South, to hold him in our strong hands, so, instead of being a menace to us and himself, he shall be a benefit to both. We shall blend his prosperity with our prosperity. With brave heart, resolute will, and strong hands we shall hold him to his suited place in the magnificent superstructure we are rearing, known as the "New South," whose splendors and glories we propose shall be the marvel of the next century.

And I state to you we propose to accomplish this in a perfectly legal and constitutional manner. We have done it, and we propose to continue to do it, without violence and fraud. We repel the insinuation of either. The Federal Constitution, that sacred compact between the States, shall be our bulwark and protection. That instrument guarantees to each State the right to fix the qualification of all its voters. We propose to exercise that right. We propose in each State, according to our different environments and different difficulties and dangers, to attach to suffrage such qualifications and restrictions as will best subserve our interest and give to that State the best and purest and most suited government. This is our right, and we shall so exercise it. The Constitution leaves that matter with us and not with you. That instrument makes it our affair and not your affair. Your criticism and interference is an impertinence which we resent. It is productive of no good. It only creates mutual animosities, crimination and recrimination, and distrust between the sections, which every patriotic man should seek to allay. [Applause on the Democratic side.]

We have at the South to settle one of the most difficult, dangerous, and far-reaching problems that ever confronted a people. Its solution affects us of the South, both white and colored, most seriously. We are interested more than all others. We ask that the two races concerned be allowed to settle it without interference, without the excitement of animosity and hatred. With mutual forgiveness and forbearance we will settle it justly and rightly.

We recognize that any settlement not founded on justice and right will not be lasting nor final. We have proven ourselves, since our accession to power in the Southern States, worthy of this trust and confidence. While the Republican party has done nothing for the colored man, except to stir his passions, delude him with promises, utilize his vote for selfish purposes, we have placed him upon the avenues of prosperous life and with our limited means sought to elevate and educate him.

I have here a report of our State auditor, which is very instructive and is a complete answer to the gross misrepresentations of the gentlemen upon the other side. In Virginia we keep the taxes paid by the white and colored people and the amounts of money disbursed to the white and colored institutions separate. This report shows that the entire taxes collected by the State in 1891 from the colored people was $103,565.54. That the same year it expended in costs to defray the expense of colored criminals $204,018.99. That the State appropriated to colored asylum to provide for lunatics, $80,000; for the support of the colored college and normal school, $15,000; and for the support of colored public free schools, $309,364.15, making the amount that this State expended in excess of what it received from the colored people, $504,817.60.

The public-school money is divided equally between the white and colored, according to the attendance of scholars. In Virginia the colored schools are taught nearly entirely by colored teachers. These teachers have been prepared at a colored college sustained and supplied by the State. I wish it to be noted further, that this school system, giving its benefits and enlightenment to the colored people, was not created during Republican rule in Virginia, but was inaugurated after the Democracy acquired possession of the government.

This is but an illustration by one State of the efforts and sacrifices the entire South is making for the elevation and amelioration of the colored race.

The Republican party has no use for him except to possess his vote. The interest of this party is opposed to his education. When he becomes educated and intelligent he can no longer be misled and deluded by Republican politicians, no longer held solidly in the Republican ranks by appeals to his passion and an abuse of the white race of the South, who are his best and truest friends. Nothing has more distinctly proven to us the extent of the Republicans' interest in the colored man than this discussion. They have made no complaint of his maltreatment in business, of his failure to receive complete justice and fairness, nor of the provisions made for his education and enlightenment.

The only complaint has been that in the South, in pursuance of law and constitutional rights, we have thrown around suffrage qualifications which disfranchises the ignorant and corrupt and thus prevent them perverting and destroying government. They stand here in the pitiable attitude of advocating that ignorance, corruption, and illiteracy should dominate and control the affairs of the States and nation.

Mr. Speaker, in claiming this right to settle this grave and serious question we here profess an equal willingness when other sections are threatened with dangers of a like character to extend to them the same right, and with our sympathy and support we will aid them to prevent there disaster and ruin. We are willing to listen to the voice of complaint and fear arising from our brethern of the Pacific Slope and to assist them to a solution of their dangers and to aid them in preventing their fair and lovely country from being blighted by the inroads of a corrupting and destroying race.

Whenever immigration at the North (which does not exist to any extent in the South) becomes dangerous and threatening, by emptying there a class of people ruinous and pernicious, we are willing to unite with you of the North and stem the torrent and preserve your prosperity and civilization. And mark my words, the time will soon come when many of you will be asking the sympathy you now refuse, claiming the rights and protection you now deny.

When this time arrives, speaking for the South, I can say that her conduct will be in marked contrast to that of many gentlemen here upon the Republican side.

Where you have been partisan, she will be patriotic; where you have been abusive, she will be kind and sympathetic; where you have sought to intensify the difficulties, she will seek to allay them; where you have magnified little disturbances, with which all unsettled and newly changed societies are afflicted, into riots and conspiracies of her best citizens against the weak, she will be found deploring with you the existence of such conditions and evils in your section. You will find none of her Representatives on this floor playing the despicable rôle of demagogue and vilifier for partisan advantage.

She will be as patriotic, as broad, and as much disposed as she has always been to make concessions and sacrifices for the benefit of the Union and advantage of her brothers. We stand in no estrangement to this Union; our highest aspirations, our warmest impulses are those which link our future and that of our common country, and make us share in the development of its measureless possibilities. [Applause.]

Mr. Speaker, imagination is powerless to prophesy the future and coming glories of our country if we will only eliminate sectionalism and have just and beneficent laws, and return to the great elementary principles of government upon which our fathers started us. The greatest foe that we will have to encounter and overcome is the Republican doctrine of paternalism. This insidious doctrine is one of the most difficult problems and the greatest danger besetting the Republic. There is not an evil in the Government to-day—not one to be apprehended in the future that can not be traced to this—the fertile source of all despotism, evil, and iniquity in government.

We of the Democratic party will resist paternalism in government as a deadly foe, in whatever guise or form she presents herself. Whether in the shape of iniquitous tariff restrictions, levying through government their depredations upon the many for the benefit of the few; whether in the shape of useless and extravagant pensions, perverting government into a dispenser of bounties and gifts; whether in the shape of subsidies, making government stand sponsor for any individual enterprise her caprice may suggest; whether in the shape of election bills, seeking to destroy the freedom of suffrage by surrounding the ballot box with Federal bayonets and supervision. Even where she presents herself in the name of reform, pretending to eliminate abuses and restrain excesses, even where she comes with proffered benefits to us and our section, we will resist the insinuating voice of the siren, for she lulls into repose with promises while with the strong arm of government she invades the right of the citizen and deprives him of the greatest right and heritage of all ages, the right of individual liberty and local self-government.

That right which teaches us that the greatness and grandeur of our country does not consist of the peerless beauty of its capital, the gorgeous luxury and dazzling display of its rulers, nor of the mighty revenue and taxes extorted from the people, nor of the vast expenditures made by government, but that it consists of the myriads of happy homes, blessed with prosperity, which dot the fair bosom of our land, where inmates happy with plenty, blessed with all the refining influences of education and ennobling influence of religion surround government with a fragrance of affection and patriotism stronger than fortunes, more enduring than all power derived from vast armies or navies. [Applause.]

Election Laws.

SPEECH
OF
HON. JAMES C. McDEARMON.
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 7, 1893,

On the bill (H. R. 2331) to repeal all statutes relating to supervisors of elections and special deputy marshals, and for other purposes.

Mr. McDEARMON said:

Mr. SPEAKER: The gentleman from Iowa [Mr. HENDERSON] has seen proper to inject into the very able, eloquent, and patriotic speech of my colleague [Col. PATTERSON] a letter or a part of a letter from some unknown creature, whose name the gentleman said he did not wish to give at that time, which traduces and slanders the Democracy of two of the counties which I have the honor to represent, and I feel that I would be recreant to my duty as their representative upon this floor if I should allow these charges to go uncontradicted. This fellow says:

> There are five counties in West Tennessee where wholesale fraud and intimidation are resorted to by the Democracy, nearly enough fraud in these five counties to change the political complexion of the State. These counties are Gibson—my native county—Haywood, Fayette, Madison and Shelby. Haywood County was always Republican by from 1,500 to 2,000 up to 1884. The Republican sheriff died in that year, and the county court by accident being Democratic, appointed a Democrat as sheriff, who, when the election came off, appointed Democrats as judges at all of the voting places, and by an organized fraud changed a Republican majority of nearly 2,000 to a Democratic majority of several hundred.

Mr. Speaker, I have lived in Gibson County nearly all my life, and I am personally familiar with her local affairs, and upon my own knowledge I pronounce this statement, as far as it applies to Gibson County, a most infamous and unmitigated falsehood, without the slightest foundation in fact; and I state most positively that, in my opinion, there is not a county in the United States where elections are held with more perfect fairness, or are freer from fraud, intimidation, or irregularity of any kind than in Gibson County; and I undertake to say that not a respectable Republican of any color can be found in that county who will deny my statement. There has never, for twenty years been the slightest political disturbance or trouble of any kind at a voting precinct in the county, nor has there been any charges of fraud or intimidation made by Republicans. The white people are largely in the majority, and there has been no temptation or cause for fraud or intimidation on the part of the whites to prevent negro rule.

The Democrats have had majorities for many years ranging from 1,000 to 2,000.

Now, Mr. Speaker, I come to speak of Haywood County, not from personal knowledge, but from information which I know to be absolutely reliable and trustworthy, and in doing so intelligibly it is necessary to recur briefly to a period in the history of Tennessee, the memory of which to those who passed through it is like the recollection of a hideous dream, and, Mr. Speaker, I approach this part of my remarks with some degree of hesitation, for nothing is further from my desire than to unnecessarily refer to the bitter past in such a way as to arouse the rancor of sectional prejudices which for so long a time has estranged the people of the North and South.

On the 4th day of March, 1865, W. G. Brownlow was inaugurated as governor of Tennessee under the policy of reconstruction adopted by Mr. Lincoln: and on the 3d of April following, a Legislature, elected by a small number of the voters in a few of the counties, assembled at Nashville, and soon thereafter adopted laws which extended the right of suffrage to the negroes, and by the same laws the great bulk of the white people were disfranchised, and for five years a reign of terror ensued. The negro vote being largely in the majority in most of the counties, many negroes were elected to county and municipal offices and to the Legislature. The State, counties, and towns were plunged into enormous indebtedness: taxation was onerous and burdensome; an armed militia of negroes and worthless whites was billeted upon the people: ballot boxes were surrounded by insolent negro soldiers; bloody collisions between the two races were frequent; disorder, tumult, and apprehension ruled the hour until 1869, when the Republican State convention divided and nominated two candidates for governor, one being the then acting governor, who had the power of appointing registrars, whose duty it was to issue certificates to voters authorizing them to vote.

By combining with this candidate the Democrats were en-

franchised and promptly threw off the yoke of political bondage, and from that time to this, counties in which the white people predominate have generally been Democratic and have been free from race troubles. But Haywood County is one of those unfortunate counties in which the negroes are largely in the majority; and for over twenty years she suffered the evils of negro rule; negroes have filled her county offices and represented her in the State Legislature. Her county affairs were largely controlled by negro magistrates and their white carpetbag associates, more despicable and objectionable than themselves; the county was overwhelmed with debt; land and other property were greatly depreciated in value, and ruin and despair stared in the face the white people, who are the owners of perhaps 98 per cent of her property.

After these long, dark years of African domination and misrule the whites united for their common welfare and self-preservation, and although they were in the minority they had wealth and intelligence on their side, against ignorance and poverty; and being inspired with a faith in themselves and a sort of "ground hog" necessity, waged a political campaign against the allied forces of the black and tan which was remarkable for its intelligence, energy, and success. I am reliably informed that there was not the least fraud, violence, or intimidation used by the Democrats; but whether the landlords, who had furnished homes, stock, and provisions for their dusky tenants and political rulers, for so many years, exerted the influence incident to such relationship, or whether there was a pentacostial shower of Democratic spirit, or just what sort of arts and wiles, if any, were resorted to by the good people of Haywood County in their dire extremity, I do not know; and I respectfully submit that it is no business of this Congress. It is a domestic and local affair of the county, and concerns it alone.

I am also credibly informed that since that memorable campaign the carpet-bag adventurers, whose occupation was gone, took their departure, greatly to the relief of the people who had so patiently submitted to their obnoxious and nefarious presence among them; and that since that time the negroes, who as a mass are docile, harmless, and little inclined to politics, have ceased to be interested in political campaigns, and that many of them have joined the Democratic party, and vote that ticket, when they vote at all, while many others have no disposition to participate in elections, but remain quietly at home: and I most positively deny that either fraud or intimidation is being, or has ever been, resorted to by the Democrats in Haywood County. The experience of this county is a counterpart of the experience of every county of Tennessee, and her Southern sister States which were cursed with a majority of negroes.

History furnishes no parallel to the dreadful ordeal through which the Southern people have passed. When the late war ended they were surrounded by a horde of the most ignorant race upon the face of the earth, the descendants of savage barbarians who were caught like wild animals and brought to America as slaves, and after over a century of bondage this people was suddenly emancipated by the vicissitudes of a terrible war, fought in their midst and over their heads, upon the issue of which their freedom or continued slavery depended, yet in which they as a mass took no part, for the want of intelligence enough to comprehend the cause or meaning of the appalling scenes enacted before their eyes, and of that force of character, aspiration for liberty, courage and intrepidity which would have characterized any other race of people upon the globe under the same circumstances; these unfortunate people who had been inured to menial services as laborers in the field, under the direction of task masters, wholly uneducated as a class, untrained to any avocation except that of farm hands and domestic servants; many of them had seldom been out of sight of the smoke of their lowly cabin homes, and were poorly prepared to meet the responsibilities and duties of life as citizens, or even to provide food and raiment for themselves and little ones, especially in that devastated region "whose once fair face bore desolation's withering trace," when their former masters were almost as destitute as they, and were dismayed and disheartened at the utter wreck and ruin of their homes and possessions which appeared on every side; before the smoke of battle was lifted from the sanguinary fields of the South, and before the white people had time to survey the puzzling problems presented by the emancipation of their former slaves in their midst, or to consider the new relations established between the two races, and before an opportunity was given to test the willingness of the whites to deal justly, fairly, and wisely with the negroes as to their civil and political status—the strong hand of the Federal Government was laid upon the South, the State governments were abolished or ignored, and a military despotism was established in their stead. The white people were dispossessed of their political freedom, and the right of suffrage was conferred upon the ignorant mass of Africans just emerged from slavery. The ballot, the highest power and the dearest right of freemen, was thrust into hands which had struck not a blow for the liberty of which that ballot was the insignia.

The elective franchise, the royal scepter which "executes the freeman's will," and at whose commands dynasties abdicate the throne of power, and surrender purse and sword to their successors, at stated periods, as regularly as the earth wings its flight around the sun, was by vindictive and revengeful partisans bestowed upon an alien race which had no conception of its meaning, appreciation of its value, or willingness to defend or preserve it from the wiles of the political trickster. The ballot, the "rod of empire," which none but freemen born with hearts by freedom fired can sway, was committed to the feeble hands of hereditary bondsmen who knew not that "who would be free themselves must strike the blow."

This most unexampled and unparalleled act was not prompted by the divine "quality of mercy" or benevolence to the poor, destitute, and helpless colored people, but was instigated by the lower and baser motive of hate and malevolence toward the white people of the South, mingled with the determination to perpetuate in power the party which then controlled the nation; for by the same statutes which armed the negroes with the ballot the white people were disfranchised, "Black heels were deliberately placed upon white necks." The proudest, the most chivalrous and intelligent people the world ever saw were disrobed of the power of self-government, were despoiled of political rights which their fathers had paid their blood to purchase, and which they had inherited from the heroes of freedom's battles in the centuries gone before.

They were taxed without representation; they were plundered by tyrannical officials whom they had no voice in selecting; their lives were menaced by marauding bands of negro soldiers; the honor and virtue of their wives and daughters were jeopardized by brutal and licentious creatures drunk with power and incited to deeds of insolence and violence by carpetbag adventurers and charlatans. All these perils and dreadful evils were endured for years by those States of the South which were cursed by a negro population in excess of the white people.

The laws which the bill introduced by the gentleman from Virginia repeals were passed during the reign of terror which I have faintly described; and, Mr. Speaker, I believe that such laws would never have been dreamed of but for the purpose of forging the chains of political bondage upon the South. These laws constituted a part of the scheme of spoliation and humiliation of the South. They are among the last relics upon our records of that unhappy period and should be promptly repealed, and if it were possible they should be expunged from the statute books, so that future generations might forget or never know that they ever existed.

But, Mr. Speaker, I do not wish to be understood by anything I have said or may say that I entertain the slightest ill will or animosity toward the colored people. I was raised among them; when I first saw the light in the Old Dominion and grew to years of consciousness my eyes looked upon black faces, and I was thrown with children who called me master, and I learned that they were slaves; I had no lot or part in making them so; the institution of slavery was bequeathed to the Southern people by a past generation which antedated our Constitution and Independence.

I played with negro children when I was a child and worked in the field with them as a youth; and when fortune cast my lot with my neighbors in the Confederate army I left my aged father and mother and my sisters surrounded by negroes, who, while they longed for freedom, were loyal, true, and devoted to their master, who they knew to be their true friend, and when I returned I found a number of them at the old homestead, having through the long and bloody war which was waged, in part, for their liberation from slavery, remained to protect and labor for those whom fortune had made their owners. And since the war I have lived among them and understand their natures and dispositions; I have represented them as attorney in lawsuits, and defended them in the courts; and I was truly gratified and felt honored when I saw numbers of them vote for me for Congress.

There is something of romance about this people; ruthlessly torn from their kindred and home, and transplanted beyond the rolling Atlantic in a strange land, amongst a strange people, with faces of a different hue, and with language, customs, and character wholly unlike their own; in a clime more rigid than that of their land of the sun they were enslaved and taught the art of labor hitherto unknown to them; they were not reduced to bondage, but elevated to the higher estate of slavery in the midst of the most enlightened people of earth. They were brought into contact with civilization; a language was imparted to them; and they were taught the Christian religion: their wild natures were tamed, and their brutish passions subdued; they became clothed and in their right mind.

They brought no traditions of their former home with them; they kept no genealogy of their fathers; no African religious creed or faith survived the first generation that were brought to America; they cherished no fond memories of their far-off fatherland; they handed down no myths of deities worshiped in their forest home across the sea; they had no harps to hang upon the willow, or songs of Zion to sing in the land of their captivity. They were simply children of nature in their intellectual nonage. Their new estate was an elevation from a lower condition; it was infinitely better for them to be the personal servants of a civilized, humane, and intelligent people, in an enlightened country where law, order, and Christianity prevailed, than to roam, in wild tribes, the jungles of that benighted and God-forsaken land from whence they were brought captive.

But by the hand of Providence they have been delivered from enthrallment; and they are now drinking at the fountain of knowledge, and he is blind who does not see a marked improvement, intellectually and morally, in the rising generation of this most interesting people over their immediate ancestors. They have begun to ascend the scale of human development; have entered the race of human progress, and let us hope that this advance will continue and that a great people will be the result. But, Mr. Speaker, as was well said by my colleague [Col. PATTERSON], it takes generations to develop a nation capable of self-government. The American people are the result of centuries of growth. They first are seen in the dim shadows of tradition; nomadic bands roaming the wilds of primeval Europe; they next appear at the dawn of history, driven before the armies of Cæsar, dressed in the skins of wild beasts, worshiping strange gods, and bowing their necks to the yoke of tyranny.

But as the sun of civilization and Christianity illumined the Continent of Europe, we see this mighty race restive under the heel of tyrants and jealous of their rights; and as education, enlightenment, and refinement displaced ignorance, superstition, and barbarism the spirit of liberty made its appearance amongst them, and the pages of history glow with their deeds of heroism in the resistance to despots and the struggle for freedom. The right of every citizen to the enjoyment of life, liberty, and property, unless declared to be forfeited by the judgment of his peers or the law of the land, and other sacred rights, were wrung from King John at Runnymede, on June 15, 1215.

The prerogatives of taxation without the consent of Parliament, declaring martial law in times of peace, billeting soldiers by force, forced loans, and the right to imprison without showing cause were extorted from Charles I by the petition of right in 1628; and to perpetuate these and other articles of liberty our forefathers did not hesitate to bring him to the executioner's block in 1649; and so on through the centuries this nation has progressed step by step in its slow march from degradation, ignorance, and barbarism to the altitude of enlightenment and refinement it now occupies, which enabled it to first demonstrate the ability of a civilized people to govern themselves. But, Mr. Speaker, the very arguments adduced by the opponents to the Tucker bill furnish conclusive evidence that the negroes of the South are not only incapable of self-government, but that their hands are too feeble to hold that sword of liberty, the elective fanchise, which none but giants can wield.

Gentlemen charge that they are driven from the polls and intimidated by their white neighbors in States and localities where they largely outnumber their foes, and that a few white people terrorize and disfranchise large numbers of colored voters. If these allegations be true, which I emphatically deny, they clearly demonstrate the utter and complete failure of the scheme of negro suffrage and the futility of the attempt to enthrone them in dominion over the white people of the South.

Mr. Speaker, I shall not argue at length the question as to the constitutionality of the laws sought to be repealed, but shall content myself with a few general suggestions.

Section 4, Article I, of the Constitution provides:

> Elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of "chusing" Senators.

At first blush it would seem that this section confers upon Congress the power contended for by the advocates of the election laws, but I submit that a careful analysis will show the unsoundness of the contention.

It has been argued, and I think correctly, that the power conferred upon Congress "to make or alter such regulations" was not intended to be operative except in such cases as where any State should fail to prescribe the time, place, and manner of holding elections for members of Congress, and was not intended to give authority to Congress to usurp this power when the States have exercised it.

The Democratic theory of government is that the United States is a government of limited and delegated authority, and can exercise no prerogative or power which in not expressly and in plain terms or by necessary implication conferred by the Constitution, and that in the language of the tenth amendment, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people," and as provided by the ninth amendment, "The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people," construing all of the sections and articles of the Constitution together as a whole for the purpose of ascertaining the true intent and meaning of its makers, and of discovering the nature, character, and prerogatives of the government which was created and called into existence by that great charter, it is apparent that the power was never intended to be given to Congress to curtail, diminish, or interfere with the authority of any State in the exercise of its legitimate functions or duties.

The existence and perpetuity of the United States Government depends upon and can only be accomplished by the selection of Representatives and Senators from the several States in proportion to their population, and according to law, and if the Legislatures of the States, or any of them, should refuse or fail to provide by statute for the election of Senators and Representatives as prescribed by the Constitution, then, unquestionably, Congress would have the power, and it would be its duty to make provisions for such elections. But when the States have, in accordance with the Constitution, prescribed by statutes the times, places, and manner of holding elections for members of the two Houses of Congress, and provided the appropriate machinery necessary for the proper execution of those laws, with sworn officers to properly conduct the elections, to preserve the peace, count the ballots, and make due returns of the results, I insist that it is not only unnecessary for Congress to make or alter such regulation, but that it is an unwarranted and unjustifiable interference with the reserved right and domestic affairs of the States to do so.

There is not a State in the Union which has not enacted statutes providing for the holding of elections for members of Congress, providing every safeguard necessary for the free and untrammeled exercise of the right of suffrage, the counting of ballots, and the returns of the elections, together with provisions for keeping the peace at the election precincts, the arrest and punishment of malefactors.

But it is said the Supreme Court, in the case of *Ex parte* Siebold, 100 United States, 371, and *Ex parte* Yarbrough, 110 United States, 651, has decided that these laws are constitutional. Mr. Speaker, I entertain the highest possible respect for the Supreme Court of the United States, and I do not by any means intend to utter a word that reflects in the least upon that great tribunal. But, Mr. Speaker, it is a melancholy truth that when the fires of sectional hate and animosity were raging in the political world they did not seem to be extinguished in the breasts of the members of the Supreme Court, as then constituted; and I challenge any gentleman upon this floor or elsewhere to instance a case which has been tried before that court since the war where a political question of great moment involving the success or welfare of the Republican party which was not decided according to the interest of that party.

Judges of even that august court remain men after their appointment of like passions as ourselves, and are subject to the same bias and prejudices as other people. When the great electoral commission was organized, with five supreme judges as one-third of the commission, and the memorable contest involving the Presidency of the United States was on hand, the eyes of millions of our people were instinctively turned to those five judges, and confident hopes were cherished that those five exalted jurists, who were supposed to be far above the petty party feeling and prejudices common to the people at large, and that being profoundly versed and learned in the law those five members of the commission would unanimously agree as to what the law of that case was, and would of course then unhesitatingly decide the contest according to that law regardless of which party was put into power. But, sir, all who entertained those fond hopes were doomed to disappointment.

The Republican judges as well as the other Republican members of the commission to a man, decided in favor of their party upon every question raised as naturally and unhesitatingly as they would have cast their votes for their party candidates at the polls. The first case of *ex parte* Siebold was decided by a divided court. Mr. Justice Field, in a most able and powerful dissenting opinion, in which he was joined by Mr. Justice Clifford, which was delivered in the companion case of *Ex parte* Clarke (100 U. S., page 416), says:

> That clause (the power given to Congress to make or alter such regulations) was designed simply to give to the General Government the means of its own

preservation against a possible dissolution, from the hostility of the States to the election of Representatives, or from their neglect to provide suitable means for holding such elections.

And he quotes from the "Father of the Constitution," James Madison, who said that "it was meant to give the National Legislature a power not only to alter the provisions of the States, but to make regulations in case the States should fail or refuse altogether." And also from Mr Hamilton, who said, "The propriety of this clause rested upon the evidence of the plain proposition that every government should contain in itself the means of its own preservation."

This was the construction given to this clause by the makers of the Constitution and their cotemporaries, and no Congress or party from the time of the organization of the Government in 1789, under the Constitution, ever sought to place any other construction upon it, or ever invoked this supposed authority to invade or violate the rights of the States to hold their own elections in their own way, until the Republican party in 1870 in their boasted contempt for the reserved rights of the States, resurrected this obsolete and thitherto unexercised supposed power, not for the purpose of purifying elections but for the revolutionary and wicked design of unjustly and infamously thwarting the will of the people in New York City, and of intermeddling in the domestic affairs of the South by reinforcing the political marplots from the North who then infested that section.

The quiet, nonaggressive, ignorant, and timid negroes were no match for their Anglo-Saxon neighbors even when they held the reigns of government, in the contests which meant the domination of one race or the other; and it was manifest that without leaders of the Anglo-Saxon blood, armed with authority of law, and backed by the Army of the United States to live and sojourn among and to stir them up, and incite them to leave their cabins and attend the elections and cast their votes, they would before the irresistible superiority of the whites, give way like sheep before the wolf; and from their nerveless grasp would fall the weapon which they had no heart to use, for they knew that they were incapable of the conduct of government, and when let alone did not attempt it.

These laws were passed when the Southern States were under the heel of their oppressors and were struggling to cast from their backs the loathsome "Old Man of the Sea" which had been placed upon them. Under these laws, bold and conscienceless scalawags and villains were sent as emissaries in the South to kindle and keep in flames the natural antipathy and prejudice which exists in the heart of the ignorant and base against persons of a different race, in order to perpetuate the Republican party in power at Washington.

It is a question of power; and it is no answer to our contention to say that the present election laws are comparatively harmless in the rural districts, inasmuch that, except in cities of 20,000 inhabitants or more, deputy marshals can not be employed at the polls with power to make arrests, and that supervisors of elections are only witnesses of the proceedings at the polls; for if Congress has the power, and if it is its duty to alter or make regulations for holding elections for members of Congress, then it would follow as a logical sequence that such regulations could be as exclusive and full as the party in power might see proper to enact; and if the acts sought by the pending bill to be repealed could rightfully and properly be passed, then the infamous and odious "force bill" could be lawfully enacted, if the party in power should deem it expedient and necessary.

For there is force, consistency, and logic in the suggestion that if the United States authorities are to take part in elections and exercise any control at the polls, there would be less conflict of authority, less friction and irritation for them to be endowed with full and plenary jurisdiction to hold elections for members of Congress and United States Senators to the exclusion of State officers entirely. An experiment of over twenty years has demonstrated that these election laws are worse than useless. They have failed to accomplish any good. Their execution has cost hundreds of thousands of dollars without any apparent results, except to intensify and keep alive partisan prejudices; alienate the white people of the two sections; to harass and irritate the sovereign people of this free country on the great days when they assemble at the polls to choose their public servants. They are obnoxious to the fundamental principles upon which the fabric of our institutions is founded, and at variance with every tenet of constitutional government.

The right to local self-government; the power and right of each locality, county, or other subdivision of a State to control their own domestic affairs; select their own neighbors to enact and execute the law; hold and control their elections, and in all respects to serve them in public stations, are the most highly prized and most jealously defended rights enjoyed by the English-speaking people of the whole world. They are priceless heirlooms inherited from valorous sires. They are trophies of victory in the great struggles for liberty and resistance to tyranny in the past. Kings have been discrowned and beheaded in their achievement. They were purchased for us by patriots' blood: they were bequeathed to us in trust for future generations; not one jot or tittle of them shall pass away while the genius of liberty shall brood over our fair land. We will hand them down to our sons as pure, unsullied, and undiminished as we received them from our fathers.

Election Laws.

SPEECH
OF
HON. JONATHAN P. DOLLIVER,
OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 4, 1893.

The House having under consideration the bill (H. R. 2331) to repeal all statutes relating to supervisors of elections and special deputy marshals, and for other purposes—

Mr. DOLLIVER said:

Mr. SPEAKER: There were many who expected that this session of Congress would pass without an untimely display of partisan contention. I was not of that number. A long study of the origin, history, and public services of the existing Democratic party has convinced me that there is only one subject which can unite the party or call forth its enthusiasm, and that is some project that seeks to undermine the freedom and fairness of elections. I had therefore a well-assured anticipation that not even the grave responsibilities which brought this Congress together would hinder this effort to repeal the laws now on the statute book to secure the freedom of citizenship. The national election code now waiting for the final act of partisan malice originated in the first Administration of General Grant. Its methods have had the approbation of the best men of all parties, and have been objectionable only to the nullifiers of universal suffrage in the South and to the criminal classes in the great cities of the North.

These laws are the last remaining evidence of the authority of the United States in the election of its own officers, and their repeal means that hereafter an American citizen has no claim upon the nation for the security of his citizenship. It places the Government in the attitude of disowning even the men who defended its life, and of leaving even the surviving veterans of its own Army without civil rights in their own country except by the grace of State laws, invented to destroy and not to protect the right of suffrage, and oftentimes administered by reckless and disorderly local authorities. It is the last maneuver in a political revolution by which within one generation a nation victorious over the rebellion of turbulent States, after losses and sacrifices almost too great for human thought, abdicates its historic relation to its citizens and commits them for protection and justice to the very influences that deny their rights. It began by open conspiracy to nullify the amendments of the Constitution, and to leave a helpless and despised but loyal race with no rights as citizens, and few, if we may believe the reports of last week from Roanoke, from Birmingham, and from New Orleans, as human beings. The success of that conspiracy is the most mournful episode in the history of popular government in the world. The brief and pitiful struggle of the outcast race and their friends of our own blood and their vain appeal for the protection of the law is a story of national humiliation which has in it much to discourage the intelligent friends of republican institutions based upon the sanctity of law.

It called from the slow and cautious pen of Gen. Grant, in a published letter of July 26, 1876, these words which I bring into this House with only a partial assurance that they will receive more than a contemptuous hearing in the ears of those who are now scattering the riches of civil liberty won for the human race by the sword of the great soldier now dead and safe in the affection of the world:

The scene at Hamburg, as cruel, bloodthirsty, wanton, unprovoked, and as uncalled for as it was, is only a repetition of the course that has been pursued in other Southern States within the last few years, notably in Mississippi and Louisiana.

Mississippi is governed to-day by officials chosen through fraud and violence, such as would hardly be accredited to savages, much less to a civilized and Christian people. How long these things are to continue, or what is to be the final remedy, the great Ruler of the Universe alone knows. But I have an abiding faith that the remedy will come, and come speedily, and earnestly hope it will come peacefully.

From the day Gen. Grant left the White House the progress of the revolution has been swift. Before the year 1880 it had changed the weapons of violence for the cheaper but not less effective weapons of fraud, and these have developed in States like Mississippi into legal machinery, which in the excitement of a Presidential election turns out seven Congressmen on a total poll of 50,000—a legal machinery which gives us an able manager of the order of business in this House on a total poll of 2,556, of which he managed to save all but 136—a legal machinery, in other words, which has in a gentlemanly way abolished the republican form of government altogether. We are not specially complaining of this—in truth, we prefer it to the South Carolina method, which robs the voter with eight ballot boxes; to the Arkansas method or the Georgia method, which in the Fiftieth Congress gave us ten Representatives on a total poll of 27,000, and, as if to add a feature to the situation, gave the Committee on Elections a chairman on an aggregate poll of 1,700 souls.

Let nobody say that I am attacking the South. It is not in my heart to stir up the animosities of the past, and even if it were I could find no words by which to describe the scandalous condition of Southern politics as severe as the courageous and manly admissions of the leading newspapers of Alabama, the Birmingham Age-Herald and the Mobile Register, of last December, which I hold in my hand. I read these editorials in full, and I undertake to say that no worse charges than they contain will be made on this floor by any Republican concerned in this debate, and I therefore admonish the other side, if they propose to grow excited on the question of sectional charges against the South, to spare the Republican party and give their undivided attention to the confession made in the open court of public opinion by the representative journalists of the State of Alabama:

[Birmingham (Ala.) Age-Herald (Dem.), December 20, 1892.]

We now see a well-defined movement toward elections that can be conducted without a miscount of the ballots as cast. Ballot-box stuffing was not the issue of the party split last summer. The leaders of the revolt were not animated by any noble purpose to devise an escape from a system that has become a burden and a curse. They were themselves in large numbers ballot-box stuffers of the kind that boast of it on the street corners. Their disposition toward fraud was bounded only by opportunity. Nor did the question of honest elections enter the calculations of the rank and file of the revolt except in the general feeling of resentment that the other fellows had the count.

While, therefore, the matter of honest elections did not get in the campaign as a motive, it was a very great factor as an incident, whose real importance exists in the present fact that public attention and public concern are aroused as they never were before. Prior to this time the practice of piling up fictitious majorities, of stuffing ballot boxes, has made little or no impression on the public mind because it was exercised against the negroes of a few counties and against an opposition that was too weak to arrest attention. But the result in August was a horse of a far different color. The white people of the counties of Alabama were the complainants and they were strong enough to procure access to all the channels of communication with the public and to command a pause while they told their tale. That tale, whether false or true, has elevated the subject-matter of its plaint into the supreme issue that confronts the people. Public attention is roused and will not much longer submit to election frauds on such a scale as they are practiced in Alabama.

The serpent has already crawled far beyond the precincts of the Black Belt and made its appearance in many of the white counties. Indeed, it may with truth be said that in half the counties of the State the only question as to who or what party will count the other out is one of opportunity and opportunity only. Conscience has fled. Nay, more. It is almost to the point that in the primaries inside the party the manipulator is in as high demand as in the elections at law.

This conduction of things is utterly demoralizing. Who cares to employ a man who stuffs ballot boxes? Who trusts him? How many of them have any credit? And yet we go on year after year persuading and encouraging our young men to do a thing we know will inevitably destroy their character, their credit, and their repute. No one expects that a single session of the Legislature can destroy at one swoop so extended and intrenched an evil, hedged as it is with pleas of party necessity. But a beginning can be made and must be made if the party which men like Kolb and Bowman so nearly kicked out would escape destruction at the hands of the same opposition more ably and wisely led, with a moral issue to give them standing and respect.

Mr. Speaker, I should like to know what Republican has made a charge against the Southern States or any one of them that compares in gravity with that admission contained in the leading Democratic newspaper of Alabama. That newspaper says that the counting out of candidates as between parties existing there is a question of opportunity and of opportunity only. It says that conscience has fled. And in order to show that that is no mere newspaper agitation involving one editor only, I will print in connection with it an editorial article which I have copied from the Mobile Daily Register of December 28, 1892, in which it is said:

We must find some solution of the suffrage question other than bribing voters to stay away from the polls.

The Age and Herald says:

The man who does not earnestly desire some other way of managing the negro question than by a miscount of the ballots is no friend of the Democratic party. Such a man is not untrue to the Democratic party, but untrue to the dearest interests of the people. There must be a change in methods, or the strain will become too intense for the party that now controls the State. A few months ago we heard a loud protest. No man can predict what shape the next protest will take.

It is to be regretted that the Legislature of Alabama, then in session, did not make a more satisfactory response to the demands of public opinion. They did reform the election laws. They copied the law of Arkansas, and Mr. Sayre, author of the new election law, in a published article, defending that law, among other things says:

I applied to the secretary of state of Arkansas for information as to how the law worked there, where it had been tried. The deputy secretary answered, and said, among other things: "The law works smoothly, quietly, satisfactorily, beautifully, and I pray God every Southern State may soon have one like it. It neutralizes to a great extent the curse of the fifteenth amendment, the blackest crime of the nineteenth century."

I repeat that I am not here actuated by partisan hostility against any section of our common country, although it is my sober judgment, if I may adopt the language of Col. Sweney, a Republican colleague from Iowa, in the Fifty-first Congress, that, "the permanence of the present situation is impossible, because it overweights a minority in all public affairs and creates a condition to which a free people can not and a brave people will not submit."

I do not intend to speak even casually of the belated and awkward effort of the Fifty-first Congress to apply a legislative remedy to these evils—an effort which came to naught by a curious combination between the enemies of free citizenship and a group of the friends of free silver.

It is enough to know that that effort failed, and it is probably true that the time has passed to secure an effective legislative remedy for evils which all good men hope may yield at last to the corrective influences of time and a reformed and purified public opinion. For great as is the store of wrath laid up against the day of wrath for the South, more solemn still is the responsibility of the North for its miserable acquiescence in these wrongs and crimes. And odious as the partnership is between the Democrats of the North and the Democracy of the South, hardly less odious before God and man has been the indifference of the Republican party. I can frame an apology for the Southern Democrat, who has at least had the manhood to admit the facts in this case. I can even frame an apology for the Democrat of the North, the cheerful accessory of these crimes, who for so long has enjoyed the privilege of receiving the stolen goods and meekly discharged the duty of lying about the source of the supply. But what exercise of charity can excuse twenty years of Republican cowardice turned first into indifference, then into aversion and at last into treachery.

It must be said, however, that the South is not the sole nor even the controlling factor in the present agitation against the election laws. The agitation comes mainly from the congested centers of population where the arts of ward politics have been in a measure circumvented by the national inspection of the registry and the national observation of the court. The city of New York is here asking for the repeal of the only laws that stand between the citizen and the undisturbed activity of the political régime which literally owns the metropolis. I can not believe that its present representatives more truly speak for the real interests of the city than the leading Democrats did who have indorsed the administration of these laws. I believe that Samuel S. Cox, Samuel J. Tilden, William C. Whitney, and even John Kelly were truer friends of the social order when, for the sake of fair elections, they raised their voices in defense of the administration of these laws.

In this connection I will ask leave to print an extract from Mr. Cox's famous report on election frauds and Mr. Whitney's testimony before that committee:

Whatever may be said about the United States law as to elections or their supervision by United States authority, whatever may be said as to the right of a State to regulate in all ways such elections, this must be said, that the administration of the law by Commissioner Davenport, Muirheid, and Allen, the United States functionaries and their subordinates, was eminently just and wise and conducive to a fair public expression in a Presidential year of unusual excitement and great temptation. (Second session Forty-fourth Congress.)

W. C. WHITNEY'S TESTIMONY.

By Mr. WELLS:

Q. You think that the supervision of the election, under the system of Mr. Davenport, has had the tendency to prevent illegal voting, and to give a fair election?

A. I think it has; yes, sir.

By Mr. RICE:

Q. But they (the city authorities) interposed no objection to it?

A. None at all. I think Mr. Kelley satisfied himself in some way that no abuse of power was intended, and I know that I have since heard him express to the organization with which he is connected, and in one place and another, the same opinion I have expressed here, that Mr. Davenport has been a very important accessory in preventing fraudulent voting in New York City.—*Testimony in Cox Report*, Forty-fourth Congress, second session.

That was in a time when a Democratic statesman could get the votes of the lower wards without agreeing in advance that in the course of his public duties he would pull down the safeguards of society for the convenience of the lowest sections of his party. That day has apparently passed, and there is no doubt that the mandate of the criminal classes already anticipated at Albany will be promptly obeyed here, but before it is done the American people will know the facts in this case.

Mr. Speaker, I have said that the demand for the repeal of these laws comes no longer entirely from the South; and yet sir we are not surprised that the politicians in the South look with approval upon the movement against free elections in the great cities of the United States. So far as the city of New York is concerned, it is the natural enthusiasm of a retired partner in the success of the old firm. [Laughter.] For in all these years the controlling factors of metropolitan politics have watched the progress of nullification in the South with a fraternal interest, and these two separate but allied centers of power now literally control the Government of the United States.

I am not here to-day for the purpose of entering upon any defense of the chief supervisor of elections for the State of New York. That is left to my friend from New York [Mr. PAYNE], whose larger knowledge and information on the subject enable him to speak with a larger authority. I only know that for twenty years past he has been an official of the circuit court of New York, and that in all these years no charge made against him has attracted even the reproof of that pure and honorable court.

I have heard it said in this debate that Mr. Davenport has arrested a large number of people, and my friend from Virgina [Mr. TUCKER] compared his ravages to the career of the Duke of Alva in the low countries. Yet I undertake to say, and challenge the Representatives of the city of New York to deny it, that in all these years no legal complaint against the supervisor of the southern district of New York has been made good, and of the thousands they claim he has arrested, I now challenge these gentlemen to give the name of any one man who having been so arrested, has on being released stopped long enough in his flight to inquire who it was that arrested him. [Laughter.] He has never crossed the path of any honest man on his way to the polls. He is the enemy of the vote dealer, the bogus boarding-house, the vacant building lot, and that entire brood of evil men that flies from one polling place to another without legal rights in any.

Almost unassisted he has taken the mass of Democratic raw material from the free list and put upon it the prohibitive penalties of the law. [Laughter and applause on the Republican side.]

They say he has arrested innocent people, but who ever prosecuted him for false imprisonment, either in the courts of the United States or the local jurisdiction? What court ever rendered a decision adverse to him? What decent man ever came forward in a court of justice making a legal complaint against him.

Gentlemen, in the whole history of hand-to-hand conflict of the law with crime no more gallant record has been made than that which has inspired the enmity of the Tammany combine against this fearless officer of the United States courts. They hate him with an unrestrained ferocity, because upon every secret device of professional politics he has turned the search-light of the law. [Applause on the Republican side.] Their quarrel is not with him, but with the law of which he is the servant. What are the political influences which propose to supersede the United States at the national elections in the city of New York? It is a secret political corporation which lives by tithes exacted from the vices, the misfortunes, the salaries, the contracts, the investments, and the ambitions of our greatest American city. In describing the political institution known as Tammany, as in describing the political institution known as the Solid South, we are fortunately not left entirely to the support of our own witnesses. In the North as well as in the South, a few reputable persons mixed up in the crime have seen the necessity of turning State's evidence. I hold in my hand a pamphlet composed of editorials printed from time to time in the New York Evening Post, a leading organ of the present Administration, which gives an analysis of the personal composition of Tammany Hall, which I will read, showing how fraternally the thief, the murderer, the contractor, and the dive-keeper run against each other in its management:

In the classification given below all the twenty-eight leaders whose sketches are given above are set down as "professional politicians," because all of them get their living out of politics. Some of them appear more than once in the classification, as, for example, a man may be an officeholder, a liquor-dealer, an indicted criminal, or even a dive-keeper and gambler all at the same time, but in order to classify him with others of less varied occupations it is necessary to record him several times. There are nominally three lawyers in the list, BOURKE COCKRAN, "Pete" Mitchell, and Frank Fitzgerald, but it would be obviously misleading to speak of any of them save Mr. COCKRAN by the simple title of lawyer. Aside from him there is scarcely a man in the list who can be truthfully said to follow any respectable regular calling or legitimate business outside of politics:

Professional politicians	28
Convicted murderer	1
Tried for murder and acquitted	1
Indicted for felonious assault	1
Indicted for bribery	1
Professional gamblers	4
Former gambling-house or "dive" keepers	5
Liquor-dealers	4
Former liquor-dealers	5
Sons of liquor-dealers	2
Former pugilists	3
Former "toughs"	4
Members of the Tweed gang	6
Officeholders	17
Former officeholders	8
Former car conductors	3
Former plasterer	1
Former navy-yard caulker	1
Former carpenter	1
Lawyer	1
Nominal lawyers	2
Favored city contractors	2

That extract, as I have said, is from an editorial of the New York Evening Post. If it had ever been denied I would not have read it here, because I confess that I hesitate to encourage the assumption of superior virtue which gets the most of its respectability by a continual outcry against the smell of the atmosphere in which by choice it habitually moves. [Laughter and applause on the Republican side.]

But, by reason of the peculiarities of this witness, I call the New York World of January 13, 1892, and ask the Clerk to read from the representative organ of the metropolitan Democratic politics a description of the political machine which now seeks to drive the United States away from its own elections.

The Clerk read as follows:

[New York World, January 13, 1892.]

It was because in the Democratic party of New York, as at present organized, the fundamental principle of Democracy that every man shall have a fair chance is not recognized. No Democrat in this State has a fair field. Nobody can be a candidate for any office except by favor of an oligarchy which assumes the right to parcel out all the offices in the gift of the party in secret council to suit itself.

No man can present himself to the people or to the Legislature as a candidate without the consent of this ring unless he is prepared to incur its hatred and revenge.

Its arrogance has reached such a degree that it dares affront public sentiment by forcing the election and appointment of men to the highest offices who are notoriously unfit in qualifications and character. Maynard, Scannell, Koch, and Murphy are recent evidences of its impudence.

The people have had more than enough of such despising of their sentiments and their interests. The existing oligarchy is an incubus on the Democratic party.

Mr. DOLLIVER. Do the members of this House thoroughly appreciate what it means to give to an institution of that character, by the showing of the organs of its own political opinion, an unrestricted control over the elections which concern the entire people of the United States?

My countrymen, ought we to take down one of the most effective protections against those disputes which may one day, in times of party passion, disturb the public safety? Do we propose to give the social maladies, which already perilously infest our great seats of population, an unmanageable license to poison the sources of public authority throughout the nation? Will this Congress condemn to a decayed and disintegrating oligarchy of New York politicians and turn aside from the national right and the national duty to protect even the humblest citizen in the exercise of his political rights?

AN APPEAL TO THE SOUTH.

Nor ought we to appeal altogether in vain to the returning reason of the South. The Republican party no longer exists there. The day may come when these laws which you now hate may be the protection, not of black men alone, but of the white citizen as well. It is no longer a question of negro domination: it is a question of free citizenship. It was a white man, the Farmers' Alliance candidate for Congress, whose votes went out on the floor through the patent slide of the ingenious Arkansas ballot box of 1888. It was a white man, the candidate of his party for our highest office, and a white audience, that were deprived of the right of free speech and of free public assembly in the State of Georgia last year. It was a white man, himself somewhat notorious as a ballot-box stuffer, whose complaints about being counted out last August in the State of Alabama called forth that fiery editorial which I have read here, not only as a witness against the past and against the present, but as a herald of the day coming, nearer than most of us think, when no decent American, North or South, will dare to take the oath of any office upon a certificate corrupted by fraud or invalidated by violence. [Applause on the Republican side.]

Repeal of the Federal Election Laws.

SPEECH
OF
HON. ASHBEL P. FITCH,
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES,

Monday, October 9, 1893.

The House having under consideration the bill (H. R. 2331) to repeal all statutes relating to supervisors of elections and special deputy marshals, and for other purposes—

Mr. FITCH said:

Mr. SPEAKER: It seems to me particularly fitting that at the end of this long debate the last argument to be made in favor of the repeal of the Federal laws relating to the supervision of elections should be made by a Representative from the city of New York.

It was in the city of New York that the scheme of these laws had its origin. In that city their enforcement and operation was most conspicuous, and it is on account mainly of the public indignation over the results of these laws in that city that they are about to be repealed. In presenting to the House the request of the most important city of the Union for the repeal of these laws, I propose to relate briefly what we know in that city of their origin, their operation, and their results.

These laws had their inception in the fertile brain of a political adventurer, who twenty-three or twenty-four years ago sought to find a foothold and a position for himself in New York politics. He was entirely destitute of all the resources which are ordinarily necessary for success in political life. He had nothing of the eloquence in public discussion which sometimes compels public attention and admiration. He had nothing of the personal qualities which sometimes fix friendship and attract a following and influence. He was utterly destitute of the high character and conscience which sometimes command public respect and confidence. He had, however, been educated in a school in which he had learned that political success may sometimes be achieved without eloquence or personal attractiveness, or character, or conscience. He had for years been the personal companion and an apt and devoted scholar of Benjamin F. Butler. He saw two prejudices then largely prevalent in the public mind, of which he believed he could make use, and with peculiar adroitness he conceived a scheme by which he might take advantage of them for his personal profit. He used them so successfully as to intrench himself in a position where, under cover of law on one side, and under cover of party loyalty on the other, he has looted for nearly a quarter of a century alternately the Treasury of the United States and the treasury of the Republican national committee. [Applause.]

The first of these prejudices was that of the Republicans in the rural communities against the Democratic city of New York. Because the city gave great Democratic majorities they had been taught and they came to believe that the great mass of the population of that city was made up of wicked and designing persons, without principle or patriotism, who, in their corrupt desire to overrule the wishes of the respectable voters in the country, habitually committed frauds at elections which resulted in enormous Democratic majorities. The second of these prejudices carried with it the belief that somewhere in the South there were great numbers of white and colored Republicans who, if they could be allowed to vote without fear or restraint, would carry for the Republican party a number of States then solidly Democratic.

When, therefore, the author of this scheme presented to the leaders of the Republican party in Congress a plan by which he proposed to reduce or perhaps wipe out altogether the Democratic majority in the city, the vote of which controlled the most important doubtful State in the Union, and to bring out in the South a Republican vote which should carry many Democratic States into the Republican party, his proposal was hailed with delight; the scheme was framed into legislation and he was promptly put in charge of the machinery which he had conceived. His plan was an excellent one for the only object for which it was designed, namely, for his own personal profit. Part of what it has done for him may be easily seen in the Treasury records which are printed in the report of the investigating committee of the Fifty-second Congres, over which I had the honor to preside. And if the record of the hundreds of thousands of dollars which he had obtained in five national campaigns from the Republican national committee were obtainable all the rascals in Christendom would view his performances with the sincerest envy. [Laughter and applause.] What his plan did for the Republican party may be best seen in the result of the election last fall, while his system was in full force, of a Democratic President, a Democratic Senate, and a Democratic House of Representatives, elected by immense majorities in the city and the States which he had contracted to control. [Applause.]

So far as the city of New York was concerned the enactment of these laws was part of the methods adopted by the short-sighted, unreasoning, and incapable men who of late years have controlled the policy of the Republican party in relation to the affairs of the city of New York. Because the city was Democratic it was attempted to rule the island of Manhattan as if it were a conquered province. At Washington and at Albany Republican legislation was invariably hostile to the city of New York, and it is largely because of this hostility, manifested in every possible spirit and in every possible form, that the intelligent voting population of that city has gone by a vast majority into the Democratic party, whose ranks are filled now to overflowing with men who came to them from the Republicans, driven out by Republican hostility to the city in which they lived.

For twenty years the Republican party, more violent against the city from year to year, when it had power at Albany, by its legislation and by all the power of the State government, inflicted every injury which could be conceived upon the Democratic metropolis. The city was made to bear a greatly disproportionate share of the State taxes; it was denied its just and proper representation in the State senate and Legislature. The rights and habits of its citizens were attacked by arbitrary and unjust laws, such as were not made to apply to any other section of the State, and the aspiration of its people for the right to manage their own affairs and to have some kind of home rule, such as existed in the Republican cities of the State, was steadfastly denied them. And in hand with this legislation at Albany went the enactment of these Federal election laws, the very design of which was to control by force and influence by bribery the conduct of elections in the city. [Applause.]

Because New York was a Democratic city all of the dearest interests of its inhabitants were attacked by legislation hostile to the whole town. There never was a more short-sighted policy displayed in politics. The result was the inevitable result. Thousands of men of intelligence, influential in the Republican party, resented these attacks upon their city and upon their own financial and personal and political interests, and joined the Democracy in its fight for home rule and fair play for their own town. These men, driven out of the Republican party under these circumstances, have made the city and the State in which they live more strongly Democratic in sentiment from year to year, until now the Republican party has as much power and influence in the city of New York as it has in the State of Texas. [Applause.]

When Davenport was given these powers, which he has abused; when Mr. Platt and Mr. Hiscock, and the other Republican leaders from the interior of the State, commenced their absurd attempt to legislate New York into a Republican city the Republican party had three or four members of Congress from the city at Washington, numerous members of assembly and the senate in the Legislature at Albany, a dozen distinguished Republican lawyers in high judicial places on the bench of the different courts, and a strong minority representation in the local government, and the board of alderman. As a result of the policy which I have described, and the performances of Davenport under these Federal election laws there are at this time no Republican members of Congress from the city; nor are there any in the adjacent communities of the three States of New York, Connecticut and New Jersey close to the metropolis and where the influence of New York is felt. [Applause.] The thirty members of the Legislature and all the senators who represent the city are Democrats.

The Republican party has no representation whatever in the local government and has lost every place on the bench but one, which is filled by a distinguished jurist in whose reëlection the Democrats cordially and willingly joined. [Applause.] One may well say to the Republican leaders who have wrought this ruin of their party in the State and city of New York, as the distinguished gentleman from Maine says to the Democratic party in his regular monthly lectures to us on our conduct, "What a spectacle you present." [Laughter and applause on the Democratic side.]

In fact, the attachment of the people of the city of New York, formerly much divided on political issues, to the cause of Democracy became so evident and awakened such feelings of hatred and resentment against the city, that the last State campaign was waged by the Republicans solely on the lines of an attack upon the city of New York, its local government, the intelligence and the morality of its people, and its right to local self-government. Headed by Mr. Fassett, the candidate for governor and one of

the very men who in the State Legislature had attacked and injured in every possible way the chief city of his State, a campaign was made in which the prejudices of the country against the city were sought to be aroused and the rural voter entreated to rally to the defense of the State against the city.

The spirit of that campaign is best shown by the remarks of Mr. Owen, of Indiana, formerly a member of this House and afterward appointed to office by Mr. Harrison, which were often quoted in that campaign, and are to be found on page 1610 of the RECORD of the Fifty-second Congress:

New York is a foreign city on American shores. The foreigner who comes to New York is flung into a tenement house. He has no opportunity to catch the genius of American institutions. His children do not learn the English language; employers pay him pauper wages; and with his hopes in America blasted, he lives on the dangerous line of disappointment and poverty. He can not make a good citizen. [Laughter on the Democratic side.]

Mr. Speaker, I know something of the foreign-born residents of the city of New York and of their thrift, prosperity, and success. No one is more willing than I am to exclude all undesirable elements of immigration, but for one I resent the attack upon our naturalized citizens of which these laws are a part and the attacks upon our city, which are exemplified by the remarks of Mr. Owen. [Applause.]

If no foreigners had ever arrived in this country no one would be here now, except the Indians and the ancestors of Mr. Owen, of Indiana. [Laughter.] We are all the descendents of men who were "foreigners" when they came here. They cleared the forest, they established the town meeting, they laid the foundation of our Republic—

She that lifts up the manhood of the poor,
She of the open soul and open door,
With room about her hearth for all mankind!

[Applause.]

When did New York become a "foreign city?" Was it when the first Congress met there at the corner of Wall and Nassau streets, and when Washington lived in Pearl street? Was it when her seamen fought the battles of the war of 1812, or when her soldiers led the triumphant advance into the City of Mexico? Was it when her militia saved Washington in 1861, or when the long procession of her regiments answered every call of the nation in the civil war? Was it when her women organized and maintained with hundreds of thousands of dollars the sanitary commission to care for the sick and wounded, and her bankers gave the Government the loans needed to carry on the war? Or was it when, in 1889, with the flag on every house, with the school boys in line, with patriotic music, and with a pomp and circumstance never seen before in this country, she celebrated the inauguration of the first President? [Applause.]

These appeals to the Tioga County farmer to rise in his might and save the State from city misrule and corruption, this assumption that the people in Chemung County are more patriotic and more honest than we are, and know better than we do how we should live and be governed, and how much money we should spend on our own city, are so many insults to each of us. When the Republican party had purposes beyond personal profit and principles instead of a price-list for a platform, these absurdities were unknown. [Applause.]

It is absurd to describe the people in New York as unintelligent. They have built up the best common-school system in the State, and have the best schools of medicine, of law, of theology, of science, of painting, and of music in the United States. They have the best newspapers and magazines in the world. New York is the market for intelligence in this country. If a citizen of Tioga County writes a book, where does he take it for criticism or recognition?

It is absurd to call them dishonest. They borrow money on their bonds cheaper than any county or village in the State can get it, and there is no Republican city in the country whose credit is so good. The New York merchants and bankers carry the finances of all the country counties, and are everywhere trusted and looked to for help.

It is absurd to say that they have no civic self-respect. They have chosen for themselves a judiciary, for instance, by popular election, which is celebrated all over the United States for its learning and its integrity. No city in the civilized world has judges whose decisions are more widely respected and more frequently followed than those chosen in the city which the Republicans say is so corruptly governed. [Great applause.]

If our city government were what the Republicans in this debate say it is, the people would leave Manhattan Island. Instead of that they leave the Republican country districts to come to us. Mr. Platt's county of Tioga, where he reigns supreme, lost in population over 2,600 between 1880 and 1890. In those ten years more than a quarter of a million people came to New York to live, and made their homes under this city government which the Republicans here pretend to be so frightened about. These people came to us from all over the United States, as well as from Europe. They and their children love this country, honor its flag, and would fight in its defense as readily as would any countryman in the State. And they will teach Mr. Davenport and his allies on this floor that no one can interfere with their interests and insult their good name without punishment. [Applause.]

Mr. Speaker, we who live in that city know well that the most valuable possessions of the city of New York are not in her municipal wealth, her noble parks, her well-managed charities and schools. They are not in the treasures of art in her Metropolitan Museum. They are not in her wonderful position, situate between the most beautiful of rivers and the most delightful of inland seas, at the head of a bay more charming than that of Naples, in which the Statue of Liberty looks down on the commerce of the world. [Applause.] They are not in the riches which her citizens have gathered together within the sound of the chimes of Trinity Church, nor the graceful luxury and magnificence of social life over which shine the lights of Madison Square. They are not in that avenue of palaces which stretches from the Memorial Arch to the Plaza, nor in the treasures of her gold and silver smiths which fill the square where Washington and LaFayette watch, immovable, the tide of travel and of pleasure in the city which they fought together to deliver from its enemies. [Applause.]

New York is rich indeed in all these and in everything which is the type or the result of the highest human civilization, but her greatest possessions are in the inheritance which she got from the Revolution, her share in the memories and in the hopes of the Republic of which she is the metropolis. Her material wealth and her achievements and possessions in architecture, music, sculpture, painting, and in literature are all fruit on the tree of national prosperity whose roots lie deep in our institutions and whose growth has been made possible by the free air and sunshine of national liberty. [Applause.]

She is the city of which we are proud because she is the chief city, not of a colony, but of a nation. She has the commerce of a continent to enrich her because that continent has been conquered and is ruled by her own countrymen, because the flag which flies over her bay floats over the Golden Gate on the Pacific, and the laws which she obeys are in force from the St. Lawrence to the Rio Grande. She is in command of the finances of a continent because a National Government has given to the whole country one system of currency and of banking. She holds her place as the home of literature because a national impulse has driven out all other languages and given to the English tongue the mastery in all our great territory. [Applause.]

No inheritance which New York's wealth can give to the children born in the richest homes on Manhattan Island is worth as much to them as is their birthright of citizenship in our great commonwealth of States, their share in the opportunities of the Republic.

The saying quoted by Emerson, that "Countries are cultivated not as they are fertile, but as they are free," is as true of the city as of the country. The soul of New York's life, the spirit which has made her what she is, was given her when the Constitution of the United States was adopted and the first Congress met in Wall street.

When Washington rode his horse down the Bowery at the head of his veterans, to take possession of the town from which the British had been driven, he brought with him the future greatness of New York. [Applause.]

The history of the chief city of America is the history of American liberty.

She made the first written protest against taxation without representation when her merchants, under Livingston and Bayard, a month before Boston acted, called upon Governor Colden to "join in an endeavor to secure that great badge of English liberty of being taxed only with our own consent." She took the first step toward a union of the colonies when her committee "to seek united action with the other colonies" was appointed October 18, 1764. Her committee of freeholders was the first to suggest, in 1774, the idea of holding the first Continental Congress. She gave to the earliest service of the Republic three of its most valued leaders, Alexander Hamilton, John Jay, and Gouverneur Morris. It would be hard to name, after Washington, three others who contributed more to the establishment of the United States than these three young men from the city of New York.

It is not necessary, Mr. Speaker, for me to discuss the prejudices against the South which, in addition to the hatred of the city of New York, furnished the ground and pretext for this legislation. Gentlemen from that section of the country have given that full and satisfactory extension. I pass, therefore, to the discussion of the operation of the law in the city of New York, merely stopping to quote, as a matter of interest in connection with the result of these laws in the South, and as showing that they had the same result there as with us, the interesting statement of my

distinguished friend from Tennessee [Mr. PATTERSON], in this debate:

When these laws were passed every Representative in both Houses of Congress from the eleven Southern States that were in the Confederacy was a Republican except five Now, mark that, I repeat it. At the time these laws were passed, in 1870 and 1871, every Representative in Congress from the Southern States was a Republican except five. To-day every Representative from these eleven States in Congress, Senate and House, is a Democrat except four. [Applause on Democratic side.]

Having thus, Mr. Speaker, spoken of the origin of these laws and of the connection between that origin and the city on behalf of which I speak to-day, I desire next to describe their operation in that city. The workings of these laws under the management of their author had steadily grown more and more unpopular with us until the meeting of the last Congress, during the existence of which this system of Federal supervision was to be again exercised in the fall of 1892 in the Presidential election. As we in New York had determined, whenever the two Houses of Congress passed into the hands of the Democratic party, to apply to the National Legislature for the repeal of these laws, it seemed necessary for us to get into definite shape and form the legal evidence as to the injustice, the expense, and the partisan use of election machinery which resulted from their operation in our city.

We desired also to put in proper form for presentation to Congress such evidence as might be obtainable as to the frauds alleged to have been committed on the National Treasury by the chief supervisor of elections, together with any denial which he might desire to make of the charges which were made against him in the public press and any evidence which he might produce to substantiate such a denial. We desired, if possible, to take a photograph of the workings of these Federal election laws when in actual operation. We wished to lay before Congress, when we came here for the repeal, a picture as accurate as could be made on the spot and at the time of exactly what happened in our city under these laws.

In other words, Mr. Speaker, we wanted to come here, not with loose allegations or wild denunciations such as our Republican friends have used in this debate against us, but with sworn evidence taken as the court takes it of the facts in the case. [Applause.] Acting on behalf of the city, we desired to prepare her case against these laws and against their author as we would prepare for trial any case to be tried before a jury.

Accordingly, Mr. Speaker, in the first session of the Fifty-second Congress I introduced the following resolution:

CONGRESS OF THE UNITED STATES,
In the House of Representatives, July 19, 1892.

Whereas it is alleged that gross abuses have existed in the administration and supervision of the election laws by Federal officers within the city and county of New York: and

Whereas it is expedient that all such laws should be administered so as to preserve and not to violate the right of suffrage: Therefore, be it

Resolved, That a select committee of five members of the House of Representatives be appointed by the Speaker to inquire into the supervision and administration of the election laws by officers of the United States within the city, county, and State of New York, so far as the same relate to the election of members of Congress, said committee to sit during the recess of Congress and to report to this House at the session thereof beginning on the first Monday of December next: and be it further

Resolved, That the said committee be empowered to administer oaths to witnesses and to send for such persons and papers as may be necessary to properly complete the inquiry hereby committed to it, and it is hereby authorized to issue the mandate of the House to compel the attendance of such witnesses and the production of such papers; and be it further

Resolved, That the expenses of the investigation above directed shall be paid out of the contingent fund of the House, and the Clerk of the House is hereby directed to advance to the chairman of such committee such amount of money as such chairman may request in sums of $1,000 at a time, said committee to account for and report upon their expenditures thereof.

This resolution was passed by the House on July 19, 1892, and under its terms the Speaker appointed a committee of five members of the House to make the investigation.

Now, Mr. Speaker, our Republican friends in this debate have had a great deal to say about the desire of the South to abolish these laws, and about the Southern sentiment on this floor against their operation. I desire, therefore, to call attention to the fact that I have shown, as I believe conclusively, not only that these laws were originated in the city of New York, but that the movement for their repeal had its origin also in the same place.

What sort of a committee was it, Mr. Speaker, which undertook this investigation? They were not the former slave-owners, the ex-Confederate brigadier-generals, the Southern State rights advocates, who disturb the dreams and fill the waking fancies of my belligerent friend from Maine [Mr. BOUTELLE]. [Laughter and applause on the Democratic side.]

The three Democrats on that committee were all Northern members of Congress; one of them from Connecticut, one of the foremost lawyers of a State which has been the nursery of law and learning in this country for two hundred years [applause]; one of them a lawyer from the State of New Jersey, of an old New York family, highly respected at the bar of both States for his learning and his character. [Applause.] The two Republican members of the committee were an alert, vigilant, and well-equipped lawyer from the central part of New York State, and a distinguished member of Congress from Philadelphia, whose long experience in public affairs makes him a most valuable member of every committee of the House on which he serves. Now, in common fairness, my Republican friends, was not that a committee fairly representative of Northern sentiment? [Applause.]

Now, Mr. Speaker, we started out in New York with a fair proposition to ask for the repeal of these laws only on evidence, openly and fairly taken, and on all the evidence that anybody chose to present. We started out with a fair-minded committee, and in an equally fair and open manner we made the investigation. Sitting in the Federal building in the city of New York, we began naturally and properly by asking the United States officials, whose offices were in that building and who were charged with the execution of the law, to come before us and to testify regarding the acts which they were committing from day to day. The Republican United States district attorney for the southern district of New York came at once before the committee, and in the most straightforward and satisfactory way put at our disposal all the records of his office, his accounts with the Government, the papers in connection with all proceedings in his charge under the law, and sent promptly before us such of his clerks and assistants as we desired to examine.

The Republican United States marshal for the southern district of New York, a well-known and very active political manager whose hostility to the Democratic party is well understood, answered at once the subpœna of the committee in person and gave us from his office, without question, all of the evidence and records which the committee desired to examine. The Republican Secretary of the Treasury, without waiting for a formal subpœna, on the written request of the committee sent to New York the bureau chief in charge of the accounts relating to these matters, with all the original vouchers and documents on file in the Treasury Department. These three high officials had no reason to try to conceal anything from the committee.

The chief supervisor of elections for the southern district of New York, on receiving the same subpœna which the other officials obeyed, took precisely an opposite course. He did what a guilty man always does, if he can, when called into court to face the charges against him. He got out of the way. He refused to come. He kept himself in hiding. He disobeyed the subpœna of the House, and he did it because, if he can help it, he will never consent to be cross-examined by a lawyer as to the money which has been paid him by his party and by the Treasury, and his disposition of that money. He loves to pose as a political martyr, and it would have delighted him to appear before the committee in that rôle were it not for the questions which would have been asked him as to what money he had received and what he did with it.

Mr. RAY. Will the gentleman allow me to ask him a question?

Mr. PAYNE. Will the gentleman allow me to ask him a question?

Mr. FITCH. No, not now. I did not interrupt you. Now, as to what happened in that committee——

Mr. RAY. I would like to ask the gentleman a question.

Mr. FITCH. My friend has stated his views very fully, and I desire now to state mine without interruption.

Mr. PAYNE addressed Mr. FITCH.

Mr. FITCH. I am speaking to my friend [Mr. RAY].

Mr. RAY. I want to know whether you will allow me to ask you a question?

Mr. FITCH. I prefer to proceed without interruption.

Mr. HALL of Minnesota. He should not allow an interruption.

Mr. FITCH. I know what my friend's question is, and can not yield. I consider Mr. DAVENPORT in the light of a fugitive from investigation and you consider him a much abused Christian statesman. I maintain that he did not appear because he did not dare to state the truth before that committee.

Mr. RAY. Do you know what the truth was?

Mr. FITCH. I decline to yield to my friend. He has had all his time and I have not had mine until to-day.

Mr. RAY. You should not be afraid of the truth.

Mr. FITCH. The truth is to be found in the evidence which was submitted to that committee under oath, and which no doubt has been fully read by members of the House, and which has been fully commented upon in this House. [Applause.]

Why, Mr, Speaker, an innocent man charged with what this man was charged with, if he had any touch of personal honor, would have crossed a continent to face his accusers. This committee sat across the hallway from Davenport's office, within a few feet from where from day to day they took the evidence,

were the records of the chief supervisor's office, which the committee demanded and he refused to produce.

I do not propose, Mr. Speaker, at the end of this long debate to review all of the evidence which our committee took; but I desire to call the attention of the House to that portion of the report of the majority of the committee which explains the reasons why the committee recommended to the Fifty-second Congress the repeal of these laws. I quote from the report of the committee as follows:

The evidence taken before the committee and submitted with this report to the House relates entirely to the administration and supervision of the election laws by Federal officers within the city and county of New York.

It is assumed by the committee that the administration and results of such laws would nowhere appear more clearly or in a better light than in the city of New York.

It is believed that in the largest city in the country, where every class of our voting population is fully represented and where the respective parties have for years made their principal headquarters at important elections, and under the constant publicity given by the best organized and most effective newspaper press of the world, the actual workings of these laws and their good or evil results can be more clearly seen and appreciated and more intelligently judged than is possible anywhere else.

Your committee, after a very careful study of the operations of the Federal election laws before election and on election day in the city of New York, are of the opinion that all of these laws have entirely failed to produce any good results in the direction of the purity of elections or the protection of the ballot box, and have been productive of such serious and dangerous results that they ought at once to be repealed.

The reasons for our recommendation for the repeal of these laws, based on our study of their operation and results in New York, may be classed under four heads. They ought to be repealed—

First. Because they result in no convictions of offenders, and are therefore useless to prevent or punish crime.

Second. Because they cause great expense and are fruitful of constant and continuing frauds upon the Treasury.

Third. Because they are designed to be used and are used only as part of the machinery of a party to compensate voters who are friendly to it, and to frighten from the polls the voters of the opposing party.

Fourth. Because under and by virtue of these laws the gravest interference with the personal rights and liberty of citizens occur, and voters are punished by arrest and imprisonment for their political opinions.

In considering the first point above mentioned, it may be remarked in the first place that these laws are believed to have been, in the main, drafted and their enactment brought about by the present chief supervisor of elections in the southern district of New York. If anyone in the country was able to administer them in such a manner as to get good results from them the author of the system certainly ought to have been. Through most of the time during which he has held his position the National Government has been fully in accord with him and willing to aid him with all its power and resources. He has drawn from the public purse vast sums of money for his compensation in the administration of these laws and for the employment of thousands of deputies and assistants. He holds his office by a tenure which makes him practically independent of any criticism or danger of removal. He not only holds this office of chief supervisor of elections, but he has also had himself appointed a United States commissioner, so that he can sit as an examining magistrate.

With the power of the Government behind him and with the money of the Government to use, he has managed for years a detective bureau, by means of which he has sought to get proof of the crimes which he has claimed existed in the city of New York. When in his first capacity, as a detective, he had obtained such proof as he wished to use, he then in his second capacity, as a public prosecutor, issued the warrants for the arrest of the alleged criminals. Sometimes he gave these warrants to the United States marshal to be executed, and sometimes in a third capacity, as a sheriff, he seems to have made the arrest of the accused parties through his own deputies. Then in his fourth capacity, as a United States commissioner, sitting as a magistrate, he has heard his own charges against the prisoner which he presented to himself as judge by himself as prosecuting attorney, and has decided himself upon their guilt or innocence.

In this way he has arrested many hundred persons at each election. This is not at all difficult under these laws. He has merely to decide on the names of the parties whom he desires to arrest or to keep from voting and issue his warrants for their arrest. But in order to have any of these persons indicted or convicted it is necessary for him to take his alleged evidence before the grand jury, and to try his case before a judge and jury in open court, and without the special advantages which up to this point the Federal election law has given him. He must then have a case. At this point he has invariably failed. With all this machinery in the hands of its inventor and the use of unlimited money the law has resulted in nothing so far as the conviction of offenders is concerned.

During the entire time covered by the examination of the committee there has not been one conviction for illegal voting in the southern district of New York in the United States courts, and under these laws. It is therefore clear that these laws do not result in the punishment of any crime, and they ought therefore to be repealed.

The second reason why, in the opinion of the committee, the law should be repealed is that it causes immense expense, and is purposely so arranged that there is no supervision over the cost, no limit to the amount expended, and no proper responsibility for the payment of the bills.

It is impossible to report upon the exact cost of the system, for the reason that the Treasury Department is unable at this time to state it. The witness Ferrell, sent by the Department before the committee, estimated the expense for this year at $1,000,000, but it is clear from his evidence that he had no accurate knowledge of the amount, which will doubtless be much more. When it is seen that the payments for the personal compensation of the chief supervisor in the southern district in New York for his services as supervisor and commissioner, entirely aside from the payment of his deputies and aside from the fees and disbursements, and the compensation of deputies of the United States marshal, have amounted during the present Administration to a sum exceeding $107,000, the abuses under these laws to which your committee desire to call attention will be plain. This amount will doubtless be increased by a further very large payment, the amount of which your committee is unable to ascertain, which has been demanded and is expected by the chief supervisor from the Treasury Department before the close of the present Administration.

In connection with these payments, attention is called to the fact that from March, 1885, till May 17, 1889, during which time a district attorney was in office who desired to examine these bills, the chief supervisor never presented a bill, preferring to go without the money sooner than submit to examination. As soon as the present district attorney came in the bills were presented and approved and promptly paid.

The third reason why the law should be repealed is that, in the judgment of the committee, it is used mainly for partisan purposes. It is believed that this will be admitted to be true in the city of New York by everyone who has any knowledge of the facts, and that an examination of the evidence taken before this committee will convince any impartial person that under these laws the power and the funds of the Government are freely used with the direct intention of affecting the result of elections.

It is not deemed necessary to enter into an extended argument to show that this should not be allowed.

The establishment for election purposes in the interest of one party of an army of political workers as large in number in the United States as the regular Army of the United States, and the giving to them the badge and authority of the National Government, is an act of arbitrary power without a precedent in the history of our country. No political party temporarily in power ought to have any such advantage over its opponents, and the majority of this committee would be as unwilling to see any member of their own party in the city of New York clothed with the power now given to the chief supervisor and marshal as they are to allow the present incumbents to remain in the possession of these unfair advantages.

The law was designed for partisan advantage. It is perhaps fortunate that its execution in the city of New York has been mainly intrusted to one of a common class of political adventurers whose only real object has been to get money out of politics. In the hands of a man of ability who cared little for personal profit, but who was devoted simply and without scruple to the success of his party, it might have been the source of much more serious trouble. The powers which it confers should not under our system of government be intrusted to anybody. In the interest of the people, whose right it is to act with any of the parties or in opposition to any of them, it ought to be repealed.

The fourth and final reason why these laws ought at once to be repealed is that under them great numbers of innocent persons have been and are at every election deprived of their liberty and interfered within the exercise of their undoubted right to vote. These facts are not to be disputed. They are known to all men in New York, and were brought to the personal knowledge of the committee and proven beyond question. The fact that all of the great number of citizens who were arrested during all these years were, with the exception of two, discharged as innocent after judicial investigation, is conclusive legal proof of the falsity of the charges. That most of them were discharged by the very magistrate who had caused their arrest shows the charges to have been not only false, but malicious.

Any system of laws under which, for any reason, citizens entitled to vote can be systematically arrested, held until their opportunity to vote is gone, and then discharged without redress, should have no place in the statutes of the United States.

Perhaps, Mr. Speaker, it will be of interest to the House to have some of the exact evidence in regard to two matters mentioned in the last paragraphs of the report which I have cited. Our opponents in this debate have insisted that these marshals were worthy and respectable officers of the law engaged in preventing from voting, by arrest, great numbers of unnaturalized foreigners in the city who endeavored to vote. I propose to show by the sworn evidence of the people whom they arrested that the persons thus deprived of the right to vote at the last election were almost all native citizens, born on the island of Manhattan.

And I propose, further, to show by a statement, giving names and addresses and police-court records, that many of these Davenport marshals, whom the Republicans pretend were appointed to defend the purity of the ballot box, were notorious criminals. As to the first point I read portions of the evidence, as follows:

William Weir, called by the committee, being duly sworn, testified as follows:

By Mr. FITCH:

Q. What is your name?
A. William Weir.
Q. Where do you live?
A. West Fifty-second street, No. 649.
Q. How long have you lived in that house?
A. About nine years in that house; seven months in the one room I am in now.
Q. But nine years in that house?
A. Yes, sir.
Q. Are you well known in that neighborhood?
A. I have been seventeen years in the same block; never lived out of it a day in my life—between Eleventh and Twelfth avenues.
Q. Your case was heard before Commissioner Shields this morning?
A. Yes, sir.
Q. What decision did the commissioner render?
A. Just asked me the same questions that you have asked me and discharged me.
Q. Are you a native-born citizen?
A. Born right here in New York.
Q. You brought him personally down before Commissioner Deuel, did you not?
A. Yes, sir; this gentleman took me over there and he came down to take him.
Q. Do you know the name of the commissioner before whom you went?
A. No, sir; he told me to bring him down to the United States court.
Q. Who gave you this paper on which you made the arrest?
A. This man inside of the poll.
Q. You don't know his name?
A. No, sir.
Q. Do you know where the polling place is?
A. Yes, sir.
Q. Where is it?
A. The twenty-ninth election district.

Next take John W. Powers:

By Mr. FITCH:

Q. Where do you live?
A. 25 Bowery.
Q. Are you a naturalized or native citizen?
A. Native citizen.
Q. Where were you born?
A. Madison street, this city.
Q. Lived here all your life?
A. Yes, sir.
Q. When you were arrested to-day what was done with you?
A. I was brought down here before the commissioner and discharged.

Take now the case of Patrick McKenna. Bear in mind what my friend [Mr. PAYNE] has said about the class of vagrant people without home or occupation that we want to have vote in New York but who are prevented by these laws:

Patrick McKenna, called by the committee, being duly sworn, testified as follows:

By Mr. FITCH:

Q. Where do you live?
A. 261 West One hundred and twenty-third street, city.
Q. How long have you lived there?
A. In that number about twelve years.
Q. How long have you lived in that vicinity?
A. Thirty-five years.
Q. What is your business?
A. Horseshoer.
Q. Are you well known in the vicinity?
A. Yes, sir; everybody in my neighborhood knows me.
Q. How long have you been in business in that vicinity?
A. About thirty-five years for myself.

And, Mr. Speaker, let me say that I have known him personally for many years and that he is well known and respected in Harlem.

Q. Did you register at this election?
A. Yes, sir.
Q. Where?
A. In Seventh avenue, between One hundred and twenty-third and One hundred and twenty-fourth.
Q. You registered before in that election district?
A. Yes, sir; very, very often—frequently.
Q. And voted?
A. Yes, sir; for the last thirty years.
Q. So that your name was on the register's polling list of that district for several years?
A. Yes, sir; I have had charge of that district for thirty years.
Q. What do you mean by having charge of that district?
A. In a political sense; I am captain of that district now.
Q. You mean for Tammany Hall?
A. Yes, sir.
Q. Were you arrested to-day?
A. Yes, sir.
Q. What were you charged with?
A. For false registration. I own the house which I registered from.
Q. Had you voted when you were arrested?
A. No, sir.
Q. Have you voted yet?
A. No, sir; I am going to, though.
Q. After your arrest you were brought before a United States commissioner?
A. I was fetched up to One hundred and forty-fifth street first, and from there down here.
Q. Before what commissioner were you taken?
A. Before Commissioner Shields downstairs.
Q. And you were examined?
A. Yes, sir; and he discharged me.

Daniel McCarty, called by the committee, being duly sworn, testified as follows:

By Mr. FITCH:

Q. Where do you live?
A. 354 East Tenth street, rear house, top floor.
Q. How long have you lived there?
A. Ten or eleven years.
Q. Are you a naturalized or native-born citizen?
A. Born here in the United States.
Q. Did you register at this election?
A. Yes, sir.
Q. Did you give your address at the number you have mentioned above?
A. Yes, sir.
Q. Were you arrested?
A. Yes, sir.
Q. When?
A. This morning.
Q. Before you had voted?
A. Yes, sir; I was going to vote and they challenged me and I cast my vote.
Q. And then you were arrested?
A. Yes, sir.
Q. What were you charged with?
A. For not living in the directions I gave.
Q. Charged with illegal registration?
A. Yes, sir.
Q. You were brought down here before Commissioner Shields?
A. Yes, sir.
Q. Did he hear the case?
A. Yes, sir; I guess he did.
Q. He heard the case and discharged you, did he not?
A. Yes, sir.
Q. Had you any knowledge that you were to be arrested to-day?
A. No, sir; not a bit of it.
Q. Did you register on the first, second, or third day of registration?
A. It was the second, I think.
Q. You think you registered on the second day of registration?
A. I can't tell that for sure.
Q. You never heard until to-day that you were charged with false registration?
A. No, sir; not until I went in there?

Now, the value of all this talk about the persons arrested being criminals or disreputable people is, perhaps, as well illustrated by the next case that I am going to cite as by any in the list:

TESTIMONY OF RAFFAEL A. JOSEPHSON

Raffael A. Josephson, called by the committee, being duly sworn, testified as follows:

By Mr. FITCH:

Q. Where do you live?
A. 287 Madison street.
Q. Are you a naturalized or native citizen?
A. Naturalized.
Q. When were you naturalized?
A. Five years ago.
Q. How long have you lived in the State of New York?
A. All the time; I have lived here eleven years.
Q. How long have you lived in the city of New York?
A. Over six months.
Q. How long have you lived from where you registered?
A. About two months; I moved there the 26th of September.
Q. What is your business?
A. Well, my business; I am a minister.
Q. You are a rabbi?
A. Yes, sir.
Q. Were you registered at this election?
A. Yes, sir.
Q. Where did you register?
A. In my district, on the corner of Madison and Montgomery streets.
Q. Did you register on the first day, or the second, or the third day of registration?
A. On the second day, I guess.
Q. If you don't know—it was the second or third day, perhaps?
A. Yes, sir.
Q. Before to-day, did anybody tell you that you were going to be arrested for false registration?
A. No, sir.
Q. You were arrested to-day, were you?
A. Yes, sir.
Q. When you came to vote?
A. When I came to vote I was led away and a man told me "I want to arrest you."
Q. Did you vote?
A. Yes, sir.
Q. And you were arrested then?
A. Yes, sir; I was.
Q. You were brought before Commissioner Shields?
A. Yes, sir.
Q. And your case was heard?
A. Yes, sir.
Q. And what was the result?
A. I am discharged.

Mr. WARNER. I should like to know whether this commissioner, who appears to have connived at all these "Tammany outrages" by discharging these men, is a Republican or a depraved Democrat?

Mr. FITCH. He is a Republican and has been one all his life.

A MEMBER. A "depraved" Republican?

Mr. FITCH. He is not a depraved Republican, because he is one who knows the law and who endeavors to administer it justly.

Mr. WARNER. And was he immediately deprived of his place by the Republican judicial officers after he had perpetrated these outrages in letting those men go whom Davenport had arrested?

Mr. FITCH. He was not. On the contrary he has been promoted by the judges of the United States courts, who, I hope, have seen that his conduct in these matters has been that of an upright magistrate. [Applause.]

Now, here is the testimony of John S. Leach:

Q. Where do you live?
A. 34 East Twelfth street.
Q. How long have you lived there?
A. The three past years I have registered from there and voted from there.
Q. You registered from there last year?
A. Yes, sir; and voted.
Q. So that your name was on the registry list or the polling list from that place?
A. Yes, sir.
Q. What is your business?
A. Upholsterer, and I work for Mr. Brown, and have done work for him for the last three years.
Q. Are you a naturalized or a native citizen?
A. Native.
Q. How long have you lived in the city of New York?
A. Fifty-one or fifty-two years.

Mr. McCALL. May I inquire of the gentleman from New York——

Mr. FITCH. I think I must decline to yield. Gentlemen on the other side were not interrupted to-day; and I prefer to proceed in my own way.

Mr. McCALL. I simply desire ——

Mr. FITCH. I decline to yield to my friend.

I wish also to call attention to the testimony of Edward Flieger:

Q. Where do you live?
A. 53 Attorney street.
Q. How long have you lived there?
A. Between four and five months; I should judge about five months.
Q. Are you a native or naturalized citizen?
A. Native; born here.
Q. How long have you lived in the city of New York?
A. Twenty-two years.
Q. What is your business?
A. I work for the fifth district court marshal.

He is a court officer of the city of New York, entrusted with the service of papers and the collection of money. He was arrested and was immediately discharged.

Now I turn to the testimony of John Barry:

Q. Where do you live?
A. 15 James Slip.
Q. Are you a married man?
A. Yes, sir.
Q. Live there with your wife?
A. Yes, sir.
Q. How long have you lived there?
A. Five months.
Q. Are you a naturalized or native citizen?
A. I was born here.

This man was arrested in the same way, and immediately discharged by the magistrate on an investigation of the facts.

Here also is the testimony of Alfred Newell Fuller. And if I ever saw a cultured gentleman and recognized him on sight, it was this man. I read his examination:

TESTIMONY OF ALFRED NEWELL FULLER.

Alfred Newell Fuller, called by the committee, being duly sworn, testified as follows:

By Mr. FITCH:

Q. Where do you live?
A. 17 Lafayette Place.
Q. How long have you lived there?
A. Since the 14th day of October, 1891.
Q. Have you ever registered from there before?
A. No, sir; but I have been a citizen of New York since 1885.
Q. What is your business?
A. A private tutor preparing boys for college.
Q. Did you register at this election?
A. Yes, sir; the 29th day of October.
Q. Before to-day did you have any intimation that you were to be arrested for any crime against the election laws?
A. No, sir; not until I presented myself to cast my vote.
Q. Have you voted?
A. No, sir; I have been over to Jefferson Market since half-past 1.
Q. You presented yourself to vote to-day?
A. Yes, sir; twice.
Q. Were you arrested?
A. Yes, sir; twice.
Q. Please restrict yourself to the arrest by the United States marshal; you were arrested by a United States marshal?
A. Yes, sir.
Q. Did he show you any warrant?
A. Yes, sir.
Q. What was the charge against you?
A. False registration.
Q. And you were brought before Commissioner Shields?
A. Yes, sir.
Q. And your case was heard?
A. Yes, sir?
Q. What was the result?
A. Discharged, with laughter, by the commissioner.
Q. Was there any foundation for any such charge against you?
A. No, sir; I can not see any. I left town on the 1st of July, and have been in Newport and Long Island, and I returned on the 30th of September; and I have been in the city ever since; although I am out of the city a great deal that is my residence.

Gentlemen talk about the "slums;" they talk about the degraded class of people who undertake to vote in the city of city of New York and whom Davenport arrests. I have cited the case of a minister of the Hebrew gospel; I have cited the cases of these other men, reputable citizens, born in the city of New York. Here is the case of a scholar, a gentleman who is engaged in the business of preparing boys for college, a man whose appearance was as significant of the character of a gentleman as that of anybody whom I have ever seen; he is dragged from the polling place and taken before a magistrate, who immediately upon investigation discharges him as entirely innocent.

Again, here is the testimony of Joseph Higgins:

Q. Where do you live?
A. 69 West Twenty-ninth street.

* * * * * *

Q. Are you a native or naturalized citizen?
A. I was born in New York City.

Now, it is to be borne in mind that the great majority of the people whom we happened to have before us were people whom we caught "on the fly," because we could not tell whom Davenport would arrest. When arrested, they were brought before the commissioner. We caught them, as it were, by accident; we photographed this thing on the spot, as it happened. We found that about two-thirds of all the people whom Mr. Davenport arrested were native citizens, born in the city where they were trying to vote.

Now, Mr. Speaker, these are matters of public record in the city of New York. I am speaking of facts that took place in the broad light of day, not somewhere down in the South, where there is perhaps some question about what happens, but right under the blaze of the calcium light of the New York press, the strongest and the best and most independent press in the world; right at the center of the great business heart of this country, the center of its intelligence, in the greatest of Northern cities. [Applause.] These things have happened for years. We have brought you the proof of it. Therefore we come to you and ask you in our behalf and for our aid to repeal these laws. They were aimed at us. They have been tried on us.

Now we ask you to help us to get rid of them. We ask to have the laws repealed, not to oblige somebody in the South, not in the interest of the late Confederacy, as my Republican friends suggest, but on behalf of the greatest manufacturing and commercial town on this continent; on behalf of the metropolis of the country, where they have been tried a quarter of a century. We now ask you, now when we have a Democratic President, a Democratic Senate, and a Democratic House of Representatives, to relieve us from these laws forever.

Mr. BROOKSHIRE. Will the gentleman allow me a moment?

Mr. FITCH. Certainly.

Mr. BROOKSHIRE. The table prepared by the Secretary of the Treasury and printed by the gentleman from Illinois [Mr. BLACK] says that there were $1,100,000 expended from July 1, 1876, to June 30 of last year, and of that amount $610,000, or over one-half of it, was expended in the city of New York.

Mr. FITCH. That is true. There is no doubt of it, and if I were permitted by my time and the game was worth the candle it would be easy to show it even more fully.

I have tried, Mr. Speaker, to show the character of the people who were arrested. I desire now to speak of the character of the marshals who made these arrests. I desire to say, first, that of all the disreputable people, of all the ignorant and debased people, whom since my boyhood in the city of New York I have ever seen, these deputy marshals who appeared before our investigating committee were the worst. If they could be ranged up now in front of the Speaker's desk, their appearance alone would pass this bill. There is but one description of them in literature and that is the description of Sir John Falstaff's recruits. [Laughter and applause on the Democratic side.]

Now, to show to the House that it has always been so under this system, I send to the Clerk's desk to be read a statement which appeared in the New York World. That paper, in 1879, when a similar debate was up before in Congress, made some investigations as to these "conservators of the peace and purity," as these men were called, and a statement of the result of that investigation was printed in the CONGRESSIONAL RECORD. It was quoted by the Senator from Connecticut, Mr. Eaton, in a speech, and subsequently by the Senator from Tennessee, Mr. HARRIS, and has never been denied.

Who and what are these conservators of peace and purity?

Theodore alias Mike Anthony, alias Snuffey, of 24 Cherry street, a laborer, 35 years of age, married, and can not read or write. Anthony was arrested by Detective James Finn, of the Fourth precinct, on July 24, 1870, for larceny from the person, and was held in $2,000 bail for trial by Justice Hogan. He was indicted by the grand jury on the charge on the 23d of August last.

Joseph Frazier, of 279 Water street, is a thief and confederate of thieves.

James Miller is the keeper of a disorderly house in the basement of 339 Water street.

James Tinnigan keeps a similar den in the basement of 337 Water street.

James Sullivan, alias Slocum, keeps a disorderly house at 330 Water street, which is a resort for desperate thieves.

Frank Winkle keeps a disorderly house at 337½ Water street. The police are frequently called in to quell fights in Winkle's place, and it bears a hard reputation.

The authorities have appointed one John, alias "Buckey," McCabe a supervisor of the eighth district, Fifteenth ward. He is now under indictment for shooting a man with intent to kill. This precious "supervisor" originated here, and was first known to the police for his dexterity in robbing emigrants. His picture is in the "rogues' gallery" at police headquarters in this city, No. 225. He was known as "Pat Maddon," alias "Old Sow," alias Housey Nichols, alias Dennis McCabe. His real name is Andrew Andrews. His wife resides in North Pearl street, and the "supervisor" of the eighth district, Fifteenth ward, New York, is down in the directory as a citizen of Albany.

Thomas McIntire, marshal Eighth ward; has been frequently arrested for beating his aged mother; sent several times to Blackwell's Island.

Timothy Lynch, marshal sixth district, Fifth ward; a Washington Market lounger.

Peter Mose, marshal Sixth ward; an habitual drunkard.

John Connor, supervisor first district, First ward; keeps a disorderly gin-mill, resort of lowest characters.

Francis Jordan, supervisor sixth district, First ward; lives in New Jersey; was turned out of the post-office by Postmaster James for bad conduct.

Bernard Dugan, supervisor eighth district, First ward; habitual drunkard. His wife left him on account of his drunkenness, and procured a divorce on that ground.

John Tobin, supervisor ninth district, First ward; arrested about six months ago for grand larceny.

Patrick Murphy, supervisor fourth district, Sixth ward; two years ago distributed fraudulent naturalization papers, and would furnish them to anybody that would promise to vote for Grant.

Edward Slevin, jr., supervisor second district, Fourth ward; has an indictment now pending against him in court of general sessions for cutting a boy named Kilkenny.

Michael Foley, supervisor fourth district, Fourth ward; well-known repeater, voting for anybody that will pay.

James F. Day, supervisor seventh district, Fourth ward; shot at a man in a fight between the Walsh Association and a gang from Water street.

John Connors, alias "Jockey," supervisor third district, Fourth ward; a well-known desperate character.

Michael Costello, marshal Sixth ward; bounty-jumper during the war.

Harry Rice, supervisor thirteenth district, Sixth ward; was connected with the Chatham-street concert-saloon murder, and fled to Nebraska to escape punishment.

Thomas Lane, supervisor seventeenth district, Sixth ward; formerly keeper of a notorious den at Five Points; headquarters of thieves and robbers.

John Lane, supervisor twenty-second district, same ward; was indicted for receiving stolen goods; has served a term in Sing Sing.

Edward Foley, supervisor sixth district, Ninth ward; arrested last year for stealing a watch.

Humphrey Ayers, supervisor eighteenth district, Ninth ward; arrested six years ago for robbing the United States mail.

John Dowling, supervisor nineteenth district, Ninth ward; arrested August 20, 1869, for till-tapping.

James Fitzsimmons, supervisor twentieth district, Ninth ward; arrested August 1, 1868, for robbery.

John Martin, supervisor fifth district, Twelfth ward; arrested a few years ago under an indictment for arson.

Samuel Rich, supervisor fourth district, Thirteenth ward; served a term of two years at Sing Sing for felonious assault.

John, alias "Buckey" McCabe, supervisor eighth district, Fifteenth ward; charged with shooting a man with intent to kill about a year ago.

William P. Burke, supervisor twentieth district, Eighth ward; served his term in the State prison of Massachusetts for burglary; also two years in the New York State prison.

James McCabe, supervisor fourth district, Eighth ward; now confined in the Tombs under indictment for highway robbery.

William Irving, supervisor fourteenth district, Eighth ward; has served a term in Sing Sing prison for burglary committed in the Eighth ward, and has never been pardoned.

Patrick Henry Kily, *alias* Fred Williams, supervisor twenty-second district, Eighth ward; keeper of a house of ill-fame, resort of the lowest and vilest characters.

Patrick Hefferman, supervisor of the tenth district, Sixth ward; arrested some time since for attempted murder.

Frederick Sterringer, supervisor Eighth ward; has been arrested several times for keeping disorderly house.

J. F. Baderhop, supervisor Tenth ward; arrested for murder a few years since.

Ed. Weaver, marshal in Eighth ward; has been but a short time out of State's prison, where he has been serving out his sentence.

Walter Prince (colored), marshal Eighth ward; now in prison awaiting trial for highway robbery.

Andrew Andrews, *alias* Hans Nichols, marshal; panel thief; been sentenced two or three times to State's prison, and has just returned from Blackwells Island.

Mr. VAN VOORHIS of New York. I would like to ask the gentleman what paper that is.

Mr. FITCH. That was published in the New York World, a tolerably well known newspaper, and was repeated in this House, or in the other House, in two separate speeches, and has been published before.

Mr. VAN VOORHIS of New York. Do you concede that all these bad people live in New York.

Mr. FITCH. I am sorry to say that they did live there, and were evidently well known there. Our court records are excellent. I do not know whether or not any of them came there from somewhere else to do this work, but they were the people who were selected by John I. Davenport to arrest our clergymen, college professors, and people in business in order to preserve the purity of the ballot. [Applause on the Democratic side.]

Mr. RAY. Will the gentleman allow me to ask him one question?

Mr. FITCH. I must decline to yield. My time is short.

Having considered, Mr. Speaker, the origin of these laws and our experience with them in operation, I desire briefly in conclusion to touch upon our reasons for their repeal. These reasons are those already quoted from the report of the committee. Let me repeat them, because I desire to emphasize the statement that we in New York do not wish these laws repealed because of any theories in regard to the Constitution or the rights of the States. We want them repealed because of the facts connected with the workings of these laws on our interests and our personal liberty. They ought to be repealed, as the report says:

First. Because they result in no convictions of offenders, and are therefore useless to prevent or punish crime.

Second. Because they cause great expense and are fruitful of constant and continuing frauds upon the Treasury.

Third. Because they are designed to be used and are used only as part of the machinery of a party to compensate voters who are friendly to it, and to frighten from the polls the voters of the opposing party.

Fourth. Because under and by virtue of these laws the gravest interference with the personal rights and liberty of citizens occur, and voters are punished by arrest and imprisonment for their political opinions.

In the course of this debate arguments of great length have been made in regard to the constitutionality of these laws or of any similar legislation. The gentleman from Virginia [Mr. TUCKER], of the committee of which I have the honor to be chairman, in particular, has argued very fully, and as if it were necessary to the repeal, that these laws are unconstitutional, and that the decisions of the Supreme Court of the United States in which their constitutionality is upheld are all wrong. He has been answered very fully by my Republican colleague, Judge DANIELS, whose distinguished career on the highest bench of New York for over a quarter of a century has reflected as much honor upon his State as it has upon him, with whose conclusions my two Democratic colleagues, Dr. EVERETT, of Massachusetts, and Dr. ENGLISH, of New Jersey, perhaps the two men in the House best read in the constitutional history of the country, agree.

Mr. Speaker, I practice law at a bar where any decision of the final courts of appeal in the State and in the nation is held in the highest respect and where it is not the custom to argue the law after the court has announced it or to denounce the court for its failure to follow the views of counsel. I submit that the question of the constitutionality of these laws is not before us. I do not feel, in voting on this question, that I must vote to overrule the Supreme Court in favor of the gentleman from Virginia. If it were constitutional for Congress to enact these laws it is constitutional for Congress to repeal them. I hope to vote in this Congress to repeal many laws about the constitutionality of which there is no kind of question. I am very happy to believe that, in order to understand why a bad law, made for a bad purpose, should be repealed, it is not a condition precedent that anybody should educate himself into the belief that he is a great constitutional lawyer.

In order, Mr. Speaker, to show that we are right in asking for this repeal on the grounds which I have stated and without adopting any particular theory about the Constitution, I call attention to the language of the platform adopted by the national Democracy at its convention at Chicago in 1892 on this subject. There is nothing about the constitutionality of these laws in the platform, although in the next sentence following the mention of them there is a statement in regard to the unconstitutionality of the tariff. The national Democracy did not ask for the repeal of these laws because of anything in the Constitution or on any theory of the rights of the States.

The national convention attacked the system on grounds precisely similar to those which I have stated, grounds on which we can all safely stand, and grounds which are more than sufficient to the justification of the repeal. The wording of the platform is as follows:

[Extract from the Democratic platform adopted at Chicago, June 22, 1892.]

FEDERAL CONTROL OF ELECTIONS.

We warn the people of our common country, jealous for the preservation of their free institutions, that the policy of Federal control of elections to which the Republican party has committed itself is fraught with the greatest dangers, scarcely less momentous than would result from a revolution practically establishing monarchy on the ruin of the Republic. It strikes at the North as well as the South, and injures the colored citizen even more than the white; it means a horde of deputy marshals at every polling place armed with Federal power, returning boards appointed and controlled by Federal authority, the outrage of the electoral rights of the people in the several States, the subjugation of the colored people to the control of the party in power, and the reviving of race antagonism, now happily abated, of the utmost peril to the safety and happiness of all.

On that platform, Mr. Speaker, on the evidence and the report of the committee of investigation in the last Congress, and for the reasons which I have mentioned, the city of New York comes to this House to-day with a request for the repeal of these laws. We ask this repeal in the interest of justice, in the interest of good government, and in the interest of pure and honest elections. The city has earned the right to be heard in a Democratic House. I am sure that her request will not be refused. [Prolonged applause on the Democratic side.]

Chinese Exclusion.

SPEECH
OF
HON. THOMAS J. GEARY,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 11, 1893.

The House having under consideration the bill (H. R. 3887) to amend an act entitled "An act to prohibit the coming of Chinese persons into the United States," approved May 5, 1892—

Mr. GEARY said:

Mr. SPEAKER: I have listened to my friend from Kentucky [Mr. MCCREARY] with pleasure, but also with some surprise. I have been unable to reconcile his present appeal on behalf of Christianity and humanity with his declaration that the act which he is now seeking to amend was calculated to inflict on a race of people in our midst punishment equaled only by those inflicted upon the Moor, the Jew, and the Huguenot. When I heard him utter that sentiment I could not help wondering why, when the act was before this House as a bill two years ago, he was not influenced by the same spirit of humanity.

Mr. Speaker, I can not permit the impression to go abroad that the members from the west coast of this country are willing to vote to pass any act in Congress, or to ask their fellow-Representatives here to give their sanction to any measure which would inflict a blot like that upon the character of the American people. The Moor was not expelled from Spain because he had failed to comply with the laws of the land. The Moor had not had a chance given him to comply with law, and his deportation was not the penalty of crime. The Jew was driven out because of hostility to his race, without regard to the question of his criminality or his innocence. The Huguenot was driven out, not because he had been guilty of an offense against the laws of France, but because he demanded the right as a free man to worship his God as he saw fit and refused to bow to the edicts of another church. This law does not impose any such penalities upon the Chinese, nor does it bring the least disgrace upon the people whom we represent here.

I will not permit my friend to assert without contradiction that he is more humane and more interested in Christianity

than I am; and, although I do not believe that these people are entitled to any new rights in this country, although I believe that good public policy would dictate that we should strictly enforce the law according to its letter, yet if I believed that by the passage of this bill, reported from the Committee on Foreign Affairs, in the shape in which it is now before the House, we would obtain a final settlement of the Chinese question, that these people would comply with its requirements and would give us the opportunity we have been seeking for the last twenty years to effectually regulate their presence here, and prevent the coming of more, I would vote for the bill.

My hostility to it is because I have no confidence in it; because I do not believe that the measure is presented with any intent to have it complied with by these people; because I believe it merely offers them another opportunity to evade existing laws. It is for these reasons that I and my associates from the Pacific coast are hostile to this proposed bill. We will suggest amendments which we claim are necessary to make it effective, and unless the House concedes those amendments to us, we shall have to oppose this bill, which we think must prove abortive and destructive of the best interests of our people.

I am not unconscious of the fact that for the last two years there has been much adverse criticism of the bill that bears my name. I never thought the time would come in my life when I should excite the attention of so many goodly people, and that in synod and conference my name would be inscribed upon the records, and all good people asked to condemn me because I had supported a measure calculated to preserve the Christian civilization of my native land from the destructive influence of the Asiatics. Somehow this smacks somewhat of the intolerance that sent the Huguenots out of France, that drove the Jews from England, and compelled the Moor to emigrate from his native land. I have before me a petition which I want to read.

To the Senate and House of Representatives, Washington, D. C.:

The Des Moines Annual Conference of the Methodist Episcopal Church, assembled at Audubon, Iowa, on the 13th day of September, 1893, composed of 225 ministers, representing 40,000 church members, respectfully petition your honorable body to immediately repeal the act passed on the 5th day of May, 1892, known as the Geary law. We make this earnest petition, first, on the ground of justice and fair dealing. By solemn treaty agreement, the Chinese now in the United States are entitled to the same treatment that is accorded to the citizens or subjects of the most favored nation. The provision that they shall register and take out certificates to assure their continued residence here, producing the testimony of a white witness to their right to be here, requires of multitudes of them an impossibility, and yet subjects them to imprisonment and deportation if they fail to comply with the requisition. This requirement made of them alone, in contradistinction to all other foreigners in the country, is a palpable violation of the treaty.

The second clause of the petition tells us that the Methodist Episcopal Church—not the American Methodist Episcopal Church alone—has some $400,000 invested in China, and is also represented there by a number of missionaries.

Petitions in form similar to this have been sent here from many of the religious conventions that have met this summer; petitions apparently prepared at the same place and issued from the same source.

It did not matter whether the Methodists or the Baptists or the Episcopalians or the Presbyterians wished to petition, they all used the same blanks. There was about this a concert of action which was peculiarly suggestive. But the only purpose for which I refer to this petition is to show the character of the statements which have been circulated throughout the country, describing the effects and operation of this law.

Mr. McCREARY of Kentucky. Will my friend allow me to make a single statement at this point? I hold in my hand—and it is justice to these people that I should refer to it—one of these petitions from the members of the annual conference of the Methodist Episcopal Church of sixteen States in the Union. I will only read the indorsement of one of these petitions:

Central Ohio Annual Conference, Methodist Episcopal Church: 200 ministers, representing 12,000 members ask for the repeal of the act of May 5, 1892, known as the Geary law.

These petitions come from the conferences of sixteen States.

Mr. GEARY. Mr. Speaker, what right has any church or church body to pass judgment upon the action of any American legislative assembly, to give directions to it, or make demands such as this? What right has any church in this land of ours, speaking from its pulpit or church door, to say to an American Congress, "you must do this," or "you must do that." I supposed that in this land of ours the line was sharply drawn between church and state; that each within its appropriate sphere must be supreme, but that the church must never lay its hand on government, and the Government must never interfere with the church. [Applause.] Remember, I do not deny that every churchman in the land has the same right to petition given to every other citizen of this country, but he must petition as a citizen, standing upon his rights as such, and not invoke the powerful name of church behind him. [Applause.] The members of the congregations as citizens have the same rights as other citizens; but the church as such has no right to interfere in the political affairs of this nation.

If there is one thing more than another which all true Americans have approved the declaration of, it is that there must be no union of church and state, and no invasion of the province of one by the other. This principle is as old as the foundation of the American Commonwealth. It has been the experience of men in the past, that whenever the church has had the right of interference in matters of government human liberty has suffered from the union, and the men and women who settled on the shores of the Atlantic and laid the foundations of the Republic had experienced in the older lands from whence they came the evils and dangers of such commingling of affairs. They had experienced persecutions under religious governments, and it mattered not what the faith of that government was, the attendant results were always the same. Protestants could not forget the persecutions of the Huguenots by the Catholics, or Catholics forget the persecutions and sufferings of Catholics and Protestants at the hands of Protestants. All alike are simply evidence of the truth of the conclusion that human liberty suffers under the union, and that the government that will maintain human rights and insure freedom to all must be free from religious interference by any sect.

Both church and state have their appointed task in the improvement of human society; each within its own sphere must be supreme. Let the church perform its grand work in the improvement and the betterment of mankind, teaching the faith handed down by the fathers, bringing men in closer relationship with Divinity if it will; teaching the necessity for the application of truth and love in the affairs of the human race. Let it go abroad wherever it may; minister to the wants of the poor and the suffering; drive sorrow from the hearthstone, and ameliorating the condition of suffering humanity wherever it may find it. Let it within its sphere be absolute and supreme, permitting no interference by the Government in its exercise of faith, but when it reaches the borderland that separates church matters from temporal, there it must stop.

The church in this country has no right to criticise, condemn, or pass judgment upon the acts of an American legislative body, and is without the power to make demands that must be respected by this Government. This is the unwritten law of the land. There was a day in the world's history when priests and bishops could point their finger and make rulers tremble, when the demands of pope and cardinal were respected by governing bodies the world over, but that day, happily for the human race, is past, never to return. In this land such a power was never recognized, and there is no room here for religious associations claiming the right to interfere with the political affairs of the people.

The Protestant churches in the United States under the leadership of misguided zealots have permitted themselves to make an exhibition of their desire to interfere in political matters that I know on sober reflection the great mass of the American church will condemn, because I do not believe that it is their wish or intent to establish a precedent that may be used in the future to justify the interference of all other churches in the political affairs of this country, because if we concede the right of interference to a Protestant bishop or minister we must concede it to the Catholic Pope and bishop and priest, and I do not think that the great mass of the people of the United States, the masses of the Protestant churches especially, are willing to concede the right of papal interference with the political affairs of our people.

What would they think and what would they do if to-morrow or the next day the learned archbishop of the Catholic Church for the State of New York should mount his pulpit, and denouncing an act of Congress, call on his people to use their political rights in behalf of the policy dictated by the church; demand that they should insist on the repeal of a statute because it was hostile to the interests of the church or interfered with some religious work that it was engaged in? Why, from every Protestant pulpit in the land, from the lips of every American, would go up a condemnation of that interference on the part of the papal representatives, and we would have the grim old specter of the Pope seeking to dominate this Government paraded through the land, and what an intensity of feeling would be exhibited by these same ministers at the apparent impudence of the Catholic clergymen seeking to do the very same thing that they have been doing from all their pulpits in the last few years. The Protestant church must be consistent, or it must admit the exercise of this, to them, dangerous power by the papal church.

I may offend some good people in these statements, but I am satisfied that I speak the wishes of the great mass of the American people of all churches, who, profiting by the experience of the

race in years gone by, jealous of their rights, fearing the interference that in all other lands has spread misery and suffering upon the people, are satisfied with existing conditions of government, and with the maintenance of a just equilibrium between the church and state. I say that hereafter, and for all time to come, there must be no intermingling of the powers of the one with the other, no union of church and state in any way or manner; that hereafter the church, as church, must abstain from interference in any way shape, or manner with the political affairs of this nation. [Applause.]

I have read this petition merely to show the falseness of the statements that have been sent abroad about the character of this legislation, to show you how people have been misled into hostility to a measure they have never read and do not understand. Now, I have heard much about this law violating the national honor and about the humiliating attitude of our Government in seeking to oppress a weak power like China. Sir, there has been no violation of any treaty. There never was a treaty between this Government and China that was violated by any law ever passed in any American Congress since the time the treaty was made. This law of May, 1892, the registration law, not only is not violative of the treaty, but is expressly authorized by the terms of that instrument, and these men who have been talking so much about it and have been so anxious to protect American honor had better first buy a copy of the treaty and learn what it contains.

Mr. RAYNER. Will the gentleman point out the part of the treaty which authorizes this legislation?

Mr. GEARY. I have it in my hand, and will give it to you in a moment. The treaty of 1880, the last treaty that we made with China, contains the following:

Whereas the Government of the United States, because of the constantly increasing immigration of Chinese laborers to the territory of the United States and the embarrassment consequent upon such immigration, now desires to negotiate a modification of the existing treaties which shall not be in direct contravention of them, etc.

ARTICLE I. Whenever, in the opinion of the Government of the United States, the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or such residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable, and shall apply only to Chinese who shall go to the United States as laborers, other classes not being included in the limitation.

Now, therein by the treaty of 1880 was the express authority conferred upon the United States to pass such laws as we might deem proper; not such laws as might seem proper to the Government of China, or to some neutral power, but such laws as the American Congress, acting alone, might deem necessary and proper for the protection of our people against the Chinese seeking to come here, and to regulate not only the mode and manner of their coming but their residence while amongst us.

Mr. RAYNER. The gentleman surely does not pretend that the act of 1892, the Geary act, was passed in pursuance of that article, because the Supreme Court of the United States said in the very case in which they affirmed the constitutionality of that act, that it was a violation of treaty obligations. In that decision they used this language:

It must be conceded that the act of 1888 is in contravention of the express stipulations of the treaty of 1868 and of the supplemental treaty of 1880, but it is not on that account to be deemed invalid or restricted in its enforcement.

This is the first time I have heard that that law was not in contravention of the treaty. In every one of these cases the Supreme Court has held that this act is in violation of treaty obligations.

Mr. GEARY. My friend is a good lawyer, but he must remember that in neither of those cases was the Supreme Court called upon to pass on that question. The questions before that court were these: Can we pass an act which is in contravention of a treaty? and if Congress does pass such an act does that abrogate the treaty to that extent? That this act did violate the treaty was conceded for the purposes of the argument, and the court assumes the violation and then gives its decision that if an act of Congress is passed subsequent to the treaty, it abrogates the provisions of the treaty when in conflict therewith.

But I am not relying upon those decisions of the Supreme Court, because it is conceded by all lawyers that every government possesses the authority to abrogate, by subsequent legislation, any treaty with a foreign power, and that when that legislation is called in question in a local tribunal, the local tribunal has to sustain the last act of its own sovereign; but that, as between the two nations, the treaty may be considered as in existence or not at the will of the party injured. I am contending now that this act of 1892 is expressly authorized by the treaty.

I am not relying upon the decision of an American court. I am willing to submit this question to any international tribunal, where we shall rest nakedly and alone upon the right given to us by the treaty which we made with the Chinese Government. The treaty of 1880 did say that whenever the American Government wished to regulate the residence of Chinese in this country it might do so, and when, in the exercise of that power, we passed the act of 1882, limiting Chinese immigration for a period of ten years, and when we passed an act amendatory of that in 1884, adding other conditions to the exercise of immigration, those acts of this Congress became as much parts of the treaty as though they had been expressly incorporated with it.

When China gave us authority to exercise power in pursuance of the treaty, the moment we exercised that power and brought into life that character of legislation, it became as much binding upon the Chinese Government as though we had incorporated it in the treaty itself.

Mr. STOCKDALE. If it will not interrupt the gentleman, I would like to ask him if it be true that the original Geary law is in violation of the treaty, does it not follow that this amendment is also in violation of the treaty?

Mr. GEARY. I have said that before the gentleman came in. I was wondering how my friend from Kentucky could reconcile his vote. Now, then, I lay down this proposition, that we have never at any time violated any treaty between this Government and China; and I go further than that, and say to these men, who are so jealous of the honor of the American people, that I do not think in this case there is room for the exhibition of such sentiments, if they are permissible at any place or any time, in viewing our actions toward foreign nations.

I am going to establish the fact that ever since the treaty of 1880 was signed, or since the act of 1882 was passed, China has day by day and hour by hour, in the daytime and in the night, sought for opportunity to violate that treaty, which its friends now claim should be observed. When we passed the act of 1882, saying that for ten years Chinese laborers should not come into this land, the moment that China became apprised of the passage of that law, she became as much bound to assist in its enforcement as though we had incorporated it in the original treaty. Her duty to us as a friendly power, bound to us by treaty, has been declared over and over again by all the international law writers. It was the duty of China, by exercising all the power and authority she had at home over her own people, to discourage them from coming to this land, just as soon as she learned that their coming was in violation of our law. Mr. Wharton lays down this doctrine as the rule:

It is the first duty of a friendly government to exercise its power to prevent its people from attempted violations of a law of a friendly state, and to exercise all its power to restrain its own people at home.

We have over and over again invoked that declaration of international law writers, first with Mexico, shortly after the close of her war, when bands of her people and Indians crossed and recrossed the frontier, inflicting injury upon ours. Our Government demanded of the Mexican Government that she should protect us against the incursions of her people, because they came here to violate the laws we had made for the protection of our citizens. Again, during the Blackfoot troubles along our Northern borders some few years ago, we demanded of the Canadian authorities that they should restrain their people and not permit them to wander from their reservations, to come in and work injury to our people.

We have said to China, "We no longer desire the coming of your laboring class. You have given us the authority and power to make this declaration. You have said that as a friend you will seek to uphold the treaty made between us."

Tell me, those who find so much to admire in the Chinese character, when has China ever exercised her power to prevent her people from violating our laws? Every day since 1882 attempts have been made by her people, by fraud and by duplicity, either by coming across our borders or by forcing themselves through our ports of entry, to get into this country after we have declared our hostility to them. There was never a single hour when the Chinese Government could not have said to her people at home, "Cease these attempted violations of American laws." And they would have stopped.

But China never did it. With knowledge of the departure of these expeditions, aware of this constant emigration of her people to our shores, knowing that she was violating treaty by permitting it, China remained silent. There is no room for sympathy for the Chinese Government. In all her dealings with the Americans, she has never failed to exercise every opportunity to defraud us.

Now, we are not left in doubt as to what China might have done with her people, because in 1888, prior to the passage of the so-called Scott act, she opened negotiations with this Government and said to us, "Let us make a new treaty and we will agree to pass such laws in China and keep our people at home."

Why did she not exhibit the same spirit under existing laws? Why did she not in 1882, 1883, 1884, and 1885 say to her people,

"Stop! this is not right; this is a violation of the spirit of the treaty," and with that intense regard for treaty rights for which she is now clamoring from the American Congress, why did she not herself give us an exhibition of the exercise of that power?

My friend from Kentucky is exercised about economy in this matter. Well, I wonder we have not received some other lectures in economy. How much, think you, have we spent since 1882 in protecting ourselves against these very violations of law countenanced by the Chinese Government? According to the report of the clerk of the Appropriations Committee, which I have here, in these years from 1883 down to 1893 the Congress of the United States appropriated, and spent most of it, $361,000 for the purpose of enforcing the Chinese restriction laws of this land. For the last few years the average amount was more than $50,000 a year; not in the enforcement of the bill that bears my name, as you say, but for the enforcement of the general laws which provide that Chinamen shall not come in. Every dollar of that could have been saved to our people if the Chinese Government had taught her people at home to obey law, or if they had ceased to attempt its violation here.

Now, then, it is said that the act of 1888, the Scott bill, so called, is a violation of the treaty. Why, Mr. Cleveland did not think it a violation of the treaty. In the message he sent to Congress in October, 1888, he referred to the conduct of the Chinese Government, and he justified the signing of the Scott bill by saying in his message, "We passed this in self-defense." Self-defense of what? A government has no more right than an individual to invoke the right of self-defense until after it had been attacked and driven to the wall. They attacked us; and here is the attack that justified Mr. Cleveland in 1888 in saying that the Scott bill was passed in the exercise of the right of self-defense. Why? Because these people had all the time been assailing the laws passed in this country, because they had been attempting to force themselves upon us after we had declared that we no longer wanted them; because their Government refused to enforce the treaty to which it had given its signature, Mr. Cleveland said that attack was made and the right of self-defense justified us in ignoring a treaty repeatedly broken by the other power. That was the interpretation and meaning placed upon that instrument then by the present President of the United States.

Then we have this fairy tale: "Oh, China does not want her people in the United States, but would rather have them all at home." Persons are actually going about trying to represent that all these Chinamen who are here have come here contrary to the wishes of their Government; but whenever we come to make a treaty with that Government it is anxious to secure their right to continue coming.

In the past forty years the surplus earnings of the Chinese in the State of California alone, as reported by the collector of intenal revenue from an investigation made by him, has been over $500,000,000. More than $500,000,000 earned in our State, taken out of it by Chinamen and carried home to China to enrich that country. More than $500,000,000 taken off the Pacific coast, out of those sparsely settled States, and transported to a foreign land! No part of it has been invested with us; no part of it has been used to improve or better our country. None of it has gone into structures, religious or otherwise; and no permanent residence established, but all, as by a sponge, taken up to be squeezed out when it is transported to the land of the nativity of the men who acquired it.

You wonder why we in California do not like Chinamen. How would you like, in one of your Eastern States, to have a colony of foreigners step in, say to the extent of a hundred thousand, whose surplus earnings every day at 50 cents a day would amount to $50,000, and which they would take away from you? Can you build up communities with such a class of population? Can you improve the conditions of communities by having in your midst such an alien race, adding nothing to your wealth, making no contribution to your prosperity?

While we have one of the richest Commonwealths on earth, while our resources are almost boundless, we know that if in the past thirty years, instead of this army of leeches, we had had an army of laborers who would have turned back the product of their earnings our State would have been greater and grander than it is to-day. Because we desire to stop the sacrifice we have been subjected to is the reason why we stand here, without regard to political faith, and demand protection from the other Representatives of our Union.

Mr. HENDERSON of Iowa. Will it interrupt the gentleman there, if I ask him a question?

Mr. GEARY. No, sir.

Mr. HENDERSON of Iowa. I would like to know what percentage of the Chinamen who come into California become citizens of the Union under American laws?

Mr. GEARY. None of them.

Mr. HENDERSON of Iowa. I ask that question because I was told that a large number of them became citizens of the United States.

Mr. GEARY. We never had Chinese citizens.

Mr. MAGUIRE. Not of Chinese birth.

Mr. McCREARY of Kentucky. You had prior to the law of 1862.

Mr. GEARY. Prior to the law of 1862. The law prohibited them from being made citizens, but the courts before that refused to naturalize them under the amendments.

Mr. BAKER of New Hampshire. I would like to ask the gentleman if it is not a fact that those who employed Chinese laborers have received the full value for all they were paid in wages?

Mr. GEARY. I suppose that if you measure the value of labor alone by the thing that it produces, I will answer yes. We needed Chinese labor thirty years ago, when our free laborer was receiving the highest wages ever paid, higher than was paid in any other State.

Mr. HOOKER of New York. Or in any place in the world.

Mr. GEARY. Or in any other place in the world. The labor we had then would not work for the wages that prevail to-day; because you must remember that no place on earth ever gathered together a body of men like those who went to California in the first years of that State. There were men from every town and hamlet in the East and from every county in the South. We gathered together the cream of the young manhood of every State. The ambitious, brave, and brilliant men, limited by the environment that surrounded them at home, anxious for greater opportunity to exercise their talents and abilities in quest of new fields where they could progress and conquer, of this kind was the army of Argonauts who, encountering the dangers by land or the more serious ones by water, entered California and planted the banner of American civilization on the far-away shore of the Pacific.

How well they labored and what victories they won every other community in the Union will to-day bear testimony to, for the fruits of the victories of the California pioneers and their generosity have gladdened the hearts of deserving people in nearly every hamlet of the Union.

In the hands of these men and their descendants the national honor and national faith will be as jealously guarded and as well protected as in any Eastern community. Those men would not perform the duties that were demanded of common and menial laborers; and it is because of the presence of that class of men at the birth of California that she has been enabled to make the strides she has made in the past thirty years.

But now times have changed. The days of El Dorado have disappeared. Thousands of other laborers from other States have followed the pioneers until to-day we have a surplus of labor. They have been compelled to come down to the hard-pan of existence, and our labor now is forced into competition with this Chinese slave labor which threatens its destruction. To-day I can employ in California all the common white labor that I want for $1.50 a day, or from that down to $1 a day. Thirty years ago I could not hire a Chinaman for that sum. Now, the Chinaman, by his ability to live on less than what will maintain the white laborer, forces on that laborer a dangerous competition which threatens his existence.

I did not intend to go into this matter, because my colleagues and other friends intend to speak on this subject, and I wanted to leave something for them to say. [Laughter.]

But I want to call attention to this. In the consular reports for June of last year will be found the report of Mr. Bedloe, United States Consul at Amoy, a gentleman who only a few years ago was a very pronounced pro-Chinese advocate, as he told me himself. In that report he gives the cost of living there and the wages earned by Chinese labor. Common laborers get from $3 to $4 per month. Skilled mechanics, carpenters, blacksmiths, jewelers, and mechanics of that class, receive not to exceed $9 a month. He gives a table of the daily bill of fare of a first-class Chinese workman, and shows that he can live sumptuously on 6 cents a day. Now what, think you, is the chance of the white laborer on the Pacific coast, competing with a laborer whose daily wants are satisfied by the expenditure of 6 cents, and who who has no family depending on him, no one to maintain but himself? I do not think I need to answer that question.

Mr. BAKER of New Hampshire. Do I understand the gentleman to say that the Chinese laborer lives on 6 cents a day in California, or that he does so at home in China?

Mr. GEARY. I mean to say that the Chinaman in Amoy lives on 6 cents a day. I mean to say further that I can feed sumptuously in California any Chinese laborer that I ever gazed upon in my life, at a cost not exceeding 10 cents a day. I mean to say

that in making inquiries as to what the cost of deportation of these Chinamen would be, the officers return a report that in addition to the $35 for transportation, 14 cents a day would be a sufficient amount to maintain them.

Now, I ask again, how can our labor subsist when it is threatened with that class of competition. I know that my friends on the other side declare that they are in favor of protection to American labor. Well, sir, I am in favor of protecting the American laborer myself, but I do not think you can protect American labor by meeting the product of the pauper labor of China, or of any other land, at your custom-houses and declaring that it shall not come in, while you allow the pauper laborer himself to enter free. [Applause.]

If there is to be protection for American labor throughout the length and breadth of this land we must reject pauper labor no matter whence it comes, and put up against it some kind of an effective barrier. Until that is done there will be no real protection for American labor. Just as long as the man who toils in the American factory or workshop knows that any day the man whose labor he displaces in the old world by the operation of our tariff laws may walk into his town or village, and, looking up into his American face, say, "You would not let the thing I made come here, now I have come myself, and want your place." Just so long as that kind of competition is permitted on American soil our Republican friends can not pretend that the bars have been placed high enough or are numerous enough to protect American labor. [Applause on the Democratic side.]

Mr. HENDERSON of Iowa. Do you think it will be better done by your Democratic friends?

Mr. GEARY. Well, I am a Democrat, and these are my views, and if my party does not believe in them then I will not be a Democrat. [Laughter.] But I think my party does believe in them, and that I correctly interpret its platform declaration and policy.

Mr. BAKER of New Hampshire. May I interrupt the gentleman once again?

Mr. GEARY. Yes, sir.

Mr. BAKER of New Hampshire. Why does the gentleman limit his exclusion to the Chinese? If he will make it broader we will join him, perhaps.

Mr. GEARY. There is a bill before this House, introduced by myself, in which I extend it to all, and I am ready to vote for that bill now or at any time. Now, let me ask you a question? Will you vote for a bill to stop all immigration of laborers from any land into the United States?

Mr. BAKER of New Hampshire. Yes, sir; but not for the deportation of those now here.

I believe that in our legislation in regard to the exclusion of foreigners it is our duty to consider existing treaties; and I do not agree with the letter of the decisions of the Supreme Court that our statutes should be enforced regardless of existing treaties. I think we ought to conform to our agreements with other nations when we are undertaking to enact our statutes.

Mr. GEARY. I do not believe that this law violates any treaty. I do not believe that any man versed in international law will contend that it does. I think in this enactment we are exercising a right expressly conferred upon us by the treaty. But I want to tell my friend this—if there were a doubt whether a law of this character for the exclusion of pauper labor was in violation of a treaty or not, I should resolve that doubt in favor of the American workingman and not against him. [Applause.]

Mr. BAKER of New Hampshire. And I would agree with the gentleman, except that I would first ask the foreign nation to modify its treaty, and then I would proceed with the proposed legislation.

Mr. GEARY. Some men in this country seem to have an idea that we as a nation have not yet attained our growth, and that we ought not to pass any laws without consulting some foreign nation. [Laughter and applause.]

Mr. BOWERS of California. Particularly the silver law.

Mr. GEARY. I am not such an American. I believe we as a nation are not only 21 years of age, but of mature age; and I think we are capable of running this Government for the best interests of our people primarily; and if there is any surplus of humanity in our legislation which we can dispense with, we will ship it to other countries. [Laughter and applause.]

Mr. BAKER of New Hampshire. I agree with the gentleman so far as to believe that we as a nation are not only 40 years old but 100 years old. Still, I think this nation is not too old to be honest nor too old to be fair. [Applause.]

Mr. GEARY. I am not asking anyone to be dishonest or unfair. But it is rare to hear of any legislation in this country that was gauged by a strict regard for honesty or for the rights of Americans when the rights or interests of foreigners were involved. Why, sir, you can not even pass a silver bill or other financial measure without first getting leave from Lombard street. [Laughter and applause.] I think it is about time we should quit such business and become Americans in all things. Let the world know that we are going to run our Government according to our own ideas, that we are going to adopt such laws as we think necessary for our proper development and the insurance of happiness to all our people; and if the world at large does not like what we do, we will try to get along for awhile without the good opinion of the rest of the world. It wants more from us and receives more than we expect or receive from it.

Some gentlemen say that it is not necessary we should require certificates. Why, sir, we had tried all other systems. We had sought other means of preventing Chinese from coming in; and we had failed in every attempt of that kind. We have in the United States to-day according to the census, as quoted by my friend from Kentucky, only 106,000 Chinamen. That census is entirely wrong. I do not mean any reflection upon the gentlemen who compiled it, because I think they did their duty as they best knew how. I do not believe they purposely omitted any Chinamen; but I submit to any man at all conversant with this race that it is not within the range of human possibility to enumerate them when you consider the manner in which they live in our midst. I say we have to-day twice 100,000 Chinamen.

Mr. MAGUIRE. Three times.

Mr. GEARY. My friend says three times. In 1870 we had, according to the census, 213,000 Chinamen in the United States. Does anybody think there are fewer here to-day than then? Why, you did not then have them throughout the South and East. You have now colonies of them in some of the Eastern States where you did not have a Chinaman in 1870. Yet if we confine ourselves to the census report the number has actually decreased instead of increasing. But the actual fact, known to all men conversant with the race, is that the race has more than doubled in the last twenty years in spite of all our restrictive laws.

Here is one thing to which I wish to call the attention of gentlemen who talk about extending this right and about the anxiety of the Chinese minister to be consulted with reference to legislation. We ought to have according to the census reports a decrease of the number of Chinamen in the United States within the last ten years of 48,000, because taking the departures from San Francisco, as compared with the number of arrivals, there was a loss of 48,000. But taking the census report there was a gain of 1,000, so that we have 49,000 out of 106,000 Chinamen in the United States who are here in defiance of our laws—not here under the invitation of the Burlingame treaty—not here by invitation of the act of 1882 or the treaty of 1880; not here by any express wish of our Government, but here in defiance of that wish, in violation of our law—not made criminals alone by the law of 1892, but criminals the moment they landed on our shores.

What claim to consideration at our hands have these people? They were not misled by the opinions of these lawyers. They knew when they left their native land that they had no right here, and that we had no desire for them. Yet with a purpose to violate the law they landed upon our shores. Is it a crime to punish them? Is it wrong to enforce obedience to our laws? If so, what becomes of government?

Now, why does not your Chinese minister, who seems to have terrorized some of the Departments of the Government, say, "If this privilege, lost by nonconformity to the laws, be extended to those Chinamen who are guilty of no crime except noncompliance with the act of 1892, I will agree to mark out the 49,000 criminals, and assist you in their removal from our midst?"

If we are to be merciful to these people, they ought at least be just to us. We were compelled to pass the registration law because we had no other means of identifying a Chinaman once he got within the borders of the Union. On arrival he went immediately amongst his fellows, mixed up and associated with them: the next day no white man could identify him from other Chinamen who had been here sometime.

We might attempt their arrest, as Mr. Carlisle has done, but when we did so in every case we were compelled to prove the time when the Chinaman came into the country: and that it was subsequent to the passage of the law of 1882. Why, it would require one white man to find every Chinaman just as he was violating the law in order to enable us to establish that fact.

If the Chinese residents in the United States had done their duty as other aliens do; if they had not become shielders and protectors of these criminals; if they had not stood ready at all times to lend their testimony to establish a lie, we would never have asked for the passage of the law of 1892. But we said, "Here, we will stop this thing in this manner. Let us compel all now in the country to register. Let them take out a certificate of identification which can not be transferred from them to

somebody else." Then we know those who have a right to be here, and all of those who come here after that we can readily discover by the absence of this certificate.

That was the only purpose and the only intent of the act of 1892, in the preparation of which I assisted. We did not contemplate deportation as a penalty for crime. We thought these men would comply with a regulation such as this, and I honestly believe to-day that if the Chinese people in the United States had been left to the exercise of their own free will, they would have complied with the act, and the condition which now confronts us would not now exist; but the men who own them, the Six Companies and their presidents, the men and corporations who make fortunes out of their importation, did not intend to permit the enforcement of a regulation which destroyed the slave traffic on the western shore.

When we had established a means of identifying those who had the legal right to be here, we thereby established another means of identifying those who came in violation of law; and once we were permitted to do that, we were enabled to distinguish the newly imported slave, and return him to his native land; and we inflicted a destructive blow upon the slave trade on the western coast. We then gave notice to the Six Companies, the masters of these slaves, "Your industry must stop, because we now have means of destroying it by identification."

And the opposition to this law, all these appeals, all this clap-trap about humanity are merely in the interest of the men who for thirty years have been engaged in this slave traffic, who do not want this law to exist, because under its provisions no further importation of these people can be had. We ask now, in the passage of this law, that it be so amended that it may be effective. Let it be so framed that the purposes contemplated two years ago shall be carried out. Let it be made so definite that not another one of these people shall cross our frontier, or come into our ports; and I say for myself, speaking as a Californian, I will give you all the humanity you want, and vote for that effective law.

Why do you not permit us, who know the race better than you know them, and know their tricks, their guiles, and their deceptions, to be the judges of whether this law is to be effective or not?

We can not identify them like other people. I have never insisted on the photograph, and do not insist on it now, if any other means of identification can be made effectual. I will accept any means of identification that will make certain and definite the description of the man who is entitled to the certificate of residence.

I have studied all the known means of describing people, and after all I have come to the conclusion that the photograph is the only effective method, unattended with inconvenience, that can be adopted for the purposes of identification. If we do not make that certificate definite, so that it can not be transferred to cover another man, they will get out a hundred thousand certificates within six months, and inside of a year we will have half a dozen Chinamen everywhere claiming the right to remain here on one certificate that fits the group. You can not make a verbal description of a Chinaman such as you can make of a white man, and have it definite.

All Chinamen look alike, all dress alike, all have the same kind of eyes, all are beardless, all wear their hair in the same manner. Now, you sit down and write out a description of a Chinaman, give his height, weight, the color of his skin and the shape of his eyes, and after you have done it, what have you got? You have a description that will fit any other Chinaman that you happen to run up against. [Laughter.]

The regulation we ask for is reasonable because it is necessary, because it is the only regulation that can be made effective, and because it will be effective, is the reason why the Chinese companies oppose its adoption. I have no desire to humiliate any Chinaman. I have no desire to impose any humiliating obligations on anybody. The lot of all is hard enough without imposing fresh burdens. I would rather go through life lifting the burdens off and making life pleasanter for all; but we must protect ourselves.

This necessity is not of our creation. It is made necessary by their repeated violations of the law. Then we must adopt the only method that will make effective our own legislation Now, if anyone knows of any other system besides the photograph that will enable us to distinguish one Chinaman from another, I will accept that method.

Why, this is no new regulation. At the World's Fair every commissioner except the national commissioners—I believe one of them objected—all of the State commissioners at the World's Fair at Chicago, all the employés attached to exhibits at that fair, have on their passes entitling them to admission their photographs. They tried the line system; they tried the different descriptions adopted by the different countries to distinguish one man from another, and after awhile the World's Fair authorities had to insist upon photographs being placed on the face of the tickets, and the photograph entitled the man to enter. Talk about humiliating a man to have his own photograph in his own pocket to identify him.

Mr. MILLIKEN. That depends upon the beauty or ugliness of his face.

Mr. GEARY. Well, you will come in. [Laughter.]

Now, then, how could it be called disgraceful and humiliating when this same thing is in vogue at this World's Fair for the identification of Americans. A Chinaman should not complain because we ask him to conform to the same law that we have imposed upon our own people.

Now, there is another reason for certificates, one that I think would justify it if there was no other reason offered.

Mr. DINSMORE. I would like to ask the gentleman a question.

Mr. GEARY. Certainly.

Mr. DINSMORE. If these photographs should be adopted as an amendment to this measure, would not your friends on the coast then be willing to support it?

Mr. MAGUIRE. With the other two amendments.

Mr. GEARY. I have submitted three amendments. This is the main one. However, the other two are changes in the law that I think are necessary.

Mr. OATES. Will the gentleman allow me to ask him a question, because it is a matter on which I desire information. I believe it is true that all the Chinamen look alike; and if so, what would be the difference in their pictures?

Mr. GEARY. We have tried that in California. We photograph all Chinamen, and have for the last thirty years; whenever we find them charged with crime.

Mr. OATES. As they look alike, do not they make the same appearance in the picture?

Mr. GEARY. No, sir; the trouble is that in any written description the appearance is so much alike that you can not distinguish. Now, for instance, you say, "He is 6 feet high, weighs 180 pounds, olive complexion, and almond eyes, no mustache, and no beard, no distinctive marks upon his face and hair, a que." There is a good verbal description. "Wears blue clothes, when he does not wear black ones." [Laughter.] That description will fit every single one of them; but when you put him under the lens and fasten on the picture whatever slight facial difference there may be, it appears and will be apparent at once.

Mr. HOUK of Ohio. Do you always have them photographed in California in criminal cases?

Mr. GEARY. Yes, we always have them photographed in criminal cases amounting to felonies.

There is another reason I wish to commend to my friend from Kentucky, who is so much exercised about the possible $7,000,000 outlay. We claim that we are justified in demanding the registration of every Chinaman legally in the United States for the purpose of protecting our own Government against the assertion of false claims against it. Under the treaty of 1880 we assumed responsibility for the security of all Chinamen in the United States; and as a matter of fact we have paid to China since the treaty of 1880 was entered into something like $700,000 for injuries imposed upon Chinamen by white mobs in the United States.

We know of the hostility of these people which prevails in many sections of the Union, and that they are liable at any time to be imposed upon by mobs, their property destroyed, and probably their lives taken. I do not mean to say these things are to be encouraged, but we know that such dislike for them exists, and we know that such things may happen where such conditions exist, and that they are always liable to happen. Then this Government is liable for the protection of every Chinaman within our borders having a legal right to be here who is injured or imposed upon by American citizens. Are we to be liable for injuries to 49,000 criminals who came here in defiance of our laws?

While you are considering the remote possibility of damages and the expenditures of the public revenues, tell me what would you do as prudent, safe business men, representing this Government, if to you was confided the task of limiting the liability of our people for injuries imposed upon any alien race? If you knew that nearly one-half of them were criminals for whom we were not responsible, who do not come here by the invitation of our Government, would it not justify you, before you undertake to determine the liability of your Government, to find out some means by which you could point out for whom you were liable and for whom you were not liable?

We had a somewhat similar question in the cases involved in the New Orleans riots a few months ago, where a demand was made on our Government to remunerate the families of the men

who were hanged by the mob at that place. The question arose there whether or not in the riots at New Orleans we were liable for injuries done to an alien after he had manifested his intention to expatriate himself and become a citizen of this country, or if the foreign government's control over him must not necessarily have ceased.

I remember very well that there was very much argument pro and con as to the liability of the Government in that regard, and there was much of doubt about the status of these unfortunate men. But in the Chinese cases they are placed on an entirely different footing. They are an entirely different race. And, Mr. Speaker, I wish to make a remark in this connection that seemingly I had forgotten before. Gentlemen say these laws are different from those which we apply to any other race, and argue against them for that reason. They then cite the language of the second section of the treaty, which says that these people shall be entitled to the rights conferred on other aliens.

But there is no ambiguity whatever. There is nothing contrary in those sections. The first sections of the treaty give the right to legislate. It is different language from that embodied in other treaties with other nations. So that both governments recognized the fact that the Chinaman was regarded as different from any other nationalities; that he came here under different conditions, with different purposes, filled with different desires, and that he did not come with any intention or expectation of remaining with us. Under those circumstances the Government of China permitted us in the treaty to make such regulations in regard to these people as we deemed necessary for our own protection, different from those which we applied to other people. Our legal friends will agree that we are permitted to exercise different legislation in the protection of our rights toward him from that which we exercise in regard to any other alien immigrant. Then, in subordination to that we must treat him just as we treat other aliens. The Chinaman is to enjoy the same rights as other aliens until we exercise our power under the first section of the treaty, and then only such rights as remain to him thereafter as fully as other aliens enjoy like rights.

Now, I hold that we are responsible for the life of every Chinaman who is legally here, because the language to be found in that treaty, which admits them to this country, requires that this Government shall so exercise all power as to protect and hold harmless the Chinaman, and was undoubtedly intended by them to create a special liability. This special provision was incorporated because they had learned in dealing with our people in the matter of the different riots which had taken place out in different parts of the Western country that the primary obligation rested upon the State government and that the National Government was not held to be liable.

As a matter of good public policy, and in the interest of economy to prevent comprehensive and fraudulent claims against my Government, recognizing the existence of the two classes in our midst, it is our duty to these men to distinguish the one from the other.

Some gentleman said a moment ago, "Why, out on the Cherokee Strip every one had to register." It was not considered any hardship. It was not regarded as an imposition upon the American citizen because he was compelled to register.

Mr. STOCKDALE. You have to register before you can vote.

Mr. GEARY. Why, in my State I have to register in order to vote. I have to give a description of myself to enable the utmost certainty to be manifest to the election officers as to who the man is that bears my name and offers the ballot. I must step into my county clerk's room and be measured, my exact height put on my certificate, my weight, the color of my hair, my complexion, the scar on my face——

Mr. CAMINETTI. And the bald head. [Laughter.]

Mr. GEARY. Well, there are so many bald ones among us that I admit I belong to the gang. [Laughter.]

Every one of these marks is recorded. I did not object to the bald head the last time, but when the clerk who took my description put in "grayheaded," then I kicked. [Renewed laughter.]

Now every one of my fellow-citizens who votes must do the same thing. Why, it is "humiliating" you say. It can not be helped. We do not think it any hardship, however, we do not think we are humiliated, because we know it is wise. The object is to take it out of the power of the fraudulent class of voters to debase the suffrage and impose on the honest voters by fraudulently personating others.

You know you require a doctor to get out a certificate and exhibit it on the wall of his office before he can practice medicine. What a terrible reflection on a man who desires to practice medicine that he must be compelled to take out his certificate and exhibit it. Do you not require him to hang up in his office a certificate so that everybody shall know that he is qualified? Your lawyer may know ever so much law and be the brightest man in the community, but he is not permitted to practice his profession until he makes application and is registered and gets his "sheepskin."

All of these laws are based upon the right of a government to protect its people against fraud, and if we had no other or better right than that which grows out of the necessity of protecting ourselves and our people against fraud on the part of the Chinese, that would justify the legislation which was enacted two years ago.

My friend from Kentucky [Mr. McCREARY] said that it would cost $7,000,000 to deport the Chinese in this country if we did not pass this bill. That I deny. I do not believe it will take any considerable part of that sum. I think that is another argument of Chinese growth, and in saying that I do not mean to reflect upon the gentleman from Kentucky.

Mr. McCREARY of Kentucky. You do not deny, I suppose, that the Secretary of the Treasury reported that as the expense would be $51 for each steerage passage from San Francisco to Hong Kong, and $35 for arrest, trial, and inland transportation, the total for each person would be $86, and that if all of them were deported it would cost $7,000,000.

Mr. GEARY. I do not deny that the Secretary so reported. I deny, however, the correctness of his premises and conclusion. I do not believe that it will take any $7,000,000 or $1,000,000, or as much money as we have spent in the last ten years to protect ourselves against them, to deport every Chinaman that will be found within the limits of the Union.

You gentlemen who talk about seven millions assume what is not so. You assume that every one of these Chinamen is going to permit you to send him back to China. What is your authority for that? These Chinamen left China to come here and make a certain sum of money by working at better wages than they could earn there, and then to go back to China. Now, if they find that we are really going to deport them, they are not going to allow themselves to be taken clear across the Pacific Ocean to China, simply to get another start for Mexico or Cuba. Just as soon as they understand that the American Congress means law when it makes it and that the American Executive can be trusted to enforce it, those Chinamen will take their departure, and your Treasury will not be troubled by the expense. You may have a few hundred of them on your hands, old men, or crippled or diseased Chinamen, who have no means to go; but just as soon as the active, the energetic ones understand that deportation means going back to China, and then the payment of another fare to get to Cuba or elsewhere, they will take the short and direct road to Cuba of their own notion.

Let us hear no more of the "seven millions," then, because no sane man conversant with the race believes in it. Now, I believe that if the present officers of this Government had done their duty on the 5th day of May and had continued doing it as the law directed, this condition would not be presented to us, and there would have been no necessity for an appropriation or an extension of time. It is not a very agreeable position for a Democrat to be in within a few months after the advent of his own Administration——

Mr. McCREARY of Kentucky. Will the gentleman permit a question?

Mr. GEARY. Yes, sir.

Mr. McCREARY of Kentucky. Is it not true that the time for the Chinese to register began on the 5th of May, 1892?

Mr. GEARY. Yes, sir.

Mr. McCREARY of Kentucky. And it expired on the 5th day of May, 1893, so that there were ten months, or about that time, in which the Chinese could have registered under the last Administration, and yet, during the whole year there were only 13,000 of them that did register out of a total of 106,000 in the country.

Mr. GEARY. My friend will persist in trying to mix the babies up. [Laughter.] Let us try to keep them separate. I said this, that if on the 5th of May, 1893, and thereafter the men who were commanded by law to execute this law had done their duty, there would be no necessity for extension and no necessity for another appropriation. I think that is plain enough. I am not talking about what occurred anterior to the 5th of May, 1893. I am talking about the nonperformance of duty after the violation of the law by these people. I am talking about what occurred subsequent to May, 1893, not about what was done by either Administration prior thereto.

Mr. McCREARY of Kentucky. Does the gentleman think $25,000 was enough to deport these Chinese?

Mr. GEARY. Do I think so? Will my saying so convey any new idea to the gentleman? Does he know enough about Chinese character to make him a judge of what amount of expenditure would be sufficient for this purpose? The gentleman is a good deal of a volunteer. My saying so will not convince him. But we who know these people—who have had experience with them,

who know their aims, their purposes, their ambitions, and the crimes they practice—we know that rather than take any chance of being sent back to China they would voluntarily have left our borders. Twenty-five thousand dollars would have demonstrated the intent of the Administration to enforce the law just as well as $25,000,000. [Applause.]

Now, it is not pleasant as a Democrat to stand here in the first months of an Administration and criticise the action of executive branches of the Government filled by those of our own selection. But I think that no party was ever yet benefited by condoning the offenses of their own partisans when they deserved censure. I think I owe an obligation to my party greater than I owe to any man, no matter what place he may fill or to what position he may have been called. The Democratic party existed years before any of us; and long after we have passed away, unless public confidence in our pledges is destroyed, unless respect for our declarations in convention is lost, unless such confidence is destroyed by the actions of our own selected agents, the Democratic party will go on in all the years to come, commanding the confidence of the people and lending its assistance to the development and progression of our country. [Applause.] But if we permit our own party friends—if we permit the men of our own selection to violate party faith and break party platforms, then we have no right to ask for a continuance of public confidence.

And, owing a duty to my party, loving her better than I love any man, believing that her administration of affairs will secure the greatest possible amount of happiness for all my people, desiring to see her march on without impairment of her strength, because I think more of her than of any individual or aggregation of individuals, I believe it my duty to condemn the officer of our own selection who violates the obligations of his office.

This law said that on the 5th day of May the Chinamen who did not have the certificates described should be deported. No discretion was left with any man to suspend the enforcement of that law; and in a Government like ours we should not permit the assumption of such authority by any officer. Public office must be a public trust; and the trustee must find in the letter of the statutes the mode and manner of performing his duties. If the trustee is to be permitted, in the exercise of his own sweet will or in accordance with his own fancy, to suspend the operation of law, then the executive trustee becomes the maker of legislation—a duty never contemplated by the Constitution.

This law went into effect on the 5th of May last. The Democratic platform adopted at Chicago last year pledged the Democratic party to the enforcement of every law for the restriction of Chinese immigration. That was a declaration made by the representatives of our party. All the power of that organization was pledged to the enforcement of such laws as were then on the statute books having for their object the restriction of Chinese immigration into this land. That platform was a contract made between the representatives of the party and the people who gave to that party their support. We in California, relying upon the Democratic party to keep pledges, upon the honesty of Democratic officers in the performance of their duty—because of our reliance in great part upon that declaration, we gave our electoral votes to this party. We have a right to demand that you fulfill that pledge; and if a Democratic officer stands in the way, then that Democratic officer must go down and out.

There were two officers intrusted with the execution of this law—one the honorable Secretary of the Treasury, the other the Attorney-General of the United States. On the 24th of May, 1893, Mr. Carlisle issued an order, which I will ask the Clerk to read.

The Clerk read as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., May 24, 1893.

SIR: By Department circular, dated the 4th instant, officers of this Department were instructed to refrain from making arrests under the provisions of the act approved May 5, 1892, entitled "An act to prohibit the coming of Chinese persons into the United States," until otherwise directed. This order remains in force so far as it applies to Chinese persons who have failed to obtain certificates of residence under the provisions of the sixth section of said act, but who otherwise would have a right to remain in the United States.

It is known, however, that great numbers of Chinese laborers have entered the United States in violation of the provisions of the act approved May 6, 1882, as amended by the act approved July 5, 1884, and of the act approved October 1, 1888. Many of these persons have obtained admission upon false representations that they were not laborers but merchants, and others have entered clandestinely from contiguous foreign territory.

Inviting your attention to the first, second, third, fourth, and fifth sections of the act approved May 5, 1892, entitled "An act to prohibit the coming of Chinese persons into the United States," which continued in force the provisions of the previous acts prohibiting the coming into this country of Chinese laborers, and provide for the trial, imprisonment, and deportation of such persons who under said laws are found to be not lawfully entitled to remain in the United States, you are directed to use all the means under your control to vigorously enforce said provisions of law and to take such measures as may be necessary to secure the arrest and prosecution of Chinese laborers who are unable to show that they have obtained lawful admission into the United States.

Respectfully, yours,

J. G. CARLISLE, *Secretary.*

COLLECTOR OF CUSTOMS.

This regulation or letter issued by Mr. Carlisle on the 24th of May last was, I think, strictly in accordance with his duty. I have no fault to find with the Treasury Department, no charge of omission to make against it. The act of May, 1892, provided that the Secretary of the Treasury should make all needed regulations to carry out that law; that he should provide the apparatus for registration and the form of certificates, should put in motion that machinery. But when the 5th of May, 1893, arrived, the right to register having ceased on that day, there was no longer any duty incumbent upon the Secretary of the Treasury to do anything under the sixth section of that act.

Mr. Carlisle in his letter calls the attention of his subordinates to the fact and commands them to use all the power at their disposal to enforce the other sections of the law, that is, to prevent Chinamen crossing the frontier and to arrest them at the ports of entry if they should attempt to come into the country fraudulently. But I contend that his Department had no longer jurisdiction over the matter of deportation; that by the terms of the law, when that right to register had ceased, these parties became guilty of a crime: and the duty of enforcing that provision devolved upon the Attorney-General of the United States.

I think that most of my fellow-Californians will bear me out in the statement that we have always found that the Treasury Department was ready and willing to lend all the assistance in its power to the execution and enforcement of the Chinese exclusion law. It was the duty of the Attorney-General of the United States to put in motion the machinery calculated to punish the men who had been guilty of violating the laws, and he had no right or authority to say, "I will discriminate between this class of criminals and that class of criminals." His duty was to blindly proceed as an executive, leaving the reasons for the laws to be considered by those who made them.

Now, the gentleman from Kentucky [Mr. MCCREARY] says no persons were deported. Why did not the Attorney-General of the United States deport the men who were used to test the constitutionality of this law, the men whom the Supreme Court of the United States said had no right within the limits of the United States? Would not that $25,000 have paid for their deportation? Why was not some of that money used to take these two criminals from New York, who had been brought up in the Supreme Court of the United States, and whose right to be deported had been adjudicated by that tribunal? Why did not your Attorney-General obey the order of that court? He had $25,000 at his disposal then. The fare across the continent would not have been $500. Why, he could have bought them the bridal chamber in a China ship, and still have had lots of money left to enforce the laws against other people. Did he do that?

Where was his authority to suspend that writ of the Supreme Court? And where is the jurisdiction vested in him by any law of this land, that he can set at defiance the edict of our highest court? Is that man so much entitled to respect that I owe obligations to him, because he happens to fill an office by Democratic selection, to fail to denounce that usurpation of power?

Why, he did this thing, which no other Attorney-General ever thought of in the history of this country. When these writs went back to Judge Lacombe's court in New York, he followed them with a message asking the district attorney there to represent to that court that he did not have the means to deport them, and to ask that court to nullify its own judgment! Was that becoming conduct in this officer?

If the great law officer of this Government can set at defiance the laws made by this Congress, if he can set himself above the legislative department of this Government, and for reasons satisfactory to him, or on his own judgment, or in accordance with his own sweet will, can say "I will defy Congress, I will not execute the law, I will not respect the edict of the court," what right have you to ask the commonest man that walks the street to have more respect for the law than he does?

If that conduct is to become the guide of public officers, then anarchy is not so far removed as some men think. Now, I think we owe obligations to our party, and that we owe an obligation to ourselves, that a public officer who acts in that manner shall not escape denunciation or rebuke.

I want to call the attention of Mr. Olney to the conduct of another Attorney-General, in a time more trying than this, when there was more excitement, when his own party stood behind him demanding the violation of law, when the legislation was repugnant to the people of a great section of this country, and when the violation would have been countenanced and approved by them, because of the conditions which then existed. I want to read the letter of Mr. Bates, Attorney-General of the United

States under Mr. Lincoln. On the 22d of July, 1861, the Attorney-General, in answer to a letter from the United States marshal of Kansas, inquiring whether he should assist in the execution of the fugitive-slave law, wrote as follows:

ATTORNEY-GENERAL'S OFFICE, *July 23, 1861.*

J. L. McDOWELL,
United States Marshal, Kansas:

Your letter of the 11th of July, received 19th (under frank of Senator Lane of Kansas), asks advice whether you should give your official services in the execution of the fugitive-slave law.

It is the President's constitutional duty to "take care that the laws be faithfully executed." That means all the laws. He has no right to discriminate, no right to execute the laws he likes and leave unexecuted those he dislikes. And of course you and I, his subordinates, can have no wider latitude of discretion than he has. Missouri is a State in the Union. The insurrectionary disorders in Missouri are but individual crimes, and do not change the legal status of the State, nor change its rights and obligations as a member of the Union.

A refusal by a ministerial officer to execute any law which properly belongs to his office is an official misdemeanor, of which I have no doubt the President would take notice.

Very respectfully,

EDWARD BATES.

There is a definition of his duties made by a Republican Attorney-General, right in the midst of that war, when all the opinion of the North would have sustained it. He said I have no discretion, nor has the President, about enforcing one and refusing to enforce the other. We know that the present Attorney-General of the United States is doing this, and that his purpose is to violate the platform of our party and the laws in the matter, and when it comes to the knowledge of the President he should receive the same treatment as Lincoln would have meted out to his subordinates if they had been guilty of like offenses.

I am opposed to the present law because I do not think the proposed measure would be operative. The bill merely provides for the extension of the period of registration. I contend that there should be a certain amendment made to it in order to make it operative. It is a peculiar bill. I want to read something from this morning's Post in reference to the resolution offered by Mr. DOLPH in the Senate yesterday asking for information:

Senator DOLPH was misinformed when he stated in the Senate Monday that the Chinese Government had not asked for an extension of time for Chinese here to register under a modified form of the Geary act. In the brief executive session which Mr. DOLPH'S own resolution calling for official information on this subject brought about yesterday, the Senators from the Pacific coast received assurances that the passage of the Dolph resolution was entirely unnecessary. They were informed that the new Chinese minister had in the name of his Government given distinct assurances that if some of the offensive features of the Geary law were modified and the time for registration was extended Chinese residents would comply with the registration provision.

The Chinese minister has given assurance that if we will modify our laws that he will advise his people to obey them! What a magnificent spectacle that is for American Representatives.

Are we to have a new rule laid down that when we determine to have legislation with reference to any foreign people in our midst that we must first consult the minister representing that country? If we are, then we must consult the foreign ministers with reference to the tariff laws so as to regulate the importations. We must go into a conference with every foreign minister. I do not think that that can be contemplated as a proposition that would be acceptable, especially in a Democratic Congress, because if this rule prevailed, that all legislation touching foreign people must receive the approval of their ministers, what in the world is to become of the poor Irish, who have not got a minister? [Laughter.] Now, then, following it out:

It was upon this understanding that the Treasury Department and the Attorney-General recently laid their heads together in the production of the McCreary modification of the Everett Chinese bill.

The Chinese minister, the Secretary, and this Attorney-General, put their three little heads together, and the McCreary bill, the Post says, is the product of that combination. [Laughter.]

Mr. McCREARY of Kentucky. Will the gentleman allow me to interrupt him, in justice to myself. I do not suppose the gentleman from California desires to misrepresent me.

Mr. GEARY. I have not done so.

Mr. McCREARY of Kentucky. You are reading from a newspaper that did misrepresent me. The bill which is an amendment of the bill know as the Geary act is very brief. I prepared that bill. The first bill was introduced by Mr. EVERETT, and the subcommittee to which it was referred requested me to draft a bill in accordance with their views, which they gave to me at our meeting, and the present bill is the bill which I drafted in accordance with the request of that subcommittee. I deem it proper to make that statement after what the gentleman has said.

Mr. GEARY. I am willing that the gentleman shall have all the credit. I have no desire to detract from it. I do not know whether the Chinese minister prepared this bill. I do not know that he was consulted about it. I would not like to think my friend had even consulted with him. I am not running the Post. It is quite a singular thing, however, that a resolution introduced in the Senate yesterday asking for this very information was sent to a committee, as I am advised, and immediately the Post comes out in the morning and tells us we need not press the resolution because the minister has agreed to it already.

Now, I want to say this much. The gentleman from Kentucky prepared this bill. This bill is the successor of the Everett bill. The paternity of the Everett bill is not known. I believe the gentleman from Massachusetts does not contend that he prepared it himself. Am I doing the gentleman an injustice when I say that?

Mr. EVERETT. I did not prepare it myself.

Mr. GEARY. So that in anything I say about the Everett bill I am not reflecting upon the gentleman from Massachusetts, because he declines the paternity of this child. It is somebody else's baby. Now, then, the McCreary bill is the Everett bill a little older.

Brother McCREARY took the text of the Everett bill, which, in turn, is taken bodily from the bill of 1892, and added to it the labor clauses and made some other changes, and that is the McCreary bill, so called. I did not like the Everett bill: none of my people did like it. I do not know who prepared it, but I do think the Chinese minister had some hand in it, either himself or his attorneys, because if ever there was a paper presented to an American Congress more thoroughly impressed with Chinese diplomatic characteristics than the Everett bill I never saw it. [Laughter.] That bill pretended to extend the registration clause, but it really struck down the law it pretended to extend. It never would have operated to confer the right of registration on anyone. In the first section it provided that—

All Chinese now in the United States and who now have a legal right to remain may register within the next year.

Why, sir, the only Chinese here and legally entitled to be here when the Everett bill was introduced, were those who had already registered, because under the operation of the law of 1892 the status of all those who did not register was fixed by providing that they should be held to be illegally in the country on the 5th day of May, 1893; so that, I repeat, the only Chinamen legally in the country at the time the Everett bill was introduced were those who had already complied with the law. And this adroitly drawn bill, to which I understand some high in authority gave the sanction of their names—I do not know whether they will do it still or not—pretended to extend the right of registration when as a matter of fact it did nothing of the kind. Standing alone that would not be so bad, but the second section of that bill is the "joker;" that is the Chinese queue on this bill. [Laughter.] That section provides that—

No proceedings for the violation of the provisions of said section 6 of the said act of May 5, 1892, as originally enacted shall hereafter be instituted and all proceedings for violation now pending are hereby discontinued.

Meaning: "No Chinaman now without a certificate of registration need get one. All prosecutions for not complying with the law are hereby suspended and the proceedings shall be dismissed."

Do you remember the anxiety that was exhibited by some gentlemen to crowd that bill through this House? We were to meet on Tuesday and pass it on Wednesday because there was such danger of something dreadful happening. The Chinese minister was tramping up and down in front of the State Department: China would declare war; somebody was going to be murdered, unless we passed that abortive thing of Chinese creation.

Think you these adroit attorneys, Mr. Choate and the other gentlemen, who, by the way, have not worked for any beggar's fees, and who have been proclaiming for the last six months that they would find a way to avoid the act of 1892, think you that they knew nothing about this instrument? They thought this bill would come in here, and that, under whip and spur, with the backing of the Administration behind it, it would be rushed through, it would walk over us, and we would have no right or opportunity of protest. That instrument meant to destroy the law and not to extend it. Now, when you come to us with a grown brother of that child which has no father, have we not a right to be suspicious of him too? [Laughter.] What right have you to tell us that, having made that exhibition of your purposes and desires, we are not entitled to ask this House to stop and consult us as to what we want, rather than take the advice of men who would send such an instrument as that into a Democratic Congress?

Now, I have said that I propose to amend this bill. I have three amendments that I am going to offer. The first is for the photograph. We of the Western country believe that to be absolutely necessary if we are to have any registration at all. Without it there is no certain means of identifying the Chinaman. Without it the certificate will be merely a thing that can be transferred from one to another and can be made to serve criminal and noncriminal alike. The other amendment I am

surprised has not been adopted, if the intention is in good faith to give us a law that shall be operative. When this law went into effect disputes arose between the Departments as to whose business it was to deport the Chinamen. My other amendment is intended to make it certain who shall take charge of the enforcement of this law. It provides that—

Such order of deportation shall be executed by the United States marshal of the district within which the order is made, and he shall execute the same with all convenient dispatch; and, pending the execution of such order, such Chinese person shall remain in the custody of the United States marshal, and shall not be admitted to bail.

That is merely intended to clear up an ambiguity in the existing law, and if the purpose is to pass a law that can be enforced, I do not see why that provision should not be inserted.

Now, a word about the photograph. My Democratic friends will say, "Why don't you confer upon Secretary Carlisle the same discretion that you conferred upon Secretary Foster?" For this reason: After Mr. Carlisle came into office he removed the necessity for it. He declared himself opposed to the photograph and he modified the instructions by eliminating it. And I understand as a lawyer the reason was based upon the fact that he had no authority under a discretionary power to impose the requirement of the photograph or for two witnesses.

Mr. McCREARY of Kentucky. Will the gentleman allow me a question?

Mr. GEARY. Yes, sir.

Mr. McCREARY of Kentucky. If those three amendments which the gentleman has just read should be agreed to by the House, would all the Representatives from California then support the bill to extend this time six months?

Mr. GEARY. My friend, I have not talked with all the Representatives from California.

Mr. McCREARY of Kentucky. I thought you said there had been a meeting of them?

Mr. GEARY. No, sir; you misunderstood me. I have said here repeatedly to day that I can only speak for myself. We are a peculiar lot of fellows out on that coast.

Mr. McCREARY of Kentucky. Then you can not state that the Representatives from California will vote for the bill if if those amendments are agreed to?

Mr. GEARY. I can only state what I will do. More than that I can not say. I suppose in time they will all speak for themselves. But let me ask my friend a question, for you must understand I was born in Yankee land. Suppose we should all say we will support the bill with these amendments, will you agree to the amendments?

Mr. McCREARY of Kentucky. I do not know what the House may agree to. But I want to see whether you gentlemen, the Representatives of California, are willing to agree on any terms to this proposed extension of six months.

Mr. GEARY. Suppose you and I try to first agree, leaving out the others——

Mr. McCREARY of Kentucky. The amendments suggested by the gentleman have never been formally offered to the House, and have never been discussed.

Mr. GEARY. Will the gentleman say for himself, as author of this bill, that he will permit these modifications of it?

Mr. McCREARY of Kentucky. I want the Representatives from California to state first what they want.

Mr. GEARY. Well, you forget, we have got the age. [Laughter.] The gentleman being in charge of this measure and having the affirmative, I think he ought to act first.

I understand that Mr. Carlisle's objection was based on this proposition, that where Congress enacts a law imposing liabilities upon certain persons, and gives to a public officer discretion to carry out the law, he may carry it out strictly, literally, but in doing so he must impose no additional liability or obligation on any party or class. Mr. Carlisle's contention will be and has been that he had no right to impose the requirement of a photograph, because it would compel the Chinaman to pay a tax or to expend some money in order to comply with the law, and that Congress alone has authority to impose such an obligation. We have no lack of confidence in Mr. Carlisle; but we recognize his ability as a lawyer. We demand this thing as essential. Why should it be said, "Trust Mr. Carlisle to change his legal opinion," when by putting the enactment in the bill we can secure the end we desire.

There is one other definition that we think necessary. The treaty permits "merchants" to come into this country. We have no desire to restrict the movements of the mercantile class: but the trouble has been that men pretending to be merchants have asked for admission at New York and other places, have sworn that they had interests in stores established in those communities, have been admitted as merchants, and immediately developed into full-fledged laborers. We merely ask for a definition of the word "merchant" which shall be broad enough to protect every man legitimately engaged in that industry and narrow enough to prevent the designation being used as an instrument of fraud by a class that we do not desire.

This amendment requires every Chinaman asking to be admitted into the United States and who claims to have formerly resided here to prove that for at least one year at some fixed place of business within the Union he was engaged in buying and selling merchandise. We do not damand that he shall have a dollar's worth of stock or a thousand dollars' worth; we simply follow the language of the treaty and demand this protection to our own people.

Those are my three amendments. I do not think this law can be enforced without money. We have $25,000 available to-day that might be used for the enforcement of this law; and I want to call the attention of the chairman of the Committee on Foreign Affairs to what I am now about to state. I have received to-day the statement of the gentleman in the internal-revenue department having charge of the enforcement of this law, who says that the law can not be enforced for six months for less than $48,000 at the lowest estimate. Now, what is the use of passing a law to give Chinamen a right to register, if you honestly mean to enforce that law, and then not give the officer charged with its enforcement the means to put its machinery in motion.

What sense is there in saying to Mr. Carlisle, "Enforce this law for six months," while you refuse to give him any means with which to execute it? Do you want us to come back here six months from now and listen to another speech saying that humanity will be outraged unless we give still another opportunity to register, because you passed this law and forgot to create any machinery to put it into execution? We want to avoid that, and I say to you in good faith I think money enough should be put into this bill to equip Mr. Carlisle with all the means he needs for the purposes which the bill contemplates.

Mr. McCREARY of Kentucky. Does not the gentleman from California remember that when he introduced his bill which was passed on the 5th day of May, 1892, that he did not appropriate a dollar of money to carry it into effect, and that the money was provided in the appropriation bill brought in by the Committee on Appropriations? Now, we take the same course that your bill took. The gentleman did not provide a dollar of appropriation in his bill, just as in the present case, but subsequently the committee brought in a bill which contained $50,000. There is now a bill pending, referred to the Committee on Appropriations, in charge of the gentleman from Texas [Mr. SAYERS], providing money to carry this into effect.

Mr. GEARY. It is funny how people get wedded to inconsistencies, strange how they ignore conditions. Now let me state the situation. What the gentleman says is all true. The law to which he refers was passed on the 5th day of May, 1892, and a period of one year, or until May, 1893, was given for its enforcement. The appropriation bills were brought into the House in June, the month following. There was not any delay in their passage. By the time the officers of the Treasury had their plans prepared, by the passage of the appropriation bills enough money was at their disposal to go to work, within thirty or forty days after the passage of the law. Now, contrast that with the present condition. The Appropriations Committee of this House will not bring in an appropriation bill until some time next year.

Mr. McCREARY of Kentucky. But there is a separate bill pending before the committee.

Mr. GEARY. If the gentleman will assure me that the Committee on Appropriations will bring in that bill, say within thirty days, it will remove one of the objections——

A MEMBER. We will not be here thirty days from now.

Mr. GEARY. What! not here thirty days! Why, we are going to camp on the hill to-night. [Laughter.]

But, Mr. Speaker, the difference is this: This law must be enforced at once. This right to register is given to the Chinaman, and he ought to have the right to go in to morrow and be granted the privilege of exercising that right. The appropriation bills will not come in and pass the House before May. In the mean time the Treasury is without money to enforce the law, and the Chinaman without any right to exercise the privilege which you give him.

If good faith stands behind the measure, if this bill is not to be on a parity with the other thing that has no father, if the sections are to be worked, and if our fears are not to be allayed by mere promises of support only, without anything to make the promises operative, why not annex the needed sum of money and let it go through with the bill? That will allay our apprehensions and our suspicions and we ought not to be blamed for possessing them. We come from a country where guile is not so common as in the Eastern lands, and where men having been deceived once have suspicions for all time to come. [Laughter.]

Now, my friends, I am thankful for the way in which the House has treated me. I am speaking on behalf of my people and State, as are all of my colleagues from that section of the

country, to whom this question is a local one. More than 95 per cent of all the Chinese in the Union reside west of the Rocky Mountains. Every man on this floor, every man in the Senate of the United States, from that section stands committed to the necessity of giving us protection for our people.

I have been in this House now going on three terms, and have heard much of the sacredness of the right of local self-government. I have sat here for many days just past and listened to men getting up and demanding that laws should be repealed because they prevented the people from governing themselves in their own localities.

I was in the Fifty-first Congress when the men of the South were threatened with legislation that they feared far worse than they feared war or pestilence; when anxiety sat with you day and night, when you fought the force bill, a bill having its origin, no doubt, in the same place as this, which was directed against your people of the South, against your society and the right of the white man to be supreme in the sunny South. I remember in that hour when all feared that a Republican President would have the right and the opportunity to put his name to that bill; when that was pending in the Senate of the United States, you did not turn to the East for help, but you turned to the land beyond the Rocky Mountains [applause on the Democratic side], and from that section men left their party and came to your assistance.

The two Senators from my own golden State, from the State of Nevada, Republicans from Colorado and Oregon, all joined hands with you and said whenever an attack is made by any alien race upon our brother white men of the South, or upon white civilization anywhere, you can command our friendship and support because we know how it is ourselves. In that hour, with Hearst and Stanford in the lead, and STEWART, JONES, MITCHELL, TELLER, WOLCOTT, and others from the West, we stood by you. We freely performed, as brethren, our duty in upholding the idea that white civilization must be dominant on this continent; in that hour you men of the South turned to us and found assistance. I say, are we now to turn to a Democratic Congress and be stricken down in this hour and day of peril by the very men that we helped then, and who should be our eternal allies because of a common danger creating a common necessity? [Applause.]

Talk about humanity! Talk about barbarism! Have I not heard those same things said of you, from the self-same lips almost? Have not I heard the men who have denounced us as barbarians, because we seek to limit Chinese immigration, who charge us with violating treaties and breaking laws, say that because you asserted your rights in your homes and protected your citizens, you have broken the Constitution of the Union and violated the statutes of the land? We permitted no such charge to cause us to falter when you wanted our help, our friendship, and our assistance.

Recognizing the justice of your position, a position born of the necessities that surrounded you, we went to your assistance, and now here, speaking for the same right, the right that we in the West shall be allowed to settle our local affairs according to our own rules, that we shall have protection for our own institutions against Asiatic immigration, that our white labor shall not be forced into competition with this kind of people, that our States shall be freed from the ban of the accursed presence of the yellow slave, we ask you now to extend to us the aid we extended to you two years ago. [Applause.] I think I know the Southern character well enough to feel sure that you will not ask us to go back to our constituents on the other side of the mountains, and tell them that Southern men are forgetful and ungrateful. [Applause.]

Restoration of Silver to Equal Monetary Functions with Gold.

SPEECH

OF

HON. F. M. COCKRELL,

OF MISSOURI.

IN THE SENATE OF THE UNITED STATES,

Monday, Tuesday, and Wednesday, October 9, 10, and 11, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. COCKRELL said:

Mr. PRESIDENT: No more important measure has ever been pending in the Senate than the present bill, no measure fraught with more important results to the present and coming generations. Its importance demands and justifies its fullest consideration.

Gold and silver by the common law of England, transplanted here by our ancestors, were money and a full legal tender in payment of debts upon a perfect equality as coin and bullion down to the adoption of our Constitution. We had the true bimetallic system.

By the express terms of our Constitution—

The Congress shall have power * * * to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

And further:

No state shall * * * coin money * * * or make anything but gold and silver coin a tender in payment of debts.

Our Constitution clearly establishes bimetallism, and vests in the Congress the exclusive power to provide by laws for coining gold and silver metal into money, and then to regulate and fix the legal-tender value of such coin and of foreign coin as such money. The Constitution does not give Congress the power to regulate the value, the market value, the commercial value, of gold and silver as metals, as commodities. It only gives the power to regulate the value of the coined gold and silver, whether of domestic or foreign coinage. It clearly gives to each State the right to make such gold and silver coins a legal tender in payment of debts.

Gold and silver coins are the money of our Constitution, which, when enacted, only recognized what previously existed. Congress has no power to declare that either gold or silver coin shall not be money—no power to demonetize either gold or silver coin or both. Well did Daniel Webster declare:

I am clearly of opinion that gold and silver at rates fixed by Congress constitute the legal standard of value in this country, and that neither Congress nor any State has authority to establish any other standard or to displace this standard.

When we demand that Congress shall by law fix the ratios between gold and silver coined in our mints into money and give to each equal powers and privileges, free or equal unlimited coinage, we demand only obedience to our Constitution.

Congress, by "An act establishing a mint and regulating the coins of the United States," approved April 2, 1792, exercised its constitutional power by establishing a mint and authorizing the coinage of gold, silver, and copper coins, and placed gold and silver upon a perfect equality, and gave to each unlimited coinage, and to the coins of each full legal tender in all payments, the gold coins to be eagles, half eagles, and quarter eagles of the declared value of ten, five, and two and one-half dollars, respectively, 11 parts pure gold to 1 of alloy; and the silver coin to be dollars or units, half dollars, quarter dollars, dimes, and half dimes, and made them all a full legal tender in payment of any and all sums.

The weight of the gold in one dollar if coined would have been 27 grains standard and 24.75 pure, and the weight of the silver in the dollar or unit was 416 grains standard and 371¼ grains pure, and the value of this silver dollar was to be that of the Spanish milled dollar as then current. This law further declared—

That the money of account of the United States shall be expressed in dollars or units, dimes, or tenths, * * * and that all accounts of the public officers and all proceedings in the Congress of the United States shall be kept in due conformity with this regulation—

And—

that the proportionate value of gold and silver in all coins which shall by law be current as money within the United States shall be as 15 to 1.

This, our first monetary law, continued in force until June 28, 1834.

Congress, by "An act concerning the gold coins of the United States, and for other purposes," approved June 28, 1834, and to take effect July 31, 1834, reduced the standard weight and fineness of the gold coins from 27 grains standard and 24.75 pure in the dollar to 25.8 standard and 23.2 grains pure to the dollar, being a reduction of the standard gold of 1.2 grains and of the pure gold 1.55 grains to the dollar, and declared the new gold coins a full legal tender in all payments, and made all gold coins previously minted receivable in all payments at the rate of 94.8 cents per pennyweight.

Congress, by "An act to establish a mint and regulate the coins of the United States," approved January 18, 1837, fixed the standard for both gold and silver coin of the United States at 9 parts pure to 1 of alloy, and the weight of the silver dollar at 412½ grains, and of the half dollars, quarter dollars, dimes, and half-dimes correspondingly, and made them all legal tenders for all sums whatever. Thus the alloy was reduced, while the pure silver of 371¼ grains was retained in the standard silver dollar.

The standard weight of the gold coins was not changed, but the fineness was fractionally advanced, so that a gold dollar if coined would have contained 23.22 grains pure gold instead of 23.20, and these reductions by the laws of 1834 and 1837 of the weight and fineness of the gold coins changed the relative val-

uation or ratio of gold and silver in coinage from 1 to 15 to 1 to 15.988, and increased the coining rate or legal-tender value of gold in this country 6.589 per cent, and both gold and silver bullion and coin were continued upon a perfect equality at the prescribed ratio.

Congress, by "An act to authorize the coinage of gold dollars and double eagles," approved March 3, 1849, authorized the coinage of "gold dollars, each to be of the value of $1, or unit" and "double eagles, each to be of the value of $20, or units," with full legal tender and free coinage.

Congress, by "An act amendatory of existing laws relative to the half dollar, quarter dollar, dime, and half dime," approved February 21, 1853, reduced the standard weight of the half dollar from 206¼ grains to 192 grains, a reduction of 14¼ grains, and the quarter dollar, dime, and half dime correspondingly, to take effect from June 1, 1853, and made them legal tender for all sums not exceeding $5, and they could only be coined upon Government account from silver purchased in the market.

This law continued the unlimited coinage, with full legal tender, of gold and silver bullion into gold coins and the standard silver dollar, and imposed a mint charge upon the depositor, whether the metal was coined or cast into ingots or bars, of one-half of 1 per cent. This law also authorized the coinage of the three-dollar gold piece, with full legal tender, and by the act of March 3, 1853, this law was made to take effect from April 1, 1853, and the charge for casting gold or silver into bars or ingots was reduced to the actual cost thereof.

By the law of March 3, 1853, the Secretary of the Treasury was authorized to establish in New York City an assay office for assaying and casting gold and silver bullion and foreign coin into bars, ingots, or disks, and the assistant treasurer at New York was made the treasurer of such assay office, and was authorized, upon the deposit of gold or silver bullion or foreign coin and the ascertainment of its net value to "issue his certificate of the net value thereof, payable in coins of the same metal as that deposited, * * * which certificates shall be receivable at any time within sixty days from the date thereof in payment of all debts due to the United States at the port of New York, for the full sum therein certified," and the same charge was made as at the mint. This is the origin of our gold and silver certificates.

Congress, by "An act to provide ways and means for the support of the Government," approved March 3, 1863, authorized the Secretary of the Treasury to issue certificates for gold coin or bullion deposited in sums of not less than $20, such certificates to be receivable in payment of interest on the public debt and duties on imports.

Congress, by "An act revising and amending the laws relative to the mint, assay office, and coinage of the United States," approved February 12, 1873, and known as the coinage act of that year, established a single gold standard and declared the gold dollar piece, of the standard weight of 25.8 grains, the unit of value, and prohibited the coinage of the silver dollar of 412½ grains, but continued the coinage of the half dollar, quarter dollar, and dime, increasing the weight of the half dollar nine-tenths of a grain, or to 192.9, and the quarter dollar and dime correspondingly, and limited their legal tender to any amount not exceeding $5 in one payment, the silver bullion to be purchased for such coinage and coined on Government account, and also authorized the coinage of the trade dollar of 420 grains standard silver, to be a legal tender for $5, which legal tender was repealed by the law of July 22, 1876.

From the foundation of our constitutional Government to February 12, 1873, our laws maintained our constitutional bimetallic system unimpaired—gold and silver upon a perfect equality with full monetary functions.

The standard silver dollar, containing 371¼ grains of pure silver, was maintained as the unit of value. The law of January 18, 1837, only reduced the alloy in the silver dollar 3½ grains, and made the dollar, silver and gold, 9 parts pure and 1 part alloy, instead of 11 parts fine and 1 part alloy.

The law of February 12, 1873, establishing the single gold standard and demonetizing the standard silver dollar of 371¼ grains pure silver and 412½ grains standard silver, nine-tenths fine and one-tenth alloy, was passed by a Congress overwhelmingly Republican in House and Senate, and was approved by a Republican President.

The Senator from Ohio [Mr. SHERMAN] was the chairman of the Senate Committee on Finance, and had charge of the bill in the Senate and well knew its provisions and effects. It is almost absolutely certain that there were not three other Senators, nor five members of the House, who knew at the time that law was enacted that it demonetized the standard silver dollar or established the single gold standard.

At that time there was no discussion of the coinage question. There was no public demand for any legislation relative to the value, the fineness, or the ratio of gold and silver coin. Neither one of them was in actual circulation as money. Each one of them was at a large premium. A silver dollar of 371¼ grains pure was more valuable than a gold dollar of 23.22 grains pure; or the standard silver dollar of 412½ grains was of more value as an article of merchandise in the open markets than the standard gold dollar of 25.8 grains.

There was something back of this, Mr. President. I am not going into a controversy at this time in regard to the motives that inspired the action which deliberately and intentionally led to the enactment of the law of 1873, and for which this country must hold the distinguished senior Senator from Ohio alone responsible, because I do not believe another Senator knew what was contained in that bill. The Senator from Ohio did know it.

Mr. PALMER. Mr. President——

The PRESIDING OFFICER (Mr. FAULKNER in the chair). Does the Senator from Missouri yield to the Senator from Illinois?

Mr. COCKRELL. With a great deal of pleasure.

Mr. PALMER. I am curious to know why some other Senator did not know it.

Mr. COCKRELL. Simply because there was no discussion. Every Senator who was here then, and who has ever spoken on the subject since, has admitted that he did not know it; and the documents I have here give a full and complete history of this whole movement from 1861; they are included in the reports of the Comptroller of the Currency and the Director of the Mint. But the history of it is contained specially in documents sent to Congress and which were not laid upon the desks of Senators, in all probability, or if they were, they were treated by Senators just as such documents are too often treated to-day—they did not read them, that was all. They ought to have known it, but they did not.

Mr. PALMER. I have understood from the history of the matter that the bill was several times printed and amended.

Mr. COCKRELL. Mr. President, I have here a more complete collection of the documents on that question than I have ever yet seen or heard read in the Senate from the beginning, the recommendations of the mint officers, and the letters they sent out all over the country to doctrinaires to get their views upon coinage, and the recommendations they have given here for striking down the standard silver dollar, and all that. But I doubt whether any one solitary Senator ever read them. The Senator from Ohio [Mr. SHERMAN] is the only one that has ever pretended to know, and he pretends to be as innocent as an unborn child of what was going to be the effect of it, as I shall show before I get through.

Mr. PALMER. Innocence seems to have been the general condition of the Senate about that time.

Mr. COCKRELL. It seems so. Why? Because of the haste with which the measure was pressed through after it was brought up. It was brought up, read, and passed upon the assurance that it was simply a coinage law. No controversy arose over it to amount to anything. It was a bill of sixty-five or sixty-six sections. It received the same consideration that many long bills receive that are brought up here and upon which no discussion arises, no demand is made for the reading and Senators know nothing about them, and with regard to which the great masses of the people of this country have never been informed. They were not heard upon this matter. There was no demand for that legislation from any part of the world.

At that time, or rather on June 30, 1872, we had $1,794,277,650 outstanding interest-bearing United States bonds and $413,566,968 noninterest-bearing obligations, mostly United States notes, making a total of $2,207,844,618 liabilities—interest and noninterest bearing—of which $200,000,000 were the funded loan of 1881, issued under the law of July 14, 1870, and payable in coin of the standard value of the United States gold and silver dollars on said July 14, 1870. Nearly all the remaining liabilities—over two billions—were payable in any legal-tender dollars—gold, silver, or greenbacks. The distinguished Senator from Ohio has time and again—and I have his quotations here—asserted upon this floor that the 5-20 bonds were honestly and justly redeemable and payable in legal-tender greenbacks, that they were sold for greenbacks, exchanged for them, and could lawfully and justly be paid in them.

In the calendar years 1871 and 1872 we coined $1,117,131 and $1,115,600, and in the one month and twelve days—January 1, 1873, up to February 12, 1873—when its coinage was prohibited we had coined $296,000 standard silver dollars, showing a very rapid increase in the coinage of such dollars.

Yet, with this record standing upon our books, the Senator from Ohio, who has been Secretary of the Treasury and ought to know this record, and the Senators who favor gold monometallism and oppose the rehabilitation of silver, have time and

again proclaimed to the world that the people would not have silver coined into dollars.

The Senator from Ohio said in his speech here this very session that it was dropped because nobody was having it coined. Yet here is the record. In the two years one month and twelve days prior to February 12, 1873, we had coined 2,531,736 standard silver dollars—nearly one-third of the total coinage of such dollars to that date.

Mr. PEFFER. Will the Senator from Missouri be kind enough to give the aggregate production of our silver mines for those years?

Mr. COCKRELL. I will give it hereafter. I do not want to put it in at this point. I have the complete figures, but they come under another head.

I shall hereafter discuss the causes leading to the passage of the law of February 12, 1873. It was not generally known for months after, that the coinage law of February 12, 1873, had demonetized the old standard dollar, and authorized a trade dollar of 420 grains with legal tender limited to $5, and established the single gold standard. The coinage of trade dollars followed at once the standard dollar, and they were used for sometime before the change was fully noted.

Suffice it to say that it was not in the minds of the people, was not generally known for months afterwards, that the coinage law of February 12, 1873, had demonetized the old standard dollar, but simply authorized the trade dollar of 420 grains with legal tender quality limited to $5.

How was that received by the people? What effect had that and the legislation of foreign nations upon the financial condition of this country?

The panic of September, 1873, swept like a deadly simoom from one end of this land to the other, and affected to a very large extent foreign nations, sweeping away millions and billions of their gains from hard labor. No less a cyclone politically followed this action of the Republican party. In the next general election in November, 1874, the Democratic party elected an overwhelming majority of Representatives to the Forty-fourth Congress, and the scepter of full power passed from the Republican party.

Mr. President, something has been said, a good deal has been said, in regard to the record of the two parties upon the silver question. I propose briefly to give that record, the record of the Democratic party and the record of the Republican party as well, upon this silver question.

In the Forty-fourth Congress, March 4, 1875, to March 4, 1877, the President was Republican. In the Senate there were 46 Republicans, 29 Democrats, 1 vacancy. In the House of Representatives there were 107 Republicans, 186 Democrats. Congress convened December 6, 1875. On March 27, 1876, H. R. 2450, from the Committee on Appropriations, was pending. It appropriated money for a deficiency for the Bureau of Engraving and Printing, and in section 2 provided for the issue of subsidiary silver coins in the redemption of fractional currency.

Mr. Reagan, of Texas, offered an amendment making the trade dollar legal tender for any amount not exceeding $50, and the silver coins less than a dollar for any amount not exceeding $25. This was agreed to. Yeas 124—99 Democrats, 22 Republicans, 1 Independent; nays 94—28 Democrats, 65 Republicans, 1 Independent. As amended the bill passed. Yeas 122—50 Democrats, 70 Republicans, and 2 Independents; nays 100—80 Democrats, 18 Republicans, and 2 Independents.

April 10, 1876, in the Senate, Mr. SHERMAN, from the Finance Committee, reported the bill with amendments; one amending section 3 so as to authorize the coinage of a silver dollar of 412.8 grains—a legal tender not exceeding $20 in any one payment except for customs dues and interest on public debt, and stopped the coinage of trade dollars. Another—a new section 4—authorized the exchange of silver dollars for an equal amount of United States notes to be retired, canceled, and not reissued; and also for silver bullion at its market value.

That was the policy at that time of the senior Senator from Ohio. It was to substitute a standard silver dollar of 412.8 grains, and that would make it the exact mathematical ratio of 16 to 1; it was to issue those silver dollars and with them retire and cancel the greenbacks, the full legal-tender United States notes.

By changing the bullion in silver dollars to 412.8 grains the exact ratio of silver to gold—16 to 1—was proposed. After discussion and a full speech by the Senator from Ohio [Mr. SHERMAN], he moved to strike out all after section 2 of the bill, in order to disembarrass the bill of a silver-coinage question, and leave it as an independent question to be afterwards settled. This motion was agreed to, and the Reagan amendment was stricken out.

The House concurred in the Senate amendments for the same reason, and the bill became the law of April 17, 1876.

On June 10, 1876, Mr. S. S. Cox, from the Committee on Banking and Currency, reported a joint resolution to issue the silver coins in the Treasury to an amount not exceeding $10,000,000 in exchange for an equal amount of legal-tender notes, to be kept as a special fund, to be reissued only upon the retirement of fractional currency; which was passed without a division.

June 21, 1876, in the Senate, the House joint resolution was amended by adding a section prohibiting the coinage of the trade dollar except for export trade; thus striking down the trade dollar, the only dollar authorized by the coinage law of 1873.

That was the action of the Republican Senate at that time destroying every solitary silver dollar, even the trade dollar.

June 28, in the House of Representatives, Mr. Payne, from the Banking and Currency Committee, reported for concurrence in the Senate amendments. Mr. F. Landers, of Indiana, moved to amend the Senate amendments by adding an amendment for free and unlimited coinage of the standard silver dollar of 412½ grains, with full legal tender, which was agreed to; yeas 110—85 Democrats, 23 Republicans, 2 Independents; nays 55—16 Democrats, 37 Republicans, 2 Independents.

July 1, 1876, in the Senate the Finance Committee reported nonconcurrence, and a conference was asked and agreed to without division

The House agreed to the conference.

The conferees, except Mr. Landers, reported to the House of Representatives an agreement, receding from the Landers amendment with substitute of sections 3 and 4, increasing the amount of subsidiary silver coin to be issued in redemption of fractional currency, not to exceed $10,000,000, and authorizing the purchase of the silver bullion for such coinage at market rate, to be made without loss in such coinage and issue, and took from the trade dollars any legal tender and limited their coinage to export demand. Agreed to. Yeas 129—66 Democrats, 62 Republicans, 1 Independent; nays 76—50 Democrats, 15 Republicans, 2 Independents.

July 14, in the Senate the report was adopted without division. It became the law, as the joint resolution of July 22, 1876.

On June 10, 1876, Mr. S. S. Cox, from the Committee on Banking and Currency, reported H. R. 3398, of three sections—very similar to the joint resolution of July 22, 1876. It was passed without division.

In the Senate June 27, 1876, the bill was considered on the report of the Finance Committee to strike out all after the enacting clause and insert four new sections. This was a substitute proposed by the Senate Committee on Finance, headed by the distinguished senior Senator from Ohio.

Section 1 provided for the coinage of silver dollars of 412.8 grains, to be legal tender for sums not exceeding $20.

Section 2 provided for exchanging such dollars and minor coins for legal tenders to be canceled and not reissued or replaced.

Section 3 provided for purchasing silver bullion at market rates for such coinage, to be made without loss in coinage and issue.

Section 4, prohibiting legal tender of the trade dollar, and limiting its coinage to export demand. This was before the law of July 22, 1876, had been enacted.

On June 28, 1876, Senator Bogy moved to strike out in section 1 the words "not exceeding $20," the effect of which was to leave that dollar with full legal-tender quality in the payment of all debts. That was agreed to. Yeas 18—8 Democrats, 10 Republicans; nays 14—3 Democrats, 11 Republicans. On June 29 the bill was recommitted to the Finance Committee and was never reported back. It was killed in a Republican Senate.

July 24, 1876, in the House of Representatives, Hon. William D. Kelley, Republican, moved to suspend the rules and pass a free and unlimited coinage bill. Yeas 119—84 Democrats, 33 Republicans, 2 Independents; nays 68—27 Democrats, 40 Republicans, 1 Independent. Two-thirds not voting yea, it failed.

On July 19, 1876, in the House of Representatives, Mr. BLAND, from the Committee on Mines and Mining, reported H. R. 3635, for free coinage of gold and silver. December 13, 1876, at the second session of the Forty-fourth Congress, Mr. BLAND offered a substitute for H. R. 3635, for free and unlimited coinage of silver dollar of 412½ grains, with full legal-tender power.

Mr. President, this was placing the standard silver dollar just where it had been from the organization of our Government up to the date of the passage of the law of February 12, 1873. It was restoring to it all the functions of money, the same as were enjoyed by gold coin. This was agreed to, and then passed: Yeas 168—123 Democrats, 45 Republicans; nays 53—17 Democrats, 36 Republicans. The bill as passed was sent to the Republican Senate, and never considered in the Senate. It slept the sleep that knows no waking, under the kindly care of the distinguished Senators from Ohio [Mr. SHERMAN], from Iowa [Mr. ALLISON], and from Vermont [Mr. MORRILL].

That is for the Forty-fourth Congress, the first Democratic House of Representatives. Now, what were the actions of the Democratic party and its results in that Congress?

First. The Democratic House of Representatives passed a provision increasing the legal tender of the trade dollar of 420 grains from $5 to $50, and the subsidiary coins from $5 to $25, by 124 yeas—99 Democrats, 22 Republicans, and 1 Independent; nays 94—28 Democrats, 65 Republicans, and 1 Independent. The Republican Senate amended, authorizing silver dollars of 412.8 grains legal tender to $20, except customs and interest and their exchanges for greenbacks to be retired and canceled, and for silver bul ion at market rates. That was the answer made by the Republican Senate to the demands of the Democratic House.

Second. The Landers free coinage amendment was agreed to in the House of Representatives by—yeas, 85 Democrats, 23 Republicans, 1 Independent; nays, 16 Democrats, 37 Republicans, 2 Independents. Defeated by a Republican Senate.

Third. House bill 3398 for subsidiary coins for redemption of fractional currency, amended in a Republican Senate, for silver dollars of 412.8 grains legal tender to $20, and exchangable for greenbacks to be canceled; and on motion of Mr. Bogy the restriction of legal tender to $20 was stricken out by—8 Democrats and 10 Republicans, to 3 Democrats and 11 Republicans. Recommitted and killed in committee.

Fourth. Kelley's free-coinage bill received—84 Democrats, 33 Republicans, and 2 Independents, to 27 Democrats, 40 Republicans, and 1 Independent.

Fifth. BLAND'S (H. R. 3635) substitute for free, unlimited coinage, passed by—123 Democrats and 45 Republicans to 17 Democrats and 36 Republicans; and in the Senate killed in the Finance Committee.

We come now to the Forty-fifth Congress, from March 4, 1877, to March 4, 1879. At that time there was a Republican President. In the Senate there were 39 Republican Senators, 36 Democratic Senators, and 1 Independent, David Davis. In the House of Representatives there were 136 Republicans, 156 Democrats, 1 vacancy.

In the first or called session of the Forty-fifth Congress, on November 5, 1877, in the House of Representatives, Mr. BLAND moved to suspend the rules and pass "An act to authorize the free coinage of the standard silver dollar and to restore its legal-tender character." Agreed to. Yeas 164—97 Democrats and 67 Republicans; nays 34, only 10 Democrats and 24 Republicans. Among the yeas were Messrs. Carlisle, HUNTON, and MILLS.

This bill, as passed by the House, was as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be coined, at the several mints of the United States, silver dollars of the weight of 412½ grains troy of standard silver, as provided in the act of January 18, 1837, on which shall be the devices and superscriptions provided by said act; which coins, together with all silver dollars heretofore coined by the United States of like weight and fineness, shall be a legal tender, at their nominal value, for all debts and dues, public and private, except where otherwise provided by contract; and any owner of silver bullion may deposit the same at any United States coinage mint or assay office, to be coined into such dollars, for his benefit, upon the same terms and conditions as gold bullion is deposited for coinage under existing laws.

SEC. 2. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

Passed the House of Representatives November 5, 1877.

Attest.

GEORGE M. ADAMS, *Clerk.*

November 21, 1877, Mr. ALLISON, from the Finance Committee, reported the bill, with amendments to strike out the clause beginning "and any owner of silver bullion," and to insert his purchasing clause, and to add section 2 for an international monetary conference.

In other words, the distinguished Senator from Iowa, as the mouthpiece of the Republican Finance Committee, reported to strike out the free and unlimited coinage clause of this House bill and to place in it the silver-purchasing clause of not less than $2,000,000 nor more than $4,000,000 of silver per month; and then to sugar-coat it with the international monetary conference.

February 15, 1878, this amendment was agreed to. Yeas 49—16 Democrats, 33 Republicans; nays 22—17 Democrats, 4 Republicans, 1 Independent (Mr. Davis). The amendment—section 2—was agreed to. Yeas 40—10 Democrats, 29 Republicans, 1 Independent; nays 30—24 Democrats, 6 Republicans. Mr. Booth's amendment by a new section for silver certificates was agreed to. Yeas 49—21 Democrats, 27 Republicans, 1 Independent; nays 14—8 Democrats, 6 Republicans. Other amendments were voted down and the bill as amended passed. Yeas 48—24 Democrats, 23 Republicans, 1 Independent; nays 21—7 Democrats, 14 Republicans.

February 21, 1878, in the House of Representatives the purchasing clause was concurred in. Yeas 203—74 Democrats, 129 Republicans; nays 72—68 Democrats, 4 Republicans. The international-agreement section was agreed to. Yeas, 196—77 Democrats, 119 Republicans; nays, 71—63 Democrats, 8 Republicans.

February 28, 1878, the bill was vetoed by President Hayes, and passed on same day over his veto. In the House of Representatives, yeas 196—118 Democrats, 78 Republicans; nays 73—22 Democrats, 51 Republicans. In the Senate, yeas 46—25 Democrats, 20 Republicans, 1 Independent; nays 19—9 Democrats, 10 Republicans.

Under this act 378,166,793 silver dollars have been coined from silver bullion, costing $308,199,262, leaving the seigniorage at $69,967,531.

Mr. President, it was known at the time when this bill was passed, from the published declarations of President Hayes, that a free and unlimited coinage silver bill would be vetoed. This bill, the Allison-Bland bill, or the Bland-Allison bill, or the law of February 28, 1878, was not what the friends of bimetallism and the true friends of unlimited coinage of silver demanded. It was all that they could get. It was then held over them in terror that the President would veto any bill recognizing the unlimited coinage of silver. Not only was that carried out, but after it was limited to not less than $2,000,000 nor more than $4,000,000 he still vetoed the bill, because it was a subversion of the policy of the Republican party which it had deliberately established after the close of the war—the single gold standard. This was the first encroachment made upon the single gold standard, and that it has resulted in untold blessings to the people no one can deny.

Where would the country be to-day if you were to strike out all this money circulation, these 378,000,000 of silver dollars that have been coined from year to year? They have been a part of the currency of this country, and they have been an aid to prevent more dire calamities than have already befallen us.

January 16, 1878, in the Senate, Mr. Matthews submitted his concurrent resolution, declaring that all United States bonds issued under the refunding and redemption acts of July 14, 1870, and January 14, 1875, could be paid at the option of the Government in standard silver dollars of 412½ grains without violation of public faith or in derogation of the rights of public creditors. It was then hurled in our teeth, every time we mentioned the subject of unlimited coinage of standard silver dollars, that we were repudiators, that we were trying to pay the bonds, the precious bonds of the Government, which ought to be paid in gold, in a debased standard silver dollar. To put an end to this the distinguished Senator from Ohio, Mr. Matthews, afterwards one of the justices of the Supreme Court of the United States, introduced this resolution; and, after the fullest discussion in the Senate, that resolution was agreed to. Yeas 43—23 Democrats, 19 Republicans, and the Independent, Judge David Davis, of Illinois; nays 22—7 Democrats and 15 Republicans.

That was sent to the House, and on January 29, 1878, it was agreed to. Yeas 189—116 Democrats, including Messrs. Carlisle and MILLS, 73 Republicans; nays 79—23 Democrats, 56 Republicans.

Here was a positive declaration that all the bonds of the Government, including the funded loan of 1907, could honestly and justly be paid in the standard silver dollars of 412½ grains. That passed the Republican Senate by the vote I have just given, and was passed in the Democratic House by an overwhelming vote. It was intended as a declaration of the law upon that question and the line of conduct to be pursued by the Administration in its execution of the law of February 28, 1878, the Bland-Allison law.

March 5, 1878, in the House of Representatives, Mr. SPRINGER moved to suspend the rules and pass a bill "to authorize the coinage of gold and silver upon the same terms, and to permit deposits thereof in the Treasury for the same purposes." It provided for unlimited coinage of each alike, with full legal tender, subject to mint charge of actual coinage cost. (This was after the passage of the Bland-Allison act.) Yeas 140—102 Democrats, 38 Republicans; nays 102—25 Democrats, 77 Republicans. Two-thirds not favoring, it failed.

December 9, 1878, in the House of Representatives, Mr. Durham moved to suspend the rules and pass a bill to stop coining trade dollars, and to exchange standard silver dollars of 412½ grains for them, and then recoin such trade dollars into the standard full legal-tender dollars. Yeas 153—104 Democrats, 49 Republicans; nays 91—20 Democrats, 71 Republicans. It failed, two-thirds not voting in the affirmative.

On the same day, Mr. Fort moved a suspension of the rules and passage of a bill declaring any discrimination against standard silver dollars by national banking associations a defiance of our laws, and instructing the Committee on Banking and Currency to report a bill for withdrawing their circulation. Yeas 151—106 Democrats, 45 Republicans; nays 89—16 Democrats, 73 Republicans. Not two-thirds in the affirmative, it failed.

Scarcely had the Bland-Allison law been enacted and a dollar

coined and issued under it, when the national banks of New York conspired to prevent any beneficial results flowing from its enactment, and ever since that day they have fought it with all the power they could bring to bear. They have refused to recognize it. They have refused largely to keep it as a part of their reserve. In other words, they have put the mark of condemnation upon it in every way that it was possible for them to do.

I come now, Mr. President, to the Forty-sixth Congress—1879 to 1881.

The President was Republican; the Senate, 42 Democrats, 33 Republicans, 1 Independent. In the House of Representatives, 148 Democrats, 130 Republicans, 15 Nationals. President Hayes called an extra session March 18, 1879.

June 27, 1879, in the Senate Mr. VEST offered a concurrent resolution, declaring "that the complete remonetization of silver, its full restoration as a money metal, and its free coinage are demanded alike by the dictates of justice and sound statesmanship." Mr. ALLISON moved its reference to the Finance Committee. Agreed to. Yeas 23—4 Democrats, 19 Republicans; nays 22—21 Democrats, 1 Independent.

At that time the distinguished Senator from Delaware, Mr. Bayard, now our ambassador to England, was chairman of the Committee on Finance. The resolution slept the sleep that knows no waking.

May 24, 1879, in the House of Representatives "An act to amend certain sections of the Revised Statutes of the United States relating to coinage and coin and bullion certificates, and for other purposes," was passed. Yeas 114—99 Democrats, 6 Republicans, 9 Independents; nays 97—89 Republicans, 8 Democrats.

It will be necessary to give a little history of this bill 564.

On April 30, 1879, in the House of Representatives Hon. A. J. Warner, from the Coinage Committee, reported this bill, with eleven sections, providing for the perfect equality of gold and silver as bullion and coin, free mintage with unlimited legal tender. Section 2 restored the standard silver dollar of 412½ grains. Section 3 gave it full and unlimited coinage. Section 4 prescribed the charges for melting and refining bullion.

May 15, 1879, Mr. Killinger moved that the bill do lie on the table. Yeas 109—14 Democrats, 95 Republicans; nays 126—107 Democrats, 10 Republicans, 9 Independents.

Mr. Caulkins moved to add to section 3 a provision for purchasing the silver bullion for such coinage at its market rates. Yeas 114—10 Democrats, 104 Republicans; nays 115—103 Democrats, 3 Republicans, 9 Independents. Disagreed to.

May 16, Mr. MILLS of Texas offered a substitute for section 3. This substitute required the Secretary of the Treasury to purchase without limit all silver bullion, trade dollars, and foreign coins offered for sale, at the market value of silver, as long as 412½ grains standard silver could be purchased for $1 of legal-tender Treasury notes, and to pay for such purchases with a *new issue* of legal-tender Treasury notes, and the silver coins to be exchangeable at par, in sums not less than $20, for such Treasury notes, to be full legal tender for all debts and receivable for Government dues, and the silver bullion, trade dollars, and foreign silver coins to be coined as fast as possible into American silver coins, and all silver coins coming into the treasury to be applied to paying the interest and principle of the public debt before using any of the gold or Treasury notes for such purpose. Disagreed to. Yeas 60—50 Democrats, 10 Independents; nays 155.

May 20, Mr. Fort offered a substitute for section 3, authorizing the deposit of silver bullion at its market value and payment therefor in standard dollars, and the coinage of the bullion into standard dollars. Disagreed to. Yeas 104—14 Democrats, 1 Independent, and 89 Republicans. Nays 118—98 Democrats, including Messrs. Carlisle and MILLS; 11 Republicans, 9 Independents.

The third section was agreed to. Yeas 113—100 Democrats, including Messrs. Carlisle, HUNTON, and MILLS; 3 Republicans, and 10 Independents. Nays 110—9 Democrats, 100 Republicans, 1 Independent.

Mr. Maish moved to insert in beginning of section 4 an amendment providing mint charges for coining gold and silver bullion into coin equal to the difference between the market value of the bullion and the legal-tender value of the coin. Agreed to. Yeas 118—15 Democrats, 100 Republicans, 3 Independents. Nays, 105—95 Democrats, 2 Republicans, 8 Independents.

The fourth section was agreed to. Yeas 113—14 Democrats, 98 Republicans, 1 Independent; nays 109—98 Democrats, 2 Republicans, 9 Independents.

May 24, Mr. Thomas Ryan moved a substitute for the bill, authorizing the purchase of silver bullion at its market price, to be coined into standard silver dollars as fast as could be done by the mints, subject to gold coinage, until the price of the standard silver bullion was equal to the coined dollar, and then for free and unlimited coinage.

Disagreed to. Yeas 69—2 Democrats, 67 Republicans; nays 137—105 Democrats, 24 Republicans, 8 Independents. In the Senate Mr. Bayard, February 2, 1880, reported adversely; and no further action.

On December 8, 1879, Senator VOORHEES introduced a resolution (Senate Miscellaneous Document No. 13), which, after reciting the singularly unanimous demand of the people for the passage of the law of February 28, 1878, and also the law of May 31, 1878, preventing further retirement of greenbacks and the great blessings resulting therefrom to the country, proposed to express immediate and unqualified condemnation of the President and the Secretary of the Treasury for their recommendations for suspending the coinage of silver dollars and for retiring the greenbacks, heard with profound astonishment and regret, and resolving—

That the true interests of the country require the free and unlimited coinage of both gold and silver on conditions of exact equality; and that it is the part of a wise financial policy to maintain the United States legal-tender note circulation, commonly known as greenbacks, in volume not less than now exists, and to preserve its legal-tender quality unrestricted as to amount, and unimpaired in legal effect.

No final action was had.

In the Forty-seventh Congress there was still a Republican President; from 1881 to 1883 the Senate was 37 Republicans, 37 Democrats, 1 Independent, and 1 Readjuster. The House of Representatives was 150 Republicans, 131 Democrats, 10 Nationals, and 2 Readjusters.

March 17, 1882, a resolution of Mr. Brown, of Georgia, in the Senate, declaring it "inexpedient and unwise to contract the currency by withdrawing silver certificates or to discontinue or further restrict the coinage of silver, and that gold and silver coin upon a proper ratio of equivalence between the two metals and paper issues predicated upon and convertible into such coin constitute the proper circulating medium," was referred to the Finance Committee. Yeas 30—2 Democrats, 28 Republicans; nays 23 Democrats and 1 Independent (Mr. Davis).

This is the only effort in the Forty-seventh Republican Congress to rehabilitate silver.

Now, we come to the Forty-eighth Congress: the President Republican, extending from 1883 to 1885—the Senate 40 Republicans, 36 Democrats. The House of Representatives 201 Democrats, 110 Republicans, 4 Independents, 1 Greenbacker.

April 1, 1884, House bill 4976, pending in the House of Representatives, authorizing receipt to January 1, 1886, of trade dollars for all dues to United States; section 2, exchangeable for standard dollars; section 3, to be sent to mints for coinage; section 4, to be part of coinage under act of February 28, 1878. Mr. BLAND moved to strike out section 4. Agreed to. Yeas 131—115 Democrats, 14 Republicans, 2 Independents; nays 119—37 Democrats; 81 Republicans, 1 Independent. Passed. Yeas 198—140 Democrats; 56 Republicans; 2 Independents; nays 45—11 Democrats; 33 Republicans; 1 Independent.

In the Senate, second session Forty-eighth Congress, the Finance Committee reported a substitute of five sections. Section 1 authorized exchange for standard dollars to July 1, 1885; section 2, to be sent to mints for coinage as part of bullion under act of February 28, 1878; section 4, to renew negotiations with Latin Union and other foreign powers for treaties to open mints to free coinage; section 5, if no such treaties be ratified before August 1, 1886, then suspension of act of February 28, 1878. February 4, 1885, Mr. Ingalls moved to strike out section 5. No other action.

In the House of Representatives, February 26, 1885, House bill 8256, being the sundry civil appropriation bill, was pending with a clause in it to suspend the operations of the law of February 28, 1878. In other words, to suspend the further purchase of silver, just as is proposed in this bill.

Mr. Randall moved to suspend the rules and consider said clause. It was disagreed to—yeas 118, nays 152; and it was abandoned and stricken from the bill.

You will remember that this was just preceding the inauguration of President Cleveland on the 4th of March, 1885.

We come to the Forty-ninth Congress, 1885 to 1887, Mr. Cleveland President, the Senate, 41 Republicans, 35 Democrats; the House of Representatives, 184 Democrats, 139 Republicans, Greenback-Labor, 2.

April 8, 1886, in the House of Representatives, House bill 5690, for the free coinage of silver dollars and placing silver on an equality with gold, reported adversely by the Coinage Committee, was pending. Mr. Dibble's amendment to strike out and substitute a provision for the repeal of the act of February 28, 1878, unless silver be remonetized by the concurrent action of the nations of Europe with the United States, was disagreed to. Yeas 84—33 Democrats, 51 Republicans; nays 201—130 Democrats, 71 Republicans. The bill was then rejected. Yeas 126—96 Democrats, 30 Republicans; nays 163—70 Democrats, 93 Republicans.

December 17, 1886, in the Senate, Senate bill 199, for the ex-

change to July 1, 1887, of trade for standard dollars, and to be sent to mints for coinage as part of the bullion to be purchased under act of February 28, 1878, was passed without division.

In the House of Representatives, February 12, 1887, Senate bill 199 was pending. Lanham's amendment as substituted, authorizing the receipt of trade dollars for Government dues and for exchange for standard dollars, and for coining the same into standard dollars, not as part of the bullion and coinage, under act of February 28, 1878, was agreed to on division. Yeas 127, nays 99; and passed, yeas 174, nays 36, and went to conference. The committee of conference reported a substitute, providing for the exchange for six months from date of trade for standard dollars or subsidiary coins, and for coining of the same not to be counted, under act of February 28, 1878. In the Senate this amendment was agreed to. Yeas 49—23 Democrats, 26 Republicans; nays 5—2 Democrats, 3 Republicans. In the House of Representatives it was agreed to without division.

It simply authorizes the trade dollars to be exchanged dollar for dollar for the standard silver dollars and then required such trade dollars to be taken to the mints and coined as additional coinage to the coinage under the act of February 28, 1878. President Cleveland, without approving or disapproving it and without returning it to the House, wherein it originated, kept it for ten days and it became a law.

In the Fiftieth Congress, 1887 to 1889, Mr. Cleveland was President. The Senate was 39 Republicans, 37 Democrats, and the House of Representatives 169 Democrats, 152 Republicans, 2 Labor, 2 Independents.

In the House of Representatives on February 29, 1888, House bill 5034, authorizing the application of the surplus in the Treasury to the purchase or redemption of United States bonds, was passed. In the Senate, on March 26, 1888, Senator Spooner's substitute, declaring section 2 of the sundry civil appropriation law of June 30, 1882, "a permanent provision," was agreed to. Senator Beck offered a section, directing the Secretary of the Treasury on the retirement of national-bank circulation and failure of other such banks to take out equal amount, then to purchase an equivalent amount of silver bullion in excess of the minimum required under the law of February 28, 1878, to be coined and used as provided in said act, which was agreed to. Yeas 38—22 Democrats, 16 Republicans; nays 13—2 Democrats, 11 Republicans. No action in the House of Representatives.

In the Fifty-first Congress, March 4, 1889, to March 4, 1891, Mr. Harrison, Republican, was President. The Senate was 47 Republicans, 37 Democrats. The House of Representatives, 173 Republicans, 154 Democrats, 1 Wheeler, 1 vacancy.

June 5, 1890, in the House of Representatives, House bill 5381, known as the Windom silver bullion purchase bill, was pending. Mr. BLAND moved to recommit, with instructions to report back a bill for the free coinage of silver. Yeas 116—101 Democrats, 14 Republicans, 1 Independent; nays 140—12 Democrats, 128 Republicans. The substitute offered by Mr. Conger was then passed. Yeas 135—135 Republicans, not a Democrat; nays 119—112 Democrats, 7 Republicans.

June 17, the bill was reported by the Finance Committee of the Senate with sundry amendments; while it was pending Mr. Plumb offered an amendment for free and unlimited coinage, which was agreed to. Yeas 43—28 Democrats, 15 Republicans; nays 24—3 Democrats, 21 Republicans. The bill so amended into a free, unlimited coinage measure was passed. Yeas 42—27 Democrats, 15 Republicans; nays 25—3 Democrats, 22 Republicans.

After long wrangling in the House of Representatives June 25, a vote was had on the Senate free-coinage amendment. Yeas 135—113 Democrats, including the Hon. ROGER Q. MILLS, 21 Republicans, 1 Independent; nays 152—22 Democrats, 130 Republicans. The Senate amendments were then nonconcurred in and conference had. The conference report was agreed to in the Senate July 10, by a vote of 39 yeas, all Republicans, and 26 nays, all Democrats, and in the House of Representatives, July 12, by 122 yeas—121 Republicans, 1 Independent (Featherstone), and 90 nays, all Democrats.

The conferees agreed to a bill with sundry amendments. The conference committee substituted in the bill as it passed 4,500,000 ounces for $4,500,000, and they modified the legal tenders "except where otherwise expressly stipulated in the contracts," and they substituted for the bullion redemption provision a requirement that upon demand the Secretary of the Treasury shall redeem the notes in gold or silver coin in his discretion—and the declaration that it is the established policy of the United States to maintain a parity between the two metals at the present legal ratio, or such ratio as may be provided by law, and to require 2,000,000 ounces of the bullion purchased to be coined monthly into dollars until July 1, 1891.

Mr. President, this was practically and entirely a new bill, agreed to in the conference led by the distinguished Senator from Ohio [Mr. SHERMAN], the great bimetallic leader of the Senate to-day. The changes entirely subverted the bill, bad as it was as it passed the Senate and as it passed the other House. Instead of redeeming the Treasury notes issued in the purchase of silver bullion with their equivalent in silver, upon the demand of the holder, the Secretary of the Treasury was required to redeem these notes in gold or silver coin in his discretion; and then the promise of the policy of the United States was put in here to maintain a parity between the two metals at the present legal ratio. I shall have occasion hereafter to comment on this matter in connection with the President's message. It was to maintain the parity of the two metals, not the two coins.

These were the most material changes, and I had the privilege and the honor of protesting against those changes and in predicting that the law would be misconstrued and enforced by an unwilling administration, just as it has been. I am glad to realize (I am sorry for the consequence of the realization, however) that every prediction I made upon the floor of the Senate in opposition to the approval of that bill as reported by the conference committee, has been verified. The distinguished junior Senator from Kentucky [Mr. LINDSAY] did me the honor to quote a large number of passages from that speech, and I stand here to-day without any apology for uttering one of them. Were that bill pending again to-day as it was then, I would simply repeat what I then said.

But what has been done since, Mr. President? I want to get at all the efforts at legislation on the silver question before discussing it.

On January 5, 1891, Mr. STEWART moved to consider Senate bill 4675, displacing the Federal election bill. That was agreed to. Yeas 34—26 Democrats, 8 Republicans; nays 29 Republicans.

On January 14, 1891, Mr. STEWART moved a free coinage amendment to the bill, which had been laid aside up to that time. That was agreed to. Yeas 42—26 Democrats, 16 Republicans; nays 30—3 Democrats, 27 Republicans.

After the bill had been discussed a long time and various amendments made, my colleague [Mr. VEST] offered a free and unlimited coinage provision as a substitute, and that was agreed to. Yeas 39—24 Democrats and 15 Republicans; nays 27, 1 Democrat and 26 Republicans.

Now, remember this was only a short time ago in the Senate, only in 1891, two and a half years ago. A great many of the same Senators are still here.

January 15, 1891, in the House of Representatives the bill was referred to the Coinage Committee and reported February 21, 1891, adversely and by order of the committee placed on the Calendar and no further action was had.

In the House of Representatives, February 6, 1891, on the sundry civil appropriation bill, Mr. BLAND moved a free coinage amendment, but was ruled out on a point of order. Then Mr. BLAND appealed from the decision of the Speaker, and the ruling of the Speaker was sustained. Yeas 134—7 Democrats, 127 Republicans; nays 127—116 Democrats, 11 Republicans.

Now we come to the Fifty-second Congress—1891 to 1893—Mr. Harrison, President; the Senate 47 Republicans, 39 Democrats, 2 Independents; the House of Representatives 235 Democrats, 86 Republicans, 9 People's party, 2 vacancies.

In the House of Representatives March 24, 1892, House bill 4426, for the free coinage of silver, etc., was pending. On motion of Mr. BURROWS to lay on table the yeas were 148—80 Democrats, 68 Republicans; nays 149—130 Democrats, 12 Republicans, 7 People's party. A motion to reconsider was agreed to—yeas 150, nays 148; and the motion to lay on table again defeated—yeas 145, nays 149. After continued filibustering the House adjourned, and no further action was had.

July 1, 1892, in the Senate Senate bill 51 for free coinage, complete as amended, passed. Yeas 29—17 Democrats, 10 Republicans, 2 Independents; nays 25—7 Democrats, 18 Republicans. Sixteen paired for and 16 against it—13 Democrats and 3 Republicans paired for, and 2 Democrats and 14 Republicans against. Counting votes and pairs and the yeas would be 45—30 Democrats, 13 Republicans, 2 Independents; nays 41—9 Democrats, 32 Republicans.

In the House of Representatives, July 5, 1892, the bill was referred to the Coinage Committee. July 6, Mr. TRACEY'S motion to refer the bill to the Committee on Banking and Currency was disagreed to—yeas 43, nays 129. Other filibustering motions were resorted to.

July 13—Mr. CATCHINGS, from the Committee on Rules, reported a resolution to consider Senate bill 51. The previous question on the same was ordered. Yeas 162, nays 130—101 Democrats, 61 Republicans, yeas; 114 Democrats and 16 Republicans and Independents, nays. The resolution was then rejected. Yeas 136—118 Democrats, 9 Republicans, and 9 Alliance; nays 154—94 Democrats, 60 Republicans.

That was only a little over a year ago—a short time.

Now, I want to go a little further in the Fifty-second Congress.

December 7, 1892, the distinguished Senator from New York [Mr. HILL] introduced Senate bill 2534 for the repeal of the law of July 14, 1890, except the fifth and sixth sections, and as this is a very remarkable bill I am very glad the distinguished Senator is present. I say the Senator from New York introduced Senate bill 3524 for the repeal of the law of July 14, 1890, except the fifth and sixth sections, which was referred to the Finance Committee, and was never reported back to the Senate.

This is a very remarkable financial measure, evidently representing the matured thought and judgment of the distinguished Democratic leader from the Empire State of New York. It proposes to stop the purchase of silver and the issue of Treasury notes, and all coinage of the silver bullion already purchased, and to leave in the Treasury the great mass of silver bullion uncoined—and a mere commodity—and the large amount of United States Treasury notes issued and outstanding deprived of all monetary functions, including legal tender and redemption in coin—a bastard; an illegitimate issue of United States notes.

Well may we all pause before this wonderful prodigy for financial legislation. The junior Senator from Nevada [Mr. STEWART] came to its rescue on December 12 by introducing and having referred to the Finance Committee an amendment adding to Senate bill 3524 a provision for the free and unlimited coinage of the standard silver dollar.

December 21, 1892, the Senator from New Jersey [Mr. MCPHERSON] introduced a joint resolution (S. R. 126) for the suspension of all purchases of silver bullion under the law of July 14, 1890, until otherwise ordered by Congress. Ordered to lie on the table. No further action had.

On January 4, 1893, the Senator from Nevada [Mr. STEWART] offered a free-coinage amendment, which was laid on the table and printed.

January 9, 1893, the Senator from Rhode Island [Mr. ALDRICH] offered a substitute, reaffirming our purpose to maintain the parity in the value of gold and silver coins and United States notes and for the issue of bonds—here is the milk in the cocoanut—to be sold for gold to maintain such parity, and the suspension of purchase of silver bullion in the discretion of the President, and repealing the purchasing clause if there was no international bimetallic agreement, before January 1, 1894.

But to go back a little to show the interest of the distinguished Senator from Ohio [Mr. SHERMAN] in anything that squints of international bimetallism or international monetary conferences: July 14, 1892, the Senator from Ohio introduced and had referred to the Finance Committee, Senate bill 3423, for the repeal of the clauses of the law of July 14, 1890, for the purchase of silver bullion and issue of Treasury notes in the purchase, to take effect January 1, 1893.

July 6, 1892, the distinguished Senator from Iowa [Mr. ALLISON], as chairman of the Committee on Appropriations, had reported the sundry civil appropriation bill, with an amendment, providing for the international monetary conference that met at Brussels last year, and of which he was a member. That was on July 6. Immediately, on July 14, the distinguished Senator from Ohio brings in his bill to repeal his own protégé and wipe it out of existence, in ample time to have its proper effect on the proceedings of the international monetary conference to be held at Brussels, and to be referred to in their proceedings, as it was.

I will read that now, to see how our representatives over there talked to those clad in the purple robes of authority—kingly regal authority.

THIRD QUESTION—

This is by Mr. Cannon—

The present policy of the United States, in regard to the purchase of silver, was defined by Mr. Cannon in the following terms:

"The United States has seriously taken into consideration the idea of repealing the silver-purchase act of 1890: the two political parties as well as—

Oh, yes; "as well as"—

the great bankers of New York have advised this repeal, and if during this conference some arrangement is not attained, it is more than probable that America will not continue disposed to buy annually 54,000,000 ounces of silver at the market price.

Was it not peculiar that just as soon as any indication of an international monetary conference was visible upon the horizon by a proposed amendment in the sundry civil appropriation bill, the senior Senator from Ohio, claiming to strongly favor bimetallism, should come in with a bill for the destruction of his own offspring.

On January 17, 1893, Senate bill 3423 was reported from the Finance Committee by the Senator from Ohio [Mr. SHERMAN], amended by changing the repeal from January 1, 1893, to January 1, 1894, and adding a new section authorizing national banks to issue notes to face value of bonds.

Now, Mr. President, remember this bill was introduced on the 14th day of July, 1892. Congress was in session for some time afterwards. It convened again in December. Not until January 17, 1893, did the distinguished Senator from Ohio bring back his own bill for action in the Senate. He must have been exceedingly anxious for the passage of the bill, considering the long time he consumed before reporting it back. Then what was it when reported back? It repealed the purchasing clauses after January 1, 1894, and then added a new section authorizing the issue by national banks of dollar for dollar of their circulation, the very identical kind of a bill that the distinguished Senator from Indiana, the chairman of the Finance Committee, has already reported to the Senate and is now pending on the Calendar. That amendment was exactly in the language almost of the present bill. It gave the banks the power to issue up to the full face value of their bonds.

January 19, 1893, the senior Senator from Colorado [Mr. TELLER] offered a substitute for free coinage of silver.

January 19, 1893, the junior Senator from Colorado [Mr. WOLCOTT] offered a substitute for coining all silver purchased and to be purchased under said act, differing in that respect. It was simply to compel the coinage of all the silver purchased and to be purchased under that act.

February 6, 1893—now we are in the present year—my colleague [Mr. VEST] offered an amendment restoring the Bland-Allison law of February 28, 1878, as a substitute.

February 6, 1893, the distinguished Senator from New York [Mr. HILL] made a speech, and moved to consider the bill reported by the Senator from Ohio [Mr. SHERMAN].

The junior Senator from Indiana [Mr. VOORHEES] moved to lay that motion on the table. That was ruled out of order on a point made by the Senator from Massachusetts [Mr. HOAR]. The motion was then voted on; yeas 23—12 Democrats, 11 Republicans; nays 42—20 Democrats, 20 Republicans, and 2 Independents.

Mr. President, that was only last February. Now, if our Republican friends were so exceedingly anxious for the repeal of the act of 1890 why did they not repeal it when they had the President, the Senate, and the House? Why did they not make more determined efforts when they had the power and the responsibility? Did we see any of them turning somersaults trying to get a vote upon a repeal clause? Not a bit of it, Mr. President. They were not half as anxious to repeal that act under a Republican Administration as they are to repeal it under a Democratic Administration. For many years they had borne the odium of the gold standard they had established in 1873, and they were not willing under their own Administration to unconditionally repeal the law of 1890 and re-establish the gold monometallism of 1873; but they are willing to do it under a Democratic Administration. Wonderful patriotism! Wonderful disinterestedness!

But, Mr. President, what has been done under the so-called Sherman law of July 14, 1890? Up to September 1, 1893—I did not have time to get the data up to October 1—up to September 1, 1893, $151,804,170 in the United States Treasury notes therein authorized have been issued in the purchase of 163,047,664 ounces of fine silver of the coinage value of $210,809,100; and 36,087,185 standard silver dollars—costing for the bullion $29,110,116.25, the seigniorage being $6,977,068.75—have been coined. If all the bullion purchased up to September 1, 1893, were coined the number of silver dollars in excess of the Treasury notes then outstanding would be $60,318,741.

Probably about fifty millions of the Treasury notes have been redeemed in gold, and very little in silver dollars. Over $150,000,000 have been added to the volume of our money circulation.

Why have $50,000,000 in gold been paid out in the redemption of these Treasury notes instead of silver dollars? The law of July 14, 1890, says that these notes "shall be redeemable on demand in coin," and "that upon demand of the holder * * * the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law." And that after July 1, 1891, "he," the Secretary of the Treasury, "shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury."

These words I have quoted are all parts of the same law—must be construed together and according to their clear intent. The first clause makes the Treasury notes redeemable in *coin*—the standard silver dollar is coin—is money absolute—a full legal tender in payment of "all debts and dues public and private, except where otherwise expressly stipulated in the contract."

The Treasury notes are debts of the United States—are public dues. There is no express stipulation in the law for their payment in gold. Why, then, have they been redeemed in gold?

It is claimed that the declaration "it being the established

policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio" so controls the action of the Secretary as to prevent his exercising the discretion nominally vested in him if by such action the parity between gold and silver may be disturbed. The law says nothing about the parity between gold and silver. It says to maintain the two metals on a parity with each other.

Has the Secretary maintained the two metals, gold and silver, on a parity with each other by redeeming the Treasury notes in gold? It is absurd to claim that he has, while with the very Treasury notes he has been purchasing silver bullion at about 56 to 64 cents on the 412½ grains standard silver. He has utterly failed to maintain the two metals on a parity with each other. While the law gives the Secretary the right to "redeem such notes in gold or silver coin at his discretion," yet in the very next sentence it tells him expressly and unequivocally, and not nominally, how he shall exercise that discretion, namely:

He shall coin of the silver bullion purchased * * * as much as may be necessary to provide for the redemption of the Treasury notes herein provided for.

It does not say for a part of such notes, or such part of them as may not be redeemed in his discretion in gold, but for the redemption of the Treasury notes herein provided for; for the redemption of every Treasury note authorized to be issued by him by said act. Manifestly, then, a refusal by the Secretary to pay these notes in gold if demanded would not destroy the parity between the two metals—gold metal and silver metal—and would not establish a discrimination in favor of gold, but, on the contrary, does actually establish a discrimination against the silver dollar just as fully and effectually as if on demand he should redeem silver certificates issued for silver dollars in gold.

Mr. President, I confess that I have been greatly astonished to be informed, as I believe reliably, that under the present Democratic Administration silver certificates calling for so many silver dollars deposited in the Treasury to be returned on demand have on presentation been paid in gold.

Mr. McPHERSON. Does it weaken them?

Mr. COCKRELL. Does it harm them? It is a breach of trust, a breach of faith. It is yielding to a dishonest and a dishonorable demand. It is bowing the knee to gold monometallism. It is acknowledging and establishing gold as the single standard. It is degrading the money of the world and the money of the United States, the silver dollar, and making it a subsidiary coin worth nothing by itself until it is redeemed in gold.

Mr. GEORGE. Is there any law authorizing the Secretary to pay silver certificates in gold?

Mr. COCKRELL. There is not on the face of any book of law in the United States an act authorizing the Secretary of the Treasury on the demand of any king or potentate or representative of any foreign syndicate or gold syndicate to redeem silver-dollar certificates in gold coin. No man can show it. Read your silver certificate, if you have one in your pocket. There is no question about what it means. I have here a little one, but it is just as good as a big one, I presume.

This certifies that there has been deposited in the Treasury of the United States one silver dollar payable to bearer on demand.

"One silver dollar payable to bearer on demand;" and yet I am told that our Secretary of the Treasury has upon the demand of the holders of these silver-dollar certificates paid them in gold. I say he has no right to do it. I say it is not in pursuance of the Democratic policy of the United States, maintained from the foundation of our Government up to this day. I say it is in violation of every principle and policy which our Government has ever proclaimed. We have made silver money as absolutely and unqualifiedly irredeemable without price as we have made gold; and he had no right when a man came to him with an illegal, unjust, infamous, and iniquitous demand, made for ulterior ends and ulterior purposes, to force this country to a single gold standard, to bow to any such demand and pay out any such gold dollars.

Mr. PEFFER. Here is the law.

Mr. COCKRELL. There is no question about it. It is simply a certificate that so many silver dollars have been put there and they are kept on deposit to be returned to the holder. Now I will read the law.

Section 3 of the Bland act provides—

That any holder of the coin authorized by this act may deposit the same with the Treasurer or any assistant treasurer of the United States, in sums not less than $10, and receive therefor certificates of not less than $10 each, corresponding with the denominations of the United States notes. The coin deposited for or representing the certificates shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and, when so received, may be reissued.

As a matter of course, any banker or any gentleman having financial transactions with a friend would, if that friend came and asked that he might have gold in lieu of silver certificates, or in lieu of fractional money, or in lieu of greenbacks, or anything of the kind, give it to him; but when a man comes with silver certificates and makes a legal peremptory demand upon any United States Secretary of the Treasury or subtreasurer that they must be redeemed in gold, I care not whether he is the representative of the Rothschilds of England, or of Great Britain itself, or of Germany, or any other nations or kindred on earth, he has no right to be paid the gold.

Mr. McPHERSON. Will the Senator from Missouri permit me to ask him a question?

Mr. COCKRELL. With a great deal of pleasure.

Mr. McPHERSON. This morning we listened to a very severe criticism by the honorable Senator from Alabama [Mr. MORGAN], in which he found much fault with the Committee on Finance for striking from the House bill a certain provision, which I will read:

And the faith and credit of the United States—

Mark the language—

And the faith and credit of the United are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law.

I should like to know whether the Senator from Alabama or the Senator from Missouri best represents the contention of the silver advocates in the Senate. The Senator from Alabama criticises us for striking from the bill a provision of law which would require a demand that the Treasury of the United States shall redeem the silver coin in a way to preserve the parity. The Senator from Missouri now declares that it is contrary to law; that it is a degradation of silver, and the Secretary of the Treasury has no right to redeem it in gold. Who represents the contention of the silver advocates here, the Senator from Missouri or the Senator from Alabama?

Mr. COCKRELL. I can answer that we both represent it; and we both represent that grand old party which has maintained it organization for over a century amid all the storms and political upheavals that have driven every other political organization out of existence. We represent the system of money that it maintained until that system was supplanted by the Republican policy of 1873, establishing the gold standard. I wanted the Senator to ask me that identical question, because we shall have much to do with it hereafter. Does the maintenance of two metals at a parity demand that one of them, just as absolute and as irredeemable as the other, shall be redeemed in the other? No, sir. That is a false interpretation of the law. I have quoted it. I have shown that the pretended claim that the Secretary of the Treasury had to redeem these Treasury notes in gold to maintain the parity is false. There is not a particle of foundation for it, in my judgment. He violated the spirit of the law. It is true he has the option, but that option is further governed by the declaration that he shall coin of the bullion purchased with Treasury notes a sufficient amount to redeem the Treasury notes—every one of them.

Mr. McPHERSON. Let me ask the Senator from Missouri what is to assist the silver coin to keep step with gold in exchanges and maintain the parity if it be not an exchangeability into gold?

Mr. COCKRELL. Oh, that has nothing to do with it. Money is without price and is irredeemable. We have made silver money. We have not made it a limping leg to gold. We have not made it subordinate to gold. Anyone who undertakes to interpret the law in such a way that the silver dollars coined under the law are redeemable in gold is the worst kind of a gold monometallist.

No, Mr. President, I care not who it is, I do not stand with anyone upon that kind of bimetallism. The silver dollar is money, absolute money. It is irredeemable in anything on earth, or above it, or beneath it. It is the equal of gold in every respect. We do not seek to maintain silver in the light in which the Senator from New Jersey speaks of it. We say let it walk side by side with gold. It will do it if you just let it alone. It will walk with it as it has always done. It commanded a premium in your cowardly gold metal right in the markets of New York during the recent panic. Yes, sir, it has always maintained it. You can take your silver dollar and go into any market in the United States and buy with it just as much as you can buy with the gold dollar.

Mr. McPHERSON. Will the Senator yield to me for another question?

Mr. COCKRELL. With a great deal of pleasure.

Mr. McPHERSON. In respect to the attitude of the silver advocates in this body a great panic has unquestionably been maintained; and I want to say to the Senator that a well-executed counterfeit would have commanded a premium sometimes during the panic.

Mr. COCKRELL. It would do it now if nobody could discover it. No, Mr. President, this panic has not been produced by the

silver dollar. It has had nothing more to do with producing the panic than the gentle evening zephyrs. This panic has been growing for years; and the conditions were in such a state of progress that the bankers intended to force this country to redeem all its money in gold, just as the Senator is wanting to do, and whom he is representing, and the aristocratic nations of Europe have joined them. They say we will have the single gold standard and we will have the money of the world redeemable in that single gold standard. That is the battle we are fighting now.

That is the enemy we are contending against now. He is covered behind the breastworks of distinguished citizens here and taking refuge behind them and their opinions, but that is the real enemy we are fighting. When this Government goes to redeem absolute money with any other money, particularly when that is silver, and demanding that it shall be done, it is degrading the silver. You do not redeem money, absolute money, metallic money. You may redeem legal-tender paper currency, but you do not redeem gold and silver. A man goes to the bank of France with a million or a billion dollars of silver francs and demands gold. Does he get it?

Mr. McPHERSON. Why?

Mr. COCKRELL. Simply because they do not intend to degrade silver by making it subsidiary to gold.

Mr. WHITE of Louisiana. May I ask the Senator a question?

Mr. COCKRELL. With infinite pleasure.

Mr. WHITE of Louisiana. Is not every dollar of silver in circulation to-day by express terms redeemable in gold?

Mr. COCKRELL. Not one of them.

Mr. WHITE of Louisiana. The Senator and myself differ on that point.

Mr. COCKRELL. I challenge the Senator to show one line of law authorizing any United States officer to redeem a silver dollar in gold.

Mr. WHITE of Louisiana. I do not speak of the United States, but of France. The Senator was referring to France.

Mr. COCKRELL. Oh, I beg the Senator's pardon.

Mr. WHITE of Louisiana. I ask the Senator whether every French silver dollar extant to-day is not redeemable in gold?

Mr. COCKRELL. Not one of them.

Mr. WHITE of Louisiana. By the terms of the Latin Union?

Mr. COCKRELL. Not by the terms of the Latin Union.

Mr. WHITE of Louisiana. By the terms of the Latin Union each respective nation agreed that it would redeem and exchange every silver dollar outstanding in the hands of a citizen of every other country for gold.

Mr. COCKRELL. Yes; but that is not silver in France, and the Senator knows it. He knows that is a miserable subterfuge.

Mr. WHITE of Louisiana. The Senator uses harsh language when he says it is a miserable subterfuge.

Mr. COCKRELL. I mean no offense.

Mr. WHITE of Louisiana. I am accustomed in debate to be civil. If we are to bandy approbrious epithets, if the Senate is to degenerate into mud-slinging, I think, with all due respect to my venerable friend, that I could sling as much mud as he.

Mr. COCKRELL. Undoubtedly, and more.

Mr. WHITE of Louisiana. But my sense of propriety and decency would prevent me.

Mr. COCKRELL. When I said it was a subterfuge I meant simply in argument, and the Senator knows it is a subterfuge.

Mr. WHITE of Louisiana. I know nothing of the kind.

Mr. COCKRELL. I will show him that it is.

Mr. WHITE of Louisiana. I believe the contrary.

Mr. COCKRELL. I will show the Senator. He is a strong lawyer, and he knows what it is to dodge around a point.

Mr. WHITE of Louisiana. Let me tell the Senator I never dodge half as much as he does. I think he is as artful a dodger as I ever met in my life.

Mr. COCKRELL. Now, let us see what the Lation Union is. We all know about that. The Latin Union binds France to redeem its coin held by other nations.

Mr. TELLER. Not the individuals.

Mr. COCKRELL. It does not relate to the redemption of silver coin circulating in France, and my good friend from Louisiana, whom I love so tenderly, will admit it. There is no use talking about that.

Mr. WHITE of Louisiana. Will the Senator from Missouri allow me?

Mr. COCKRELL. With a great deal of pleasure.

Mr. WHITE of Louisiana. If my answer to the question which the Senator has made does not affirm the proposition which I stated, then I do not know how a proposition can be affirmed. If silver is outstanding issued by the French Government and the French Government has entered into an obligation not treating it as ultimate money, but that every dollar of it outstanding held by another nation shall be redeemed in gold, the existence of that obligation renders every dollar redeemable in gold, because the man who desires to redeem the silver in gold has only to put it into a position where it comes under the obligation which forces it to be redeemed in gold.

Mr. COCKRELL. That does not relate to silver in circulation in France, as the Senator knows. I say that silver money circulating in France and in the hands of the people within its territorial dominion is not redeemable in gold.

Mr. WHITE of Louisiana. Ah, yes, if the Senator will allow me; but the faculty and power to put a dollar in a position where it has a right to demand gold follows that dollar in the hands of every individual in the world, and gives it an attribute which makes it as good as gold.

Mr. COCKRELL. How can the citizens of France, with 600,000,000 silver dollars, place that silver coin in the hands of a foreign government?

Mr. WHITE of Louisiana. Very readily, when the time comes.

Mr. COCKRELL. The idea that six or seven hundred million of coined legal-tender dollars in France, equal there to gold in the payment of the national debt, and in the payment of taxes, and in the payment of the personal obligations and the purchase of millions and billions of dollars' worth of products there, is going to be sent to some foreign government, Belgium, Switzerland, Italy, or Greece, forming the Latin Union, and given into the hands of those governments, in order that they may come back to France and demand under the Latin Union that those coins shall be redeemed in gold, is an impossibility.

Mr. TELLER. I ask the Senator if he will allow me to make a suggestion in reference to the statement made by the Senator from Louisiana?

Mr. COCKRELL. With pleasure.

Mr. TELLER. The Latin Union provides that when France shall have Italian money, and Italy has French money, that they shall strike the balance, and if it shall be found that France has more of the Italian money than Italy has of the French money, that that shall be redeemed in gold. That is the Italian money which will be redeemed, which is circulating out of the country in which it is coined. Under no provision of law or any practice in France has a single French 5-franc piece ever been exchanged for gold, and it can not be done by law.

Mr. McPHERSON. Why not?

Mr. TELLER. The Senator from New Jersey asks why not. Because there is no law requiring it. I do not mean to say that a Frenchman may not, if he chooses, exchange a 5-franc piece, or a number of them, for gold, but there is no policy in France for redeeming silver in gold; and if any Senator makes such a statement he is making that which he can not sustain.

Mr. WHITE of Louisiana. If the Senator from Missouri will allow me one moment, I will make clear the statement I made. The Senator from Missouri made a broad statement that any money which was redeemable was not ultimate money.

Mr. COCKRELL. Metallic money, I mean.

Mr. WHITE of Louisiana. Metallic money. Then he went on and referred to the Latin Union, and I immediately called attention to the fact that the very states that form the Latin Union found it necessary in order to form it to enter into an agreement among themselves that this money should be redeemed in gold.

Mr. TELLER. If I may suggest, the contract was this: As long as Italy had French money she redeemed French money in French money.

Mr. WHITE of Louisiana. She redeemed it in gold.

Mr. TELLER. Not at all. She struck the balance, and when she could no longer redeem it in silver, because she had not French silver, then she was obliged to redeem it in gold.

Mr. WHITE of Louisiana. Then I say this was not ultimate money, and they provided that she should get gold for it by the terms of the Latin Union. My argument is that the faculty of redeeming that money in gold, however remote that faculty was, gives the attribute to the money which makes it equivalent with gold resulting from that very stipulation; and that, in my judgment, is what enabled the Latin Union to keep the silver afloat which it has kept afloat.

Mr. COCKRELL. That is a contingency so far remote that it does not have upon the circulation of the francs of France within the territorial dominions of that great Republic even the influence that ordinary moonshine would have upon it. It is simply mythical. It has grown up in the vivid imagination of the distinguished Senator from Louisiana.

Mr. McPHERSON. Now, if the Senator from Missouri will yield to me for a single moment, I want him to be exactly correct in his speech here, which he is soon to publish, I suppose, and judging from the amount of references that he has before him he has camped here for a week or two, and therefore it will be no interference.

Mr. COCKRELL. It never is any interference, whether I am making a long or a short speech.

Mr. McPHERSON. The agreement made between France and the states of the Latin Union is an agreement which relates only to intercourse between those nations and must end at the termination of the period of time for which the agreement was made. If there is an Italian coin or Belgian coin in her possession, Italy and Belgium are required to pay her in gold, and vice versa. The Senator is quite right, however, when he says that France is not obliged by law to compel the redemption of silver coin in gold coin to maintain the parity; but that she does it in practice is obvious and certain. No man who goes to the Bank of France, or to any bank in France, and asks for the exchange of a certain amount of silver coin or silver francs in gold coins, Napoleons, if you please, is turned away empty.

Mr. COCKRELL. As a matter of course not.

Mr. McPHERSON. Silver—the silver franc being the unit and standard of value in France, the charter of the Bank of France requires the bank to receive these coins on deposit and pay them out to those who deposit them; that is, the public. Therefore, the silver coins stand alone; but in practice France does exactly what the Government of the United States does. It always redeems the coin in gold when gold is asked for, not in sums suited for export, because upon export gold they demand a slight premium. The premium is very slight, for the reason that if gold can not be exported, commodities must be exported to take the place of gold; and if a high premium is put upon it, it bears very heavily upon the exchange of commodities.

Mr. COCKRELL. There is no doubt but that a banker in the United States or anywhere else who had a spirit of accommodation and any of the milk of human kindness about him would exchange a few dollars of gold for a few dollars of silver, or anything of that kind. But I say if a citizen of the United States were to go to the Bank of France and present any considerable number of silver dollars for gold and demand them as his right he would be quickly turned out of the Bank of France.

Mr. McPHERSON. If the Senator will allow me a moment longer, I was going to ask him a further question. The Bank of France to-day has some $250,000,000 of gold coin. I speak in round numbers.

Mr. COCKRELL. That is about right.

Mr. McPHERSON. The Treasury of the United States has $100,000,000 of gold coin standing under and behind her $1,000,000,000 of silver money and paper money. The Bank of France is abundantly able to make exchanges as she pleases; and there is no condition, no pledge, and no law requiring the exchange. The Government of the United States, upon the other hand, is confronted by a positive law which says that you must maintain the parity between the two metals. With $100,000,000 of gold in our Treasury to redeem a thousand or eleven hundred million dollars of paper and silver, and to maintain the parity between the different kinds of money, certainly there is a wide difference between the situation of France and the situation in this country.

Mr. COCKRELL. I understand the Senator, and will he permit me to answer his question in the Yankee fashion of his own State by an interrogatory? The Senator holds that the silver dollars, the silver certificates, the United States Treasury notes issued for the purchase of silver bullion, and the greenbacks are redeemable in gold?

Mr. McPHERSON. I mean that we have Treasury notes issued to the extent of $150,000,000, and under the law which authorizes their issue for the purchase of silver that it is provided that they shall be redeemed in gold at the discretion of the Secretary of the Treasury, and there is no discretion left with him. And I say if he fails to pay in gold those notes with which he is expressly required and commanded to maintain the parity, then all the silver issues of the Government stand practically upon the same foundation.

Mr. COCKRELL. In other words, then, all the silver dollars are redeemable in gold?

Mr. McPHERSON. Not at all.

Mr. COCKRELL. This is a very important question, and I want to know exactly where we are. The Senator contends that the United States Treasury notes issued under the law of July 14, 1890, in the purchase of silver bullion under the Sherman law are redeemable in gold or silver, at the option of the Secretary of the Treasury, and if gold is demanded he must pay gold. Now, what relation does that have to the silver certificates issued for the silver dollars coined under the Bland act?

Mr. McPHERSON. If that money itself is discredited by the failure of the Secretary of the Treasury to maintain the parity it affects in like manner every silver issue by the Government, because the contention of people to-day is that the Government has proceeded in the direction of injecting silver into the circulation to such an extent that it is impossible to maintain the parity and we are fast drifting to a silver basis. That is the contention.

Mr. COCKRELL. Mr. President, the people of the United States do not make any such contention. A few Bull Run panic-stricken bankers of New York may make the prediction that they are scared to death over silver dollars. The masses of the people in New Jersey, the toiling masses, are not sending up their petitions here telling you and me that they are afraid to receive silver dollars. This panic made to order has demonstrated beyond the shadow of a doubt the unbounded illimitable and unlimited confidence the masses of the people have in the standard silver dollar. You may search the United States from Maine to Texas, and from Florida to Alaska and you can not find a man, woman, or child who will refuse to receive the silver dollar just as quickly as the gold dollar, the silver certificate just as quickly as the gold certificate, and to receive the greenbacks or any of them.

The people of the United States are intelligent and patriotic enough to know that every dollar of money issued by authority of Congress is just as good as any other dollar, and they treat it as such. It is only the bankers who have lost confidence, and that is done because of their overnervousness and their fears and apprehensions of what may come to pass in the future, based upon the ulterior object of establishing a single gold standard, and that is the aim of my friend. He has said enough here to convince me that he stands for the single gold standard and for everything in the shape of money in the United States to be redeemable in gold—the silver dollar and the silver certificate. I have, then, truthfully said that the battle waging in the Senate is between the bankers and the plutocrats of the world on one side for a single gold standard, in which all other moneys shall be redeemable at their sweet will and pleasure, and the people on the other side for the maintenance unimpaired of the monetary functions of silver as an equal money with gold, whatever amount may be coined by our Government.

I am very glad this colloquy has come up. It is a question that I intended to discuss further on, and I am glad that it has been developed now. We know where the friends of this bill stand. We know the battle that is before us. We know the objects to be attained. We know the interest our toiling masses have in this great struggle; and we propose to stand by them and defend their interests against the combined powers of the plutocrats of the United States and of every nation, kindred, and tongue on earth; and you shall not succeed.

But, Mr. President, I was criticising the distinguished Secretary of the Treasury, for, as I was told by a distinguished Senator, the holders of these silver coin certificates had demanded gold, and he had yielded to that demand. I say it was wrong. I say furthermore he has a perfect right in equity and justice, under the law, to redeem the United States certificates that were given in payment of the purchase of bullion in silver coin, and while the law gives him nominally the right to redeem in gold or silver at his discretion, yet under that right his discretion is modified. Now, I will read that clause of the law.

Mr. TELLER. I wish to interrupt the Senator to know if I understood him aright.

Mr. COCKRELL. I will yield with pleasure.

Mr. TELLER. Did the Senator from Missouri state that the Treasury Department had redeemed silver certificates proper in gold?

Mr. COCKRELL. Silver coin certificates. That is my information.

Mr. TELLER. I will state that a few days ago—not more than twenty—I called on the Treasurer of the United States and made that inquiry, and he informed me that they never had redeemed the silver certificate proper in gold. I do not mean the Treasury notes, but the silver certificates. He said they never had redeemed them in gold, and I venture to say now there never has been a dollar of them redeemed in gold.

Mr. COCKRELL. My colleague gave me the information.

Mr. TELLER. It is a mistake.

Mr. COCKRELL. I understood my colleague to say expressly that silver coin certificates—not the United States Treasury notes issued for the purchase of bullion—had been redeemed in gold.

Mr. TELLER. No.

Mr. VEST. At the time that the first million dollars was drawn out in gold from the United States Treasury for exportation it was stated in the press, and I have always understood it to be true, that a large amount in silver certificates was included in the million dollars, and that the Treasury Department paid out gold indifferently upon any of the paper circulation of the United States. I so understood from the President's declaration at the time it was made. I do not remember the exact date, but it was a formal declaration made by the President to the effect

that every dollar issued by the United States in any sort of obligation (I suppose, of course, that it referred to the paper obligations of the Government) should be paid in the coin which the holder demanded. If reference can be made to that statement, which I have not at command, I think it will be found to amount to that.

Mr. TELLER. Will the Senator from Missouri allow me?

Mr. COCKRELL. Certainly; I only want to get at the facts. It was in conversation with my colleague that I got this information, and I am glad that he has explained it just as it is. I do not want to do injustice to any human being on earth.

Mr. TELLER. The $1,000,000 referred to by the junior Senator from Missouri were not silver certificates, but Treasury notes. Since that time I have put on record a letter from the Treasurer and a letter from the Secretary. The Secretary of the Treasury replied to a Senate resolution declaring that no silver certificates have been redeemed in gold.

The editor of the Century Magazine, in an article about three months ago, declared that all the silver certificates were redeemable in gold, and that is why they continue to circulate as money. A friend of mine in Colorado, a distinguished lawyer of the State, addressed him a courteous letter, saying that he thought he was mistaken, and called his attention to the documents I had had presented to the Senate on that point. The editor replied in a brief letter (declining to publish the gentleman's letter, as the class of people who make such charges always do, without knowing anything about it) that "no matter what Mr. Foster has done, I have the evidence that Mr. Carlisle is redeeming them in gold." So when I came here I went to the Treasury Department, rather than put in a resolution of inquiry, and asked the present Treasurer, Mr. Morgan, whether that had been done, and he informed me that it had not been done. If it has been done at all it has been done since the 4th of March, and I do not believe it has been done at all.

Mr. PALMER. Will the Senator from Missouri allow me to ask the Senator from Colorado a question?

Mr. COCKRELL. With pleasure.

Mr. PALMER. The Senator from Colorado says the notes he describes have not been redeemed in gold. Have they been redeemed at all, any of them?

Mr. TELLER. They have not. In reply to the resolution of the Senate the Secretary answered about a year ago, that they had not been redeemed in gold nor in any paper that drew gold or could command gold. They have been redeemed, of course, in silver coin.

Mr. PALMER. Is it an established fact that they have been redeemed in silver coin?

Mr. TELLER. It is an established fact that they have been redeemed in silver coin. Quite a quantity have been redeemed in silver coin.

Mr. VEST. If it does not interrupt my colleague——

Mr. COCKRELL. No, certainly not.

Mr. VEST. I wish simply to make one suggestion. It seems to me rather an immaterial point so far as this discussion is concerned whether the silver certificates have been paid in gold by the Treasury or not, because the bullion notes, as they are called, the Treasury notes issued under the Sherman act in payment of silver bullion purchased by the Government, unquestionably are paid in gold, and under the terms of those notes they are payable in silver, because there is a lien upon the silver bullion that is purchased for the payment of those notes, and the discretion is given to the Secretary of the Treasury to coin all the bullion that he deems necessary to redeem those outstanding bullion notes. So, in point of fact, it makes very little difference logically as to whether the Treasury Department has paid the silver-coin notes in gold or not.

Mr. COCKRELL. Mr. President, there is a vast difference in the legal effect of a certificate calling for so many dollars, stating that so many dollars have been issued returnable to the holder on demand, as to whether it is to be paid in a different kind of coin or not. That is a material question. I do not withdraw one solitary word I said about anybody who would redeem those silver-coin certificates in gold simply upon demand and not simply as a mere accommodation, because he has no right to do it in the world; but when it comes to the United States Treasury notes issued under the law of July 14, 1890, in the purchase of silver bullion, the law expressly gives to the Secretary the right to redeem them in gold or silver coin at his discretion. There is no question but that it is in his discretion; but it is contended that certain clauses in that law compel him to pay gold.

Mr. GEORGE. That it takes away the discretion?

Mr. COCKRELL. That it takes away the discretion. On the contrary, I say that certain clauses in that law ought to control and limit his discretion.

Mr. GRAY. What clause?

Mr. COCKRELL. The last clause.

Mr. GRAY. The parity clause.

Mr. PEFFER. The clause requiring only coin enough to redeem them.

Mr. COCKRELL. Here is the provision I refer to; that after the 1st of July, 1891—

> He shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for.

That follows after the parity clause, and after the provision for redemption in the discretion of the Secretary in gold or silver.

Mr. GRAY. May I ask the Senator from Missouri, then, what relation in his opinion the parity clause in the law of 1890 has to the duty of the Secretary of the Treasury in redeeming those notes in coin, or whether it has any or not?

Mr. COCKRELL. That parity clause was put in in conference. It is the provision of the distinguished Senator from Ohio, and it is a peculiar makeshift. It is made to catch going either way. Now let us look at it:

> That upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain—

What?—

> the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

Now, shall the Secretary of the Treasury, beginning under Secretary Foster and continued under Secretary Carlisle, by redeeming these Treasury notes in gold bring up a metal containing 412½ grains of standard silver equal to the gold? That is the question. That is what the law says. It says the metal. I say that the Secretary did not accomplish it. It is a mere subterfuge, a pretext to say that that law, which is impossible of execution, has compelled him to do anything of that kind. Oh, no, Mr. President. You can not interpret that law to mean that he shall keep the gold and silver metals on a parity with each other by redeeming the silver coin in gold. It does not say anything of the kind.

Mr. GRAY. If I do not interrupt the Senator——

Mr. COCKRELL. Oh, no.

Mr. GRAY. I wish to ask him, if he will allow me, whether he thinks that the Secretary of the Treasury in construing his duty under the last paragraph of the second section of the act of July 14, 1890, ought to exercise his ingenuity to see how he could evade the obvious, apparent, perfectly plain meaning of that clause by a verbal construction which would transfer his duty in maintaining a parity between the two metals to merely a duty to maintain the parity between the two metals as bullion without regard at all to the obligation to maintain the two metals at a parity as coin? Whatever we may say and however nice we may be in our distinction between metal in bullion and metal in coin, undeniably metal in coin is as much metal as metal in bullion, and the only metal that he could possibly maintain the parity of with gold was the metal in coin.

Mr. COCKRELL. Metal in coin ceases to be metal and becomes money.

Mr. GRAY. Oh, well, metal in bullion ceases to be metal and becomes bullion.

Mr. COCKRELL. There is no money unless it is coined.

Mr. GRAY. It is precisely the same as to say that metal in bullion ceases to be metal and becomes bullion.

Mr. PALMER. May I ask the Senator from Missouri a question?

Mr. COCKRELL. Certainly.

Mr. PALMER. What does he do with the ratios? They are to be maintained at the present or at some other ratio. Has not that ratio relation to coinage alone and not to the metal or the coin?

Mr. COCKRELL. The Senator from Ohio, who fathered the amendment in conference, has never yet been able to explain exactly what it meant or what it does mean. I do not know that it was intended that it should be plain. It was passed in an emergency. It was passed in order to kill the free-coinage bill which had been passed by the Senate, and which, if the conference committee report had been rejected, would have become a law or would have been vetoed by the President at that session. This provision was put in in conference, and it was a makeshift. It could not be anything else, because it says the notes shall be redeemable in coin; and then it goes on and says that they shall be redeemable in gold or silver coin at the discretion of the Secretary, and then they inject a little stump speech and a little promise into the law, such as is proposed to be injected into this bill, and then they set that up as a pretext for doing just what they want to do, and that is, to establish the single gold standard.

Mr. McPHERSON. Will the Senator yield to me a moment?

Mr. COCKRELL. Certainly.

Mr. McPHERSON. I want the distinguished Senator to understand that so far as I am individually concerned, and as I understand it so far as those who think and vote with me upon this question are concerned, we resist no contention on the part of the Senator from Missouri or any other Senator which proclaims that it is the intention, the desire, the determination of this Government, whether you like it or not, whether you wish it or not, to maintain all the money of this country, whether it be paper money or silver money, whether it be in bullion or in coin, on a parity with gold. Now, let us have no controversy on that subject.

Mr. COCKRELL. I do not occupy that position. I am for good money. I am for honest money. I am for one kind of money and only one kind of money, and that is a full legal-tender money, good money; good for the bondholder and the banker, good for the soldier and the citizen, good for the millionaire and the toiling laborer alike; paying a thousand million dollars of indebtedness or buying a dollar's worth of groceries. I want the same kind of money maintained by the sovereign power of the United States as absolute and irredeemable money whenever it is made out of metal. I want the paper money redeemable in the metallic money. You have my financial system—gold and silver unlimited in amount and irredeemable in quantity, absolute money in the hands of the people, and no paper that is not redeemable in either gold or silver. To-day there is not a dollar issued by the sanction of the United States within its territorial limits that is not just as good as any other dollar.

Mr. GRAY. Why not?

Mr. COCKRELL. Because it is a legal tender by the power of the Government. It is law that gives it money value, pure and simple.

Mr. GRAY. How maintained?

Mr. COCKRELL. Maintained because everybody wants it to pay debts. It will buy anything a man wants. This despised and abused silver dollar even among the gold plutocrats of New York commanded a premium of 3 and 4 per cent, and some of the gold monometallist bankers made a handsome profit in selling the silver dollar as full money. I understood from the newspapers that one broker there made nearly $1,000,000 in selling silver money.

Mr. GRAY. If the Senator will permit me, do I understand his proposition to be that the declaration of the Government that both coins shall be full legal tender is all that in his opinion is necessary to maintain that parity which he talks so much about?

Mr. COCKRELL. I think it is.

Mr. GRAY. How does he account for the fact (for I would really like to know) that at the time of the demonetization of silver in 1873 you could not exchange at a parity five gold dollars for five silver dollars when they were both full legal tender?

Mr. COCKRELL. There was none coined.

Mr. GRAY. There was an absolute premium of about 3 per cent.

Mr. COCKRELL. There was a premium on silver over the gold. If you have a silver dollar and the silver in that dollar in some other place is worth 3 cents more than the gold dollar, and you have a neighbor who is so obliging as to want to make 3 cents out of you and is going to such other place and proposes to give you a gold dollar, I do not suppose you would refuse it to him. The metals in the silver and gold dollars were above the coining value. I admit that up to 100 cents the silver dollar could not pay any debt in the United States better than the legal-tender dollar.

Mr. GRAY. The Senator and I agree precisely as to the fact, and the cause of that fact, it seems to me, would settle the question I asked.

Mr. COCKRELL. Not at all; it does not settle it. The value was not as money. The value by the Government remained unchangeable. The metal in the coin may be far more valuable before coinage than its money value after being coined into money, and the silver metal of 412½ grains is worth 103 cents, while when coined it is as lawful money worth only 100 cents.

Mr. GRAY. I ask the Senator, if it does not disturb him, whether the same reasoning would not apply to the greenback as it was in 1865 and the gold and silver dollars when they were both legal tender and full legal tender.

Mr. COCKRELL. The gold dollar paid no more than the silver, the silver dollar no more than the gold, and the greenback as much as either one of them in legal tender. When you intervene between individuals and the payment of debts then your gold would buy more because then we had no specie resumption. We were not on a metallic basis at all. To-day your silver dollar is worth just as much as your gold dollar. You can not make any distinction between them.

Mr. GRAY. Then I agree with the Senator, and the reasoning would apply of course if you made a dollar out of 412 grains of copper.

Mr. COCKRELL. Mr. President, I was criticising the construction placed upon the law of July 14, 1890. When it is said that it compelled the Secretary of the Treasury to redeem in gold, I say when the whole of it is taken together with the last clause, which says that the Secretary shall coin of the bullion purchased by the notes issued under this act a sufficient amount to redeem the Treasury notes, it means what it says, that the Secretary has a perfect right under that provision to coin every solitary dollar of the silver bullion which is now in the Treasury, and he has the right whenever one of these Treasury notes is presented for redemption to pay it in a coin dollar, and in my judgment he ought to do it. It would not destroy the parity between the coined silver dollar and the gold dollar, but it would establish and maintain that parity. As it is, preference is given to gold and silver is made inferior. Silver is not held up side by side with gold, and silver ought to be paid in the redemption of those notes.

Mr. McPHERSON. If the Senator will allow me, in considering the instructions found in the law of 1890, does he draw a distinction between the right to do and the power to do?

Mr. COCKRELL. Mr. President, I do not know that there is any great difference between them. I would construe the law for the purpose of maintaining silver and not for the purpose of degrading it. I would make silver as respectable as gold, and whenever a man came and demanded gold I would make him take some silver, and I would show him that in my estimation silver was the equal of gold. That is done in France: we have the right to do it here; but we are the only nation in the world, so far as I know, that bows the knee to every foreigner or anybody else who wants gold.

Mr. McPHERSON. Rather than degrade silver, as the Senator states it, he would allow the parity to take care of itself and silver to travel alone. That is the idea.

Mr. COCKRELL. The Senator can have his own idea of it. Every silver dollar now in circulation and every silver dollar to be coined under existing law is absolute money, and I say that it is a proper subject for the redemption of any outstanding obligation of the Government except the gold certificates. There is not a bond of the Government to-day which can not be paid honestly, justly, and equitably in standard silver dollars—not one.

The very object that these foreign bankers and brokers and money loaners have had in coming to the Treasury under Secretary Foster and demanding of him the redemption of the Treasury notes in gold, was to degrade and debase silver and establish the single gold standard practically in this country. In my humble judgment, when the late Secretary Foster yielded to the importunate demands of the gold ring and the gold brokers of New York for the redemption of United States Treasury notes in gold; he failed in administering and executing that law fairly and justly, established an unwise and unjust precedent, and gave into the hands of the gold brokers and bullion speculators unjust and dangerous privileges and powers. It gave them the weapons and the pretexts for demanding the issue of gold bonds and the repeal of the Sherman law.

Had he executed the law in a friendly spirit and coined the bullion and redeemed the Treasury notes issued in its purchase in the standard silver dollar, not a dollar of gold would have left this country more than did leave it, and the people of the country would have rejoiced with exceeding great joy to see the standard silver dollar in the eyes of the law the full equal of the gold dollar in legal-tender and debt-paying power, so recognized and proclaimed by the Government and by the new incoming Democratic Administration. The precedent he established should have been held up "not as a pattern to emulate, but as an example to deter," and should never have been followed. I think that very fact had a good deal to do with the scare and with the panicky fears which have been engendered in the minds of doctrinaires.

Mr. McPHERSON. Will the Senator permit me a moment right on that point, for I know he is exceedingly good natured always?

Mr. COCKRELL. I yield to the Senator.

Mr. McPHERSON. I know the Senator means to get at the exact facts of this case. I want to ask the Senator, suppose the Secretary of the Treasury had acted upon the proposition just now made by the Senator and had not redeemed the Treasury notes, as he did redeem them, in gold, but had made those notes or obligations payable in silver, what would have been the result upon the panicky condition of the country? It was feared that the Secretary was going to do that very thing, and he came very near doing it because of the want of free gold to do other-

wise. What would have been the effect, as I said, upon the panicky condition of the country to know that we had gone upon a silver basis?

Mr. COCKRELL. My judgment is that we should have had no panic. My judgment is that then there would have been no reason for manufacturing the scare which holds the distinguished Senator from New Jersey. We should have had none of it. That added to the intensity of the panic. Why? I am not quoting dates, and I am not in the habit of referring to newspapers for authority, but it has been quoted time and again, and I believe it has been quoted here in the Senate, first, that the Secretary had intimated that he was going to redeem these Treasury notes in silver dollars, and it did not produce any panic. Afterwards the President issued his pronunciamento, in which it was stated again—I do not know whether the President said it or not; I am not responsible for the statement, for I am not responsible for all the newspapers say—but the newspapers reported, apparently by authority from the White House, that the President had stated that all the obligations of the Government should be redeemed in gold.

Up to that time the only paper currency in the United States redeemable in gold or silver were the United States legal-tender notes, the greenbacks. They were expressly redeemable in gold or in silver. Then the greenbacks stood upon the silver coinage and upon the gold coinage. That was their metallic base. It gave a wide and substantial base sufficient to have held a superstructure of a billion dollars.

Mr. MCPHERSON rose.

Mr. COCKRELL. I hope the Senator will wait a moment and let me answer his question. He thinks he knows what I am going to say, but I am not going to stop until I answer his question.

Mr. MCPHERSON. Very well.

Mr. COCKRELL. There was the base. Three hundred and forty-six million dollars in greenbacks were outstanding and over $150,000,000 of United States Treasury notes issued for the purchase of silver bullion under a law which certainly, beyond any question, gave the Secretary the right to redeem in silver. The President proclaimed to the world that all these obligations should be redeemed in gold. The silver coin was knocked from under the financial body, and it began to totter and sway here and there, because, instead of $346,000,000 in greenbacks resting upon the silver and the gold, it had the whole amount resting upon the gold, with the addition of $350,000,000 of silver coin certificates and $150,000,000 of United States Treasury notes. The bankers of Europe saw it, the financiers of this country saw it, and they said this mass all thrown upon the one gold base can not be supported by that one golden leg, and all the other props and foundations have been ruthlessly torn away from under the fabric by the proclamation of the President.

What occurred? Foreign bankers refused to continue their advances to make investments. They said, "You can not hold up that great fabric on this one golden leg of $100,000,000." Hence came the demand for bonds, then came down the representatives of the foreign bankers, and they had the audacity to demand of Secretary Carlisle, as I read in the speech of the distinguished Senator from Kentucky [Mr. BLACKBURN], the issue of $150,000,000 of gold bonds to add to the strength of this one golden leg, trying to support this mass which was making it wave here and there like a broken reed.

Here was the pretext. Then they said, "Now is the golden opportunity; we will force the United States to come to a single gold standard and to continue to redeem all its obligations, silver dollars and all, in gold coin; we will force them to issue bonds to get the gold; we shall have the selling of those bonds, with the interest, commissions, and brokerage, and we shall have that much of a safe fund in which to invest the money that we secure through our banking operations." No, no, Mr. President. There it was they commenced squeezing. The New York bankers joined them. I do not mean all the bankers, but the leading ones there, who are interested in foreign exchanges, the Heidelbachs, the Ickelheimers, and other foreigners here who are speculating off the world's exchanges. They had a right to do that; but they had no right to come and ask the Government of the United States, the grandest nation on earth, to bow to their infamous and imperious demands.

They then commenced the squeezing process, and they kept on extending it. They intended to extend it only far enough to scare the Senator from New Jersey and the rest of us. This is just what they wanted to do. Then they commenced the process of sending to every organized community wherever they had the name of a man, or a registry, or a city directory, or a county directory, circulars telling them to telegraph the President to call Congress together to repeal the Sherman law, or the country is going to hades. They sent telegraphic messages by the cartload and Congress has been convened; and here we are [laughter], and there is not yet unconditional repeal at the demand and behest of the foreign gold rings and syndicates.

This is the best time this country has ever had to establish a permanent financial system. We have no election coming on this fall, we have all an abundance of leisure on our hands, and I am convinced that we are better informed upon the financial question to-day than the Senate ever has been or will be again. Now is the accepted time; now is the day of salvation. [Laughter.] We had for years a monetary financial system independent of the systems of any nation, kindred, or tongue upon the earth. Less than four millions strong in 1776, we proclaimed ourselves entitled to be a free and independent nation, and for eight long years we resisted the power of the mistress of the seas, old England, established our independence politically, socially, civilly, and in every other way, and entered upon a financial system without having once conferred with England.

We paid no more attention to old England when we established our financial system than we did to the Hottentots. As an independent nation, endowed with all the attributes of sovereignty, we proclaimed to the world our system without calling on them. Great Britain undertook to thrash us and make us yield to the imperious demands of her empire that "once a subject of Great Britain, always a subject;" that when one of her citizens came to the United States and became panoplied with the rights and authority of American citizenship, she still had a right to take him upon the high seas and impress him back into her service. It was under a Democratic Administration that this infamous demand was resisted. The war of 1812-1814 followed. We were only in our teens, in our minority, comparatively with other nations, but we whipped old England and drove back the old lion to his island lair, and we have made him stay there, closely confined, ever since. [Applause in the galleries.]

The VICE-PRESIDENT rapped with his gavel.

Mr. COCKRELL. We have no favor to ask of any nation when it comes to establishing our financial system. They do not ask any favors of us. Think of the miserable position in which we are placed. Mexico established her financial system and never sent any monetary commissioners to confer with us. Guatemala, Nicaragua, Costa Rica, and what not, all over the world, England, France, Austria, Russia, Italy, Turkey, Portugal, all of these countries established their financial systems, and we have never been honored with a monetary delegation from any nation on earth sent at its own request; and yet we must not move a peg; we must stand still and wait for an international agreement. I am tired of it; I am sick of it. I want to see the Senate rise to the dignity and the power which the people in their sovereign capacity have confided to it in the Constitution. I want to see it establish a monetary policy for the United States and maintain it; and when any syndicates or combinations or rings come here and undertake to juggle with our finances, with our Secretary of the Treasury, and try to intimidate him and drive him to grant their requests, we will have it in the code of the United States that they are to be shown the door with the tip of the boot.

Mr. VEST. Mr. President, if my colleague is not interrupted too much I should like to recur to the point in regard to the payment of the silver certificates in gold. I did not think I was mistaken about the construction the Secretary of the Treasury put upon the power conferred upon him. As to whether he has actually paid any of these silver certificates, of course I make no issue of fact, and his statement will be conclusive, but that a silver certificate must be paid in gold, if demand is made upon him by the holder, is unquestionably the declaration of the President and the Secretary. I hold in my hand a letter from Mr. Carlisle, published some months since for the purpose of informing the people of the United States as to the policy of his Department. Referring to the Sherman act he uses this language:

> By the terms of the act the Secretary was required to pay for all silver bullion purchased by the issue of new United States Treasury notes, payable in coin, and it provided that upon demand of the holder of any such notes they should be redeemed in gold or silver coin, at the discretion of the Secretary, "it being," in the language of the act, "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law."

Now, says the Secretary——

Mr. TELLER. From what does the Senator read?

Mr. VEST. From Secretary Carlisle's letter published in the Washington Post.

Mr. GEORGE. What is the date?

Mr. VEST. I do not see the date.

Mr. TELLER. It was published some time ago.

Mr. VEST. It was published in July, some three months ago. It was published at the time this so-called panic commenced, before this session of Congress was called.

Now, I come to the material part of it:

> In the execution of this declared policy of Congress it is the duty of the Secretary of the Treasury, when the necessity arises, to exercise all the

powers conferred upon him by law in order to keep the Government in a condition to redeem its obligations in such coin as may be demanded, and to prevent the depreciation of either as compared with the other.

That does not apply to the Treasury notes alone, but to all the obligations of the Government, and it is beyond any sort of question whatever. The fact is it has been placed in practical operation, and this Administration has declared, both through its President and its Secretary of the Treasury, that holders of silver-coin certificates will be paid in gold if they demand it. If that is not the meaning of this language, then the English language has ceased to mean anything.

Mr. TELLER. Will the Senator from Missouri allow me?

Mr. COCKRELL. Certainly.

Mr. TELLER. On the 10th day of March, 1892, the Senate passed the following resolution:

Resolved, That the Secretary of the Treasury is hereby directed to inform the Senate what amount of Treasury notes has been issued under the provisions of the act of July 14, 1890.

The amount of silver dollars coined under the provisions of said act.

The amount of silver bullion now in the Treasury purchased under the provisions of that act.

Whether the silver dollars coined under the provisions of that act were available for the ordinary expenses of the Government or whether they are held for the redemption of Treasury notes.

Whether silver dollars or silver certificates have been redeemed or exchanged for gold, and, if such redemption or exchange has been made, the amount thereof.

Whether silver dollars and silver certificates that are received for public dues are used in the discharge of Government obligations; and, if so, what class of obligations are discharged with silver certificates and silver dollars.

I need only read the reply of the Secretary as to the redemption of the silver certificates, that being the only matter in discussion. I quote from his reply of the 22d day of March, 1892, the following:

Respecting redemptions or exchanges of silver dollars and certificates, I have to state that the Department has not redeemed silver dollars or silver certificates in gold or gold certificates, nor has it exchanged silver dollars or certificates for gold or gold certificates.

That seems to be explicit on that point. On February 13, 1892, I received from the Treasurer of the United States, in answer to a letter which I had addressed to him, the following:

TREASURY OF THE UNITED STATES,
Washington, February 13, 1892.

SIR: I have the honor to acknowledge receipt of your favor of the 12th instant, in which you ask whether silver certificates have been redeemed in gold coin, in what amount, and on what authority.

I have to state in reply thereto that, so far as this office is concerned, it has never been done, nor have any of the subtreasury offices been authorized to do so, and no departmental instructions have been issued to that effect.

Respectfully, yours,

E. H. NEBEKER,
Treasurer United States.

Hon. H. M. TELLER, *United States Senate.*

On the 7th of December, 1892, the Secretary of the Treasury addressed the following letter to me, in answer to a letter of mine to him:

TREASURY DEPAREMENT, *Washington, December 7, 1892.*

MY DEAR SIR: I have your favor of December 7. I beg to inform you that silver dollars are not in law or in practice exchanged for gold or for paper that calls for gold.

Very respectfully, yours,

CHAS. FOSTER.

Hon. H. M. TELLER,
United States Senate.

To that I have nothing to add, except the statement that I was recently informed by the Secretary that the same practice prevailed, of paying the silver certificates only in silver dollars, not in gold.

Mr. HARRIS. Does the Senator mean the present Secretary?

Mr. TELLER. Not the present Secretary. I have never conversed with the Secretary on the subject, and know nothing about what he may think on the subject.

Mr. MCPHERSON. The Senator from Missouri on my right [Mr. VEST] will please note that in the letter which he has read from the Secretary of the Treasury, the Treasury does not recognize the silver certificates as an obligation of the Government. The Government coins money; it coins silver dollars. The Government does not redeem its coins, unless it may be to call them in for abrasion or something of that character. For the convenience of the people of this country it issues a certificate which stands before the coin dollar, and does serve us as money. The certificate calls for its own redeemer under the law. It may be surrendered at the Treasury, and the Government is obligated to pay to the holder a silver dollar in exchange for his certificate issued. It is not an obligation of the Government in the sense used in the letter, and as distinguished from the obligation of the Government based upon the deposit of bullion and the bullion certificate.

Mr. VEST. I should like to see where that is stated in the letter from which I have read.

Mr. MCPHERSON. The law states it for itself. The law makes no obligation upon the Treasury to redeem a silver certificate in gold. The Government itself proposes to accept the silver dollar and the coined dollar for all debts, obligations, taxes, revenue, and everything due to it. The Treasury of the United States redeems them every day through the custom-house. They are received in New York for customs dues; they come to the Treasury, and the Treasury redeems them. That is the redemption which the Treasurer of the United States gives the silver dollar or to the silver certificate; but in the sense employed by Secretary Carlisle, he does not treat it as an obligation of the Government; that is, as he treats Treasury notes, of which he was speaking in the same letter.

Mr. VEST. We have had a great many surprises in this debate, but I must confess that this confession is the most surprising of all. I rather think when the Senator from New Jersey convinces the people of the United States, and especially the capitalists of New York and elsewhere, that the silver certificates are not an obligation of this Government, he will find them rapidly discredited.

What is an obligation of this Government? It is a promise to do something; it is obligatory on the Government to do something. What is a silver certificate? It says that the Government of the United States shall pay a certtin amonnt of standard money, silver dollars, to the holder of that certificate. Is not that an obligation of this Government? Upon whom rests any obligation at all as to the silver certificate if not on the Government of the United States?

More than that. If it did not interrupt my colleague too much, I could go on and read from Mr. Carlisle to show his argument that all these silver certificates rest upon so much gold. Again and again the New York newspapers and all the advocates of the policy which the Senator from New Jersey has been so conspicuous in urging upon us have claimed that one defect, and one great defect, in our system was that we had an enormous pyramid of silver resting upon a small pedestal of gold. If the silver certificates are not part of that pyramid, I confess that I am enlightened to a very large extent.

Mr. MCPHERSON. If the Senator from Missouri on my left [Mr. COCKRELL] will bear with me a moment, I want the Senator from Missouri on my right [Mr. VEST] to understand that I contend that the Government of the United States is impliedly bound to keep every obligation of this Government, gold, silver certificates, and all, I do not care what they may be, in coin or paper, on a parity with gold.

Mr. VEST. That is all of it.

Mr. MCPHERSON. I was speaking of the Secretary's letter, and I say that there is no law which will require the Secretary to redeem that obligation. What is it? Let us read it:

This certifies that there has been deposited in the Treasury of the United States one silver dollar, payable to the bearer on demand.

How payable? The law steps in and tells you that the holder of that silver certificate is entitled to a silver dollar at the Treasury of the United States or at a subtreasury of the United States. It is nothing more nor less than a warehouse receipt, under the law. Therefore, I say that the Secretary of the Treasury in the letter from which the Senator read, unquestionably, in speaking of the obligations of the Government, did not treat the silver certificate as an obligation of the Government which it was required to redeem in gold, under the law.

Mr. VEST. I differ with the Senator as to what the Secretary of the Treasury means. I think, upon asking the Secretary, the Senator will find that the Secretary did include the certificates.

I should like to ask the Senator another question as to a higher authority than the Secretary of the Treasury. I ask him if the President of the United States five months ago did not state further that every obligation of this Government and every dollar issued by it of every description should be payable in the coin demanded by the holder?

Mr. MCPHERSON. I do not recall the exact language. If the Senator has the letter of the President and has quoted the exact language, I should like to see it. I assume that the President of the United States gave utterance to some such declaration; but I want the Senator to understand that the contention I make in this matter—and I presume it is the same contention made by the President, because I do not think I differ very much with the President in regard to these matters—is that very obligation of this Government in the form of money of whatever nature or character, be it silver dollars or paper dollars, it is the duty of this Government to maintain upon a parity with the very best money of the world.

Mr. VEST. The Senator is unquestionably clear enough upon that point. I think, too, the President has been clear enough upon it. I am not attacking the sincerity of the Senator or the President or the integrity of their intentions in that regard at all. It has passed into current political and financial history that for a time the impression prevailed in the city of New York

amongst the speculators and capitalists, that if Mr. Carlisle, the Secretary of the Treasury, reached his $100,000,000 reserve, as it is called, which is the proceeds of the sale of bonds under the act of 1875, to make good the use of greenbacks, he would then refuse to pay gold except upon greenbacks or gold certificates.

The stock market fell from 6 to 10 points under that rumor. It was believed in New York that the subtreasurer, Mr. Jordan, had received instructions not to pay out any gold except upon greenbacks after that reserve was reached; and it is notorious that this became a subject of discussion in the Cabinet, and that 20 minutes after 2 o'clock on that eventful day Mr. Carlisle telegraphed to the subtreasurer to pay out the gold. At any rate, if I am inaccurate as to details, the New York capitalists held that every obligation of this Government, including silver certificates, would be paid in gold. I was therefore most profoundly astonished to hear from the Senator from Colorado [Mr. TELLER] this afternoon that the Treasury Department had informed him by implication that that was not the policy of this Government.

Mr. TELLER. I did not say that the Treasurer said it was not the policy of the Government. I simply asked him if the Department was redeeming silver certificates in gold, and he stated to me that it was not. That is as far as he went. He did not say anything about the policy of the Government.

Mr. VEST. I am responsible for the word "implication." I understood the meaning of that communication to be that they were not paying for silver certificates in gold. Here is the question—and there is no use of evading it—suppose I go to the subtreasury or to the Treasury here in the city of Washington to-morrow, present a silver certificate, and demand gold, would it be paid in gold or not? Without undertaking to answer for the Administration—for I have no right to do so—I have no question that it would, or else the declaration of Mr. Cleveland as President, in which he declared that every obligation of this Government would be paid in gold, would be negatived. I have no idea that the Treasury would take refuge behind the construction that we hear to-day for the first time from the Senator from New Jersey, that silver certificates are not obligations of this Government.

Mr. McPHERSON. I assume that the Senator from Missouri has no disposition to do me an injustice in the broad statement he has made.

Mr VEST. Not the slightest.

Mr. McPHERSON. I think he has not quoted me exactly correct. I do say—at least if I did not so say, I intended to say—that a silver certificate was not an obligation of this Government, in the sense in which Mr. Carlisle was speaking of it in his letter, nor was it an obligation of this Government in the sense that the Treasury was compelled to redeem it in gold.

Mr. PALMER. If the Senator from Missouri will allow me to proceed for a moment perhaps he may be able to give me the information I am seeking.

Mr. COCKRELL. I yield to the Senator.

Mr. PALMER. I find in the report from the Treasury on the 1st day of October that there was in circulation of silver certificates $326,849,827. I have believed that they were a part of the Government's indebtedness, which was redeemable at the Treasury and payable in gold. Now, I wish to ask if any Senator will furnish me the information, whether it is true that there is in circulation now $324,955,134 which is understood to be redeemable in silver—I mean according to the practice of the Department—or whether it is not the practice of the Treasury to treat the silver certificates as a part of the indebtedness to be provided for in gold? I ask for information.

Mr. COCKRELL. To what does the Senator refer?

Mr. PALMER. I am reading a statement. I have the official Treasury statement. I refer to the fifth item in the list—silver certificates.

Mr. COCKRELL. In circulation?

Mr. PALMER. In circulation, $324,955,134.

Mr. COCKRELL. Those were silver certificates issued under the Bland law, which I will read.

Mr. PALMER. Without discussing the question, I desire to ask the Senator, with his permission, for specific information, whether that amount is regarded by the Treasury Department as redeemable in silver?

Mr. COCKRELL. I can not speak for the Treasury Department. I know that for every dollar of these silver certificates outstanding there is a coin dollar in the Treasury of the United States, and I was astonished when informed by my colleague that those certificates had been redeemed in gold.

Mr. PALMER. The Senator from New Jersey referred to the $324,000,000 a moment ago, but, as a matter of fact, I desire to know whether it is true that that amount is regarded by the Treasury as so far distinct from other Government issues, that the other Government issues are redeemable in gold while this amount is redeemable in silver?

Mr. McPHERSON. Allow me to answer the Senator in this way: In practice, yes. The Treasury maintains a parity. Under the law there is no requirement upon the Treasury to redeem the silver certificates in gold or to redeem them in anything except the standard silver dollars which are in the Treasury for the purpose of making those redemptions upon demand. The Sherman law, as the Senator is aware, does provide for the parity to be maintained as between the two metals. Prior to the passage of the Sherman law there was never any obligation, as I understand, on the part of the Government as to silver issues that should be redeemed in gold.

Mr. PALMER. The Senator does not quite meet my question, whether, as a matter of fact and practice, this amount of $324,000,000 in silver certificates is treated as redeemable by the Treasury.

Mr. McPHERSON. I repeat, practically, yes; as a matter of law, no.

Mr. TELLER rose.

Mr. COCKRELL. I yield to the Senator from Colorado to offer a resolution.

Mr. TELLER. I ask to offer a resolution in order to settle the question whether the Government is redeeming in gold or not. I will read it because I think I can read it better than it can be read at the desk:

Resolved, That the Secretary of the Treasury be, and he is hereby, directed to inform the Senate whether silver dollars or silver coin certificates have been redeemed or exchanged for gold or paper that are by law or practice of the Government redeemable in gold.

I desire to ascertain whether they have been exchanged for gold, or greenbacks, or Treasury notes.

Mr. McPHERSON. The Senator ought to say "redeemed by the Treasury." He has not stated that.

Mr. VEST. I will state to the Senator from Colorado that that does not exactly meet the point which we are discussing. I understand that the Treasury has already informed him that they have not redeemed silver certificates. The point I should like to be informed about is whether the holder of a silver certificate can obtain gold upon it now, under existing laws, from the Treasury.

Mr. VANCE. I desire to remind Senators of the fact that a few weeks ago the Senator from Arkansas [Mr. JONES] introduced a resolution calling upon the Secretary of the Treasury to say whether or not applications which had been made at the Treasury for silver had been refused; and if so, why. My recollection is that the answer of the Secretary of the Treasury was that there had been applications made, which had been refused for the reason that the silver in the Treasury by law was required to redeem the certificates outstanding against it. Perhaps some Senator may remember when that was, and remember correctly if I have erred in my statement.

Mr. COCKRELL. The Senator is correct about that. The answer was made, and it is printed as a document, to the effect that the Department had not issued silver certificates in exchange for gold because the silver in the Treasury was required to meet the silver certificates outstanding.

Let the resolution offered by the Senator from Colorado be passed.

Mr. McPHERSON. I desire to call the attention of the Senator from Colorado, before the resolution is acted upon, to a fact which seems very apparent to everybody, and that is, since the present Administration came into power—and I assume that this is addressed to the present Secretary and to his administration——

Mr. TELLER. Certainly.

Mr. McPHERSON. There had been then no free gold in the Treasury, and the Secretary was working upon the reserve. Therefore, if it had been the practical policy of this Government in the past, say, during the former Administration, when there was an abundance of gold to do it, I assume that that ought to be brought out by the resolution, because I take it that since this Administration came into power there has been no gold whatever with which to redeem any silver.

Mr. TELLER. We have in the neighborhood of $100,000,000 of gold. It ran down, I believe, to $92,000,000, but has not been below that.

Mr. VEST. We have had free gold in the Treasury within the last three weeks.

Mr. TELLER. Certainly. I now ask for the present consideration of this resolution as I have modified it.

The VICE-PRESIDENT. The resolution will be read as modified.

The Secretary read as follows:

Resolved, That the Secretary of the Treasury be, and he is hereby, directed to inform the Senate whether silver dollars or silver coin certificates have been redeemed by the Treasury Department or exchanged for gold or paper that are by law or the practice of the Government redeemable in gold.

The resolution was considered by unanimous consent, and agreed to.

Mr. COCKRELL. Mr. President, I have passed in review the legislation up to the act of July 14, 1890. I come now to the question, what is proposed to be done by the pending bill? Let me give its history.

House bill No. 1, to repeal a part of the act of July 14, 1890. In the House of Representative August 28, 1893, on the free-coinage amendment at present ratio the yeas were 124—100 Democrats, 13 Republicans, 11 Populists; nays 227—116 Democrats, 111 Republicans. On free coinage at 20 to 1—yeas 122; nays 222. On the restoration of the Bland-Allison law, yeas 136—110 Democrats, 15 Republicans, 11 Populists; nays 213—103 Democrats, 110 Republicans. On the final passage, yeas 240—139 Democrats, 101 Republicans; nays 110—76 Democrats, 23 Republicans, 11 Populists.

In the Senate, August 28, 1893, House bill No. 1, referred to the Finance Committee: August 28, 1893, reported by Mr. VOORHEES with an amendment substituting Senate bill 570. This report of the substitute by Mr. VOORHEES represents the majority of the Finance Committee of the Senate, composed of 11 Senators—6 Democrats and 5 Republicans—and is favored by 2 Democrats (Messrs. VOORHEES and MCPHERSON) and 4 Republicans (Messrs. MORRILL, SHERMAN, ALLISON, and ALDRICH), and is opposed by the minority, 4 Democrats (Messrs. HARRIS, VANCE, VEST, and JONES of Arkansas) and by 1 Republican (JONES of Nevada).

The bill proposes the repeal of the clauses of the law of July 14, 1890, authorizing the purchase of silver bullion and the issue of United States Treasury notes for its purchase, and declares our policy to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and further declares that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

Suppose the bill passed and became a law, what would be our monetary condition? We would have in our Treasury silver bullion of the coinage value of $176,990,207, and the only authority for its coinage into standard dollars would be the words in section 3—

He shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for.

How much would be coined without any additional legislation? This is a material and vital question, considering the past and the statement of the President in his message to this session.

This declaration—

Referring to the established policy to maintain the two metals at a parity—

so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver be disturbed.

And that—

A refusal to pay these notes in gold, if demanded, would discredit and depreciate obligations payable only in silver, destroy the parity between the two metals by establishing a discrimination in favor of gold.

It seems to me almost absolutely certain that no more silver bullion would be coined. I can not reasonably come to any other conclusion. There would be left in the Treasury a hoard of silver metal of the coin value I have just stated.

While I firmly believe the Secretary of the Treasury would still have ample authority to coin all the bullion into standard dollars, yet it seems to be absolutely essential that there should be added to the bill express requirement to coin all such bullion into standard dollars. Without such coinage of the bullion on hand we would have $383,245,365 coined under the laws of February 28, 1878, and $36,087,185 coined under law of July 14, 1870, making a total of 419,332,550 standard silver dollars added to our money currency, having full legal-tender power in the payment of all debts, public and private, and before the law and in the confidence of the honest toiling masses the equal in every respect of the precious, cowardly, idolized gold dollar and bearing the sacred inscription "In God we trust," "first used by our National Mint in issuing the 2-cent copper coins in 1864, during the depths of the late rebellion. The subsequent use of the motto on all our larger coins, both of silver and gold, was expressly authorized by the act of Congress of March 3, 1865. These solemn words, so full of historic significance, are now permanently interwoven as a vital portion of our national coinage." quoting the language of Hon. Samuel R. Ruggles. Now we are tantalized and ridiculed by the enemies of silver because we have that sacred and consecrated inscription placed upon the silver dollar. They say to us, You want us to trust in that motto for the 20 or 25 cents that the silver dollar lacks of being equal to the gold dollar.

These would be the only fruits of our twenty years' struggle in behalf of silver as the money of our Constitution. The passage of the pending bill "would absolutely demonetize silver as to the future coinage, and leave it supported by not one word of legislation," and "absolutely sweep from under the silver currency every vestige of law." It would restore in full force and vigor the despised and abused law of February 12, 1873, demonetizing the silver dollar, stopping its further coinage, and establishing the single gold standard.

For twenty years the Democratic party has denounced from every house top, in every highway and by way the crime of 1873, and has struggled in Congress—beginning in 1876 with the first Democratic House of Representatives elected since 1860—to expunge it from our records and substitute for it laws rehabilitating silver as money equal with gold. I have given the record of these fierce struggles during this period. With singular unanimity our party passed the free-coinage bill in November, 1877, but in consequence of the Senate being Republican we had to yield to the Bland-Allison act. Even that was vetoed by a Republican President and was passed over his veto.

The record shows the struggles our party made for a better law, and in the great contest of 1890, with the President, Senate, and House Republican, the Republican House passed the bullion purchase bill, repealing the purchasing and coining provisions of the Bland-Allison law over a solid Democratic vote. In the Senate a free coinage substitute was passed, receiving 28 Democratic votes and 15 Republicans, with 3 Democratic votes and 21 Republican votes against. The Sherman law did not receive a Democratic vote in either the House of Representatives or the Senate.

Mr. DOLPH. If the Senator will yield to me for a question, I desire to ask him if the Democrats have possession of both branches of Congress, the Senate and House of Representatives, and the Administration besides, why do they not pass a free-coinage law?

Mr. COCKRELL. We will if we can.

Had that bill been an unconditional repeal of the Bland-Allison law, and thereby have restored the law of 1873, I believe I am justified in saying not a Democratic Senator would have voted for it. Is there one who would?

If there is one I will thank him to answer. I pause for a reply.

Our Republican friends in full control passed the Sherman law—not as good a law as the Bland-Allison law—but infinitely better than the law of 1873. We were then unwilling to substitute it for the Bland law, and I reiterate every word I then uttered against it. Every prediction I made in regard to its execution by unfriendly executive officers has been verified. Were it pending to-day, as it was then, I would repeat the speech I then made, and the Senator from Indiana would doubtless do likewise. It is not pending as a measure in lieu of the Bland law

That is the proposition, pure and simple. You can not avoid it, you can not run around it. There it is. Whether you intend it or not, you accomplish it. The pending measure is to repeal it, and with it the Bland law, and restore the crime of 1873, the demonetization of silver and the establishment of the single gold standard.

I shall never vote to restore the odious law of 1873. Yet I am asked to so vote. My answer is given in the eloquent language of the senior Senator from Indiana—spoken with so much force and emphasis on this floor on February 17, 1893, as follows:

I should vote to-day for the coinage of all the American product of silver. I would go further. I would vote as Thomas Jefferson advised, for free coinage of silver the same as gold. I would vote, in the language of the Democratic platform laid down at Chicago last June, that "We hold to both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination against either metal and without charge for mintage," only stipulating, as we did in that great platform, that the two dollars, the one of silver and the other of gold, shall be of equal intrinsic value and purchasing power.

I should have voted, the other day to take up what is known as the Sherman act, and for its repeal, but for the fact that its passage would absolutely demonetize silver and leave it supported by not one word of legislation. I thought the measure was audacious. I thought it an outrage to ask men like myself and others to absolutely sweep from under the silver currency every vestige of law. That is not what we meant at Chicago; that is not what the people mean.

I should vote for the repeal of the Sherman act simply because it is vicious in principle, but it must be in connection with something better. You might as well authorize a circulating medium based upon tobacco by the hogshead, or cotton by the bale, as upon silver in its bullion shape. It must be coined into money, and such is the position of the Democratic party as declared in national convention.

And still I am asked to vote for this bill and thereby vote to restore in full force and effect the crime of 1873. Again, my answer is in the forceful language of Kentucky's most gifted

son, Hon. John G. Carlisle, uttered in the House of Representatives on February 21, 1878:

> According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.

I can never vote for restoring such a law, the result of such a conspiracy, and surely entailing the dire results therein so graphically portrayed.

But, say the Democratic advocates of repeal, we do not propose to stop with the simple repeal. After that is secure we promise and solemnly declare "that the efforts of the Government should be directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payments of debts."

That is a futile promise. It is already an accomplished fact. Every silver dollar coined by our mints to-day has equal power with any other dollar—coined or issued by us—in the payment of debts and in the purchase of articles in our markets. The standard silver dollar to-day has equal debt-paying and purchasing power with the gold dollar within our domain, and in all our markets—the only markets over which we have any control—legislative or otherwise.

Why then this pretext in this bill of promising something which already exists and to the strength of which no supplementary law we can enact will add anything?

Again our friends say that is not our only promise. We declare expressly that it is—

> the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals and the equal power of every dollar at all times in the markets, and in the payment of debts.

You say this is the promise of our last national platform. I admit it; but I ask by whom, by what body was that platform promise to be redeemed, and how? Your only answer must be by Congress and by Congressional legislation, and not by mere Congressional promises. Think of the absurdity, the ridiculousness of the pretense of redeeming a platform promise by a Congressional repetition of such promise! Is this the redemption the voters in November last expected and voted for?

We can make no legislative promises binding any subsequent Congress. If such promises bind at all, they can only bind us, this Fifty-third Congress.

Why, then, shall we make this promise without any effort whatever to redeem it? Why not strike out the promise and do now what we promise? When shall we have more time? When shall we understand the situation, the monetary conditions, any better? Think of the abundant leisure we shall have from now on until the close of this Fifty-third Congress, on the 4th of March, 1895. Here we are, robust, healthy, capable of the vastest physical endurance—sixty hours if you want. Why should we not do it now?

How, in what manner, by what legislative process or otherwise, do you propose to redeem this promise? If by Congressional action, then why not make it a part and parcel of this measure? No, Mr. President, there will never be such a glorious opportunity for the Congress of the United States to establish its financial system as it has to-day. We know more than we have ever known before; we have more leisure than we ever had before; we are all in a better humor than we have ever been before; we are all more patriotic and less partisan, because we behold a majority of the Republican party in the front ranks of the Administration, leading the Democratic Administration to victory! [Laughter.] It is a glorious spectacle, and what a splendid time for nonpartisan and patriotic legislation, with our Republican friends coming over and helping us, and all bimetallists! There is not a Senator here who does not declare himself a bimetallist except my distinguished friend from New Jersey [Mr. MCPHERSON], who, I believe, is the only one who has not planted himself squarely upon bimetallism. Why can we not get together? Why can we not, as sensible men, enact a financial system for this great country?

But some Senators who favor this bill say that we as a nation can only maintain bimetallism with a perfect equality of gold and silver, with unlimited coinage and full legal tender, by international agreement with the leading commercial nations of Europe. I ask, why not? Senators will doubtless reply because the value of silver has so largely depreciated that we as a nation, independently of other leading nations, can not open our mints for the free and unlimited coinage of the silver dollar of 412½ grains and maintain it at a parity with gold; that that quantity of silver is only worth in the markets of the world from 54 to 65 cents on the dollar.

In response to this statement I beg the indulgence of the Senate to present in detail the reasons why, in my judgment, an international agreement with European nations is absolutely impossible now, and the causes which have produced the depreciation of silver as a metal.

[At this point the honorable Senator yielded for a motion to proceed to the consideration of executive business.]

Tuesday, October 10, 1893.

Mr. COCKRELL. Mr. President, in my rejoinder to the reply of our opponents that we can not independently of other nations open our mints for the free and unlimited coinage of silver, I beg the indulgence of the Senate to present in detail the reasons why, in my judgment, any international bimetallic agreement with European nations is impossible now, and the causes which have produced the depreciation of silver as a metal.

I assert these propositions: That the United States by the misrepresentations and unfounded statements of our citizen and official representatives have caused the discriminating legislation of European nations and our own nation in favor of gold and against silver, and that this discriminating legislation alone has caused the depreciation of silver measured by or relatively to gold; and that our own conduct, the actions of our representatives, have made such international bimetallism impossible now. International agreement upon the relative value or ratio of the coinage of nations and the unity of coins has been the dream of doctrinaire statesmen for years past.

Under a joint resolution of Congress of February 26, 1857, the Secretary of the Treasury, Howell Cobb, appointed Prof. J. H. Alexander, of Baltimore, a commissioner to confer with the functionaries of Great Britain relative to some plan "of so mutually arranging, on the decimal basis, the coinage of the two countries as that the respective units shall hereafter be easily and exactly commensurable."

Prof. Alexander visited England in 1857 and 1858 and made known his mission. He was referred by the lords of the treasury to the master of the mint, and was finally informed by Malsbury, of the foreign office, that Her Majesty's Government was not prepared to invite a conference on a project requiring parliamentary action and not considered by the public nor discussed in Parliament, but would confer and consider with him on any proposal which he might be instructed to make. Prof. Alexander, in his report, says:

> This conclusion expressed with a caution that is, I believe, habitual with the Government of Great Britain in contemplation of any change in existing institutions or establishments there, is in reality all that could be arrived at under the conditions of my instructions.

Nothing was accomplished.

What were the causes leading to and influencing the discriminating legislation in favor of gold against silver? It is astonishing to me that among all the writers upon the financial troubles beginning after 1865, no one of them has undertaken to show the moving causes which induced so many nations in Europe to change from the single silver to the single gold standard and to abandon bimetallism. There was some cause for these things. This no one can doubt. Why have these economic writers not gone to the foundation and ascertained what caused Germany to change from a single silver standard to a single gold standard? She had, under the excitement of an overflow of gold in 1857, changed to a single silver standard to avoid an overflow of money. In 1871–'73 she changed to a single gold standard. Other nations did the same. What were the motives which led them to enact this discriminating legislation? I say it is remarkably strange that no economic or financial writer has ever attempted to trace these causes.

Take the monetary status of 1860. Great Britain, Portugal, and Turkey were the only three European nations having a single gold standard. Great Britain had maintained the double standard at the ratio of 15.2 to 1 from 1717 to 1797, when specie payments were suspended and continued up to 1821, and on June 22, 1816, during this specie suspension, adopted the single gold standard, which was the first discrimination by law of any important commercial nation against silver, and in her markets the price for silver, a mere commodity, has ever since been regulated by the value of her single-standard legal-tender gold coins.

The cause prompting England in establishing her single gold standard is manifest. Specie payments were suspended, and she had a great mass of worn, clipped, and mutilated coin, current and legal tender, and yet varying greatly in metal value and weight, and was looking forward to the early resumption of

specie payments, and was a great creditor nation, having vast commercial transactions with the civilized countries, and was practically the money center of the world, with the nations paying tribute to her and interest in money on loans, and desired to unify her coinage in the interest of her creditor-ruling classes and increase the purchasing power of the dollar, its value, and hence adopted the single gold standard, and yet retained a subsidiary silver coinage with legal tender for 40 shillings for the transaction of the vast amount of business among her masses, and established the grand central market in London for the sale and disposition of the entire silver products of the world, as a mere metal or commodity, to be there measured by her own gold legal-tender coins.

In 1860 all Asia used silver as the standard money. Austria-Hungary, The Netherlands, Sweden, Norway, Denmark, Spain, and Russia had the single silver standard. France, Belgium, Switzerland, and Italy had the double standard with free coinage and full legal tender at the ratio of 15.5 to 1. Germany had the single silver standard at the ratio of 15.5 to 1, adopted on January 24, 1857.

Such was the condition of coinage in 1860.

Now, let us trace our own action; let us see what influence we, through our Representatives, one of whom, the senior Senator from Ohio [Mr. SHERMAN], is upon this floor to-day—have had in bringing about the present condition. In 1862, the Commissioner of the General Land Office of the United States, Hon. J. M. Edmunds, in his annual report to the Secretary of the Interior, described—

the great auriferous region of the United States * * * embracing portions of Dakota, Nebraska, Colorado, all of New Mexico, with Arizona, Utah, Nevada, California, Oregon, and Washington Territory, and other mountain ranges.

And then said—

These mountains are literally stocked with minerals, gold and silver being interspersed in profusion over this immense surface and daily brought to light by new discoveries. The precious metals are found imbedded in mountains of quartz, rich washings marking the pathway of rivers and floods. Besides their wealth in gold, no part of the world is so rich in silver mines as Nevada and New Mexico, and yet these may be estimated as only in proportion to the gold fields, which are in process of development with amazing results.

The recent discoveries in the Colorado or southern portion of California, and in the regions stretching thence away up to and north of the Salmon River in Washington Territory, are every day stimulating the mining enterprise of our people. Prior to the gold discoveries in 1848, at Sutter's race in California, the gold product of the world was only an average of eighteen millions. In 1853 the yield of California was seventy millions, about four times the aggregate gold product of the world prior to 1848, and that sum may be set down as the present average from that State alone. If we compare the known gold fields elsewhere in our domain with the yield of California, we would have, if an equal ratio of labor was applied, an annual value of between three and four hundred millions. That an adequate amount of labor to this end will be at hand when peace returns is not to be doubted.

He then suggests that an immense revenue may be readily obtained by subjecting the public mines there to lease under quarterly payments. Mark the language, because it has been misleading in Europe ever since.

An immense revenue may be readily obtained by subjecting the public mines there to lease under quarterly payments, or quarterly tax, as seigniorage upon the actual product.

And then states the amount of the public debt, and that—

A tax of some 8 per cent on the whole yield of the mines * * * would pay off the interest.

And then says:

The yield of the precious metals alone of this region will not fall below $100,000,000 the present year, and it will augment with the increase of population for centuries to come. The value of these mines is absolutely incalculable. * * * Within ten years the annual product of these mines will reach $200,000,000 in the precious metals alone.

There is a distinct statement that these mines were public mines belonging to the Government, upon which a tax could be levied, and that statement has been thrown in the face of our delegates to almost every international monetary conference we have had.

He asserts that while his estimate may be somewhat extravagant he believes "experience will demonstrate that the estimate is too low."

The Secretary of the Interior, Hon. Caleb B. Smith, in transmitting this report to the President, quoted from it and said:

The present annual production in California is estimated to average $70,000,000, and the commissioner after extensive inquiry from all available sources estimates the production of gold the present year at $100,000,000.

And then said:

If an amount of labor relatively equal to that expended in California had been applied to the gold fields already known to exist outside of that State, it is believed that the production of this year, including that of California, would have exceeded $400,000,000.

Four hundred million dollars in one year, and you ask me how did these exaggerations and misrepresentations of our officials have any weight or influence with foreign nations? I answer: In September, 1863, at Berlin, an international statistical congress was convened for the express purpose of considering the question of weights, measures, and coins, and was composed of delegates from Australia, Belgium, Denmark, France, Great Britain, Holland, Italy, Norway, Portugal, Prussia, Russia, Spain, Sweden, Switzerland, Turkey, and many other nationalities and provinces, and our Goverment was there represented by Hon. Samuel B. Ruggles, duly appointed and accredited by the President of the United States.

On September 11, 1863, Mr. Ruggles, as our representative, presented to that congress a written statement in which he quoted from the official report of the Commissioner of the General Land Office of 1862, the parts which I have just read, and then added:

From the documents and other evidences now before the international statistical congress, it must be apparent that the auriferous regions of the United States are destined sooner or later to add materially to the supply of precious metals, and thereby to affect the currency of the world, especially if taken in connection with the capacity of the auriferous regions of Russia, Australia, and British America, and the possibility of increased activity in the mines of Mexico.

He then suggested the appointment of a commission—

To collect such facts as may be gathered from authentic sources in respect to the probable future production of gold and silver, and to present them for consideration to the international statistical congress at the next or some future session.

It is easy to imagine with what alarm, apprehension, and consternation these glowing descriptions, exaggerated statements, of the rapidly approaching avalanche of gold and silver must have been received, considered, and digested by these assembled doctrinaires from the nations of the earth in their efforts to solve the question and to determine and agree upon the weight and standard for the coinage of such masses of the precious metals.

These exaggerations were continued from year to year. They were all spread before the representative men of every nation in the world, the men who were delegated by their governments to represent them in considering the question of weights, measures, and coinage. As a matter of course those reports were made back to every one of the governments represented just as a full report was made to our Government here. But I shall go on and show that these exaggerations continued from year to year.

The Secretary of the Treasury, in the finance report of December 4, 1862, in speaking of the metalliferous regions of the United States, said:

This product of gold and silver during the current year will not, probably, fall very much, if at all, short of $100,000,000, and it must long continue gradually yet rapidly to increase. If this product be subjected to a reasonable seigniorage as suggested by some, or if, as suggested by others, the mineral lands be subdivided and sold in convenient parcels with proper reservations in favor of the miners now in occupation of particular localities, a very considerable revenue may doubtless be obtained from these regions without hardship to the actual settlers or occupiers.

Here is another intimation that these are public mines.

The Director of the Mint, in his report of October 27, 1862, to the Secretary of the Treasury, described in glowing colors the gold and silver yield of our country, and said:

Adding together all these sources of supply of both gold and silver, we may safely estimate an annual yield in these times of $175,000,000, or seven times the amount produced annually for some years prior to the year 1815.

The Director of the Mint, in his report of November 23, 1864, quotes from the report of the Commissioner of the General Land Office of 1862, and then goes on to describe the probable yield of the precious metals in this country, and says:

I anticipate a production of gold and silver for the year 1866 of $200,000,000.

He also estimated the yield of 1865 at $120,000,000, and then said:

In submitting the above estimates of the annual production of gold and silver I concur with the Commissioner of the General Land Office, who computed the yield of the precious metals in 1862 at $100,000,000, although I am not unaware that the computation of the San Francisco press greatly reduces the aggregate.

The Director of the Mint, in his report of September 29, 1865, said:

The reports from the gold and silver mining portions of the United States are of the most encouraging character. The developments of the past year prove the supply of these minerals to be inexhaustible. * * * It is not easy to obtain any other reliable statistics than those officially appended to the report of the Director of the Mint, but these do not assume to give the amount of the entire production of the precious metals. The shipments to other countries must be large.

For example, we are vaguely assured that the silver mines of Nevada average a shipment of one ton daily, which would equal $12,000,000 annually. * * * We have had frequent opportunities for conversation with persons who travel or reside in the various mining regions of the United States and of contiguous provinces, and it is interesting to hear their accounts of the vast development of wealth and prospects of profitable industry. We also have an interesting statement, and one particularly so at this juncture of our national affairs, from a proprietor in the gold region of North Carolina, that "the system of paid labor is likely to show its just and natural effects in the increased return of gold."

In order to ascertain with accuracy our productions of gold and silver, Congress, in the sundry civil appropriation law of July 28, 1866, appropriated $10,000 to enable the Secretary of the Treasury to collect reliable statistical information concerning the gold and silver mines of the Western States and Territories. Mr. J. Ross Browne was appointed the special commis-

sioner for the collection of the mining statistics, and on November 24, 1866, submitted his preliminary report, accompanied by many statistical and special reports, and said:

Assuming the estimate of the product of bullion as above given to be approximately correct, it will be seen that the States and Territories on the Pacific Slope produce annually upwards of $100,000,000 of the precious metals, a quantity more than four times as great as the total product of the world less than thirty years ago. The improved processes for the extraction of these metals from their ores made within the past two years and the constantly increasing area over which gold and silver mines are being developed furnish strong guaranties that there will be no abatement of the product for years to come * * * The approximate estimate already given of the gold and silver product of the Western States and Territories for 1866 shows a total of $106,000,000, or nearly double the combined bullion of the Government and all the banks of the country.

Much consideration is given to the celebrated Comstock lode, and Mr. Browne quotes from a report made by Baron Richtofen in 1866 on the Comstock lode, its character, and the probable mode of its continuance and depth, in which he said:

In winding up these considerations we come to the positive conclusion that the amount of nearly $50,000,000 which have been extracted from the Comstock lode is but a small proportion of the silver awaiting future extraction in the virgin portions of the vein from the lowest level explored down to indefinite depth; but that, from analogy with other argentiferous veins as well as from facts observed on the Comstock lode, the diffusion of silver through extensive deposits of middle and low-grade ores is far more probable than its accumulation in bodies of rich ore.

On March 5, 1868, Mr. Brown submitted a full and final report under said appropriation, in which he said:

No uneasiness need be felt as to a decrease in the source of supply. After many years of travel through the mining regions I feel justified in asserting th t our mineral resources are practically without limit. Explorations made by competent parties during the past year in many parts of the mineral region hitherto unknown demonstrate that the area of mineral deposit is much larger than was ever before supposed.

And then, referring to the probable production in Mexico, said:

The production should rise to $60,000,000 or $100,000,000 a year, and those companies which could get possession of the best mines should make princely fortunes for all their shareholders.

And then, speaking of the yield throughout the world, said:

A great increase in the production of gold and silver is probable. In California, Australia, and Siberia gold-mining is now conducted under many disadvantages.

And, in speaking of the results of the mining, discussed how individuals are enriched by mining and how nations are enriched by mining and how the precious metals fall in value, saying:

A third effect of the production of the precious metals in large quantities is that the prices of other articles generally are affected. We want gold and silver for coin and for use in the arts, and the smaller the supply relative to the demand, the higher the value.

And then says:

But whatever may be the relative position of the two metals, it is certain that the time is not far distant when the price of the two as compared with other products of human labor must fall. They are now increasing far more rapidly than is the demand for them, and at the present rate of increase they would soon have to begin to fall perceptibly. But the production will become much greater than it is. The vast improvements that have been made both in gold and silver mining in the last twenty years are applied to only a few mines, and the reward for those who introduce them into other parts of the world is so large and so certain that the introduction can not be delayed to any remote period. If all the argentiferous lodes of Mexico, Peru, and Bolivia known to be rich were worked with the machinery used at Washoe their yield would really flood the world. * * * The inevitable fal. in the value of precious metals will be of benefit to mankind generally. It will reduce the wealth of the rich and the debts of nations. Those national debts now existing will be reduced 20 or 30 per cent, the interest as well as the principal.

All these statements have been published abroad throughout Europe and are as familiar to the citizens and financiers there as here—in fact, are far more generally known there than here.

While we were thus appalling the nations of Europe and their learned doctrinaires with these fairy tales of the inexhaustible and incalculable production of gold and silver—an overwhelming flood—our officials were not idle in demanding and pleading for the single gold standard and the demonetization of the standard silver dollar, the utter destruction of our Democratic constitutional bimetallic system maintained from the foundation of our Government.

I will throw a little light now upon the demonetization act of 1873, as to how it came to be passed.

The Director of our Mint, in his report of October 10, 1861, said:

The gold dollar of the United States, conforming in standard value and decimal character to all the gold and silver coinage of the country except the silver dollar, has been properly selected and should be retained for the standard of value for all coins used or employed in commercial or governmental transactions with other nations.

The silver dollar of the United States, differing as it does in commercial or decimal value from the other silver coins in our country, can not, without disturbing our decimal system and producing confusion in the relative value of our gold and silver coinage, be used as a standard. * * * As the dollar, which is the unit of our money, is represented in gold coin, it would seem desirable not to have any other dollar in any other metal; but, if this is inadmissible and the silver dollar should be retained, then it should be reduced to eight-tenths of an ounce to be in true relation to our other silver coins. * * * The reason for its retention having ceased, either we should cease to coin the silver dollar or it should be made to conform in weight and value to our lesser silver coins.

The Secretary of the Treasury, in his finance report for 1862, says:

In his last report, the Secretary took occasion to invite the attention of Congress to the importance of uniform weights, measures, and coins, and the worth of the decimal system in the commerce of the world. He now ventures to suggest that the present demonetization of gold may well be availed of for the purpose of taking one considerable step toward these great ends. If the half eagle of the Union be made of equal weight and fineness of the gold sovereign of Great Britain, no sensible injury could possibly arise from the change; while, on the resumption of specie payments, its great advantages would be felt in the equalization of exchange and the convenience of commerce. This act of the United States, moreover, might be followed by the adoption by Great Britain of the Federal decimal divisions of the coin, and thus a most important advance might be secured toward an international coinage, with values decimally expressed.

The Director of the Mint, in his report of October 21, 1863, says:

Permit me again to refer to the anomalous character of the silver dollar of the United States and to the remark on this subject in my report for the fiscal year ending June 30, 1861. The dollar is our unit of value, but the value of the gold and silver dollars under existing laws is not the same, and therefore we have no certain or determined standard of value. Gold, being more fixed and certain in its valuation, is not only better than silver as a standard of value in our monetary system, but better expresses the equivalent value of foreign coin in our currency, and therefore the gold dollar should be by law adopted as the unit of value of our money.

The Director of the Mint, in his report of October 3, 1864, says:

Permit me again to refer to the anomalous character of the silver dollar of the United States and to the observations on this subject in former reports. The whole dollar should be made in weight and value the exact multiple of our fractional silver currency, and the gold dollar should be by law declared to be the unit of the value of our money.

The Director of the Mint, in his report of October 25, 1867, speaking of international coinage, says:

The first claim that meets us is the fact that in some commercial countries gold is the principal medium of trade, in others silver. To maintain these at a steady relation may be given up as an impossibility. We must therefore calculate or assume that as the world grows richer one nation after another will fall into the wake of those which have taken the lead in adopting gold as the standard, using silver only for subsidiary purposes. * * *

Gold for the civilized, intelligent, aristocratic classes, and silver for the toiling millions, the masses of the people; and that, too, to be a subsidiary silver coinage, limited according to the laws of England to $10 of legal tender!

Nearly five years ago (December 31, 1862) a letter on this subject was addressed to the Treasury Department from the Mint, in which the precise ground was taken which has lately been agreed upon by the Paris conference. * * *

I will come to that directly.

If the proposed international coinage of gold should become a law of the United States the reduced weight would call for a recoinage; and this would be a proper moment to introduce an improvement which the progress of counterfeiting loudly calls for.

In connection with these exaggerations and falsehoods let us trace their effect. What effect did they have? Here are causes, falsehoods, misrepresentations, but believed to be true, and when believed to be true having just as much effect as if true.

On the 23d day of December, 1865, France, Belgium, Italy, and Switzerland united in the monetary treaty "to regulate the weight, title, form, and circulation of their gold and silver coins," whereby they agreed to coin of gold only the pieces of 100, 50, 20, 10, and 5 francs in weight, standard, tolerance, and diameter, and of silver only the five-franc pieces of standard weight and fineness, with unlimited coinage and legal tender for such coins; and further agreed to coin in amounts as herein prescribed for each State, silver coins of 1 and 2 francs, 50 and 20 centimes, of reduced fineness and limited in legal tender to 50 francs; and that any nation could join the convention by adopting its monetary system in regard to gold and silver coins, and that the convention should remain in force until January 1, 1880.

In this convention, known generally as the Latin Union, Belgium, Italy, and Switzerland strongly favored a single gold standard, with subsidiary silver coins under 5 francs.

What induced this convention and the formation of the Latin Union?

The minister of finance, in his report in 1866 to the Emperor of France, concerning a bill relating to this monetary treaty, for it was necessary in order to carry out the provisions of the monetary treaty that act should be passed by the Corps Legislatif, says:

For ages the yield of silver has been greater in value than that of gold.

Since 1846 the proportion between the values of the quantities of the two metals annually extracted from the mines has been reversed. * * * These great quantities of gold, coming for the most part from California and Australia, have thus rendered this metal far more abundant in the issues of coin in all the countries which admitted it, either as principal money, as, for example, England, Portugal, Brazil, the city of Bremen, or as money concurrently with silver, as did France and Italy. The abundance of gold has even caused the introduction of this metal into the monetary system of countries which lately rejected it, as, for example, Switzerland, Belgium, and English India.

And states to the emperor that the silver 5-franc pieces were either exported or melted down and replaced by gold, the cheaper metal, and the object was to reduce the fineness of the silver

coins and retain them in circulation. Here we see a scare, a dread, and an excited apprehension of an avalanche of gold to the banishment of silver.

The States of the Church on June 18, 1866, and Greece and Roumania in April, 1867, joined this Latin Union.

In March, 1865, the Government of France called the attention of our Government to the project of the Paris Universal Exposition of 1867, and our Government agreed to participate, and appointed Hon. N. M. Beckwith commissioner-general for the United States, who, on July 17, 1866, transmitted to Secretary of State Seward Document No. 216, containing the project of a law submitted to the Corps Législatif for a coinage as proposed by the Latin Union, and giving reasons in favor of that monetary treaty, and detailing the proceedings, wherein it was stated that "the opinion in regard to a single standard is still divided, both in the financial and scientific world."

A number of sensible men believed "that while Australian and Californian gold inundates European markets the double standard is useful in making the value of silver sustain the value of gold."

And some go so far as to say that, with the double standard in commercial and financial crises, one metal serves as a counterpoise to the other. And for the same reason they say we must not expect silver to go out of circulation, for the discovery of new mines, improved methods of working them, and the return of silver coin accumulated in the East, caused by the introduction of gold as money in those remote and unopened regions, will restore the former abundance of that metal.

Mr. Beckwith also transmitted Document No. 282, being "Report of the committee to examine a bill relative to a monetary convention passed between France, Belgium, Italy, and Switzerland." This report approved the monetary convention and submitted a bill for carrying it into effect, which was duly passed into law.

The committee discussed the question of double standard as follows:

A question of another nature arose in the committee. As the two monetary standards have long been a source of annoyance, why did we not adopt gold as the only standard, like England and many other nations, and thus settle it definitely at once? The committee was not in favor of it. We certainly can not say what the future may have in store for us, but nobody can say but what the measure may be soon adopted. It is too soon yet. Though theory and logic may be for a single standard, facts show that the double standard offers great advantages in practice.

The two help each other, and in time of crises one serves as a balance to the other. The use of both metals moreover facilitates our commercial relations with other countries by allowing our merchants a choice of the coin best suited to the stranger. Does a difference of the value between the two metals of late years give a sufficient cause for such a radical reform? If silver is preferred to-day, the preference may change by the discovery of vast silver mines or a great reflux of silver from the East by reason of the sale of our manufactures in those countries. The proposed law prudently confines itself to present necessities without pretending to look into the future.

Mr. Beckwith also transmitted a copy of the monetary convention of December 23, 1865. We now see clearly the actual scare and apprehension of a continued deluge of gold; and that the convention, the Latin Union, was formed primarily for the protection and preservation of silver as money, then so scarce compared with gold, and the maintenance of bimetallism:

ARTICLE 12. Any other nation can join the present convention by accepting its obligations and adopting the monetary system of the Union in regard to gold and silver coins.

Here is international bimetallism established by France, Italy, Belgium, Switzerland, and Greece. France alone had maintained bimetallism ever since October, 1785. Now Italy, Belgium, Switzerland, and Greece join this bimetallic league. There is no question of their ability to maintain it. But we see what caused this monetary conference. It was to keep silver in their countries and not have it entirely expelled by the overabundance of gold with which they were being flooded. To do that they reduced the quantity of silver in the minor coins and left the five-franc (the dollar) with full legal tender, unlimited and free in coinage.

At this very time, as I stated before, France was preparing for the Paris Universal Exposition, to begin in April.

In March, 1865, she had called the attention of our Government to it, and Mr. Lincoln had appointed Mr. N. M. Beckwith, commissioner-general. An advisory committee had also been appointed in New York, of which Mr. Samuel B. Ruggles—this same man who was in the Berlin statistical congress of 1863—was a member, and chairman of group 5, on mines, metallurgy, etc.

On October 9, 1866, Hon. Samuel B. Ruggles was designated by Secretary Seward to take charge of that branch of the representation at the exposition relating to uniform weights, measures, and coins.

Now, Mr. Ruggles gets himself appointed as the representative of our Government to the Paris Universal Exposition on the subject of weights, measures, and coins.

Meetings, composed of members of the scientific commission, the imperial commission, and the foreign commissioners at Paris, for consultation regarding measures for drawing public attention to the subject of uniformity in weights, measures, and coins, were held.

I want to show just exactly the connection of Mr. Ruggles, and how he, in connection with the distinguished Senator from Ohio [Mr. SHERMAN], manipulated the proceedings to be had in the international monetary conference of 1867.

I do this to show what position he was in, and how he could use that position.

On January 4, 1867, Mr. Berthemy, envoy of France to the United States, submitted to Secretary Seward a copy of the monetary convention of December 23, 1865, and invited the United States to become a party to it.

That is the only time the United States was ever offered an opportunity to become a member of an international bimetallic union. Here it is. I want the Senate to understand it, and I want the country to know why we did not accept it. Here was a bimetallic system upon the ratio of 15½ to 1 maintained by France since October 30, 1785, and all we had to do was simply to subscribe to it. There was no international complication connected with it; nothing to do but simply subscribe to it, and agree that we would coin certain coins. In order to come to that, we only had to strike out about 12½ grains of our standard silver dollar, reduce it to 400 grains, and thus bring it down to the ratio of 15½ to 1.

I want to read to the Senate from the documents before me, because I propose to show that this was an opportunity, an invitation, to the United States to join an international bimetallic union of Europe, and the distinguished Senator from Ohio and Mr. Ruggles prevented it. Never was such a chance had before, and never has there been such a chance since. Here was the standard perfected, tested for nearly a hundred years, already agreed to, with an open clause, with an open door for any nation to join in it; and that great nation, France, once our ally in our sore trouble, the nation which helped give us our independence from Great Britain, the nation which has stood by us closer than any other foreign nation, came with the friendly offering of international bimetallic coinage, the thing we have been talking about ever since 1873.

I shall read from these documents a few passages so that we may understand exactly the situation. I do not desire to do an injustice to anyone, but I think the distinguished senior Senator from Ohio has never been given credit—so called—for the very efficient part he took in bringing about a single gold standard.

I quote now from Senate Executive Document No. 14, Fortieth Congress, second session, the message of the President of the United States in answer to a resolution of the Senate transmitting a report from the Secretary of State concerning the international monetary conference held at Paris in June, 1867. This is the letter of Mr. Berthemy, representing France, to Mr. Seward:

SIR: I have the honor to transmit herewith to your excellency a copy of the text of the monetary convention, concluded December 23, 1865, between France, Belgium, Italy, and Switzerland.

As you will see, Mr. Secretary of State, this act went into force the 1st of August last, reconstituted, under the guaranty of an international contract, a monetary union which had existed in fact between these four states, but which diverse measures, adopted without preliminary understanding, had broken up during late years. These measures, adopted successively in Switzerland, in Italy, and in France, had a sole object, that of putting an end to the abnormal disappearance of fractional silver money, or standard change money, indispensable for payments of trifling amounts. To the same evil they opposed the same remedy, the lowering of the standard, but according to different rules and proportions. The Swiss pieces, for instance, coined at the standard of eight hundred thousandths fine, while those of France and of Italy were at the standard of eight hundred and thirty-five, had to be refused in the public treasuries of the Empire as well as in those of the Kingdom of Italy.

The inconvenience of this state of things was not long in becoming apparent, and causing, perhaps more keenly than in past time, the appreciation by the populations of the four bordering states, of the advantages of the monetary communion by which they had been formerly benefited. For the purpose of satisfying the just claims and pressing interests of trade the government of the Emperor last year proposed to Belgium, to Italy, and to Switzerland, to intrust to a mixed international commission the care of reestablishing the ancient uniformity by taking account of facts accomplished, and of the new conditions of the monetary circulation of Europe. Commissioners appointed by these different states assembled at Paris under the presidency of M. de Parieu, vice-president of the council of state, and, in stating the causes for the convention of the 23d December last, they have fully met the immediate end which was assigned for their labors, according to the expression used by the minister of finance of Belgium, on submitting to the Belgium Chamber the project of law intended to sanction the convention: "This act contains in effect, within itself, saving the unity of stamp, a monetary system, complete for moneys (coin), properly so called, to the exclusion of *billon* (base coin)."

At this time the gold and silver coinage of these four States is conducted under conditions that are identical. In what relates especially to fractional silver of the piece of five francs for real change of standard money, which alone can meet the demand for small transactions, the standard of eight hundred and thirty-five thousandths has been definitely adopted. This is the figure which, already adopted in France and in Italy, has seemed best to satisfy the conditions of the problem which was in discussion for a solution—that is to say, to give to fractional metallic coins of the Union the

highest intrinsic value and the qualities of a good alloy, at the same time doing away with the premium they had reached from the relative depreciation of gold, which allowed speculation to melt them up and export them at a profit.

Express provisions limit, moreover, the emission of this legal small change, and serve also as the corrective of the lowering of the standard value. Precise rules reduce to the smallest possible figures the allowances for cost of fabrication, so as to maintain the money of the Union in a constant normal condition. In fine, you will remark, Mr. Secretary of State, a clause which is detached from the rest of the stipulations, exclusively destined to determine the monetary regulations of the four countries. I desire to say something of the accession which article 12 guarantees to any other State. This clause may be considered as the manifestation of a wish that sprung up in the proceedings of the international conference, and has not been without influence on the happy issue of the negotiations. After having brought about the disappearance of divergencies of which they recognized the inconveniences, the delegates of France, of Belgium, of Italy, and of Switzerland, seeing a population of 70,000,000 of souls thenceforth endowed with the same monetary system, must quite naturally have been led to fix attention on an interest more general. Without entering on the examination of a question which it was not their mission to solve, they expressed in the name of their governments the desire—

The desire—

to see the Union, as yet restricted to four countries, become the germ of a union more extended, and of the establishment of a general monetary circulation among all civilized states.

Mr. President, here it was; and here we are urged to become a party to it, which we could have done without sacrificing one particle of honor, one particle of convenience, or the sustaining of one nickel or a penny of cost.

I read further:

The Government of the Emperor would be very happy to see this proposition well received, but, at the same time can not dissemble the difficulties and objections it might encounter.

* * * * * * *

If for the moment objections too weighty prevent the Federal Government—

Pleading with us now—

If for the moment objections too weighty prevent the Federal Government from adhesion to the convention of 23d December, the Government of the Emperor would not the less attach special value to being informed of these obstacles, and to learn what observations may have been drawn forth by the examination of that international act.

* * * * * * *

Thus also, in case the Federal Government, without wishing to accede to the union actually constituted, should be disposed, either to enter into arrangements destined to establish equations between some of its monetary types of gold or silver, and those which the convention may determine, or to take part in an international conference at which might be discussed the means of arriving at a more extended monetary understanding, the Government of the Emperor will entertain with readiness the overtures which might be addressed to it in this view.

Now, Mr. President, we see the offer. We see the pleading of this great nation. Now let us trace the progress of it.

Mr. Seward, February 13, 1867, says:

Having consulted the Secretary of the Treasury upon the subject, I have the honor to state in reply to your note that this Government, both in its legislative and executive departments, has repeatedly manifested its interest in the question of international unification of monetary standards; that the importance of a standard unit of equal value in all commercial countries for the uses of account and currency is fully recognized and appreciated; and that the ideal object presented in your communication being acceptable, it only remains to be decided how the desired result may be brought about.

It is to be hoped that neither the quadripartite convention nor the proceedings already adopted by the four governments under its provisions, will be held to preclude any of those governments from entertaining considerations in favor of its modification which may be offered by other governments in the interests of a system universally acceptable.

Mr. Berthemy replied May 27, 1867, to Mr. Seward's letter, and after stating the preliminaries, says:

In consequence, a formal proposition has been transmitted through the diplomatic medium to divers governments in order that they might cause themselves to be represented in a commission which should meet at Paris on Monday, the 17th of June next, at the hotel of the department for foreign affairs. This conference would be presided over conjointly by the minister for foreign affairs and the minister of finance.

When our replies were received the French Government determined then to hold an international monetary conference so that we could have a full opportunity of discussing this question and entering into it. I will read further from what Mr. Berthemy said. I have just read from page 5 giving the notice to our Government that the monetary conference had been called. I now read from page 6:

There is no need to add that the commissioners will assemble without any programme arranged in anticipation—

Now, mark you; this is very important—

There is no need to add that the commissioners will assemble without any programme arranged in anticipation. They will thus be able to look more freely for a solution of the difficulties which would oppose an assimilation between the systems actually in operation. This mode of proceeding, which has already received so happy application at the conferences of 1865, appears at this time of greater utility, inasmuch as different countries, while appreciating the importance of the object to be attained, would have the means of recurring to divergent opinions. The conference proposed has not otherwise any immediate object than to call out an interchange of views and discussion of principles; in a word, to seek for the basis of ulterior negotiations.

That conference was to meet on June 17, 1867, and Mr. Seward appointed Mr. Ruggles as the representative of the United States to that international monetary conference. But before the monetary conference met Mr. Ruggles, who was already the commissioner of the United States to the Universal Exposition on the subject of weights, measures, and coinage, was there getting in his work, in direct violation and disregard of what the French Government had said should be the meeting of the conference, no programme laid out, or anything of the kind. Mr. Ruggles, as a member of the preliminary international committee on the uniformity of coinage organized by the imperial commission, had been at work. For what? For the single gold standard.

Mr. ALLISON. How was that preliminary committee arranged?

Mr. COCKRELL. The preliminary committee was arranged by the commissioners of the different nations to the Universal Exposition. The several representatives got together and formed a preliminary committee, and this preliminary committee had gotten together and determined in their wisdom to anticipate the action of the convention and have a cut-and-dried platform for the convention to act upon when it met. It was just like when a political meeting is to be held a few gentlemen get together and draw up the resolutions that must be adopted.

Now, somebody else was aiding Mr. Ruggles in this important work of representing the United States. He had in that important work the potential influence of the distinguished senior Senator from Ohio, Hon. JOHN SHERMAN, then chairman of the Finance Committee of the Senate. Now, mark you, we were invited to join the Latin Union for bimetallism. What were our representatives there doing? Invited to a feast to partake of bimetallism, and our representatives go there with a dish of their own and say, "Not one of the dishes you have invited us to partake of will we partake of. No, no. We must have our own diet." I want to read the letter of Senator SHERMAN. Remember this monetary conference was to meet on the 17th of June. On the 17th of May, just a month before it was to meet, Hon. Samuel B. Ruggles addresses a letter to Senator SHERMAN in which he invites him to give some expression of his views, etc., and Senator SHERMAN replies as follows:

HOTEL JARDIN DES TUILERIES, *May 18, 1867.*

MY DEAR SIR: Your note of yesterday, inquiring whether Congress would probably, in future coinage, make our gold dollar conform in value to the gold 5-franc piece, has been received.

There has been so little discussion in Congress upon the subject that I can not base my opinion upon anything said or done there.

The subject has, however, excited the attention of several important commercial bodies in the United States, and the time is now so favorable that I feel quite sure that Congress will adopt any practical measure that will secure to the commercial world a uniform standard of value and exchange.

The only question will be, how this can be accomplished?

The treaty of December 23, 1865, between France, Italy, Belgium, and Switzerland, and the probable acquiescence in that treaty by Prussia, has laid the foundation for such a standard. If Great Britain will reduce the value of her sovereign 2 pence and the United States will reduce the value of her dollar something over 3 cents; we then have a coinage in the franc, dollar, and sovereign, easily computed, and which will readily pass in all countries, the dollar as 5 francs and the sovereign as 25 francs.

This will put an end to the loss and intricacies of exchange and discount. As the gold 5-franc piece is now in use by over 60,000,000 of people of several different nationalities, and is of convenient form and size, it may well be adopted by other nations as the common standard of value, leaving to each nation to regulate the divisions of this unit in silver coin or tokens.

If this be done France will surely abandon the impossible effort of making two standards of value. Gold coins will answer all the purposes of European commerce. A common gold standard will regulate silver coinage, of which the United States will furnish the greater part, especially for the Chinese trade.

I have thought a good deal of how the object you propose may be most readily accomplished.

Now, here is the gist of it:

It is clear that the United States can not become a party to the treaty referred to—

That is the language. This is the reason given—

They could not agree upon the silver standard; nor could we limit the amount of our coinage as proposed by the treaty. The United States is so large in extent, is so sparsely populated, and the price of labor is so much higher than in Europe, that we require more currency per capita. We now produce the larger part of the gold and silver of the world, and can not limit our coinage, except by the wants of our people and the demands of commerce.

Here the Senator writes a letter one month before this monetary conference is to be held to one of the delegates to that conference, who is also representing and manipulating another intermediate or preliminary committee.

It is clear that the United States can not become a party to the treaty referred to. They could not agree upon the silver standard.

That is, they would not agree upon the bimetallic standard of the Latin Union. They must have the silver part of the bimetallism stricken out.

You may ask how did that letter have any influence? Was it published? Did it fall into the hands of anybody? In order to show exactly how Mr. Ruggles manipulated and used the influence of Senator SHERMAN, I quote from page 7.

Mr. Ruggles to Mr. Seward, May 30, 1867.

Remember, Mr. Ruggles had gotten Senator SHERMAN'S let-

ter on May 18. He refers to Mr. Berthemy transmitting to our Government the Latin Union conference, and says:

To that treaty the United States are now invited to become a party, in the communication from M. Berthemy, minister of France at Washington, to the Secretary of State of the United States, a copy of which, forwarded from Washington by the Department of State, reached the undersigned on the 29th of May, instant.

He then goes on and states that he had suggested to M. de Parieu the necessity of a modification in the common unit of gold coin, and then that he had been introduced to the French Emperor; and I read now from page 8 what he says:

Upon that occasion the Emperor, after expressing very cordially his gratification that the United States of America had shown their willingness to aid in unifying the coin of the world, proceeded in a straightforward, business way to ask, "What do you wish France to do in aid of the work?" To that interrogatory it was answered, first, that much could be done by distinctly recognizing in the official documents and discourses of the Government the international unification of coin, as a result of cardinal importance to be attained at the Universal Exposition.

Then he goes on and says:

It was further urged that the United States of America, politically, commercially, and geographically had a peculiar interest in the subject, etc.

* * * * * * *

In answer, the Emperor asked, in a kindly tone—

No doubt, as Mr. Ruggles had proposed nothing and asked for nothing, but told about the desire of our country and its greatness and grandeur—

Can France do anything more in aid of the work?

A very pertinent question.

To which it was replied, France can coin a piece of gold of 25 francs, to circulate side by side on terms of absolute equality with the half eagle of the United States and the sovereign, or pound sterling, of Great Britain, when reduced, as they readily might be, precisely to the value of 25 francs. The Emperor then asked, "Will not a French coin of 25 francs impair the symmetry of the French decimal system?" To which it was answered, "No more than it is affected, if at all, by the existing gold coin of 5 francs;" that it was only the silver coins of France which were of even metric weight, while every one of its gold coins, without exception, represented unequal fractions of the meter.

It was then stated to the Emperor that an eminent American statesman, Mr. SHERMAN, Senator from Ohio, chairman of the Finance Committee of the Senate of the United States, and recently in Paris, had written an important and interesting letter, expressing his opinion that the gold dollar of the United States ought to be and readily might be reduced by Congress, in weight and value, to correspond with the gold 5-franc piece of France; that the letter was now before—

Before—

the international committee having the question of uniform coin under special examination, to which letter, as being one of the best interpretations of the views of the American people, the attention of the public authorities of France was respectfully invited. The Emperor then closed the audience by repeating the assurances of his gratification that the important international measure in question was likely to receive active support from the United States.

The letter of Mr. SHERMAN, above referred to, dated the 18th of May, 1867, originally written in English, was presented in a French translation a few days afterwards to the international committee in full session, where it was received with unusual interest and ordered by the committee to be printed in both languages. A copy is herewith transmitted for the information of the Department of State.

Now, I read from page 13, the letter of Mr. Ruggles to Mr. Seward of July 18, 1867. He says:

The undersigned is gratified to learn, by the communication from the Department of State of the 21st of June last, that the steps thus taken for securing the uniformity of money are approved by his Government; that he "is warranted in encouraging the expectation that the United States may give its adhesion to a conventional arrangement which may be susceptible of termination within a period to be specified in such arrangements," and that "the views so ably set forth" in the letter of Mr. SHERMAN "will be so far approved by the public sentiment, the Congress, and the Executive of the United States as to secure a concurrence of the Government in any reasonable plan for producing the desired reform."

Now, you must remember that this is the preliminary conference before which he laid this letter. What does he say?

The subject of a uniform coin did not actually come into discussion, either in the international committee or the subcommission on coins, until early in the month of May.

Now—

On the 17th of May the undersigned presented to the international committee the letter of Senator SHERMAN in a French translation, which was received with lively interest, and forthwith ordered, with the approbation of the imperial commission, to be published both in French and English. It is but due to the history of the unification of money to state that the earnest and active agitation of the subject in a practical form on the part of the United States exerted its full share of influence in leading the Government of France to adopt the decisive measure of inviting in diplomatic form an authoritative "conference" of delegates, duly accredited, from all the nations of the European and American world practically accessible to meet at Paris on the 17th of June, not merely for an exchange of views or a discussion of general principles, but "practically to seek for the basis of ulterior negotiation" between the nations.

The importance of this step had become evident at an early day to the French authorities, and especially to Monsieur Esquirou de Parieu, first vice-president of the "conseil d'etat," preëminently distinguished by his long and well-directed labors in the cause of monetary unification, adorned by his learned and eloquent writings, replete alike with accurate knowledge and classic taste. He was one of the delegates on the part of France who successfully negotiated the quadripartite monetary treaty of the 23d of December, 1865, between France, Belgium, Switzerland, and Italy, the beneficent effects of which enlightened measure are now illuminating continental western Europe from the German Ocean to the Mediterranean, carrying, in his own graphic language, "a common coin of equal value from Antwerp, across the mountains of the Oberland, to the classic coast of Brundusium."

As early as the 21st of April last the undersigned had argued and urged upon M. de Parieu the importance which would be attached by the United States of America to the coinage by France of the gold piece of 25 francs, and the consequent necessity of modifying that portion of the quadripartite treaty which would prevent the issue of a coin of that denomination.

[At this point the honorable Senator yielded to Mr. ALLEN.]

Mr. COCKRELL. I was reading from the letter of Mr. Ruggles, transmitting these reports and commenting upon it, which gives the insight into the *modus operandi* by which the preliminary programme for the monetary conference of 1867 was cut and dried and presented to it, and the influence and power that the distinguished Senator from Ohio exerted. I am going to state what occurred. He tells what he did himself. He says on page 16:

On this occasion the very important question of abolishing the double standard of money, retaining only gold, was elaborately discussed, and with singular ability and ingenuity by distinguished French economists holding opposite opinions. On putting the question to the vote of the numerous and intelligent audience, the single standard of gold was adopted by a large majority. The question of the gold unit then coming up, the English delegates—

Now, mark you—

the English delegates earnestly opposed the proposition of the international committee adopting as the unit the gold 5 francs, and urged the substitution of 10 francs in its stead, expressing their belief that the Government of Great Britain would consent to issue for the purpose a gold coin of that amount to be denominated a "ducat." This substitution was opposed by the undersigned in behalf of the United States, on the ground that their half eagle when reduced to 25 francs, would be an even multiple of the 5-franc unit but not of the 10; that he dollar, whenever made precisely equivalent and equiponderant to the 5 francs, would be practically if not nominally the monetary unit, and the actual denomination in which money contracts embracing different countries or distant quarters of the globe would or might be payable; that the more important and higher issue soon would be, not between the 5 francs and the 10 francs as the unit, but between the dollar, decimally and easily divided, and the sovereign (or pound sterling), not decimally but most inconveniently divided in shillings, pence, and farthings, but which, by that very peculiarity had hitherto maintained an undue predominance in the money payments of the world. The debate was closed by the Prince president submitting the question to the vote of the meeting, which resulted nearly unanimously in favor of the unit of 5 francs.

It is proper to add that the Government of Great Britain was not represented as such at this reunion, nor in any discussion at any previous meeting of the international committee, but duly appeared by accredited delegates at the international monetary conference.

Thus before the international monetary conference had met this preliminary committee, an international committee, had cut and dried the whole programme of a single gold standard. Mr. Ruggles goes on and says:

The advocates of a uniform coin cherished the belief that the Government of the United States is not to be discouraged or discomposed by the temporary delay or hesitation of any government in Europe to participate in the widespread work of monetary unification, destined sooner or later to become the crowning civic achievement of modern times.

In the earlier agitation of this subject at the International Statistical Congress at Berlin in 1863, the delegate from the United States found a large and influential delegation from Great Britain zealously engaged in the great endeavor to unify the money of the world. In the present effort of the assembled nations "not for a day, but for all times," the clear good sense and sterling liberality of the English people will not allow their Government to lag or linger much benind. The fire but recently kindled is rapidly diffusing its light throughout the world.

The farsighted negotiators of the quadripartite monetary treaty of 1865, though seriously embarrassed by the fallacy of a double standard, now generally discarded, succeeded in establishing a uniform system not only of gold, but of silver, over a large and populous portion of Europe, since increased by the adhesion of the pontifical states and of Greece; thus including by a singular felicity in this newly enlightened region of the globe the two great seats of ancient civilization.

Now, I wish to read from what one of the English delegates said in that monetary conference, a gentleman who has figured in almost every other conference since then, Mr. Rivers Wilson. I read from page 55:

The English Government was obliged to accept the cordial invitation from the Government of the Emperor to participate in this conference, because a refusal would have shown a want of courtesy, and would have made it liable to accusations of prejudices upon this very important question.

Indeed the English nation is in a position much more independent upon this question than most continental nations.

So long as public opinion has not decided in favor of a change of the present system, which offers no serious inconveniences either in wholesale or retail trade, and until it shall be incontestibly demonstrated that the new system offers advantages sufficiently commanding to justify the abandonment of that which is approved by experience and rooted in the habits of the people, the English Government could not believe it to be its duty to take the initiative in assimilating its coinage with those of the countries of the Continent. But the English Government will be always ready to aid and attempt to enlighten and guide public opinion in the appreciation of the question, and facilitate the discussion of the means by which such an assimilation so advantageous in theory may be effected.

Thus, while consenting, then, to be represented in this conference, the English Government has found it necessary to place the most careful restrictions upon its delegates; their part is simply to listen to the different arguments, to study the situation as developed in discussion, and to report to their Government.

The attitude of Germany was that at that time she was considering herself a political programme which might include her local monetary question, and therefore she would not be bound by anything that was done.

Baron de Hock submitted report No. 4 on the unification of coinage, and the recommendation was the adoption of the series of gold coins now in use in France, adopted by a large part of

the population of Europe, and recommending this as the basis of the uniform system sought.

It is extremely desirable that the system of two different monetary standards should be discontinued wherever it still exists.

That the gold standard should be adopted.

I read the remarks of Mr. Meinecke, of Prussia, on page 34 of this report. The German Empire had not then been formed, and Prussia was represented by Mr. Meinecke. He said:

He did not pretend to ask the sympathies of the conference in favor of the Prussian monetary system, for he thinks that the standard of gold in the countries which have adopted it can not be replaced by the standard of silver in force in Prussia only. Prussia, then, must renounce its standard if she wished to rally under a general monetary union. However, Prussia is content with a silver standard; the monetary circulation of which it is the basis is excellent, and there is no urgent reason for introducing there a change so considerable as that which would result from the change of this standard. On the other hand, the difficulty of adopting the gold standard is much greater for Prussia than for any other country. Nevertheless without having the thought of modifying at this time its monetary system, the Prussian Government would not fail to take the matter into consideration if the labors of the conference should aim at establishing a basis for a general monetary arrangement.

The international monetary conference continued in session until July 6, 1867, when it adjourned. During its discussions, on page 36—

Mr. Ruggles said it would be as impossible to abolish the expressions of the dollar in the United States as that of the sovereign in England, but that both might be retained in reducing their intrinsic values. For the sovereign it would be a reduction of only 20 centimes; for the dollar, on the other hand, the reduction would be 3½ per cent on its value. The United States were ready to make this sacrifice in view of monetary unification; such was the opinion of the American people, and after the next winter a general reminting of coin, however considerable, might commence.

Mr. Ruggles further said, as the representative of our Government, that the double standard had never practically existed in this country, and said—now listen:

The original act of Congress, which was passed at a time when we were less enlightened than to-day, either by study or experience, sought to establish a double standard by giving to gold coin and silver coin equal legal currency in payments, whatever might be the amount of the debt.

Less enlightened than now! Jefferson and Madison, and Hamilton and Washington were ignorami on the financial question; they amount to nothing; they imagined that they could establish a double standard, but they had failed. Now, what further does he say:

And that we have sufficiently learned that the system of a double standard is not only a fallacy, but an impossibility, in assuming a fixed relation between the values of two different products, gold and silver. The value of each of these depends upon the quantity produced, and this quantity is beyond the power of legislation. A diminution of value is and ever will be the inevitable result of the increase of supply.

I want to read a little further from Mr. Ruggles. Says he on page 41:

It is true that the silver dollar is still retained as lawful money for debts of any amount, but of a total silver coinage of $136,351,512, 4,366,340 only are in dollars, while $131,985,472 consist of subdivisions of the dollar.

Almost all the divisional pieces which had been coined before the passage of the law of 1853 have disappeared, in obedience to the fundamental and inexorable law of demand and supply, which sets at naught all attempts made to fix by legislation the relative values of the two metals. The legislators and the people of the United States have sufficiently learned, if not by study, at least by experience, that the system of a double standard is not only a fallacy, but an impossibility, in assuming a fixed relation between the values of two different products, gold and silver. The value of each of these depends upon the quantity produced, and this quantity is beyond the power of legislation.

During the fifty-six years which immediately preceded the year 1850 the United State coined in gold dollars $85,588,038, and in silver $78,322,969, which represents a supply of about 1.12 of gold to $1 of silver. From 1850 to 1856 inclusive, the coinage of gold has been $759,648,453 and of silver $59,027,843, which represents about $12.50 in gold to $1 of silver.

Admonished by so great a change in the relative supply of the two metals the United States now share without reserve the conviction more and more extended through the civilized world that it is impossible to establish a double standard which must presuppose a fixed relation between the values of the two metals.

In a written argument presented to this international monetary conference on June 23, 1867, he discussed the probable yield of gold and silver in the United States, and said—I want the Senate to note this:

Its annual product, now nearly $100,000,000, may eventually reach three hundred or four hundred millions. The money of the world must be unified now or never. * * * It is moreover to be considered that the United States and Great Britain may continue to add for many successive periods of fifteen years, the gold to be produced in America and Australia, which will probably fall little short for each period of $655,352,325 for the United States and $455,235,695 for Great Britain, the amounts respectively coined during the fifteen years just elapsed. We will not dwell upon what can not be forgotten, the possibility of a still more enormous product that would result from the more extensive developments and discoveries in the vast auriferous interior of the United States, a field as yet only partially explored.

Without going too far in measuring the gigantic monetary future in reserve for the world, we will simply say that the work of unification can not begin too soon.

I could read many other extracts here.

This international monetary conference after discussing the various monetary systems, utterly ignored the monetary conference of December, 1865, the Latin Union.

No wonder, Mr. President, that this international monetary conference recommended the establishment of the single standard of gold, with silver as a subsidiary minor coin, when they were enlightened by such exaggerations as I have just read, coming from officials of our own Government professing to be statisticians and to know the facts they presented!

This international monetary convention unanimously decided against the adoption of the single silver standard, and in favor of the single gold standard exclusively, The Netherlands alone dissenting on the gold standard, and unanimously affirmed that it was "more easy to realize monetary unification by mutual coördination of existing systems, taking into account the scientific advantages of certain types and of the numbers of the populations which have already adopted them."

Now, I want to repeat to the Senate, here was an international bimetallic union composed of France, Italy, Switzerland, Belgium, Greece, and Roumania, maintaining a bimetallic standard at the ratio of 15½ to 1, and that ratio had been maintained from October, 1785, down to that date by France with slight coöperation from the other governments, notwithstanding the overflow of gold from California and Australia from 1850 to 1860. These nations had agreed upon a bimetallic system, and France, the great nation of Europe which had aided us in securing our independence, had sent us a formal and cordial invitation to come and become a member of that international bimetallic union; we sent Hon. Samuel B. Ruggles as a representative there to represent us; and the distinguished Senator from Ohio was there, not authorized by the Government, but introduced and presented as the chairman of the Committee on Finance in the United States Senate; and they discarded and rejected every overture of bimetallism presented and demanded the single gold standard and that silver should be stricken down.

We now see the germination and the budding of the monetary policy produced by the distinguished Senator from Ohio and Mr. Ruggles, which is now throughout the world aggressive and brutal. It is a single gold standard, the only money of ultimate redemption, with silver and all other money and coin and paper merely subsidiary and redeemable in gold. The only time that has ever occurred in the history of the world where an international bimetallic agreement could have been made was when France offered to us that bimetallic system, and the Senator from Ohio more than any one man is responsible for its rejection.

But now let us trace out this determination to have a single gold standard.

On January 6, 1868, Senator SHERMAN introduced S. 217, in relation to gold and silver coinage. Referred to Finance Committee.

On June 9, 1868, Senator SHERMAN, from that committee, reported the bill back to the Senate with proposed amendments, reducing the weight of the gold coins, and also of silver half dollar, quarter, and dime, and making such silver coins a legal tender for $10, and prohibiting the coinage of the standard silver dollar.

This was in 1868, and the Senator from Ohio [Mr. SHERMAN] then proposed to strike down the standard silver dollar and coin only half dollars, quarter dollars, and dimes of less intrinsic and coining value and make them a legal tender for only a small sum, comparatively.

He made a written report to accompany that bill. I have the report here before me. There was a majority and minority report, Senate Report 117, Fortieth Congress, second session, the majority report made by Senator SHERMAN and the views of the minority submitted by Senator Morgan, of New York. Now listen to the report of the majority:

The United States is the great gold-producing country of the world, now producing more than all other nations combined, and with a capacity for future production almost without limit. (See reports of Mr. Ruggles and J. Ross Browne.) Gold with us is, like cotton, a raw product. Its production here affects and regulates its value throughout the world.

The United States is a new nation, and therefore a debtor nation. By placing ourselves in harmony with the money units of creditor nations we promote the easy borrowing of money and payment of debts without the loss of recoinage or exchange, always paid by the debtor.

He then indorsed the recommendations of the Paris International Monetary Conference of 1867, and said:

The single standard of gold is an American idea, yielded reluctantly by France and other countries where silver is the chief standard of value.

All the provisions of the plan proposed are in harmony with the American system of coinage. They are either already adopted or may be without inconvenience.

France, whose standard is adopted, makes a new coin similar to our half eagle. She yields to our demand for the sole standard of gold.

Here we have conclusive proof of the indorsement of the highly exaggerated statements of the productions of the precious metals in our own country made broadcast in Europe by Mr. Ruggles in 1863 and 1867, and our other officials from 1862 to 1868, and the world is told that we demanded the single gold standard, and to secure it were ready and willing to debase and reduce the value of our gold dollar 3½ cents. Why? For the honorable, noble, and unselfish reason that our country was the

great gold-producing country, and would deluge the world with gold, and, being a creditor nation, could pay our debts more easily in such debased, reduced coinage (!)

The Latin Union coined gold pieces of 5, 10, 20, 50, and 100 francs, and silver 5 francs, ratio 15½ to 1, or about 400 grains of standard silver in each 5 francs.

Upon this bimetallism we were asked to unite with the states of the Latin Union.

We answered through Senator SHERMAN and Mr. Ruggles by proposing to reduce the gold in our dollar 3½ cents to correspond with the five-franc gold piece, and peremptorily refused to consider even recognition of silver as full legal tender, when, if we had agreed to reduce the silver in our dollar, then worth 3 cents more than the gold dollar and more when the gold was reduced 3½ cents, we would have had bimetallism at the ratio of 15½ to 1. Our bimetallist-now Senator, would not consent, and bimetallism failed and he is the responsible party.

Now, Mr. President, I want to put this matter beyond any doubt. I continue the proofs to sustain the proposition.

On April 25, 1870, the Secretary of the Treasury transmitted to Senator SHERMAN, "A bill revising the laws relative to the Mint, assay offices, and coinage of the United States," with a lengthy report of John Jay Knox, Deputy Comptroller of the Currency, explaining the bill and the reasons for it, published in Senate Miscellaneous Document No. 132, Forty-first Congress, second session.

In this report, with draft of a coinage law, Mr. Knox says:

SILVER DOLLAR—ITS DISCONTINUANCE AS A STANDARD.

The coinage of the silver dollar piece * * * is discontinued in the proposed bill. It is by law the dollar unit, and assuming the value of gold to be fifteen and one-half times that of silver, being about the mean ratio for the past six years, is worth in gold a premium of about 3 per cent (its value being $1.0312), and intrinsically more than 7 per cent premium in our other silver coins, its value thus being $1.0742. The present laws consequently authorize both a gold-dollar unit and a silver-dollar unit, differing from each other in intrinsic value. The present gold dollar is made the dollar unit in the proposed bill, and the silver-dollar piece is discontinued.

On June 25, 1870, in response to a House resolution of June 4, the Secretary of the Treasury transmitted to the Speaker a report of Mr. Knox, giving copies of a voluminous correspondence between the Department and officers of the different mints, assay offices, and other persons, touching the bill and report submitted April 25, 1870. In this correspondence some favored and others opposed the proposed discontinuance of the silver dollar.

The Government of Sweden and Norway instituted a commission known as the Swedish Commission on Coinage, and in July, 1870, our minister there submitted to this commission copies of a letter from our Secretary of State, of June 13, 1870, "on the subject of promoting a common unit and standard of international coinage."

This commission in 1870 submitted their report containing about 300 pages, and in it discussed, with great particularity as to dates, names, etc., every step then taken in regard to a universal coinage, referring to the statements and reports of Mr. Ruggles, Senator SHERMAN'S letter to Ruggles, his report and bill in 1868, to which I have just referred, and the proposal of our Government, and rejected it. But the next year they adopted it. Germany, which had adopted the single silver standard in 1857, over a scare produced by the overflow of gold from California and Australia, December 4, 1871, then flushed with her victories over France and the indemnity of $1,000,000,000 and the consolidation and unification of all her different provinces into one grand empire, desiring to unify the coinage, introduced a new coinage of gold based upon gold, the mark as the unit, and that single gold standard was perfected in 1873.

Denmark, Norway, and Sweden in pursuance of the convention of Sweden and Norway discarded their single silver and adopted a gold standard. In connection with the acts of Denmark, Sweden, Norway, and Germany, the United States the 12th of February, 1873, demonetized the standard silver dollar. These things occurring in rapid succession the nations of the Latin Union had to limit the amount of pieces to be coined by each, and another convention was held in 1875 and a limited coinage continued, and finally the mints of the Latin Union were closed to the coinage of silver. In 1876 Russia changed to a silver standard; that is, she stopped the coinage of silver on private account and only allowed it to be coined for export to China.

Now, here are these data. They show cause and effect. The exaggerated statements and misrepresentations of our own officers and representatives in regard to the production of gold, and our own determination to honor and magnify gold, establish the single standard, debase and degrade silver, caused the legal discrimination to be enacted by other nations.

How ridiculous some of these misrepresentations are I will illustrate by our monetary commission of 1876, of which the senior Senator from Nevada [Mr. JONES] was a member.

Among the witnesses whose testimony was taken and reported was Hon. Edward Atkinson, who testified in regard to the yield of silver, and said:

I should question the evidence as to the total production of silver, partly on the ground of what I saw in the centennial exhibition from Mexico.

Remember, Mr. President, that the world was to be deluged with gold and silver, with from $200,000,000 to $400,000,000 annually. These exaggerated falsehoods and misrepresentations were continued until when? Until the nations had come to a single gold standard, until gold monometallism had been established in the United States and the friends of silver began efforts for its rehabilitation. From that time on to this there has been no talk of any overflow from gold, no flooding of the world with gold, but the flooding of the world with silver. The talk has all been directed to silver.

Mr. Atkinson says in reply to the question as to what he had seen at the Centennial in Philadelphia:

A very curious mass of silver, thick in the center and thin at the edge, as if it had been cast in an earthen pan. It was afterward explained to me how it was obtained: that there were cliffs containing veins of metals, against which piles of combustible materials were placed and set on fire, and the production was collected in what might be called an earthen pan, and this was alleged to be a rough production by this process. I at once inferred in relation to silver production that statistics might be fallacious.

This is the statement of a distinguished statistician, which has been published all over the world, of mountains of silver and the silver so soft that a pile of combustible material set up against the side of it and set on fire causes it to pour down in a stream.

Mr. President, I have thus traced, in as consecutive chronological order as possible the facts and figures in regard to the fabulous, mythical exaggerations of the probable production of gold and silver in the United States, in such amounts as to literally flood, deluge the world and seriously impair the currency value of these metals, especially of gold; and in regard to the representations and efforts of Senator SHERMAN, Ruggles, and other officials and representatives of our Government, made to secure the single gold standard in this country, and their bold proposal to the nations of the world to debase and reduce our gold dollar 3½ cents in value because of the excessive production of gold and its depreciation; and then in regard to the actions and legislation of European governments changing their coinage and their discrimination in favor of gold and against silver, in order that we might correctly see the producing causes and the resulting effects.

Beyond question in my mind, the statements and actions of the representatives of our country, which I have shown, caused, forced the discriminating legislation of European nations in favor of gold and against silver, and all combined have caused the change in the ratio of gold to silver.

The actions and legislation which I have stated, abandoning the single silver standard and adopting the single gold standard, and abandoning the double standard by adopting the single gold standard, and by stopping the coinage of full legal-tender silver and continuing the unlimited coinage of gold with full tender, have necessarily and unavoidably caused an enhanced demand for gold and thrown upon the markets of the world an enhanced supply of silver, and very largely decreased the demand for silver, and have broken the connecting link forged and maintained by law for so many years previously at a fixed ratio with very slight changes, and have stricken down silver as a money metal of the world and debased it from money to a mere commodity, a mere metal, like nickel and copper, in the markets, and consequently, when measured by the full legal-tender gold metal, silver has fallen in value.

In further support of my propositions I will quote from the final report of the royal commission of Great Britain—appointed in 1886 to inquire into the recent changes in the relative values of the precious metals—made in 1888. This commission examined fully into all the facts, and in their unanimous report say:

189. Looking then to the vast changes which occurred prior to 1873 in the relative production of the two metals without any corresponding disturbance in their market value, it appears to us difficult to resist the conclusion that some influence was then at work tending to steady the price of silver and to keep the ratio which it bore to gold approximately stable.

190. There is another fact to which we have already drawn attention, pointing decidedly in the same direction. Prior to 1873 the fluctuations in the price of silver were gradual in their character and ranged within narrow limits.

192. * * * Now undoubtedly the date which forms the dividing line between an epoch of approximate affinity in the relative value of gold and silver and one of marked instability is the year when the bimetallic system which had previously been in force in the Latin Union ceased to be in full operation; and we are irresistibly led to the conclusion that the operation of that system, established as it was in countries the population and commerce of which were considerable, exerted a material influence upon the relative value of the two metals. So long as that system was in force we think that, notwithstanding the changes in the production and use of the precious metals, it kept the market price of silver approximately steady at the ratio fixed by law between them, namely, 15½ to 1.

193. Nor does it appear to us *a priori* unreasonable to suppose that the existence in the Latin Union of a bimetallic system with a ratio of 15½ to 1, fixed between the two metals should have been capable of keeping the market price of silver steady at approximately that ratio.

The view that it could only affect the market price to the extent to which there was a demand for it for currency purposes in the Latin Union, or to which it was actually taken to the mints of those countries, is, we think, fallacious.

The fact that the owner of silver could, in the last resort, take it to those mints and have it converted into coin, which would purchase commodities at the ratio of 15½ of silver to 1 of gold, would, in our opinion, be likely to affect the price of silver in the markets generally, whoever the purchaser and for whatever country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio, and would tend to keep the market steady at about that point.

* * * * * * *

198. To sum up our conclusions on this part of the case, we are of opinion that the true explanation of the phenomena which we are directed to investigate is to be found in a combination of causes, and can not be attributed to any one cause alone. The action of the Latin Union in 1873 broke the link between silver and gold, which had kept the price of the former, as measured by the latter, constant at about the legal ratio; and when this link was broken the silver market was open to the influence of all the factors which go to affect the price of a commodity. These factors happen since 1873 to have operated in the direction of a fall in the gold price of that metal, and the frequent fluctuations in its value are accounted for by the fact that the market has become fully sensitive to the other influences, to which we have called attention above.

Remember, Mr. President, that these are the conclusions, after a thorough investigation, of gold-monometallist Englishmen. Suppose, now, that all this discriminating legislation had been against gold and in favor of silver, where would gold be to-day compared with silver? It would be much less valuable, measured by silver, than silver is to-day measured by gold.

Can any sane man doubt that, if we had agreed to the bimetallic system of the Latin Union in 1867, as we were invited to do, that the market value of silver throughout the world would be to-day equal to gold at the ratio of 15½ to 1, or that the European nations would not have adopted the discriminating legislation in favor of gold and against silver, which I have shown.

Certainly they would not. Can any sane man, can even the Senator from Ohio, doubt to-day that his own actions and representations, coupled with the exaggerated statements and misrepresentations of Mr. Ruggles and our own Government officials as to the enormous yield of gold from our auriferous regions and their refusal to enter the Latin Union for bimetallism, and their demand for the single gold standard—the American idea—have caused the European nations to enact the discriminating legislation against silver and the depreciation in the relative value of silver as a metal measured by gold as money, and have practically made international bimetallism now an impossibility?

In my judgment there can be no question of it. I think I have conclusively proved the propositions I asserted. But "to make assurance doubly sure" and to remove any lingering doubt in any man's mind we will trace the record further.

As soon as the discriminating legislation referred to had been secured in Europe and the United States enthroning gold, the idol, and demonetizing and degrading silver to the condition of a mere commodity, the necessary inevitable result, the depreciation of silver as a metal, a commodity measured by gold as money followed.

Then our bimetallist friends insisted upon international agreements. Oh, yes, after international agreements were made impossible, then the opponents of silver, whenever any legislative effort has been made for its rehabilitation, have interposed some project for international bimetallism. When the Bland bill of November, 1877, for the free and unlimited coinage of silver was passed by the Democratic House of Representatives and came to the Senate, the Senator from Iowa [Mr. ALLISON] insisted upon limiting the coinage and inviting the governments of Europe to an international monetary conference at Paris, to be held in August, 1878.

It was doubtless hoped by him and those who agreed with him that European governments might agree to some bimetallic system. I do not intend to cast any reflection upon the honesty and sincerity of any one who then held or who may now hold to the possibility of such a chimera or delusion. They were then, as now, mistaken in my judgment, and the very measure of limiting the coinage instead of unlimited coinage was a hindrance and an obstacle to the possibility of such a project.

Messrs. Fenton, Groesbeck, and Walker were our delegates, with Mr. Horton as secretary. The principal nations of Europe, except Germany, were represented. Germany declined to send any delegate.

At the first meeting on August 10, 1878, Dr. Broch, of Sweden and Norway, laid before the conference certain tables, from which I read, on page 11:

Mr. SHERMAN, as Senator of the United States, proposed as an international coin a piece of gold of 125½ troy grains nine-tenths fine; it will weigh 8.135868 grams, and will contain 7.322281 grams of fine gold.

It will be in fact the English sovereign recoined at the fineness of nine-tenths; it will only differ from it by one three-hundredths of an English penny.

Mr. SHERMAN proposes to accept it as $5, although, in comparison with the American eagle of $10, it is only worth $4.8065.

This showing that they had before them all the documents which we have published in regard to coinage.

At the second meeting this same Dr. Broch laid before the conference the views of the delegates of Norway, Denmark, and Sweden, that they could enter into no agreement which would be binding.

Mr. Groesbeck, as our representative, on page 20, addressing the conference, said:

Mr. Groesbeck then directed attention to an error, a prejudice, which it appeared had found its way to many minds. It was said that the United States had taken the initiative in the conference because they were a silver-producing country, and that they had as a state peculiar interest in the monetary question. This was not correct. The United States as a state had no interest in the working either of silver or of gold mines.

Now you see the effect of the falsehood stated in the report of the Commissioner of the General Land Office and the Secretary of the Interior about these public mines and the levying of a tax upon them, which would yield dividends enough at 8 per cent to pay the interest on the national debt, thus connecting the whole matter link by link. All these things were known to them.

And besides, were the United States, he asked, as great producers of silver as had been represented? Here was another error which he also desired to rectify. In the last quarter of a century the yield of gold mines in the United States had been four times as great as that of the silver mines. The yield of the gold mines had, it was true, decreased, and that of the silver mines increased in enormous proportions. But it was well that it should be understood that in the great Comstock lode, which was the most productive of all, such a depth had now been reached that the time was near when the working would have to be suspended, unless it should be extremely remunerative.

* * * * * * *

The remonetization of silver is therefore in no sense an enterprise undertaken by the United States selfishly with a view to private profit; nor is it a new undertaking. They have been in the use of the two metals from the time the Government was organized. It is no new system which they propose to establish; it is the old system, that under which they have long lived and prospered, to which they are returning. From 1792 to the day when, by a sort of inadvertence, in 1873, the silver standard was suppressed not a merchant, not a banker, not a manufacturer, not an establishment nor an interest of any kind could be cited as having raised any objection to the simultaneous use of the two metals. Bimetallism is therefore in the United States not only a tradition of the law, but has entered deeply into the habits of the people.

Here was another error which he also desired to rectify. Why were these errors there? Why did not Mr. Groesbeck in a manly way tell them, "Yes, our representatives made misrepresentations when they came here in 1853, 1865, and 1867, and represented to you and to the nations of the world that we were about to produce from $200,000,000 to $400,000,000 of the precious metals and would flood the world with them; they have made untruthful statements, they were mistaken"? Why did he not do that? These misrepresentations and unfounded statements have been thrown in our teeth in every monetary conference that has been held.

But here is something amusing. Mr. Groesbeck said:

In 1873, in a law which did not very accurately carry out its purpose, silver was made to disappear through inadvertence, rather than intentionally, by an omission to say anything about it.

That is a very elegant description of the crime of 1873! But did they swallow that explanation? Was it satisfactory? We shall see. I quote now from Mr. Feer-Herzog, of Switzerland. He remarked that—

long before the law of 1873 silver had disappeared from circulation in the United States. The actual circulation consisted of gold and paper money.

Gold and paper in 1873!

During the long period of time of which Mr. Groesback spoke, from 1792 to 1873, there had only been coined about 8,000,000 silver dollars—

How much like the Senator from Ohio [Mr. SHERMAN] and the Senator from Vermont [Mr. MORRILL] that sounds! They are the same things that we have been hearing ever since 1878, thrown back in our faces. Mr. Feer-Herzog continued:

while in the three or four months that had succeeded the passage of the Bland bill an equal amount of these dollars had been coined.

As to what Mr. Groesbeck had said of the "inadvertence" in consequence of which the law of 1873 had been passed, and of the surprise which the effects of this law were supposed to have provoked in consequence, Mr. Feer-Herzog laid upon the table documents relating to the preliminary preparation of that law—documents published by the Government of the United States. It appeared, he said, from these documents, that it was not by a mere accidental oversight, but voluntarily and with reflection, that the suppression of the silver standard was determined upon. It was expressly stated that gold was to be in the future the sole monetary standard of the United States, and that silver should cease to be a standard. (Exhibit D, second session.)

It is, therefore, said Mr. Feer-Herzog, difficult to admit that there was any inadvertence.

No, no. There was not any inadvertence upon the part of Senator SHERMAN and probably two or three in the Senate—not more than that—and I do not believe there were three who understood exactly what was in that bill of 1873.

Now, as I said in regard to the views of Senator ALLISON, insisting upon the limit of coinage and with limited coinage operating against the possibility of bimetallism, I quote from the remarks of Mr. Say, president of this monetary conference:

Mr. Say insisted upon the question which he had stated at the opening of the conference, namely, why did not the United States in restoring the double standard permit the unlimited coinage of silver as well as that of gold?

Why did it not? Continuing, he said:

It has been said by the Hon. Mr. Groesbeck that the restriction of the coinage of silver by the Latin Union had supplied a motive for the restriction in the United States, but this view did not seem to be well founded. It was by an amendment of the law that a limit was fixed to the coinage of silver dollars, and Mr. Say felt constrained to believe that this amendment was a mode of agreement, a compromise by means of which a majority could be obtained. The influence of the Latin Union seemed to have counted for so little in the resolution adopted by Congress on this occasion that it does not appear that there was, even for a moment, any question of conforming the American system to that of the Latin Union by the adoption of the relation of 1 to 15½.

Mr. Feer-Herzog supported the observations of the president, by calling attention to the fact that the bill in its original form permitted the coinage of silver without limit.

I read from the reply of Mr. Horton:

Mr. Horton, in reply to the points raised by the president of the conference, called attention to the fact that the majority report of the commission appointed by Congress in 1876 to investigate the silver question had recommended the adoption by the United States of the ratio of 1 to 15½ because it was the ratio of the Latin Union. The bill known as the Bland bill had been proposed in Congress in the summer of 1876. Between that time and the passage of the law in pursuance of which the conference met, the whole question had been thoroughly discussed in the United States in all its phases. In this discussion the situation of the Latin Union had not been lost sight of, but had been made the subject of special attention.

Mr. President, what was the attitude there of foreign nations?

The delegates of the European states represented in the conference desire to express their sincere thanks to the Government of the United States for having procured an international exchange of opinion upon a subject of so much importance as the monetary question.

Having maturely considered the proposals of the representatives of the United States, they recognize:

1. That it is necessary to maintain in the world the monetary functions of silver as well as those of gold, but that the selection for use of one or the other of the two metals, or of both simultaneously, should be governed by the special position of each state or group of states.

2. That the question of the restriction of the coinage of silver should equally be left to the discretion of each state or group of states, according to the particular circumstances in which they may find themselves placed; and the more so, in that the disturbance produced during the recent years in the silver market has variously affected the monetary situation of the several countries.

3. That the differences of opinion which have appeared and the fact that even some of the states which have the double standard find it impossible to enter into a mutual engagement with regard to the free coinage of silver, exclude the discussion of the adoption of a common ratio between the two metals.

After the bimetallic union had been formed and we had been earnestly invited to become a member of it and had refused, no wonder then after the European nations had, each for itself, adopted its own standard, that they have rejected all overtures made by us.

Our commissioners submitted their report, but I will only read a few lines from it:

The states which had, in the past, performed this grand service to the world appeared in the conference of 1878 with a divided opinion; and it is, we think, to the delicate relations, political and financial, of the Latin Union, that the failure of the conference to adopt any positive measures is primarily to be referred.

Switzerland appeared as the uncompromising advocate of gold monometallism for Europe.

The delegation from Belgium also was unfavorable.

* * * * * * *

France, the leading state of the Union, declared through her finance minister, the president of the conference, that, in suspending the coinage of silver, she did not incline to the single gold standard, but, on the contrary, she occupied a position in which she might await the favorable moment to reënter upon the system of the double standard.

* * * * * * *

The United States appeared at the conference at a disadvantage by reason of the belief, quite commonly entertained in Europe, that the action of Congress had been mainly determined by the consideration that the United States are largely producers of silver. This opinion exhibited not a little vitality, and your commissioners found it necessary to combat it. They showed that not only has the Government of the United States no royalty on the production of the mines of the precious metals, but that, through the absence of any accumulated stock, it has in fact far less of a special interest in the question under consideration than many or even most of the states represented in the conference; that the effect of a given decline in silver had been, and would continue to be, a more serious loss to the accumulated wealth of France, Belgium, Holland, and especially Great Britain, through its Indian dominions, than to the United States; that as a branch of industry the production of silver is but one of many occupations to which our available labor and capital have hitherto been inadequate; and that even as a debtor, the United States, a country of vast undeveloped resources, could better bear the weight which would be added to its debts by a diminution of the money supply of the world, than could other states with less recuperative power and a narrower margin for future growth.

Your commissioners have reason to think that these views, during the course of the conference, prevailed over the opinion referred to respecting the motives which had actuated the United States in the recent legislation respecting silver. They believe that the European delegates came to fully recognize the preponderating motive of that legislation as springing from a general interest in an undiminished money supply, and not from the wish to support a particular branch of American industry.

The record of that entire conference was that the nations refused to agree to international bimetallism. How could you have expected them to agree to it?

But in 1869, after the monetary conference of 1867, England and France made a little effort at international bimetallism. France appealed to England, as the United States had rejected her overtures, and was willing to join England in abandoning the silver standard, as the United States had refused to recognize bimetallism. But the distinguished bimetallist of the Senate, Mr. SHERMAN, had something to do with this monetary conference of 1878. He was then Secretary of the Treasury, and wrote a letter to Mr. Groesbeck, dated July 15, 1878. A letter, you will remember, turned up from him, addressed to the Paris Monetary Conference, which destroyed the possibility of international bimetallism at that convention. He says in this letter:

During the monetary conference in Paris, when silver in our country was excluded from circulation by being undervalued, I was strongly in favor of the single standard of gold, and wrote a letter, which you will find in the proceedings of that conference, stating briefly my view. At that time the wisest among us did not anticipate the sudden fall of silver or the rise of gold that has occurred. This uncertainty of the relation between the two metals is one of the chief arguments in favor of a monometallic system, but other arguments, showing the dangerous effect upon industry by dropping one of the precious metals from the standard of value, outweigh in my mind all theoretical objections to the bimetallic system. I am thoroughly convinced that if it were possible for the leading commercial nations to fix by agreement an arbitrary relation between silver and gold, even though the market value might vary somewhat from time to time, it would be a measure of the greatest good to all nations. My earnest desire is that you may succeed in doing this.

No one anticipated, said he, that there would be any fall in the price of silver, or any rise in the price of gold. Why? Because his financial views are based upon the idea that law had nothing to do with the values of the two metals, gold and silver. That has been the theory. It is the theory of many that law does not give to gold coin a value as money over and above its metallic value. Senator SHERMAN in his wisdom then proposed that the United States and other nations should come together and agree to demonetize silver, and it would not affect the market value of silver; that demonetizing silver and throwing all the demand for money upon gold would not increase the purchasing power of gold or cause a rise in the value of gold.

The various delegates to this international convention declared that they were not ready to abandon the systems which they then had. That looks to me like a statement which ought to have been sufficient to satisfy us that there was no earthly chance of international bimetallism, but it was not.

In 1881, under a provision in the appropriation law for the sundry civil expenses of the Government, approved March 3, 1881, the President was authorized to appoint, and did appoint, "three commissioners to represent the United States at a conference to be called to adopt a common ratio between gold and silver for the purpose of establishing internationally the use of bimetallic money and securing fixity of relative value between those two metals," namely, Hon. William M. Evarts, Hon. Timothy O. Howe, and Hon. Allen G. Thurman, with Hon. Dana Horton as secretary. This conference met at Paris, April 19, 1881.

I shall not consume the time of the Senate in reading all these extracts. I will simply refer to them in the proceedings of the International Monetary Conference of 1881.

The first is the declaration of Germany on page 29. I read this to show that those governments peremptorily refused to change their standards and said they were satisfied with them, and that they simply met us out of politeness through our invitation. That was practically the whole thing.

I read from pages 28 and 29 in regard to Germany; from page 31 in regard to England; page 31 in regard to the British Empire; page 32 in regard to Denmark; from page 32 in regard to Portugal; from page 33 in regard to Russia; from page 34 in regard to Greece; from page 35 in regard to Denmark, Norway, and Sweden; from pages 36 and 39 from Mr. Cernuschi, and France from pages 38 and 39:

DECLARATION OF THE GERMAN DELEGATES.

It is generally agreed to attribute this fall less to the sales of silver made by Germany than to the measure adopted by our Government of taking from silver its quality of legal tender, an action which led the states of the Latin Union to put a stop to their coinage of silver.

It can not be denied that this latter measure, by doing away with the compensating effect which, until then, had maintained within narrow limits the oscillations in the price of silver, removed all obstacles to a progressive and limitless fall: it is, on the other hand, but just to admit that the fear of finding themselves compelled to receive a half milliard of marks of German silver, which could not fail to depreciate in a very considerable degree their own circulation, had no little influence in the decision taken by the Latin Union.

The fall of silver would, nevertheless, not have reached the point it did if, at the same time, the production of that metal had not considerably augmented in America, while the demand in Asia was diminishing.

In view of these combined circumstances, the Imperial Government, in the month of May, 1879, resolved to suspend its sales of silver, and they have not since been resumed. This action, by giving firmness to the metal market, tended to facilitate the initiative of those powers which were interested in the rehabilitation of silver. It also had the effect of diminishing the demand for gold, a fact the more important in that the decreasing production of the latter metal, in the face of a constantly growing demand, had, within the last few years, caused a certain degree of tension in the market.

We recognize, without reserve, that a rehabilitation of silver is to be desired, and that it might be attained by the reëstablishment of the free coinage of silver in a certain number of the most populous states represented at this conference, if these states, to this end, should adopt as a basis a fixed relation between the value of gold and that of silver. Nevertheless, Germany, whose monetary reform is already so far advanced, and whose general monetary situation does not seem to call for a change of system so vast in scope, does not find herself in a position, so far as she is concerned, to concede the free coinage of silver.

Her delegates are, therefore, not able to subscribe to a proposition looking to such action.

The Imperial Government is, on the other hand, entirely disposed to do its best to second the efforts of other powers which might wish to unite, with a view to the rehabilitation of silver by means of the free coinage of this metal. In order to reach this end, and to guarantee these powers against the afflux of the German silver, which they seem to fear, the Imperial Government would voluntarily impose upon itself the following restrictions:

During a period of some years, it would abstain from all sales of silver, and, during another period of a certain duration, it would pledge itself to sell annually only a limited quantity, so small in amount that the general market would not be glutted thereby.

The duration of these periods, and the quantity of silver to be sold yearly during the second period, would form the subject of ulterior negotiations. Such an arrangement would efficiently protect the mints of the bimetallic states against the unlimited outflow of German thalers drawn from the national fund. Private individuals or the Imperial Bank (which is a private bank under special control of the Government), would not be able, on the other hand, to cause thalers to flow to the mints of the bimetallic union, except in the case of the balance of trade being against Germany, or unless the relation of 1 to 15½, established by the bimetallic union, should undergo a considerable modification in favor of siver. This last contingency appears, however, but slightly probable. (Pages 28, 29.)

DECLARATIONS OF THE DELEGATE OF GREAT BRITAIN.

Now, gentlemen, the monetary system of the United Kingdom since 1816; that is to say, for more than sixty years, has rested on gold as a single standard, and this system has satisfied all the needs of the country without giving rise to those disadvantages which have shown themselves elsewhere, and under other monetary regulations; and, for these reasons, it has been accepted by the governments of all parties and by the nation. The Government of Her Majesty could not, therefore, take part in a conference as supporting the principle of the double standard, and its answer to the invitation of France and the United States necessarily set forth the reasons which prevented it from taking part in the reunion which had been proposed. (Page 31.)

DECLARATION OF THE DELEGATES OF BRITISH INDIA—READ BY LORD REAY.

Mr. President, and gentlemen, the government of British India, in sending delegates to the conference, is not to be regarded as having, by this fact, admitted the adoption of the principle of bimetallism in the British Indies; and in order that it may be free from responsibility for the conclusions which might be reached by the conference, its delegates are not authorized to take part in the votes of that body.

Although the secretary of state, as well as the council of British India, do not believe it possible to nourish the hope, in the present circumstances, of a radical reform of the monetary system of India, they are ready to take into consideration such measures as might be proposed for introduction into India with the object of restoring the value of silver.

I have no need to assure your excellency, and you, gentlemen, that the government of India will follow with the greatest interest your deliberations and your resolutions, which may exert so powerful an influence upon the destinies of the empire of British India

DECLARATION OF THE DELEGATE OF DENMARK.

As the Danish Government has no intention of abandoning the single gold standard introduced into the country a few years ago, I have received instructions on the part of my Government to abstain from all discussion of the manner (*quo modo*) by which the bimetallic system could be regulated.

DECLARATION OF THE DELEGATE OF PORTUGAL.

Mr. President, and gentlemen of the conference, the Portuguese Government, in accepting the cordial invitation of the Governments of France and of the United States of America, represented at this conference, desired, while fulfilling a duty of international courtesy, to give to these two governments a proof, in all respects deserved, of consideration and deference; but it frankly stated to them that the Portuguese monetary system now in force would not allow of its entry into the bimetallic union now contemplated. (Page 32.)

But, at the same time, the Russian Government reserves to itself entirely its right of opinion upon this whole matter, and in nothing renounces its liberty of action by reason of any resolutions of the conference. (Page 33.)

DECLARATION OF THE DELEGATE OF GREECE.

The delegate of Greece, in presence of the declarations made by the honorable delegates of England, of Russia, of Portugal, etc., considers it his duty also to declare that, in his capacity of representative of a state which has adopted monometallism, he would not be able to join in any measure which might lead to a change in this system. He will be most happy to take part in the labors of the conference, and he will, while reserving to it full liberty of action, most willingly repo t to his Government upon any other question which may be proposed and discussed. (Page 34.)

DECLARATION OF THE DELEGATE OF NORWAY.

You are aware, gentlemen, that the Scandinavian countries have a monetary union based upon the single standard of gold; my government reserves all its rights, but has given me entire freedom to take part in the discussions, saving only my obligation to report to it finally. (Page 35.)

DECLARATION OF FRANCE.

Mr. Cernuschi, delegate of France, desired, in the first place, to convey to the conference the impression which had been made upon him by the declarations just read, notably those of the honorable delegates of Germany and of Great Britain. The conference could not fail to note the very considerable importance of these declarations.

Upon what condition, in reality, did the success of the work depend upon which the assembly was entering to-day? Upon the concord of the four great metallic powers of the globe, France, the United States, Germany, and Great Britain. The understanding between France and the United States was already an accomplished fact, of which the meeting of the present conference, called as it had been by the two Republics, might be considered the official confirmation. The success of the conference, and the fate of bimetallism, then only depended upon Germany and England. If [continued Mr. Cernuschi] these two join France and the United States, bimetallism becomes the monetary law of the whole world; if one of them should join, it would still be possible; if both should refuse their coöperation, it would be condemned to remain impracticable.

Now, what is the purport of the declarations which have just been read to the conference? It is, in the first place, that the concurrence of Great Britain is, for the time being, refused. (Pages 36, 37.)

Germany was the first to go into the experiment of gold monometallism, at a time when that monetary system was the object of a universal infatuation, amounting almost to a craze. In 1869, the chancellor of the exchequer, Mr. Lowe, was able to declare in full Parliament, on the occasion of the propositions for monetary unification made by France, that he would never treat with a country which retained bimetallism; but he expressed himself as disposed to reduce by one grain the weight of the pound sterling, in order to bring it nearer to the international piece of 25 francs, but only upon the absolute condition that France should give up the coinage of silver; and he was able to add, without being contradicted, that the French Government was inclined to subscribe to such an arrangement. At the same time, on this side of the channel, a vast monetary investigation was being carried on with éclat before the superior council of agriculture and commerce, the conclusions of which examination were favorable to the adoption of gold monometallism. An international conference, called upon the occasion of the Universal Exhibition of 1867, had already pronounced in favor of the same views; and it may be said that everything seemed to presage the early triumph of monometallism.

Immediately following upon these significant facts came Germany's proceeding in the reform of her monetary system; and it was natural enough that she took the course that seemed open to her. She did not wish by becoming a bimetallic power to run the risk of being used as a stepping-stone by the other states, which were nearly all moving towards monometallism; she did not wish to aid her neighbors to adopt gold monometallism, so that they might be able thereafter to use it against herself. Such conduct, save the error upon which it was based, seemed rational enough, but it is none the less certain that if in 1871 Germany had not felt this fear, she would have preferred bimetallism, which she acknowledges to-day to be logical and legitimate from a scientific point of view. She would thus have saved 96,000,000 marks, which the other States have gained at her expense.

In the present condition of affairs, what is the proper thing to do? We must, so to speak, blot out from history these last ten years, and return to the *status quo* which obtained before the monetary war; in a word, we must liquidate the disastrous experiment attempted by Germany.

I call special attention to Mr. Cernuschi, delegate for France, who makes the statement I have read:

Germany was the first to go into the experiment of gold monometallism at a time when that monetary system was the object of a universal infatuation amounting to almost a craze.

Why? Because of the wonderful fairy tales and unfounded exaggerations and representations of the officers and representatives of the United States in Europe that we had an auriferous and argentiferous region extending from Mexico clear up to Alaska, a region which was mountainous and filled with the precious metals which would yield annually from $200,000,000 to $400,000,000; and that the world was to be flooded. They became wild. Europe had seen the deluge that came from California and Australia, and here was another which was to be fourfold that which came from California and Australia, more gold than they ever produced annually, to continue for all time to come. These were the representations. As Germany had been scared in 1857 into establishing a single silver standard because of the surplus of gold, no wonder she was made to change from that single silver standard to a single gold standard in 1871-3 by reason of these misrepresentations and exaggerations.

We see now the effect of the misstatements and misrepresentations of Mr. Ruggles and Senator SHERMAN. I now quote from that part relating to India, on pages 266 and 267:

As to India, the great wish of the financial authorities in that country has been, if possible, to have a common monetary system with England.

Silver being impossible, on account of the English system, they must choose between bimetallism or gold, and although for the present the latter solution would be too difficult, it is certain that if the depreciation of silver continues, and if by reason of the discovery of fresh deposits of gold, or from some other cause, the opportunity should offer itself, we should only be too ready to seize it, and to return to the proposals of the commission which sat at Calcutta in 1868, and to enter, though much against our wish, into the struggle which is about to commence between the nations of the earth for the sole metal which will be left to us as the solid basis of an international currency.

Then the effects of the representations of Senator SHERMAN and Mr. Ruggles were disclosed in the remarks made by Mr. Horton, on page 305. What does he say?

The fact was thus recalled to me that a great deal had been written and said in various quarters about the United States, and about the reasons which had led my country to interest itself in the silver question, and that the press had largely reproduced these observations.

I can not say that it surprises me to observe a certain confusion of ideas with reference to the monetary policy of my country. This is the fourth time that I have come to Europe since my entry, in 1876, into monetary controversy as an apostle or advocate, in my way, of a bimetallic monetary union, and each time I have been able to recognize the same phenomenon: it is all very natural; the New World is a long way off.

And exaggerations, as a matter of course, are firmly established in the mind.

Mr. President, in this conference every one of the nations refused. They attended out of deference to the United States, and it would seem that that was sufficient to settle forever the fact that we could not have an international agreement upon that question.

I also quote from Mr. Evarts's speech, on pages 322 and 323:

Mr. Evarts, chief delegate of the United States, then addressed the conference (in English) as follows:

Mr. President and Gentlemen of the Conference, the first disturbance in what was a satisfactory condition in the working of the money market of the world, become so by either a fortuitous or a circumspect consent which had obtained between the nations theretofore; the first disturbance in that condition of things grew out of the debates, and came as a sequel of a conference that really had no function or duty in the matter which we now discuss. The conference of 1867, meeting for and undertaking to treat that important consideration of convenience and utility, the unification of the coins used in the computations and transactions of the world, naturally, under a scientific, a mathematical, a symmetrical consideration of the subject, felt as if there were but one metal money in the world, it would be easier to have a universal system of coinage. Bent, with the zeal of their work, upon accomplishing that secondary result, and finding that the reduplicated impediments grew out, both of the use of the two metals, and of the great diversity of coinage in the two, they thought that the way to get at a unity

of coinage was to have but one metal in the service of the world for its money. This was a clear subordination of the end to the means; this was a sacrifice of money that could not be spared in its volume and in its force, in order that the symmetry of the mintage might be more conveniently attained. This was in the nature of a sacrifice of the great and manifold transactions of an open commerce to the convenience and the simplicity of the bookkeeping which records it.

Unluckily, this scientific appreciation fell upon two great countries under circumstances which hid, perhaps, from their eyes the mischiefs, and made of less consideration the responsibilities of an effort toward the demonetization of silver. Germany, interested in its own unification, the great political transaction of our age, found political reasons why the unity of money in Germany was of great importance to the unity of society and of the State. Then this unhappy idea that, as the diversity was most in the silver, and the habits, antagonisms, and preferences of the people were most involved with the silver, if you would unify the money by having only the gold, the empire with its golden currency would easily master the suppression of the diversities of the inferior coinage. In the United States these ideas of the conference of 1867 reached us when we were using neither silver nor gold, and when the public mind was inattentive to the consideration of so intimate, so comprehensive, so universal an influence upon all the interests of a State as a change in their money might exert. In the presence, then, of the fact that neither silver nor gold was the practical and present money in our daily use, the money in which we, to the common apprehension, had to accommodate our relations to the other nations of the world, the movement took place by the act of 1873, a coinage act, as I understand it to have been; which, under this unlucky incident of regulating coin, has seemed to suppress one-half the intrinsic money of the State.

Now, I want to put the matter still further beyond doubt. I know some of my bimetallic monometallists will not believe anything that occurs unless it comes filtered through certain channels. I shall now read from President Cleveland's message of December 8, 1885, and I know you will believe him. In listening to the same kind of a message in behalf of the repeal of the Bland bill and picturing the consequences flowing from it, it would be very difficult for a practiced ear to distinguish between the parts of that message referring to the Bland act and the present message referring to the Sherman act. You would think they were about the same subject-matter and referring to the same time. The same evil is predicted and the same result. But I am quoting him now in regard to the possibility of an international bimetallic agreement, because that is the *dernier ressort* of the opponents of silver, and has been all the way through this fight.

He had sent delegates over there of his own choice and selection—Mr. Manton Marble, Mr. Edward Atkinson—who saw this pile of silver that had flowed out of the mountain side, and others. Mr. Cleveland says:

It may be said, in brief, as the result of these efforts, that the attitude of the leading powers remains substantially unchanged since the monetary conference of 1881, nor is it to be questioned that the views of these governments are in each instance supported by the weight of public opinion.

The steps thus taken have therefore only more fully demonstrated the uselessness of further attempts at present to arrive at any agreement on the subject with other nations.

Mr. President, I desire to read a little more of what was said in 1885. The President himself now refers to international agreement just as if there were a possibility of such a thing. I quote now from Senate Executive Document No. 29, Forty-ninth Congress, first session, being a message of the President of the United States, transmitting, in response to Senate resolution of December 9, 1885, a report of the Secretary of State, with information relative to the gold and silver coinage of Europe. This is the report of the Secretary of State transmitting letters to Mr. Manton Marble from the Secretary of State to Mr. Phelps, our minister to Great Britain, and to Mr. McLane, our minister to France, etc. They were instructed to make full inquiry. Mr. Phelps says to Mr. Bayard (No. 4, page 5):

From these, as well as other sources, I am satisfied that the British Government will inflexibly—

Now, listen, Mr. President—

From these, as well as other sources, I am satisfied that the British Government will inflexibly adhere to their past and present policy in respect to coinage; that they will not depart from the gold standard now and so long established; that they will not become party to any international arrangement or union for the creation of a bimetallic standard or of a common ratio between gold and silver, for the purpose of making both an unlimited legal tender, nor adopt such double standard or common ratio in Great Britain. On this point both political parties quite concur, and I believe that if either were to attempt to introduce such a departure from the existing money standard it would be driven out of power by the force of public opinion.

Now I quote from McLane to Secretary Bayard:

Referring to my separate dispatch, under date September 11, I have to renew the opinion therein expressed, that while France would gladly receive the intelligence that the United States would adopt the French ratio of 15½ of silver to 1 of gold, no consideration of future consequences, whether for good or evil, could induce her to adopt the American ratio of 16 to 1; still less would she adopt any higher ratio to assimilate the present commercial or market value of silver with the value of gold, nor would she consent at any ratio now to permit an unrestricted or even a limited coinage of silver at her mints, the present opinion and purpose of her Government and people being to maintain, if possible, the two metals at their present ratio of 15½ to 1 in domestic circulation and international exchange.

Now I read from Hon. George H. Pendleton to Mr. Bayard, on page 9:

The adhesion of Germany to an international bimetallic union, such as was proposed by the United States and France in 1881, can scarcely be expected, it seems to me, within any limit of time now to be predicted.

The coöperation of Germany in an international bimetallic union may be sought with fair hopes of success whenever it becomes possible to include in such a union England and Russia, the former of which seems to cleave tenaciously to her gold monometallism, while the latter staggers under the evils of a depreciated and largely fluctuating paper money. The adhesion of England at least is certainly now, and would probably for an indefinite period be, regarded by Germany as a *sine qua non*.

I will read a few more extracts from this document. There was an international monetary conference of the Latin Union held in Paris in 1885 among European nations only, at some exposition there, and Mr. George Walker was delegated by President Cleveland to represent the United States. I wish to read a few lines to show the financial standing of the Administration at that time. Mr. Walker was consul-general there, and this is his observation addressed to the delegates of the Latin monetary union assembled in conference at Paris July 20, 1885:

I am instructed to say to you that the policy of the new American Government, in respect to the continuance of silver coinage, does not differ from that of its predecessors. The newly elected President, Mr. Cleveland, on the 24th of February last, in reply to a letter addressed to him by certain members of the House of Representatives, before his assumption of office, declared his opinions very frankly on the silver question, and showed himself to be in perfect accord with the Presidents who have preceded him, on the essential question now under discussion in the United States—namely, the continuance of silver coinage under the Bland bill. He did not hesitate to avow that it was, in his opinion, the duty of Congress to suspend further coinage.

He declared that a disastrous crisis was close at hand in which gold is likely to disappear from circulation and when we shall be reduced to silver alone; that under the operation of the silver coinage law the flow of gold into the Federal Treasury had been steadily diminished, and that silver and silver certificates had displaced, and were then displacing, gold in the Treasury, and that the sum of gold available for the payment of the gold obligations of the United States, and for the redemption of the circulating notes called "greenbacks," if not already encroached upon, was perilously near such an encroachment.

These being the facts of our present condition, our danger, and our duty to avert the danger seemed to the President to be plain. To maintain and to continue in use the mass of our gold coin is possible by a present suspension of the purchase and coinage of silver, and the President affirmed that he was not aware that by any other method it is possible.

That is a beautiful message to convey to bimetallists in Europe in 1885, that this country was going to destruction, that our gold was being driven out of the country and out of our Treasury, and that we would not have gold enough left to redeem the greenbacks. These dire disasters are repeated as the predictions of our President in 1885, and that there was no difference between his position on the finances and the position of his Republican predecessors. I thought there was some difference. I may have been mistaken.

It does seem to me that these things show beyond any question whatever the impossibility of international bimetallism. Mr. Cleveland's own agents and representatives sent there have demonstrated the fact.

I wish to settle this matter beyond any possibility of doubt. Hon. Edward Atkinson was sent as a representative of this Government by Mr. Bayard in 1887. His report is found in the reports of the United States consuls, October, 1887, volume 24. I will read just enough to give an idea of his views. Remember, this is the same gentleman who had the exaggerated idea in his mind of mountains of silver in Mexico, and how the silver metal could be melted away from it and produced in an open hearth, as it were. Mr. Atkinson's report is dated October 1, 1887. He says:

I have further stated that if the principal commercial and manufacturing states of Europe had no immediate intention of changing from the present status of a limited coinage of silver for subsidiary use, the standard of full legal tender being limited in practice to gold coin only, then it might become the true policy of the United States to take action to maintain the gold dollar as the "unit of value" according to the present statute, and for the Executive to recommend to Congress suitable measures, if any further action is necessary, to maintain permanently the present interchangeable quality or convertibility of our currency into gold coin on demand, whether consisting of notes, silver coin, or silver certificates.

A magnificent representative of bimetallism in the United States, going to Europe as representing President Cleveland's first Administration, and telling them that he wanted to know what they were doing, and if they did not do something it might become necessary for the United States "to maintain the gold dollar as the unit of value according to the present statute, and for the Executive to recommend to Congress suitable measures, if any further recognition is necessary, to maintain permanently the present interchangeable quality or convertibility of our currency into gold coin on demand, whether consisting of notes, silver coin, or silver certificates." This is remarkable language for a delegate of the United States in a foreign country attempting to establish bimetallism. Permit me to say that too often in our efforts for international bimetallism have we been represented in the same way, beginning at the statistical congress in 1863, and the monetary conference of 1865, and so on. But he says:

I have reason to believe that my efforts in this direction may have partly removed the dread of a prospective "avalanche of silver," as it is sometimes called, from the continent of North America, especially from the United States, and that this fear, which has been perhaps the most potent cause of the unwillingness even to consider the question of bimetallism, may be wholly removed by the further investigation as to the relative production of

silver and gold which may ensue. Another dread may also have been removed, to wit, that of a sudden change of policy in the United States leading to the cessation of silver coinage and also to the possible attempt to dispose of a considerable part of the present stock of silver coin.

Oh, yes, he has disabused the mind of that, and yet told them that we would do it. What is his belief? Here is the point that I wish specially to bring out:

1. There is no prospect of any change in the present monetary system of European states which can modify or influence the financial policy of the United States at the present time.

2. There are no indications of any change in the policy of the financial authorities of the several states visited by me which warrant any expectation that the subject of a bimetallic treaty for a common legal tender, coupled with the free coinage of silver, will be seriously considered at the present time by them.

3. There is no indication that the subject of bimetallism has received any intelligent or serious consideration outside of a small circle in each country named, as a probable or possible remedy for the existing causes of alleged depression in trade.

4 There is no considerable politically organized body of influential persons in either country with whom a combination could be made, if such a combination or cooperation were desirable on the part of a similar body in the United States for promoting any definite or practicable measures of legislation to bring about the adoption of the bimetallic theory according to the commonly accepted meaning of that term. The discussion is as yet almost wholly personal, and without concentration of purpose or the presentation of any well-devised measure capable of being acted upon.

Mr. President, it does seem to me that this ought to be sufficient to satisfy anyone that bimetallism by international agreement is an impossibility. It is useless for us to waste time in trying to get foreign nations to agree upon international bimetallism with us.

The quotation I have just read is a graphic, painful, and yet, doubtless, truthful statement of the views and opinions generally prevalent in Europe in regard to the motives and purposes of our Government. Their origin is easily traced, and Mr. Atkinson is in part responsible for their existence.

The financiers, statisticians, and business men of Europe read and believed all the exaggerations, to use a very mild term, in regard to the certain deluge of the world with the precious metals, and the statements made in our efforts to establish the single gold standard and the resulting action and legislation of our own and their own Governments, discriminating in favor of gold and against silver, and then as soon as gold had been enthroned as the only money, the changed hue and cry raised by the gold monometallists in this country as to the excessive production of silver, and then the bitter denunciations poured out against every effort made in this country to restore silver as a money metal and the unfounded statements as to the production of silver and the refusal of our own people to use the silver dollars as money, and very naturally came to entertain the views, opinions, and feelings so forcibly stated by Mr. Atkinson.

It is therefore useless to make any further efforts for any international agreement to restore silver as a money metal to its old equality and par with gold.

But, Mr. President, we were not satisfied with what was done in 1885, 1886, and 1887; and when the Presidential election was to be held in 1892 the sundry civil appropriation law contained a provision for an international monetary conference and the delegates were appointed by President Harrison to meet, I think, in November, 1892. They were Senators ALLISON of Iowa, and JOHN P. JONES of Nevada, and Representative JAMES B. MCCREARY, and Messrs. Henry W. Cannon, E. Benjamin Andrews, and Edwin H. Terrell.

Mr. ALLISON. I think the Senator should state in this connection that the President of the United States had already invited the nations in conference before the clause was inserted in the appropriation act to which he refers.

Mr. COCKRELL. I think that was done in pursuance of a former provision for that object.

Mr. ALLISON. The invitation had already been extended to those governments before the item to which the Senator alludes was inserted in the appropriation act.

Mr. COCKRELL. I understand that, but I say it was in pursuance of some existing provision of law. I hold in my hand the report of the International Monetary Conference at Brussels. I will not consume the time of the Senate in reading it, but at page 50 the delegate of Germany gave his views to show that they did not want to make any change, and at pages 69 and 70 Mr. Rothschild said:

Apart from other considerations, it seems to me impossible to come to an universal arrangement in respect to a general currency question, as no two countries are alike as regards their individual wealth, resources, and expenditure.

Now look at pages 203, 205, and 206, and we will see the position of France:

France, under present circumstances, has no cause to complain of her monetary situation, and she does not complain.

She has attempted at various times, and notably in 1881, to come to an agreement with the United States, and it was thus that the way was paved for the conference of 1881, which was only a continuation of that of 1878.

Then on page 205:

If France and the Latin Union—I believe that for the moment I may speak in its name—should alone open their mints to the free coinage of silver, all the surplus silver of the United States and of Mexico would go to France, to Italy, to Belgium. And where would these countries be able to use it? Nowhere, since in the rest of Europe none wish to admit it as legal tender.

I should never advise such a measure to the government which I have the honor to represent.

If, on the contrary, other European powers, such as England, the German Empire, the Austro-Hungarian Empire, the Scandinavian States, and others, would consent to open their mints to the free coinage of silver, then the aspect of the question would be changed. But have we reached that point?

And then on page 206:

Since the first day we have heard upon this point declarations which were perfectly frank and sincere, declarations for which I, on my part, am grateful to their authors, because it is well to know upon what we may rely. We have heard the minister of Germany and the minister of Austria-Hungary, and then Sir Rivers Wilson declare that neither Germany nor Austria-Hungary nor England had any intention of modifying their monetary systems, with which they declared themselves satisfied. Under these conditions we evidently can not reëstablish free coinage, and I have not the vanity to believe that I should succeed in pursuading the governments of these great countries and their eminent representatives that they are mistaken, that they have taken the wrong road, and that they are in error in remaining attached to monometallism.

I consider, therefore, until some change takes place, that the question of free coinage is decided so far as we are concerned.

On page 361 of this same report is other evidence to the same effect. I will not quote that, nor ask to have it printed, because it is simply the declaration of Mr. Currie as to what England would do, and of Mr. Wilson, both of them saying that England would under no circumstances agree to it. So it does seem to me that each nation, as each individual, must work out its own destiny. International bimetallism in impossible.

Mr. HAWLEY. Will the Senator allow me to ask him a question.

Mr. COCKRELL. Certainly.

Mr. HAWLEY. Do I understand him to claim that the nations generally are opposed to an international agreement?

Mr. COCKRELL. I have not yet found one solitary nation, in all the international conferences, that was willing to give up its monetary system for any other one that was proposed.

Mr. HAWLEY. Let me call the Senator's attention to the somewhat famous debate in the House of Commons last March, in which several members said substantially that Great Britain alone is in the way of an international agreement. If the Senator will look at the document from which he has just been reading he will find in one of what I may call the minority reports the statement of Mr. Leonard Courtney, as follows:

I am myself drawn to the conclusion that the home Government is the greatest obstacle, perhaps the only substantial obstacle, to the establishment of an international agreement for the use of silver as money, which, without attempting to restore the position of twenty years since, would relieve India from the anxiety of a further depreciation of its revenue in relation to its liabilities.

I think it is the understanding of the bimetallists of Great Britain that it is only their Government, and perhaps only the existing ministry, that stands in the way.

Mr. COCKRELL. I understand; but you may read quotations from the remarks of this distinguished citizen and all the others and you will find even in the Brussels conference that one of the English delegates differed from the others. But I wish to read what Mr. Edward Atkinson said in regard to those cases:

There is no considerable politically organized body of influential persons in either country with whom a combination could be made, if such a combination or cooperation were desirable on the part of a similar body in the United States for promoting any definite or practicable measures of legislation to bring about the adoption of the bimetallic theory according to the commonly accepted meaning of that term. The discussion is as yet almost wholly personal, and without concentration of purpose or the presentation of any well-devised measure capable of being acted upon.

That is the point I make. You can find distinguished Englishmen, and Germans, and Frenchmen, and others who are advocating bimetallism; and we all know that as England commenced the movement for a gold standard and established it she has determined to maintain it ever since, and that she will not change under any conditions until her Government is overthrown, until the power that rules there is overthrown. It will take a cabinet, it will take a House of Commons entirely changed from the present complexion of all the political parties there. The time may come, and I hope it will, but it will only come by open and free discussion before the people of England. It will not come by any measures of the aristocratic and plutocratic class that control the administration of the Government.

International bimetallism is a mere dream. Look at it a moment. You had just as well seek an international language. International bimetallism was prevented when the language of the world was confused at the Tower of Babel and the people were scattered, forming independent nations, each nation to take care of itself and work out its own destiny. We have been trying to get an international agreement upon weights and measures ever since our Government was organized and yet we have not obtained it.

Mr. President, it is not necessary, it is not essential. Every government establishes its own system. It has its own consti-

tution; it has its own laws; it has its own distinctive features peculiar to its own people; its own traditions, its own ancestral memories and cherished antiquities. They will adhere to them; they will not give them up easily. England will not give up her pound sterling. The people of the United States will not give up their dollar.

Mr. HAWLEY. By the way, Mr. President, the Senator will allow me to observe that it happens to be the old Spanish coin, and we borrowed it from another country. The Senator says there is no international relation between our Government and others in the matter of currency. We founded our dollar upon the Spanish dollar.

Mr. COCKRELL. We were scarcely anybody; a few citizens of other countries residing upon this soil under the dominion of England. As a matter of course we had nothing of our own, separate and distinct from other people. But we were rebellious. We rebelled. We established our rebellion into revolution and patriotism, and we established our Government, and then we established dollars and cents as the money of account, not pounds, shillings, and pence, not francs, but dollars and cents; and we made the silver dollar which was in circulation amongst us a Spanish coined dollar, because we had no mints, we had no coinage, we had no silver produced in this country to coin if we we wanted it, so that we had to take a foreign coin and have it made into our standard dollar. We adopted that, and we have maintained it. Then we were only about three and a half million in population I believe, but we did not consult the King of England, we did not bow the knee to His Majesty, and ask him what kind of a financial system we should establish. We did not bow to France and ask her to coöperate with us in establishing a financial system for our youthful Republic. We had some confidence in our own individuality and some self-reliance, and some determination to maintain our independence and our nationality and our principles and our policies in the face of the world.

Mr. ALLISON. Will the Senator allow me for a moment to call his attention to the fact that we adopted as nearly as we could their system and the ratio which we supposed they maintained between the two metals?

Mr. COCKRELL. That who maintained?

Mr. ALLISON. England and France. We did not adopt the Spanish ratio. We adopted as nearly as we could the ratio which was then supposed to exist in continental Europe and in England.

Mr. COCKRELL. We adopted what was believed to be the weight of the money current in our country, and you will find it on a critical examination made of the Spanish dollar and the number of grains it was supposed to contain, and then we made it to correspond with that.

Mr. ALLISON. That is very true; but when we did that we also adopted a ratio between that and gold which should make both metals, as was supposed, circulate freely in our own country as they were then circulating, but for war, in all Europe.

Mr. COCKRELL. I beg pardon; in 1785 France had established the bimetallic system at the ratio of 15½ to 1. It was in the law. It was not done in 1803. Then, when our Constitution was formed and when we came to the mint question in 1792 we had the record of France before us establishing her standard of 15½ to 1, and we did not establish it.

Mr. ALLISON. If the Senator will allow me a moment, I will state that the ratio adopted in 1785 in France was not then a practical ratio as to coinage.

Mr. COCKRELL. Why not a practical ratio?

Mr. ALLISON. Because very soon after it was adopted they went to the system of paper money and had neither gold nor silver.

Mr. COCKRELL. Oh, they did have gold and silver.

Mr. ALLISON. They did not have it in circulation.

Mr. COCKRELL. I beg pardon; it was the lawful ratio, the legal ratio, I understand.

Mr. ALLISON. I agree with that.

Mr. COCKRELL. And it prescribed it exactly. Now, in our act of 1792 establishing the mint we established a system of 15 to 1. That was not the system of France at that time; it was not the system of England.

Mr. ALLISON. Fifteen and two hundred and eleven one-thousandths, or very near that, was the system.

Mr. COCKRELL. Fifteen and two-tenths was that of England. Ours was not the system of any other nation; and as I understand it was ascertained from the reports that were then made by the officers to whom reference was made, and especially with the Spanish dollars.

Mr. HARRIS. A thousand Spanish milled dollars were taken.

Mr. COCKRELL. A thousand milled dollars were taken and assayed, and from their assay we established our ratio.

But, Mr. President, we must present after a century of existence a wonderful spectacle to foreign nations. Think of it! After we had rejected international bimetallism in 1865–67 and then went on and established our single gold standard, we did not ask other nations to agree with us there. The Senator from Ohio, when he led the gold monometallic hosts of this country, unknown among the masses of the people, unrecognized, and thereby secured the law of February 12, 1873, did not go and consult other countries. He did not even reduce the gold in the gold dollar 3½ cents, as he promised to do in France, in order to make them abandon silver. No, no: but the very moment the friends of silver, the true bimetallists, make an effort to restore silver in this country, then we hear the plea for international conferences and international agreements.

European nations, suspicious and jealous of this great Republic, the greatest and most powerful nation to-day in all the essential elements of an independent nationality, can not believe our efforts to secure international bimetallism to be pure and disinterested and unselfish. They know what we have told them heretofore; they think something is concealed; they look with wonder, admiration, and astonishment at our remarkable career as a young nation, our unparalleled development and progress. They beheld us only a few years ago engaged in the most fearful fratricidal war ever waged on earth. They saw us emerge from that war an indissoluble union of indestructible States, with our financial resources apparently exhausted, with an enormous debt—a debt on August 31, 1865, of $2,845,907,626.56, and wondered how we could ever liquidate it. They have watched our progress more closely than we imagine. They have seen us raise the revenues and pay in discharge of that vast debt the enormous sums of $1,701,590,978.80 of the principal, and $2,370,616,966.70 of the interest, aggregating $4,072,207,945.50 up to August 31, 1893, in principal and interest paid on our national debt.

In addition, they have seen us collect from our revenues $6,973,990,881, paid out in defraying the ordinary expenses of our National Government, making a total expenditure of $11,036,198,837 from August 31, 1865, up to August 31, 1893—an amazing result, never before in the history of the world achieved by any other nation.

The nations of the world stand aghast at our hesitation, our refusal, our timidity to establish independently of them our own monetary system and policy. They can not understand why we are time after time beseeching them to meet in international conferences to agree upon the policy we shall pursue. Out of mere deference to us as a nation they generally accept our invitations and meet with our delegates, and then tell them, and through them tell us and the world, that they each have their own systems and policies and are content and do not desire to change.

Great Britain tells us that her gold monometallism is satisfactory and she does not desire a change. Prussia told us in the conference of 1867 that she was content with her single silver standard adopted in 1857; yet she did not deign to consult us or any other nation when she changed to the single gold standard in 1871 and 1873, nor did Russia, Denmark, Norway and Sweden, Austria-Hungary, or any other European nation.

France in 1867 held out to us the willing hand of a true bimetallic system and we knocked it back in her face by peremptorily refusing to recognize silver and demanding the single gold standard as the American idea, of which great feat of statesmanship the distinguished Senator from Ohio boasted in his report quoted. They met us in friendly conference in 1878, and very politely recalled to us our own exaggerations and statements, and our conduct in the statistical congress of 1863, and the monetary conference of 1867, and reminded our delegates that we had not done what we were urging them to do, that the Bland bill as passed by the House was for the free and unlimited coinage of the standard dollar, and was subsequently changed to a limited coinage measure, and only the minimum coined. They have placed us on the defensive in every convention. They know as well as we do that our representatives deceived and misled them by the unfounded and exaggerated statements of our auriferous and argentiferous productions, made in 1863, and again in 1867, and upon which and under the belief of the truth of which they made the changes in their monetary standards I have shown.

They ever since have viewed, and now view, with suspicion and doubt the real facts we show them from official records, the truth as it is.

Shall we longer plead with them our dependence, our inability to establish and maintain our own national monetary system, such a one as we desire?

Let us take an exact review of the relative conditions existing in the past and at present between silver and gold, in order to determine our line of duty and interest now.

According to the tables published in the report of the Director of the Mint, showing the ratio of silver to gold each year since 1687, we find the ratio in 1687 was 14.94 silver to 1 of gold, or 14.94 to 1; and in 1871 was 15.57 to 1, and that the two greatest divergencies from this ratio were in 1760, when the ratio was 14.14 to

1, and in 1813, when the ratio was 16.25 to 1; but in the next year, 1814, it was 15.04 to 1.

The average ratios during these one hundred and eighty-five years, 1687–1872, was about 15.5 to 1, showing a remarkable steadiness in the relative values. The ratio in 1872 was 15.63 to 1; in 1873, 15.92 to 1; in 1874, 16.17 to 1; in 1875, 16.59 to 1; in 1876, 17.88 to 1, and in 1888, 21.99 to 1, and in 1889, 22.10 to 1; in 1890, 19.76 to 1; in 1891, 20.92 to 1; 1892, 23.72 to 1; 1893, 28.52 to 1.

These ratios are taken from 1687 to 1832 from tables by Dr. Soetbeer from quotations of such prices at Hamburg; and from 1833 to 1878 from Pixley & Abell's tables of quotations in the London market; and since 1878 from the daily telegrams from London to our Mint Bureau.

London for many years has been the great market for the world in fixing the price of silver as a metal by the gold standard.

We see here a remarkable stability in the ratios from 1687 to and including 1872, at or about the average of 15.5 to 1.

We see a wide divergence in their ratios since 1873. What caused this divergence?

I assert that it was not caused by any excessive production of silver over gold throughout the world.

In proof of this I give the following statements of the average percentage in the value of gold to silver in the productions of the world, in the periods of years indicated:

Statement of the production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from table of averages for certain periods compiled by Dr. Adolph Soetbeer. For the years 1886–1892 the production is the annual estimate of the Bureau of the Mint.]

Period.	Total value of gold for the period.	Total coining value of silver for the period.	Percentage of production.			
			By weight.		By value.	
			Gold.	Silver.	Gold.	Silver.
1493–1520	$107,931,000	$54,703,000	11.0	89.0	66.4	33.6
1521–1544	114,205,000	80,986,000	7.4	92.6	55.9	44.1
1545–1560	90,492,000	207,240,000	2.7	97.3	30.4	69.6
1561–1580	90,917,000	248,990,000	2.2	97.8	26.7	73.3
1581–1600	98,095,000	348,254,000	1.7	98.3	22.0	78.0
1601–1620	113,248,000	351,579,000	2.0	98.0	24.4	75.6
1621–1640	110,324,000	327,221,000	2.1	97.9	25.2	74.8
1641–1660	116,571,000	304,525,000	2.3	97.7	27.7	72.3
1661–1680	123,084,000	280,166,000	2.7	97.3	30.5	69.5
1681–1700	143,088,000	284,240,000	3.1	96.9	33.5	66.5
1701–1720	170,403,000	295,629,000	3.5	96.5	36.6	63.4
1721–1740	253,611,000	358,480,000	4.2	95.8	41.4	58.6
1741–1760	327,116,000	443,232,000	4.4	95.6	42.5	57.5
1761–1780	375,211,000	542,698,000	3.1	96.9	33.7	66.3
1781–1800	236,464,000	730,810,000	2.0	98.0	24.4	75.6
1801–1810	118,152,000	371,677,000	1.9	98.1	24.1	75.9
1811–1820	76,063,000	224,786,000	2.1	97.9	25.3	74.7
1821–1830	94,479,000	191,444,000	3.0	97.0	33.0	67.0
1831–1840	134,841,000	247,930,000	3.3	96.7	35.2	64.8
1841–1850	363,928,000	324,400,000	6.6	93.4	52.9	47.1
1851–1855	602,566,000	184,169,000	18.4	81.6	78.3	21.7
1856–1860	670,415,000	188,092,000	18.2	81.8	78.1	21.9
1861–1865	614,944,000	228,861,000	14.4	85.6	72.9	27.1
1866–1870	648,071,000	278,313,000	12.7	87.3	70.0	30.0
1871–1875	677,083,000	409,322,000	8.1	91.9	58.6	41.4
1876–1880	572,931,000	509,256,000	6.6	93.4	53.0	47.0
1881–1885	495,586,000	594,773,000	5.0	95.0	45.5	54.5
1886	105,000,000	120,000,000	5.2	94.8	46.8	53.2
1887	105,302,000	124,306,000	5.0	95.0	45.9	54.1
1888	109,900,000	142,107,000	4.6	95.4	43.6	56.4
1889	118,800,000	162,690,000	4.4	95.6	42.2	57.8
1890	113,150,000	172,215,000	4.0	96.0	39.7	60.3
1891	120,519,000	186,733,000	3.9	96.1	39.2	60.8
1892	130,817,000	196,605,000	4.0	96.0	40.0	60.0
Total	8,204,303,000	9,726,072,000	5.0	95.0	45.8	54.2

The average percentage for the whole period is 45.8 to 54.2.

From the discovery of America in 1492 to this date, four hundred years, of every dollar of the world's aggregate product of both gold and silver, 45.8 cents were gold and 54.2 cents were silver.

The information available for estimates of the world's production of gold and silver prior to 1687 is not considered definite or reliable by Dr. A. Soetbeer, of Germany, now deceased, who in my opinion was the most impartial and accurate of statisticians, and was a single gold standard advocate.

The estimates of the ratios of silver to gold throughout the world prior to 1687 are uncertain and unreliable, as little is known with certainty as to the fineness of the gold or silver in the coins.

From the reports of the Director of the Mint, I have compiled some data.

In the years 1801 to 1810, inclusive, of the world's production of gold and silver, the proportion or percentage of gold to silver was 24.1 dollars or 24.1 cents of gold to 75.9 dollars or cents of silver. Notwithstanding this large difference in the product, there was great stability in the ratios or relative values.

In the ten years, 1852–1861, inclusive, the world produced $1,724,750,000 of gold and silver, of which the gold was $1,314,150,000, or 76.2 per cent, while the silver produced was only $410,600,000, or 23.8 per cent, and yet there was no very great divergence in their ratios or relative values. The cause of this remarkable stability in ratio or value was the fact that the mints of the United States were open to the free and unlimited coinage of silver at 16 to 1. And the mints of France from October 30, 1785, were open to like coinage at the ratio of 15½ to 1.

There was a scare in this period of 1852–1861 in regard to an overflow, a deluge of gold from California and Australia, very similar to the scare since that date in regard first to an overflow, a deluge, of both metals, and then when gold was enthroned as the single standard, as I have shown—then as to an overflow—a deluge of silver—which still exists in the vain imaginations of our gold monometallist bimetallic friends.

Have these doctrinaire prophets, Mr. Ruggles, Senator SHERMAN, and others realized the falsity of their predictions and the true facts as to the production of gold and silver? Please recall their fairy tales of the production from our own mines of from two hundred to four hundred millions annually, so persistently proclaimed in Europe in 1863 to 1868, and then hear the truth as shown by the records.

In the ten years, 1862 to 1871, inclusive, the production of gold and silver in the entire world was only $1,616,200,000, an annual average of only $161,620,000 of both metals. Think of it. Mr. Ruggles and Mr. SHERMAN told them we were going to produce from $200,000,000 to $400,000,000 a year in the United States alone, and yet the world produced in that time only an annual average of $161,620,000 of both metals, gold and silver.

In this period the gold product alone was $1,102,825,000, or 68.24 per cent of the aggregate product of both metals, while the silver product was only $513,375,000, or only 31.76 per cent of the aggregate product.

During the entire period, when these sages and doctrinaire statesmen were enthroning gold and demanding the single gold standard, refusing to agree with the nations of the Latin Union to free and unlimited bimetallic coinage, and practically driving them to join in degrading, depreciating, and demonetizing silver and destroying nearly one-half of the world's money, the world was producing 68.24 dollars of gold to 31.76 dollars of silver.

These facts throw an arc electric light upon the unreliability and the falsity of the judgment, opinions, and predictions of such leaders. If so egregiously mistaken then, may not they be mistaken now, and their prophetic warnings prove a delusion, a snare, a will-o'-the-wisp?

Take the entire period, 1862 to 1892, inclusive, thirty-one years, and the world's product of gold and silver has been $6,284,666,000, an annual average of only $202,731,161.

During this period the gold product has been $3,359,422,000, or 53.45 per cent of the aggregate of both metals, while the silver product has been only $2,925,144,000, or 46.55 per cent of the aggregate.

If every nation had had at the beginning of this period of thirty-one years an adequate supply of gold and silver for all monetary purposes, then this annual average product of both metals, after deducting the demands for such metals for industrial purposes and the loss by wear and tear and abrasion, would have been barely sufficient to maintain the average per capita circulation required by the increase of population and to meet the increasing demands for money in the rapidly expanding commerce of the nations of the earth, domestic and foreign.

What has been the product of gold and silver in the United States? In the twelve years, 1862 to 1873, inclusive, the aggregate product of gold and silver in the United States was $733,000,000, an annual average product of only $61,083,333.33⅓. The gold product was $546,750,000, an annual average of $45,562,500, or 74.60 per cent of the aggregate, while the silver product was only $186,250,000, an annual average of $15,520,833, or only 25.40 per cent of the aggregate—about one-third.

These figures, in juxtaposition with the deliberate, carefully prepared statements of our distinguished representatives and officials, published by them to the nations of the world in 1863 and since, should bring crimson to their cheeks. I do not give them to the Senate as a pattern to imitate, but as an example to deter

The largest yield of gold in any one year in the United States was $65,000,000 in the calendar year 1853. The largest yields since 1862 were $53,500,000 in 1866, $53,225,000 in 1865, and $51,725,000 in 1867, while our annual average yield of gold in the twelve years, 1881–1892, inclusive, was only $32,733,000. These facts seem to me to prove conclusively that the depreciation of silver has not been caused by any excessive production relatively to gold.

The conclusion seems to me irresistible that the depreciation

has been caused almost entirely by the legislation of the various nations discriminating against silver and in favor of gold, closing their mints against the free and unlimited coinage of silver, making it a mere commodity—merchandise, and keeping their mints open to gold, and making gold, in bullion as well as in coin, money with full legal tender, and thereby appreciating and increasing the value of gold.

I can not forbear at this point to prove this beyond a reasonable doubt by the solemn declarations of the senior Senator from Ohio:

I quote from Senator SHERMAN'S speech in the Senate on April 11, 1876. He said:

The enormous effect of this law in Germany—

Referring to the demonetization of silver there—

The enormous effect of this law in Germany, and as a consequence the partial demonetization of silver coins, I suppose is felt by every man, woman and child who buys or sells anything. I suppose there is no act of any parliament that has so wide-reaching effect as this act of the German Parliament. The amount of coin in the world is estimated by Mr. Seyd and other technical writers at $3,200,000,000 silver and $3,500,000,000 in gold. So the effect of the act of Germany, aided no doubt somewhat by the large supply of silver by our mines, has been to reduce the purchasing power of the whole of this enormous sum of thirty-two hundred millions of silver fully 10 per cent. The fall of the silver trade dollar in this country has been from 103 to 91.

This effect extended itself to what is called the Latin League, who feared that German silver would be carried rapidly into Italy, France, and the nations of the league, for coinage purposes, and they interfered at once and stopped the coinage of silver. It also created an impression in India; so that, for the first time for two hundred years, the current flow of silver into China and India was arrested, but only for a short time, however. It is one of the remarkable currents of trade in the history of mankind that with the silver that has been coined in the world the greater part flows in a continuous stream into these Oriental countries; and for three or four months a feeling of alarm was created there lest that which they cherish as the measure of all their values should become valueless to them. It created a partial panic, but that panic has passed, and now the stream goes on; silver flows into India and China and all the Asiatic countries as heretofore.

That was not the worst of it. A struggle for the possession of gold at once arose between all the great nations, because everybody could see that if $3,200,000,000 of silver coin were demonetized and $3,500,000,000 of gold coin made the sole standard it would enormously add to the value of gold, and the Bank of France, the Bank of England, and the Imperial Bank of Germany at once commenced grasping for gold in whatever form. Therefore what we have observed recently is not so much a fall of silver as it is a rise of gold, the inevitable effect of a fear of the demonetization of silver; and now the Bank of France has in its vaults the enormous amount of $300,000,000 of gold in coin and bullion; the Bank of England has $170,000,000, and the Imperial Bank of Germany, has $125,000,000. So in these three depositories there is over $600,000,000 of gold, or nearly one-fifth of the supply of the world.

Then in the same speech the Senator from Ohio said:

The demonetizing of silver tends to add to the value of gold, and though its relative value changes it is more stable compared to gold than any other metal or production.

This was the Senator from Ohio in 1876, who was then apparently perfectly unconscious of having himself done anything to contribute to the action of Germany in the change from a single silver standard to a single gold standard, perfectly unconscious that anybody paid any attention to his refusal there in France as a Senator of the United States and chairman of the Finance Committee, to join Mr. Ruggles in agreeing upon the bimetallic system of the Latin Union in 1867, which was offered to us.

A bird's-eye view of all these actions will only occupy a few moments.

In 1870 the mints of all Europe, except Great Britain, Portugal, and Turkey, were open to the free and unlimited coinage of silver into full legal-tender money, the same as gold, at the ratio of 15½ to 1, and the mints of the United States, in the same condition, at the ratio of 16 to 1; and silver as metal and money at such ratio was the full equal of gold, and there was a greater demand for silver for monetary purposes than there was a supply.

In July, 1870, the Government of Sweden and Norway created the monetary commission, joined by Denmark in 1872, and the result was the abandonment of their single silver standard and the adoption of the single gold standard.

In 1871 Germany instituted her change from a single silver standard to the single gold standard, and completed the same July 9, 1873.

The United States, by the coinage act of February 12, 1873, prohibited the coinage of the standard silver dollar and established the single gold standard.

On January 30, 1874, the nations of the Latin Union by a supplementary treaty denied free coinage of silver to individuals, limited their coinage, and finally, in 1877, suspended further coinage of full legal-tender silver.

In 1875–'76 the Netherlands changed from the single silver standard to a single gold standard and stopped the free coinage of silver.

In 1876 Russia suspended the free coinage of silver.

Look at these unprecedented changes. What is the inevitable result? An immense mass, many hundreds of millions of coined silver money made a mere metal commodity, like iron, and thrown upon the markets for sale as such.

This mass of demonetized silver coins made an abnormal addition to the current production of silver, created for the time grave apprehensions as to its future use as money, and destroyed largely the demand for its monetary use, and at the same time created an abnormal and unprecedented demand for an amount of gold to supply its place for money far beyond the sufficiency of the existing stock of gold then in the world and the current production to supply it.

The natural and inevitable result followed: The depreciation of silver measured by gold as money, and a rapid increase or appreciation in the value of gold, not only as compared with silver, but also as compared with the staple products of the world, produced by the sweat and toil of the great masses of the people.

Not only did these great evils result, but the stable foundations of the monetary system of the world were grievously shaken by destruction, ruthlessly made, of one of the two foundations and pillars upon which they rested.

Gold monometallists, in their idolatrous devotion to and worship of the golden calf, were blind to the inevitable consequences. They feared no danger, no calamity, no evil, no impoverishment, no financial disturbances.

The true friends of silver and gold, the true bimetallists, alone foresaw the consequences and predicted them in unmistakable terms.

To prove this beyond cavil, I read the prophecies of Messrs. Seyd and Wolowski, republished in the United States in 1880 by Henry Carey Baird & Co., Philadelphia, in a small volume entitled "The Gold Standard; its causes, its effects, and its future," from the German of Baron William Von Kardorf-Wabnitz, who served more than ten years in the German Reichstag.

This is one of the most wonderful predictions in regard to financial matters which has ever been made in the world. It has been literally fulfilled, and is being fulfilled to-day:

Count Wolowski and Mr. Seyd published the following theses in 1868, the year in which the agitation for the introduction of the gold standard began in Paris—

This was in 1868, the very year that the Senator from Ohio introduced the bill in the United States Senate and made his famous report in favor of demonetizing silver and establishing the single gold standard in the United States. They say:

The demonetization of silver, they predicted, by any great civilized nation, must produce the following results:

1. The international trade of the world will instantly show signs of decline, to the special injury of countries having the largest international trade.
2. The spirit of public enterprise, in railroads and other useful undertakings, will be immediately checked, and consequently the general progress of civilization will suffer.
3. The decline in prices will compel countries internationally indebted to depart more and more from the principles of free trade toward a policy of protection.
4. The nations of the world will be divided into two groups—the one trading in gold, the other in silver—and this condition will render commerce between them unsafe and precarious.
5. Throughout the world a decline in prices will follow, injurious alike to owners of real property and the laboring classes, and advantageous only—and unjustly so—to the holders of State bonds and similar securities.
6. One of the principal difficulties in this period of general depression will be that people will look for its causes in all possible directions. The advocates of the gold standard will offer all possible groundless and fantastic excuses or reasons of a secondary nature only, and the real cause, the demonetization of silver, will be overlooked until the perspicuity of the phenomena and dire necessity shall force thinking men to point it out.

That is a remarkable and wonderful prophecy, and it has been carried out.

I now quote from Lord Beaconsfield, of England, in the same volume. The Senator from Ohio, as I shall quote hereafter, stated that nobody could anticipate such a thing. I want to show that there were some statesmen who did, even if he did not apprehend anything:

The views of Messrs. Seyd and Wolowski were also held by the distinguished statesman who is now the head of the British cabinet—Lord Beaconsfield—who, in 1873, foresaw the coming and the obstinancy of the recent great commercial crisis, and in his above-cited speech said:

"I attribute the great monetary disturbance that has occurred, and is now to a certain degree acting very injuriously to trade—I attribute it to the great changes which the governments in Europe are making with reference to their standards of value."

And again:

"It is quite evident we must prepare ourselves for great convulsions in the money market, not occasioned by speculation or any old cause, as has been alleged, but by a new cause with which we are not sufficiently acquainted, and the consequences of which are very embarrassing."

And finally:

"Convulsions must come, and no one will be able to form an adequate idea of the monetary derangement of the time in which he lives if he omits from his consideration the important subject to which I have called your attention."

I also refer to a quotation from Mr. Goschen, found at pages 51 and 52 of the conference of 1878. He said.

England had plainly stated her intention of maintaining her gold standard; Norway had said so, too; Germany was of the same opinion; while the Latin Union was not disposed at present to resume the free coinage of silver, or depart from the ratio of 1 to 15½, by which they are now bound. Very little, therefore, could result from the conference, because most of the states had decided beforehand on a particular policy. Austria, Italy, and Russia might vote for the proposition as a theoretical question, but having a forced currency they could not give practical support.

A theoretical discussion of the double standard, or of the advantages of the single standard, would accordingly, in his judgment, be a waste of time.

Of what avail would it be to discuss theories out of which it was known beforehand no practical result could arise, and thus to lay down principles which one was not about to follow. If the question of the double standard, however, were set aside, another question might fairly be put to the conference, and one of a most practical and useful character. Assuming that the universal double standard preferred by the United States be not adopted, what will be the future of silver? And toward what end ought all states to work, as far as practicable? The aim, he thought, should be to maintain silver as the ally of gold in all parts of the world where this could be done. A campaign against silver would be extremely dangerous, even for countries with a gold standard.

* * * * * * *

The Indian government had suffered a great loss; the merchants had suffered from fluctuations in value, and public functionaries had suffered from the depreciation, but England had given proof of her faith in regard to silver by waiting to see whether it would not recover its former value. Had the example of other countries been followed in India, and precautions taken by limiting the mintage or introducing gold, silver might have fallen an additional 10 or 15 per cent. The *laissez faire* policy in India had done more than anything else to keep up the value of silver. If, however, other States were to carry on a propaganda in favor of a gold standard and of the demonetization of silver, the Indian government would be obliged to reconsider its position, and might be forced by events to take measures similar to those taken elsewhere. In that case the scramble to get rid of silver might provoke one of the gravest crises ever undergone by commere. One or two states might demonetize silver without serious results, but if all demonetized, there would be no buyers, and silver would fall in alarming proportions. Thus all or nearly all states were interested in silver. He would not enter on the situation of France, but take the case of Belgium. Belgium had coined a large quantity of 5-franc pieces, and if the Latin Union came to an end, these coins would necessarily flow back to Belgium, which country would then not escape the general embarrassment.

If all states should resolve on the adoption of a gold standard, the question arose, would there be sufficient gold for the purpose without a tremendous crisis? There would be a fear, on the one hand, of a depreciation of silver, and one, on the other, of a rise in the value of gold and a corresponding fall in the prices of all commodities.

Again, there was a further important question. Italy, Russia, and Austria, whenever they resumed specie payments, would require metal, and if all other states went in the direction of a gold standard, these countries, too, would be forced to take gold. Resumption on their part would be facilitated by the maintenance of silver as a part of the legal tender of the world. The American proposal for a universal double standard seemed impossible of realization, a veritable Utopia; but the theory of a universal gold standard was equally Utopian, and, indeed, involved a false Utopia. It was better for the world at large that the two metals should continue in circulation than that one should be universally substituted for the other.

The conference could not adopt the American proposition, but an attempt might be made, perhaps, elsewhere, to overcome the temporary and abnormal difficulties created by the German stock of £15,000,000 of silver. At present there was a vicious circle; states were afraid of employing silver on account of the depreciation, and the depreciation continued because states refused to employ it. As long as this sum of £15,000,000 of silver was in the market, an expectant attitude must be maintained.

Mr. Mees, another delegate to that conference, said:

Mr. Mees stated that he had no instructions which would permit him to vote for the propositions of the United States. It is the opinion, he said, of the Government of the Netherlands that so long as England and Germany shall retain the system of the single gold standard, it will remain impossible for Holland to adopt another system. Not only she can not bind herself internationally in this matter, but she could not even adopt separately any other than her present system. Such was the sole declaration which the delegate of the Netherlands was authorized to make in the name of his Government.

* * * * * * * *

Mr. Mees added that if the universal double standard was an Utopia, the single gold standard was also an Utopia, and one that would be very dangerous, if by some impossible combination of circumstances it should come to be realized. The general demonetization of silver undertaken everywhere at once would have the most fatal consequences. It would bring in its train an enormous depreciation in the value of that metal, and would occasion crises alarming in their economic effects. What would be better for everybody would be that the two metals should continue to serve simultaneously and, as Mr. Goschen had said, lend each other a mutual support.

Have these prophecies been fulfilled? Mr. President, no such prophets have ever made predictions in behalf of the gold standard and had them fulfilled. Here we have pointed out for successive years exactly what would result from the demonetization of silver. Here we have prophecies as to what it would be. What was the general result, all over the world, of this demonetization of silver? The general result, Mr. President, was a fall in the market value of all the great staple products of the world. I quote from Dr. A. Soetbeer, who made a thorough examination and a statement. He says:

Taking the whole one hundred articles together, we find that the general level of prices was higher in 1886 than in 1847–1850 by 4.96 per cent. The case is very different if we compare the average prices of 1886 with those of the period of 1871–1875. This becomes plain if we compare the prices of different groups in 1871–1875 and in 1886. Taking one hundred as the prices in 1871–1875, we find that a fall in prices had taken place, as follows:

		Per cent.
Group	I. Agricultural products	31
Group	II. Animal products	23
Group	III. Southern products	7
Group	IV. Tropical products	12
Group	V. Minerals and metals	40
Group	VI. Textile material	24
Group	VII. Miscellaneous	32

For all the one hundred articles the comparative prices show a fall in 1886 compared to 1871–1875 of 22 per cent.

Mr. President, I will read a short extract from this same work, Gold Standard, from page 31:

If we observe that the commencement of the great crisis in the commerce and trade of the world coincides precisely with the demonetization of silver in North America and Germany, we shall easily perceive the connection of causes between that fact and these phenomena, and see that the mischievous results of the demonetization of silver must, from year to year, become more apparent.

But what was the result in England? England demonetized silver in 1816, and at that time England had depreciated paper money.

The immense resources—

I am reading from Gold Standard again, pages 16 and 17—

The immense resources of the British Empire; its supremacy in the commerce of the world; the rapid development of those astonishing industries, resting upon its natural treasures of iron and coal, which the inventions of Watt and Arkwright had called into life; the ceaseless influx of the wealth of India into the British Islands; all this could not prevent the fearful crises which the several rapidly changing phases of the British finance and banking policy necessarily brought on.

First, following out the doctrines of the prevailing financial school, there was a strong contraction of the note circulation in order to force the resumption of specie payments, in consequence of which a business and financial crisis occurred, whose severity has not been exceeded by any in our times. Then inflation, great increase in the issue of notes, and in consequence of this apparent prosperity, apparent rapid growth of the national interests; then a second contraction of the currency and consequent return of the crisis; and so on, until ultimately the present bank act came into existence, the note circulation acquired a certain stability, and the inexhaustible resources of British prosperity were able, undisturbed by human folly, to enrich the country.

What was the condition in Germany, Mr. President? The same result occurred after the demonetization of silver in Germany. The same author, a German author, speaking of the demonetization of silver by Germany, says:

The fact that a number of smaller states would be forced to follow the example of Germany; that the embarrassments of countries having depreciated standards, as Austria and Russia, would be increased by our proceeding; that France would be compelled to stop its coinage of silver; all this was then considered as unimportant and even as desirable. Even the question whether a general depreciation of silver would follow appeared important only in so far as slower sales of silver would cause greater losses to Germany.

* * * * * * * *

The adoption of the gold standard by the German Empire was the signal for the immense commercial collapse the deplorable effects of which have not yet been effaced. The like action by the North American Union by later legislation would have remained isolated, and could hardly have produced similar results. There was in that country no large stock of silver which, like that of Germany, had to be placed on the market; there the greenbacks—the national paper money—still formed the basis of circulation. If under these circumstances the United States alone had adopted the gold standard, and Germany retained the silver standard with subsidiary gold coinage, the United States would probably have experienced difficulties and embarrassments, but the acute and general depreciation of silver which resulted from the change in the German standard would never have occurred.

The introduction of the gold standard in Germany caused no decrease in the circulation of metallic money, as not only the withdrawn German silver and gold coins, but also the not inconsiderable amount of foreign gold circulating in Germany (Napoleons, 10 guldens, 5 francs, Austrian thalers and guldens), were amply replaced; indeed, the minute calculations by Soetbeer suggest that, including the changes in note circulation caused by the German bank law, the amount of circulating medium has been increased. This, according to the scholastic theory, should have resulted in advanced prices of all commodities and in an export of money. But the higher gold prices, in conjunction with the introduction of free-trade practices in our commercial policy, produced the opposite result, namely, a perceptible increased purchasing power of money, and a decrease in the price of all commodities. The wild chase after gold, in which all countries immediately joined, enhanced the price of gold, and thus caused an unprecedented depreciation of the value of land and commodities. The imperial board was obliged to exercise all circumspection and caution to secure to the country its share of gold by a timely increase in the rate of discount, not to the advantage of production.

Now, Mr. President, what was the result in the United States of the demonetization of silver? It was the coinage act of February 12, 1873, and in the following September such a panic as this country never before experienced shook it from center to circumference, a financial depression which brought hundreds and thousands of citizens of the country into bankruptcy and ruin. So that in every country where it has been adopted the result has been a crisis, a commercial depression, bankruptcy, and ruin.

Sir W. Houldsworth, a delegate of Great Britain, said, at the Brussels Conference, in 1892:

In the first place, I am, from my position and antecedents, more peculiarly identified with industrial and commercial life than any of my honorable colleagues, and I need scarcely stay to remark that it is industry and commerce in their widest aspects which are most vitally interested in and will be most profoundly affected by the decisions at which this conference arrives. In the second place, I have had the honor and the responsibility of sitting upon both of those important commissions in England, which were appointed specially to examine into questions intimately connected with that which we are called upon to discuss here. I refer to the royal commission on the depression of trade, which sat in 1885, and the gold and silver commission, which sat in 1887–'88.

Now, with regard to the first of these commissions, without going into details, I feel bound to bring before this conference certain conclusions which appear in the reports. The origin of the commission was the widespread feeling in Great Britain, even so far back as fifteen years ago, that a deep and abnormal depression of trade had set in, which, unlike previous depressions, showed no signs of recovery. All available statistics were brought before us, and a large body of evidence was taken. Conflicting opinions were expressed both as to the extent and as to the causes of the depression; but at last these five definite conclusions were arrived at:

1. That the depression dated from the year 1873 or thereabouts.

2. That it extended to nearly every branch of industry, including agriculture, manufactures, and mining, and that it was not confined to England, but had been experienced to a greater or less degree in all the industrial countries of the world.

3. That it appeared to be closely connected with the serious fall in general prices, which even then was most observable, though it has since been

more strongly marked, resulting in the diminution—in some cases even the total loss—of profit, and consequent irregularity of employment to the wage-earners.

4. That the duration of the depression has been most unusual and abnormal.

5. That no adequate cause for this state of things was discoverable, unless it could be found in some general dislocation of values caused by currency changes, and which would be capable of affecting an area equal to that which the depression of trade covered.

It was in consequence of this report, and at the express recommendation of the depression of trade commissioners themselves, that the gold and silver royal commission was appointed to examine into the "recent changes in the relative values of the precious metals." I will not dwell on the report of that second commission, as I feel sure its main conclusions are within the knowledge of most if not all the delegates at this conference. It will be enough to say that it confirmed the findings of the previous commission as to the date of the disturbance, as to the fall in prices, as to the effect of such fall upon all industries; and, in addition, it revealed the serious consequences which had resulted from the destruction of that par of exchange between silver and gold at about 15½ to 1 which had practically existed uninterruptedly for seventy years before 18.3, the disruption of which had dislocated, embarrassed, and to some extent destroyed the trade between silver-using and gold-using countries, and turned legitimate commerce into little better than gambling.

In further substantiation of what I have said I quote from the speech of Sir Guilford L. Molesworth, delegate of British India, at the Brussels Monetary Conference:

Now, this state of things was clearly predicted by Ernest Seyd in 1871, when the severance of the link between gold and silver was first contemplated. His prediction has been so remarkably fulfilled that I must quote his words:

"It is a great mistake to suppose that the adoption of the gold valuation by other States besides England will be beneficial. It will only lead to the destruction of the monetary equilibrium hitherto existing, and cause a fall in the value of silver, from which England's trade and the Indian silver valuation will suffer more than all other interests, grievous as the general decline of prosperity all over the world will be.

"The strong doctrinarianism existing in England as regards the gold valuation is so blind that when the time of depression sets in there will be this special feature; the economical authorities of the country will refuse to listen to the cause here foreshadowed, every possible attempt will be made to prove that the decline of commerce is due to all sorts of causes and irreconcilable matters; the workman and his strikes will be the first convenient target; then speculation and overtrading will have their turn. * * * Many other allegations will be made totally irrelevant to the real issue, but satisfactory to the moralizing tendency of financial writers. The great danger of the time will be that among all this confusion and strife England's supremacy in commerce and manufactures may go backward to an extent which can not be redressed when the real cause becomes recognized and the natural remedy is applied."

In fulfillment of this prediction, we find that the difficulties under which we labor have been attributed to all sorts of irreconcilable causes. It has been necessary to invent a theory that progress in manufactures, in improved transport, inventions, and banking have caused a species of economic revolution, which has created a new state in the conditions of trade and commerce differing from that which previously existed. But they overlook the fact that the alleged causes have been in active operation during the greater portion of the century (and when compared with the previous progress, they were far more pronounced during the middle of the century than at present).

It is obvious, therefore, that such a revolution, if it existed, should have arisen at an earlier period, and that it should have developed gradually, instead of setting in suddenly at the exact moment when the link was broken between gold and silver. Moreover, this theory involves another irreconcilable position. It is absurd to suppose that a revolution of this character could have affected gold prices so seriously, and yet should have left silver prices unaffected. Silver is the standard of value of more than half the world, yet silver prices have remained stable, whilst gold prices have fallen from 40 to 50 per cent. Whilst shutting their eyes to these facts, the advocates of such a theory are also blind to the following facts:

1. That the depression which has occurred as a necessary consequence o the suspension of free coinage of silver in France was predicted, and the prediction has been fulfilled to the letter.

2. That since 1871 the population demanding gold has quadrupled, and the foreign trade demanding gold has trebled.

3. That the demonetization of silver for international monetary purposes in Europe has caused gold to perform, single-handed, the work previously done by gold and silver combined.

4. That the annual supply of gold scarcely exceeds the amount required for industrial purposes.

It follows, as necessary consequences of these facts, that with the increased demand for gold its value must rise, or, in other words, gold prices must fall.

The judicial blindness must be great which, ignoring this strong evidence of facts, seeks an explanation in irreconcilable theories.

A very distinguished member of this conference has likened silver to a sick man whose state has been but aggravated by medicines which have been administered to cure him; but I think that this is not surprising, inasmuch as the physicians have not merely mistaken the character of the illness, but they have mistaken the invalid. It is gold who is the sick man, not silver. They have mistaken the bloated condition of gold for a symptom of health, whereas it is the symptom of a dangerous disease which now threatens to develop into a fearful crisis, which, as Mr. Rothschild says, "would be frightful to contemplate."

I am not one of those who believe in the efficacy of simple purchases of silver to relieve the situation. I have, for years past, publicly expressed the opinion that the purchases of silver under the Bland act and similar bills were opposed to the first principles of monetary science, and must, unless the true remedy be eventually applied, end in disaster, from which, if the United States has up to the present escaped, it is because of the great expansion of their population and industry.

I could go on indefinitely quoting authorities and facts, conclusively establishing what I have asserted.

Cast your eyes over the world's history since 1873 and see the wrecks, financial crises, panics, failures, depreciation of the prices of the world's products, the constant rise in the purchasing power of gold, the shrinkage in the market values of bonds and stocks, entailing losses to the amount of billions of dollars, all graphically foretold by the friends of bimetallism; the gold monometallists in the meantime, just as Seyd and Wolowski predicted, attributing these dire results to every imaginable cause except the true one, the striking down by discriminating laws one-half of the metallic money of the world and establishing gold only as money.

Our own country has not escaped. We had the panic of 1873, and several severe financial crises prior to the present one. Yet our gold-standard financiers and doctrinaires attribute the causes not to the true one, the demonetization of silver in the United States in 1873 and throughout the world, but to our legislation for the rehabilitation of silver.

Now, the so-called Sherman law is made the scapegoat and must be unceremoniously and unconditionally driven into the wilderness, and with its banishment halcyon days of financial prosperity and restored confidence are to be ushered in.

The so-called Sherman law has had no influence whatever on the exports of gold, to which reference has been made. In the fiscal year 1889 our exports of gold were $49,607,427 in excess of our imports. In 1890 they were $4,331,149; in 1891, $68,130,087; in 1892, $495,873; in 1893, $87,506,463. Think of sane men undertaking to make other sane men believe that the Sherman law drove this gold out of the country! It is ridiculous.

I wish to quote here from the speech of my distinguished friend from Kentucky, Mr. BLACKBURN, in regard to whether the Sherman law drove gold out of the country or not. I quote from his speech on page 2215 of the RECORD, and I doubt not he has verified it:

The records of the country show that for days and weeks, beginning in the latter part of April, and it is more noticeably true in the month of May, for days and weeks gold left this country at the rate of five millions a week, until thirty-eight millions had gone, until a panic had been produced, until values had been upset and unsettled, until the business of the country had been disturbed. At the rate of five millions a week your gold was shipped out of the country, when never in one day nor one hour nor one instant had foreign exchange been above the rate I have named.

It is plain on the face of paper that one of two things was true, either the shipper was paying ocean freights at a loss out of his pocket or else he was receiving a commission from some one upon every dollar that was shipped. Who shipped this gold? I do not charge that all of the bankers of New York or Wall street were engaged in it. There are bankers there whose character stands too high for me to believe that they were guilty of such a combination; but I know that there are bankers there who represent the Rothschilds, who did ship—Heidelbach, Ickelheimer & Co. and Lazarus Frères & Co. These were the exporters of your gold. They were shipping it when the rate of exchange proved beyond controversy that they were shipping it at a loss; they were either paying the ocean freights out of their pockets or receiving a commission.

It was fictitious, it was planned to order. There is no doubt of this, and I quote this to show exactly what was the reason. If the Sherman law sent gold out, it brought it back very quickly.

The financial collapse in the Argentine Republic occurred in 1890, and was followed in the year 1891 by the failure of the English banking house of Baring Brothers, when it is charged that England's investors lost $1,000,000,000. Gold was demanded and taken from us as stated. Failures in Australia to the amount of many millions have occurred, and gold monometallic England was again shaken to the center. These exports of gold were no more caused by the Sherman law than by an evening zephyr. The present crisis was plainly predicted by Mr. Alfred de Rothschild, delegate from Great Britain to the Brussels conference. This is a very remarkable prediction. He said:

Gentlemen, I need hardly remind you that the stock of silver in the world is estimated at some thousands of millions, and if this conference were to break up without arriving at any definite result there would be a depreciation in the value of that commodity which it would be frightful to contemplate and out of which a monetary panic would ensue, the far-spreading effects of which it would be impossible to foretell.

There it is as plain as A B C, in the Brussels conference, predicted just as it has come to pass, and the cause stated, and yet none of these gold monometallic doctrinaires will believe anything about it. They will shut their eyes to all these things. You could not make my friend from New Jersey [Mr. MCPHERSON] read that and comprehend it. He would think it was something else, although it is the opinion of one of his own monometallic friends.

From this same report I have quoted from Sir G. Molesworth, representing India, to show that he predicted that India would change to a single gold standard if that monetary conference adjourned without any agreement.

There was in that monetary conference a Mr. Currie, who was also on the Indian currency commission to settle the financial question in India.

Mr. PLATT. On the Herschell commission?

Mr. COCKRELL. Yes, sir. Mr. Currie was a delegate to the Brussels conference, and at the same time he was a member of the Indian commission. Our commissioners unwittingly told him what we were going to do, or what they thought we were going to do, without any authority to say so. I read from page 118 of the Brussels conference. I do not want to do any injustice to any distinguished gentleman who represented us in that body, but I want to show what they said and how we were represented. We have a right to know that.

Governor MCCREARY, of Kentucky, a representative of the Government of the United States, made an address before that conference, in which he went on to speak in behalf of silver, and then told about the election and about the Democratic platform, which he quoted, and then said:

Speaking for myself only, I express the opinion that the silver law known as the act of 1890 now in force in my country will be repealed. It is possible this will be done at the present session of Congress—

That is, at the last session of the last Congress.

If not this session, I believe it will certainly be repealed at the next session of Congress.

Oh, yes; we are going to repeal. "You had better get scared now and come to an international agreement because we shall repeal this law." What did Mr. Cannon, another delegate, say at that conference?

The United States has seriously taken into consideration the idea of repealing the silver purchase act of 1890; the two political parties as well as the great bankers of New York have advised this repeal, and if during this conference some arrangement is not attained, it is more than probable that America will not continue disposed to buy annually 54,000,000 ounces of silver at the market price.

Yes, we by our delegates told that monetary conference we were going to drop it, silver, and that they had better come to some agreement. The conference adjourned, and was to have met last spring, I believe, was it not?

Mr. ALLISON. It was to have met on the 30th of May.

Mr. COCKRELL. I believe that Indian currency commission just held back long enough to get ahead of us and strike down silver first, and let us bear the brunt of it if we repeal the existing law. We told them what we were going to do. We have always told them in advance we were going to do something to strike at silver, with the expectation of scaring them. There never has been but one time, Mr. President, that the agents and representatives of the United States have ever been able to scare Europe into changing its monetary system, and that was in 1863 to 1865 and in 1873, when we told them that we would flood the world with gold and silver and depreciate the purchasing power of their invested securities. We told them that we were the great gold-producing country, as the Senator from Ohio said, and the gold system had to be established; and we went on and established it, and they were foolish enough to believe that what we said was true, and they changed their whole system to a single gold standard.

The Indian currency commission was appointed October 21, 1892. As predicted by Sir Molesworth, in anticipation of the repeal of the Sherman law by us, India has closed her mints to the free coinage of silver and the crisis predicted is upon us, intensified by many other combinations and causes, and silver has fallen most fearfully in value measured by the gold standard, just as expected by India and England. And we are now called upon to repeal the Sherman law unconditionally, reëstablish the gold standard and practically close the mints of the whole world to the free and unlimited coinage of silver and make silver everywhere a mere commodity, a mere ordinary metal without any monetary functions by the laws of any nation, and still further depreciate it, lessen its value, etc.

Think of the ridiculousness of the proposition that we must demonetize silver and destroy value in order to make Europe come to international agreement! It is perfectly absurd upon its face. We destroy its value or make it the world over a mere commodity, and what greater harm will be done to Europe than to us? What greater losses will they suffer than we shall? We are producing more silver, and gold too, than any other nation. Would not we be the greatest sufferers in the depreciation in prices? Yet it is pretended that we should be in some way or other the beneficiary. There was never such sophistry proclaimed to intelligent free men in the world.

Then truly we would have throughout the world the idealistic doctrinaire single gold standard, which would entail for ages to come upon the toiling masses of every country in the world untold and inconceivable sufferings, losses, financial disturbances, and crises, depressions of all kinds of business, a rapid increase in the purchasing power of gold and a still greater fall in the prices of the world's products.

This Utopian single gold standard. This is what we are coming to, if unconditional repeal is carried.

Mr. President, let us examine this single gold standard—this American idea, so called—boasted of by the senior Senator from Ohio.

I assert that there is not only not a sufficient amount of gold in the world to answer the demands of the world's commerce and business for monetary purposes, but not enough gold and silver combined to meet the monetary wants and demands of the nations.

The estimate of Dr. A. Soetbeer, of Germany, from 1493 to 1885, and since that date of our Mint Bureau, places the world's production of gold and silver for that period, 1493 to 1892, inclusive—four hundred years—as follows: Gold, $8,204,303,000, and silver, $9,726,072,000, being in the proportion of $45.80 of gold to $54.20 of silver, making an aggregate amount of $17,930,375,000.

If this vast amount were all in existence to-day it would only be a fraction over $14.81 per capita of the world's population, estimated at 1,210,000,000.

What has become of this vast sum of the precious metals, and what proportion can be found in all the nations of the world? It has been subjected to all the multitudinous mutations, strifes, and contentions of the peoples of the world during these four hundred years to losses, abrasions, wear and tear, and to all the uses for industrial purposes.

The losses by abrasion are estimated annually for gold about $500,000 and for silver, including subsidiary coins, about $2,000,000.

Now, search and examine the treasuries of the nations the world over for the existing gold and silver; and from the most reliable data available, our Mint Bureau, we can only find $3,582,605,000 of gold coin and bullion, and $3,469,100,000 of full legal-tender silver coins, aggregating $7,051,705,000.

The percentage or proportion of gold to silver is 50.8 gold to 49.2 silver, nearly equal in value. This aggregate of goin coin and bullion and silver coins in the world gives for gold $2.96 per capita and for silver $2.86 per capita, and combined, only a fraction over $5.82 per capita to the population of the world, a wholly inadequate and insufficient supply for monetary purposes.

The conclusive proof of this is found in the fact that according to statistics of our Mint Bureau there is to-day in existence among the nations of the world an immense mass of irredeemable or uncovered paper money, without any metallic basis for redemption, aggregating the sum of $2,635,873,000, including $600,000,000 in South America, $500,000,000 in Russia, $163,000,000 in Italy, $100,000,000 in Spain, $260,000,000 in Austria-Hungary, which latter adopted the single gold standard in August, 1892. Russia, Austria-Hungary, and Italy, as well as other nations, having such uncovered paper money, are grabbing for gold in every direction in order to resume specie redemption on a gold basis. India has in this year closed her mints to the coinage of silver and adopted the gold standard, and entered on the scramble for gold.

This scramble, this grabbing for gold, will more distinctly appear from a careful consideration of the estimates by our Mint Bureau of the world's production and coinage of gold and silver.

I applied to the Director of the Mint for an estimate as far back as the statistics accessible enabled him to make, and he furnished me the statement published in Senate Miscellaneous Document No. 34, present session, giving the production and coinage for 1873–1891, inclusive, as follows:

World's product of gold $2,080,144,579, and coinage $2,782,927,456. The excess of the coinage in these nineteen years over the gross product is $672,782,877.

Silver product	$2,204,155,349
Silver coinage	2,309,962,273
Coinage excess	105,806,924

To see still more distinctly the shifting of gold from one nation to another, and its recoinage, first by one and then by another nation, and so on, let us consider the varied consumption of gold and silver for industrial uses, in industry, manufactures and fine arts.

The two principal demands or uses for gold and silver are for coinage—monetary purposes—and for industrial uses. The eminent statistician, Dr. A. Soetbeer, in his "Materials toward the elucidation of the economic conditions affecting the precious metals," prepared October 1, 1886, estimates for the three recent years an average net annual consumption of the precious metals for "industrial uses" in civilized nations as follows: Of gold, 90,000 kilograms, $59,814,000 (the kilogram being $664.60), and of silver, 515,000 kilograms), $21,403,400 (the kilogram being $41.56). In giving these figures he says:

Surprising as the enormous extent of the estimated annual consumption of gold for ornaments and other purposes in the arts may seem, any doubt as to the probable correctness of the estimate will disappear on consideration of the increasing use of gold for ornament and for industrial purposes with the growth of population and wealth.—*Volume 24, Consular Reports, page 5134.*

In the ten years, 1876–1885, inclusive, just preceding the date of this estimate, the world's product of gold was, according to our Mint Bureau, $1,067,721,842, and the consumption in industrial uses, according to Dr. Soetbeer's estimate of $59,814,000 annually, being 56 per cent, was $598,140,000, which left for coinage only $469,581,842. And the actual coinage was $1,372,407,272, being an excess of coinage of $902,825,450.

This was an enormous excess of coinage in these ten years over the balance of the total production of gold left after deducting the amount consumed in industrial uses. Now, this balance of $469,581,842, left for monetary uses throughout the world in the period of 1876–1885, inclusive, was only 46.95 cents per capita of

the world's population, estimated at 1,000,000,000 people, a low estimate, and 4.69½ cents per capita of population for each year during the ten years, to be added to the stock of money in existence to meet the wants and demands of the world's increase of population, commerce, and business.

In this same period of ten years, from 1876 to 1885, inclusive, the world s product of silver, according to our Mint Bureau, was $1,016,586,116, and the consumption in industrial uses according to Dr. Soetbeer's estimate of $21,403,400 annually, being 21 per cent, was $214,034,000, which left for monetary uses for coinage $802,552,116, while the actual coinage was $1,103,371,395, which shows an excess of silver coinage in these ten years of $300,819,279.

This balance of $802,552,116 left for monetary uses in the world in these ten years was only 80.25 cents per capita of population, and only a fraction over 8 cents per capita for each of the ten years to meet the wants and demands of the world's increase of population, commerce, and business.

Take the world's product of both gold and silver during this ten-year period, and deduct therefrom the amounts consumed in industrial uses, according to Dr. Soetbeer, and the balance left for monetary uses was only $1.27 3/10 per capita of the world's population, and for each of the ten years was only 12 73/100 cents per capita of population, a wholly inadequate sum to meet the wants and demands of the increase of population, commerce, and business.

In confirmation of the correctness of these estimates as to the world's consumption of gold and silver for industrial uses, I now state the estimates of our Mint Bureau as to the product and such consumption of gold and silver in the United States for the five years from 1888 to 1892, inclusive.

Year.	Gold product.	Industrial consumption.	Percentage.	Silver product.	Industrial consumption.	Percentage.
1888	$33,175,000	$16,500,000	49.4	$59,195,000	$5,280,000	8.9
1889	32,800,000	16,697,000	50.8	64,646,000	8,766,000	13.5
1890	32,845,000	18,105,901	55.1	70,464,000	9,231,178	13.1
1891	33,175,000	19,700,000	59.3	75,417,000	9,630,000	12.7
1892	33,000,000	19,329,000	58.6	73,697,000	9,301,000	12.6
Total	164,995,000	90,331,901	*55	343,419,000	42,208,178	*12.2

*Average.

Consider the vast significance of these figures.

The world's stock of gold coin and bullion is $2.96 per capita of the world's population, and of full legal tender, silver coins only $2.86 per capita.

Since 1857, the largest annual product of gold in the world was $130,817,000 in the year 1892, equal to only the insignificant sum of 10.81 cents per capita of the world's population. With this momentous increase annually to the gold money of the world to meet the increase of population and of the world's commerce and business, it is imperiously demanded of us to vote for the pending measure, unconditionally repealing the Sherman law and restoring the single gold standard of the coinage act of February 12, 1873, a beautiful basis to ask for such a vote.

But examining a little more critically, we find that of the annual product of gold in the world of $130,817,000 in 1892, we produced in the United States $33,000,000, or a fraction over 25.22 per cent, and of our product we consumed for industrial uses about 58.6 per cent, equal to $19,329,000, leaving us only $13,671,000, or only 20.40 cents per capita, estimating our population at the close of 1892 at 67,000,000 people.

A still more critical examination, according to the estimate of Dr. Soetbeer, of an average annual net consumption of 56 per cent of the world's gold product in industrial uses, shows $73,257,520 of the $130,817,000 of gold produced in the world in 1892, used for such industrial purposes, and leaves for monetary purposes in the wide world $57,559,480—equal to 4.75 cents per capita of the world's population.

In the name of reason, of ordinary common sense, I ask is this 4¾ cents per capita increase of the gold money of the world sufficient to meet the wants, the demands of the increasing population, commerce, and business of the world? Is not gold monometallism not only an Utopia, but also a ruinously false Utopia—a mere doctrinaire's summer dream.

And we are urged to repeal the existing Sherman law, without any amendment or substitute of any kind whatever, and thereby restore and leave in full force and operation the Sherman coinage law of February 12, 1873, establishing the single gold standard, this Utopia, and wipe from our laws every vestige of legislation recognizing the true Democratic bimetallic monetary system.

No alternative is offered us. Wheresoever we seek refuge, relief, we must fall in the embraces of Sherman legislation, an audacious demand. We want no more of it. Neither the present Sherman law nor the Sherman law of 1873, but the restoration of the constitutional bimetallic system, maintained by successive Democratic Administrations for over half a century.

[At this point the honorable Senator yielded for an executive session.]

Wednesday, October 11, 1893.

Mr. COCKRELL. Mr. President, why not restore true bimetallism? Why not restore silver to all the monetary functions given by our laws to gold as coin and money? Why not make them the equals in every respect by proper legislation now by amendments to the pending bill?

According to professions all of us on both sides of this Chamber, as well as the Executive, are the friends of silver.

If friends, then why not give some tangible evidence of our friendship for silver by proper legislative recognition now?

Now is the accepted opportunity. Procrastination is the thief of time.

The President, in the proper exercise of his constitutional prerogative "from time to time to give to the Congress information of the state of the Union and recommend to their consideration such measures as he shall judge necessary and expedient," and "on extraordinary occasions to convene both Houses or either of them," has convened this extraordinary session of both Houses and submitted to them his views of the state of the Union, and recommended to their consideration such measures as he judges necessary and expedient. We have his message, his views of the existing conditions, and his recommendation.

I quote his recommendation—the only one in his message. He says:

> I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

This recommendation, the only one given to this Congress, is all in one sentence and all one recommendation—the repeal of the purchasing provisions of the act of July 14, 1890, and other legislative action putting beyond doubt or mistake the intention and ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries. As a personal and political friend of the President, I stand ready and anxious to carry out by appropriate legislation on the pending bill the recommendation, the only recommendation made by the President.

Why do the Senators on each side of this Chamber, under the leadership of the senior Senators from Indiana and New Jersey, and from Ohio and Rhode Island, claiming to represent the Administration, insist upon and urge the passage of the pending bill without any amendment, simply repealing the purchasing clauses of the Sherman law, and wholly ignoring the most vital and essential part of the President's single and only recommendation:

> Other legislative action putting beyond all doubt the intention and ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

This is by far the most important part of this one recommendation of the President.

The charge is iterated and reiterated, day by day and week by week, that the Senators opposing the passage of the pending bill for simple unconditional repeal are obstructionists—are filibustering, whatever that may mean—and are opposing the wise and judicious recommendation of legislation by the President. This is a false and unfounded charge. If there be obstructionists, it can only be those Senators who insist upon ignoring the most essential and necessary legislation recommended to our consideration.

I believe I am justified in saying, in behalf of the Senators opposing the pending bill, that we stand ready to-day, and will so stand throughout this struggle, ready and anxious to pass this bill with amendments, with "legislation putting beyond all mistake the intention and the ability of our Government to fulfill every one of its pecuniary obligations in money universally recognized by all civilized countries." We are not repudiationists. There is not one in this Senate, so far as I know. We are not inflationists. We do not believe in fiat money.

We advocate "honest money—the strict maintenance of the public faith—consisting of gold and silver and paper convertible into coin on demand," in the words of the national Democratic platform of 1880.

Again, Mr. President, "we believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss," as declared in the national Democratic platform of 1884, upon which the present President was first elected, and which was readopted in the platform of 1888.

We favor now legislation on this bill, not mere idle promises, "to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value," and we want now "to secure such equality by such safeguards of legislation," to be enacted now, and not merely promised, as will insure the maintenance of the parity in value of the coins of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts."

We are now steadily, persistently, and consistently directing—not merely promising to direct—"the efforts of the Government and of this Senate to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts."

We want to engraft on the pending bill, not these idle promises contained in the bill, but the legislation therein promised and recommended by the President.

Is this obstruction? Is this filibustering? We are ready, waiting, to join the advocates of this bill in appropriate legislation to carry out and redeem the promises set forth in it.

We favor legislative action, not legislative promises. You may ask by what legislative action do we propose "to put beyond all doubt or mistake the intention and the ability of the Government to fulfil its pecuniary obligations in money universally recognized by all civilized countries?"

According to the American Yankee idea, I answer by propounding to you, what legislation do you propose? You are occupying the affirmative, you are promising legislation. The country and the Senate want to know what that legislation is. What does the President propose? We have his message. He has exercised his constitutional prerogative, and we know what it is. Is there anything there? That other legislation, which I have just quoted, to make manifest the intention of the Government to redeem all its pecuniary obligations in money recognized by all civilized countries.

We stand ready to carry out that kind of legislation; but the friends of this bill and the President have failed to tell the country what legislation they want. They are as dumb and as silent as oysters.

Mr. PALMER. Will the Senator from Missouri allow me to say a word?

The VICE-PRESIDENT. Does the Senator from Missouri yield to the Senator from Illinois?

Mr. COCKRELL. With pleasure.

Mr. PALMER. The Executive has asked us to pass the pending bill. There is no silence about that.

Mr. COCKRELL. Is that a financial plan?

Mr. PALMER. Yes, sir; that is part of it?

Mr. COCKRELL. That, then, according to the Senator from Illinois, is the financial plan of the national Democratic party of the United States, simply a patchwork to repeal the Sherman law.

Mr. PALMER. It required six days to create the world. This is one step in the direction of a financial policy.

Mr. COCKRELL. Then it is not a policy?

Mr. PALMER. It is not a policy.

Mr. COCKRELL. It is a step, a miserable, pitiful step on a broken leg. We want a system, a policy. What is this?

Mr. PALMER. May I be allowed to ask the Senator from Missouri, will he present his plan? I understood the Senator to claim——

Mr. WOLCOTT. We can not hear the Senator.

The VICE-PRESIDENT. The Senate will be in order. It is impossible to hear the remarks of the Senator from Illinois.

Mr. PALMER. The Senator from Missouri claims that this is no plan. This is to remove an obstruction out of the way of a plan, but the Senators who complain of the silence of the supporters of this bill ought kindly to present a plan of their own, that the two may be contrasted; but, above all, Senators who have plans, should come forward to the rescue and put their plans in comprehensible shape—something more than mere declamation for free silver. I submit that as an answer to the question.

Mr. COCKRELL. I submit that it is no answer at all. The President of the United States has convened the Congress in extraordinary session because of our financial condition. That is the expressed subject submitted to us, and it is simply proposed, according to this bill, to repeal the power given in the Sherman law to purchase 4,500,000 ounces of silver per month, and stop there.

Mr. PALMER. The Senator is right. The bill proposes no more and no less than that; but it is an essential part of any financial or any monetary measure——

Mr. COCKRELL. And that leaves us upon the Sherman law of 1873, establishing the single gold standard, and giving to gold only the right of coinage.

Mr. PALMER. I will say frankly to the Senator that it leaves all laws in force other than the one repealed.

Mr. COCKRELL. That is the only law on the subject in force. The Senator can not evade that.

Mr. PALMER. That is a matter of judgment for the Senator himself.

Mr. COCKRELL. I ask the Senator to show any other law on the subject that would be in force?

Mr. PALMER. Whatever other provisions the law makes are in force. The silver dollars are left by law a legal tender.

Mr. COCKRELL. There is no doubt about that; I stated that. But what law is there recognizing the right of silver to coinage?

Mr. PALMER. Oh!

Mr. COCKRELL. What law is there that does not make gold the single standard in this country and the only metal that is admitted to coinage?

Mr. PALMER. This bill only does what it professes to do. That is all.

Mr. COCKRELL. Yes; and we are not going to permit you to evade the issue. This bill, if passed, places the United States Government on the single gold standard.

Mr. PALMER. The Senator will pardon me for saying one word more. He has argued elaborately that that was done by the act of 1873.

Mr. COCKRELL. Then this bill puts the act of 1873 in force again.

Mr. PALMER. I think not.

Mr. COCKRELL. There is no question about that. I think if the Senator will look over the law he will see that that is the case.

Mr. PALMER. I understand the law which makes a silver dollar a legal tender is unrepealed.

Mr. COCKRELL. Everybody knows that; but is there any law authorizing the coinage of a solitary silver dollar after this bill is passed? Is there any law authorizing any coinage except gold coinage?

Mr. PALMER. None, I think, except the discretionary power contained in the act itself.

Mr. COCKRELL. To coin the bullion on hand, and no further and no more than that.

Mr. PALMER. There is none that I know of.

Mr. COCKRELL. That is right. Now we understand each other. This bill does not give any additional power, not a particle.

Mr. VOORHEES. I do not intend to interfere in the debate. My attention was called yesterday by the senior Senator from Ohio [Mr. SHERMAN] to a continuing provision of law, of which I was not aware the other day when I was on the floor, authorizing the Secretary of the Treasury to purchase bullion for subsidiary coin.

Mr. COCKRELL. There is no doubt about that; I do not dispute that.

Mr. VOORHEES. I am not interfering in the debate. I merely wanted to contribute that fact to the general knowledge upon this subject.

Mr. COCKRELL. There is no doubt about that.

Mr. VOORHEES. That is a large discretion which might extend to $100,000,000. We have seventy-seven millions of subsidiary coin now, and it is generally understood that it ought to be more.

I did not rise as I said, however, for the purpose of interfering in the debate, but merely to contribute that fact, that future silver coinage is provided for by a general and continuing law making such coinage a legal tender for $10.

Mr. COCKRELL. For ten dollars?

Mr. VOORHEES. Yes.

Mr. COCKRELL. There is no question in the world about the power to coin the subsidiary silver, which is a legal tender for five or ten dollars, as I believe it is now.

Mr. VOORHEES. Yes.

Mr. COCKRELL. It was increased to $10. That law is continued. Nobody denies that. That is a class distinction between the toiling masses. We provide a subsidiary silver coin, half and quarter dollars, dimes and half dimes, a legal tender for $10, for the laboring and toiling millions; but for the millionaires, the aristocrats, and the plutocrats, we only furnish gold, the precious gold. We do not degrade them by making them carry around silver, which is a legal tender for only $10. I am opposed to class legislation on money or on anything else.

I will answer the question I asked. What do you propose? In order to do so, however, we must see what are the existing pecuniary obligations of our Government, and in what kind of money they are payable according to the terms of the obligations, and the laws existing when created and when payable.

It can be safely said that every civilized country, every nation in the world claims and recognizes that its pecuniary obligations can be and must be equitably and fully paid in the money called for and specified in the obligations, etc., which was a full legal tender for such payment when the obligations were created and when they are to be paid. That is a sound principle of law, national and international.

If the obligations specify the kind or character of money or currency in which they are to be paid then they can only be paid in such specified money. If the obligations do not specify the kind of money and only specify the amount then they can be lawfully and equitably paid in any full legal-tender money. If the coin or paper money was a full legal tender at the time the obligation was created and is such full legal tender when it matures then no question of equity or good faith can ever arise.

The demand for any other coin or paper money would be in direct violation of the obligation and open practical repudiation and dishonesty.

The existing pecuniary obligations of our Government are as follows:

Funded loan of 1891, issued under law of July 14, 1870, 2 per cent	$25,364,500.00
Funded loan of 1907, issued under law of July 14, 1870, 4 per cent	559,605,700.00
Refunding certificates, issued under law of February 26, 1879, 4 per cent	67,390.00
Total interest-bearing bonds	585,037,590.00
Old matured debt, not presented for payment; interest ceased	1,984,770.26
United States notes, legal tenders or greenbacks	346,681,016.00
Old demand notes, national-bank notes, redemption fund, and fractional currency	27,643,243.37
Gold certificates	79,756,819.00
Silver certificates	330,864,504.00
Certificates of deposit under act June 8, 1872, in exchange for greenbacks	5,285,000.00
Treasury notes of 1890	151,319,040.00
Pacific Railroad bonds	64,623,512.00

The funded loans of 1891 and 1907 are Government pecuniary obligations issued under the law of July 14, 1870, which required that the bonds should be "redeemable in coin of the present standard value." * * * "And the said bonds shall have set forth and expressed upon their face the above specified conditions." Each one of those bonds specifies the law under which issued, and then has in plain English upon its face set forth and expressed, "is redeemable in coin of the standard value of the United States on said July 14, 1870, with interest in such coin."

The senior Senator from Ohio doubtless had charge of this refunding law in its passage, and was determined to protect the interests of the purchasers and holders of such bonds and maintain unsullied the public faith. Hence the requirements of the law and the language of the bonds, about which there can be no question of good faith or honesty. They are payable at the option of the Government, by the recognized laws of every civilized nation, in coin money of the standard value of the United States on said July 14, 1870. And no man living can truthfully say or pretend that the coin of the standard value on said day and now was other than the silver dollar of 412½ grains, 9 parts fine, and the gold dollar of 25.8 grains, 9 parts fine. They were the coin money specified in the law and on the face of the bonds. They can be just as equitably and legally paid in the standard silver dollar, then and now a full legal tender in all payments, as in the gold dollar, without the least particle of tarnishing the public honor or breaking the public faith.

As to the refunding certificates and certificates of deposit, they were issued in exchange for lawful money and are payable in any full legal-tender money.

The old matured debt can be paid in honesty and good faith in the standard silver dollar.

The United States notes or greenbacks, the old demand notes, national-bank notes, and fractional currency can also be paid in honesty and good faith in standard silver dollars.

But, Mr. President, it seems that there is some dispute about the right to pay silver or redeem the greenbacks in standard silver dollars. It seems that the Administration has some scruples about redeeming greenbacks, United States legal-tender notes, in the standard silver dolars. Can they be honestly and justly paid in the standard silver dollar? Let me read what the distinguished senior Senator from Ohio said. You know he is not a greenbacker, nor a populist, nor a repudiationist. I quote from the speech of the senior Senator from Ohio, on the 11th day of April, 1876, on a bill then pending in the Senate in regard to fractional currency and silver coinage. That Senator then said:

> But the vital question presented by the amendments of the committee is the restoration of the silver dollar. Why restore the silver dollar when it is now so depreciated by the events that I have named? Well, sir, the answer is that we have a large amount, some $400,000,000 of United States notes, which now are a legal tender for all purposes, and the time has arrived when we can redeem them all with the old dollar of the United States. We do not create a dollar; we simply provide for its issue. The law was, I have shown you, up to 1873, that this old silver dollar could be tendered for the payment of all debts; but it was simply not coined because the silver dollar was worth more than the gold dollar. Does that prevent us from coining it? Not in the least.
>
> * * * * * * *
>
> The silver dollar was, it is true, a legal tender until 1873, and, in strict law, might be restored to its former position as a standard of value without a violation of the legal contract between the United States and the bondholder.

Mr. President, is not that pretty good authority? But I wish to put this question still further beyond the possibility of a doubt. We all remember with great pleasure our late distinguished associate and colleague from the State of Vermont, one of the ablest jurists in the United States. I refer to ex-Senator Edmunds. Ex-Senator Edmunds, in 1886, said what I shall quote. I quoted Senator SHERMAN in 1876, before the passage of the Bland law. I now quote Senator Edmunds in 1886, after we had had the silver dollar in circulation for eight years:

> Mr. EDMUNDS. It may be that I should agree with the Senator from Kentucky—I certainly agree with him that the silver coin of the United States is just as good a legal tender for every bond and debt of the United States, that does not say gold coin exclusively, if there be such a one, as the gold is—and so far and to that extent I am just as strong a silver man as my friend from Kentucky is.

Is there a doubting Thomas now left in the Senate Chamber?

Mr. GRAY. Doubting as to what?

Mr. COCKRELL. That the standard silver dollar can equitably and justly be paid in the redemption of the greenback and of the funded loan of 1891 and 1907.

Mr. GRAY. I never heard anyone express a doubt that it could be legally so used.

Mr. COCKRELL. Then I am gratified that we have other distinguished jurists who confirm everything that I have said, and confirm what the Senator from Ohio and the Senator from Vermont stated.

Now, Mr. President, I will go to the next point.

The silver certificates are issued on the deposit of silver dollars, and are only promises to pay silver dollars. Their language is: "This certifies there have been deposited in the Treasury of the United States five silver dollars, payable to the bearer on demand." It would be a breach of faith to offer to return to the bearer anything other than the silver dollars named.

The gold certificates are issued on deposit of gold coin or bullion, and are payable only in gold. No one seeks to pay them otherwise. The gold is simply housed in the Treasury, to be delivered back to the holder of the certificate on demand or presentation.

Mr. PLATT. Will the Senator from Missouri allow a question?

Mr. COCKRELL. Certainly.

Mr. PLATT. He is making a most thorough examination of the law and practice, and I wish he would state for the information of Senators, if he knows, who it is that deposits the silver dollars in the Treasury under the practice of the Treasury Department at the present time?

Mr. COCKRELL. Any holder of them, I presume. The most of them are deposited there by banks and mercantile establishments, in all probability. I have never investigated that particular point.

Mr. PLATT. Do they not go in some mysterious way directly from the mint to the Treasury, and the only issue of money when they are coined is really the silver certificate?

Mr. COCKRELL. I expect that is the truth of the matter, as to a part of them. I have no doubt of that. When they are coined they are placed in the Treasury, and everybody prefers the certificate to the coin, and then instead of issuing the dollar the silver certificate is issued.

Now I come to the United States Treasury notes issued under the law of July 14, 1890, in payment of silver bullion purchased under that act. In my opinion, it was clearly the purpose of the law to have them redeemed in silver dollars coined from the silver bullion purchased and paid for by them. I have already fully discussed their payment in another place.

The Pacific railroad bonds are currency bonds issued in aid of the construction of those several roads, and are payable as well in greenbacks as in silver dollars. Everybody knows they are payable in anything that is a legal tender.

We have now considered every pecuniary obligation of the United States and see in what kind of money universally recognized by all civilized countries, by every nation, each kind of obligation can be paid. We do not propose to pay the gold certificates or the silver certificates, or to redeem the greenbacks or the Treasury notes, or to pay the interest-bearing bonds in the legal-tender money of foreign nations—China or Japan, Russia or England—but only in the standard money of the United States, our own full legal-tender money called for and specified in them, and in which, by our laws, the only laws creating them or any obligation to pay them, they can be honestly, legally, and equitably paid; in short, only in such money as every self-re-

specting, civilized country or nation issuing and creating them would pay in pursuance of the law and the terms of the obligation. What more can anyone ask or demand?

Does anyone now claim that we must redeem the silver certificate or the legal-tender notes only in gold? I am exceedingly anxious to ascertain whether there be one or more Senators who now so claim.

I will pause for a reply. I want to know if there is any pretense that the silver certificate calling for silver dollars must only be redeemed in gold, or that the United States greenbacks, legal tenders, must only be redeemed in gold.

But it may be said, and has probably been said, that the President meant in recommending other legislative action putting beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries—only gold money; and that gold money is the only money universally recognized by all civilized countries.

Now, let us see if this claim be correct. Is gold the only metal recognized by all civilized countries? The latest authorities I know upon this question giving us an idea of what the money of the world is, is the Indian currency commission report. It is a report of Lord Herschell and others of England. It was made in the present year. It was the report upon which India went to a gold standard practically, or suspended the coinage of the silver rupee. It gives a description of the money of the world, the financial conditions, the financial policies of the different nations of the world. I wish to read some from that report. I read now from page 28:

United Kingdom.

That is Great Britain. As a matter of course we all know that they have—

(1) The standard coin to be of one metal, gold.

* * * * * * *

Gold is the standard or measure, but for the most part not the medium itself. Though, however, in wholesale transactions, and in a great many retail purchases, gold is no longer the medium of exchange, the use of gold coins is probably greater in the United Kingdom than in most other countries.

In India the silver rupee, at the rate of 15½ to 1, is a full legal tender in the payment of all debts. It is not now allowed free mintage or unlimited mintage. It is coined upon account of the Government.

I go then to Canada, our neighbor. The standard is gold, but they have no mint. There is no Canadian gold coin, and little or no gold in circulation. Silver is not convertible into gold.

The American silver dollar circulates at par, at the ratio of 16 to 1, although a government proclamation was issued in 1870 declaring it to be legal tender up to the amount of $10, but only at 80 cents per dollar.

Silver is not convertible into gold.

This is a very remarkable case, since, without any gold currency, and without even a mint for gold, dollar notes and silver dollars circulate at the United States gold-dollar value.

That is right here in our neighboring country, and look how our gold monometallists begin to tremble when a few million dollars of gold leave this country!

I now go to the West Indies.

All the West India Islands and British Guiana have adopted the English currency, gold being the standard, but silver being the legal tender without limit.

They have a nominal standard of gold, with silver a full legal tender.

This is an instance of a gold standard without gold and a silver token currency circulating to an unlimited extent at a value based on that gold standard

I go now to Germany. Germany adopted the single gold standard in 1871-1873 and closed her mints to silver, and they say:

The peculiarity of the case of Germany is that £20,000,000 worth of old silver thalers are retained in circulation at a ratio of 15½ to 1, and are legal tender to an unlimited extent.

I go to the Scandinavian country:

The standard has been gold since 1873, and the mints appear to be open to gold, but there is little gold in circulation. Bank notes convertible into gold are the ordinary currency.

I go to the Latin Union now—France. What do they say? Now I read from it:

The mints are open to gold.

Silver coinage, except of subsidiary coins, has since 1878 been and is now prohibited under the rules of the Latin Union.

There is a large quantity of gold coin in actual circulation.

The peculiarity of the French currency is the large amount of 5-franc pieces, which circulate at the old ratio of 15½ to 1. They are legal tender to any amount, and are accepted as freely as gold coin. They are not legally convertible into gold.

That is what the Herschell commission say, notwithstanding the views of my distinguished friend from Louisiana [Mr. WHITE].

I now go to Belgium. The same condition exists precisely as in France, the Latin Union embracing France, Belgium, Italy, Switzerland, and Greece. Italy is the same way.

The rules as to 5-franc pieces, as to the ratio between gold and silver, and as to legal tender are the same as in France.

There is very little metallic coin in actual circulation; the paper is at a discount, and the exchange below par.

I go now to Holland and the Dutch East Indies. They had the single silver standard for a long time, and then they changed to the single gold standard "at a ratio of 15½ to 1, and the Dutch mint was opened to gold, whilst the coinage of silver, except of subsidiary token coins, was prohibited, and remains so at the present time. Silver florins, at the gold value, were legal tender to any amount, and, with paper florin notes, which were also at a gold value, formed the internal circulation of the country."

I go now to Austria-Hungary. They had the silver standard for a long time. They took steps in 1891 to go to the single gold standard and adopted it in August, 1892. They have no coin, practically, in circulation. They have a large amount of irredeemable paper, and their silver was coined at a ratio, I believe, of 15½ to 1, but they have changed the ratio since.

I go to Brazil:

The case of Brazil is perhaps the most remarkable of all, as showing that a paper currency without a metallic basis may, if the credit of the country is good, be maintained at a high and fairly steady exchange, although it is absolutely inconvertible and has been increased by the act of the Government out of all proportion to the growth of the population and of its foreign trade.

They sum up this on page 35, but I will not consume the time of the Senate in reading it. It is just what I have read. They give a summary:

RESULTS OF EXAMINATION OF DIFFERENT SYSTEMS OF CURRENCY.

93. It is impossible thus to review foreign systems of currency without feeling that, however admirable may be the precautions of our own currency system, other nations have adopted different systems which appear to have worked without difficulty, and have enabled them to maintain for their respective currencies a gold standard and a substantial parity of exchange with the gold-using countries of the world, which has, unfortunately, not been the case with India. This has been effected under all the following conditions, viz:

(*a*) With a little or no gold coin, as in Scandinavia, Holland, and Canada;

(*b*) Without a mint or gold coinage, as in Canada and the Dutch East Indies;

(*c*) With a circulation consisting partly of gold, partly of overvalued and inconvertible silver, which is legal tender to an unlimited amount, as in France and other countries of the Latin Union, in the United States, and also in Germany, though there the proportion of overvalued silver is more limited, the mints in all these countries being freely open to gold, but not to silver, and in some of them the silver coinage having ceased;

(*d*) With a system under which the banks part with gold freely for export, as in Holland, or refuse it for export, as in France;

(*e*) With mints closed against private coinage of both silver and gold, and with a currency of inconvertible paper, as has been temporarily the case in Austria;

(*f*) With a circulation based on gold, but consisting of token silver, which, however, is legal tender to an unlimited extent, as in the West Indies.

The case of Holland and Java is very remarkable, since in that case the gold standard has been maintained without difficulty in both countries, although there is no mint in the Dutch East Indies, no stock of gold there, and a moderate stock of gold in Holland; whilst the currency consists of silver and paper legally and practically inconvertible into gold, except for purposes of export. The case of Canada, which maintains a gold standard without a gold coinage, is also very remarkable.

We see, Mr. President, what other civilized countries treat as money, that silver as money is recognized by nearly every civilized country. Suppose England or Germany should adopt platinum instead of gold and should change their standard, I suppose then the United States must hasten to pay all its pecuniary obligations in platinum, the only money universally recognized by all civilized countries. You might just as well make that contention as to contend that under the language of the President you must redeem them all in gold.

I do not know what the President meant except by simply taking his language as I find it, and I say that according to his own language silver dollars are full legal tender, the equal of gold, irredeemable in anything on earth, above it, or beneath it, the money universally recognized by all civilized countries, in which the pecuniary obligations of the Government can all be paid, except only the gold certificates.

WHY NOT RESTORE SILVER MONEY?

Mr. President, we are told of the fearful financial crisis now pending and the deadly paralysis of business, and that all results from our legislation in regard to silver.

These are only the same old prophecies we have heard ding-dong ever since 1877, the same old scare, and the same old trembling apprehension of dire consequences from the restoration of silver to its equal monetary functions with gold. What do they really portend? What is the ulterior object of these predictions? To what monetary system are they intended to bring us? These are vital questions to every American freeman, every patriot, regardless of politics.

I assert that the ulterior object, the final end sought to be attained, is the single gold standard for the United States, with free and unlimited coinage and full legal tender, and all other kinds of money, silver and paper currency, to be redeemable in gold, limited in legal tender and mere subsidiary money.

The senior Senator from Ohio [Mr. SHERMAN] has certainly had more to do in shaping our financial legislation and establishing the single gold standard by the coinage law of February

12, 1873, than any one man in the United States. He certainly understood clearly the objects sought to be secured.

Now, Mr. President, I am going to show you what is to become of all these predictions and pretensions. I take the finance report of 1877, when the Senator from Ohio was Secretary of the Treasury and was making his recommendations to Congress. I read from page 21:

The question of the issue of a silver dollar for circulation as money has been much discussed and carefully examined by a commission organized by Congress, which has recommended the coinage of the old silver dollar. With such legislative provision as will maintain its current value at par with gold, its issue is respectfully recommended. A gold coin of the denomination of one dollar is too small for convenient circulation, while such a coin in silver would be convenient for a multitude of daily transactions, and is in a form to satisfy the natural instinct of hoarding.

Of the metals, silver is of most general use for coinage. It is a part of every system of coinage even in countries where gold is the sole legal standard. It best measures the common wants of life, but, from its weight and bulk, is not a convenient medium in the larger exchanges of commerce. Its production is reasonably steady in amount. The relative market value of silver and gold is far more stable than that of any other two commodities—still, it does vary. It is not in the power of human law to prevent the variation. This inherent difficulty has compelled all nations to adopt one or the other as the sole standard of value, or to authorize an alternative standard of either, or to coin both metals at an arbitrary standard, and to maintain one at par with the other by limiting its amount and legal-tender quality, and receiving or redeeming it at par with the other.

It has been the careful study of statesmen for many years to secure a bimetallic currency not subject to the changes of market value, and so adjusted that both kinds can be kept in circulation together, not alternating with each other. The growing tendency has been to adopt, for coins, the principle of "redeemability" applied to different forms of paper money. By limiting tokens, silver, and paper money to the amount needed for business, and promptly receiving or redeeming all that may at any time be in excess, all these forms of money can be kept in circulation, in large amounts, at par with gold. In this way, tokens of inferior intrinsic value are readily circulated, but do not depreciate below the paper money into which they are convertible. The fractional silver coin now in circulation, though the silver of which it is composed is of less market value than the paper money, passes readily among all classes of people and answers all the purposes for which it was designed. And so the silver dollar, if restored to our coinage, would greatly add to the convenience of the people. But this coin should be subject to the same rule, as to issue and convertibility, as other forms of money.

There you have it, a silver dollar redeemable in gold. Now, I read from page 23—

Much complaint has been made that this was done with the design—

Referring to the demonetization of silver—

Much complaint has been made that this was done with the design of depriving the people of the privilege of paying their debts in a cheaper money than gold, but it is manifest that this is an error. No one then did or could foresee the subsequent fall in the market value of silver.

That is remarkable for a financier, a statesman for years and years at the head of the Finance Committee, and who presented himself in Paris to give financial instruction to the assembled delegates of the world in a monetary conference, that no one could conceive of any possibility of the fall in the price of silver by its demonetization, when in 1868, five years before the demonetization of silver, Wolowski and Seyd had published to the world, as many other writers had done, exactly what would occur if silver was demonetized by the world and the mints opened for gold only. Yet Secretary Sherman says nobody could possibly have conceived of such a thing. Now, I read from pages 24 and 25:

The Secretary believes that all the beneficial results hoped for from a liberal issue of silver coin can be secured by issuing this coin, in pursuance of the general policy of the act of 1853, in exchange for United States notes, coined from bullion purchased in the open market by the United States, and maintaining it by redemption or otherwise.

Mr. President, you see exactly what the Senator from Ohio wants. He wants a silver dollar redeemable in gold. I go to the finance report of 1878, page 17, to the same effect. It is to the same effect as the extract I have just read.

And the Secretary respectfully recommends that he be authorized to discontinue the coinage of the silver dollar when the amount outstanding shall exceed $50,000,000.

The Secretary deems it proper to state that in the meantime, in the execution of the law as it now stands, he will feel it to be his duty to redeem all United States notes presented on and after January 1, next, at the office of the assistant treasurer of the United States in the city of New York, in sums of not less than $50, with either gold or silver coin, as desired by the holder, but reserving the legal option of the Government; and to pay out United States notes for all other demands on the Treasury, except when coin is demanded on coin liabilities.

Now, I take the finance report of 1880, also made by Secretary SHERMAN. It is to the same effect:

1. It is too bulky for large transactions, and its use is confined mainly to payments for manual labor and for market purposes or for change. The amount needed for these purposes is already in excess of the probable demand.

2. It is known to contain a quantity of silver of less market value than the gold in gold coin. This fact would not impair the circulation of such limited amount as experience shows to be convenient for use, but it does prevent its being held or hoarded as reserves, or exported, and pushes it into active circulation, until it returns to the Treasury, as the least valuable and desirable money in use.

For these reasons the Secretary respectfully but earnestly recommends that the further compulsory coinage of the silver dollar be suspended.

Now, I will refer to what I have already stated, and that is Senate bill 217 and Senate report made by the Senator from Ohio [Mr. SHERMAN], June 9, 1868, establishing the gold standard with free coinage and unlimited legal tender, and section 2 provides for silver coinage in these words:

The weight of the half dollar shall be 179 grains, equivalent to 116 decigrams; and the lesser coins shall be in due proportion. But the coinage of silver pieces of $1, 5 cents, and 3 cents shall be discontinued.

Section 3 provided * * *—

And the silver coins shall be a legal tender to an amount not exceeding $10 in any one payment.

I have here a quotation from the finance report of December, 1881, made by Secretary Folger. It simply says that they can not circulate the silver dollars, that there are too many of them already issued, and that the Bland law must be suspended.

President Arthur in his message of December, 1881, indorsed Secretary Folger's recommendation. Secretary Folger in 1882 repeated his former recommendation for the suspension of the Bland law, and President Arthur in 1882 reaffirmed his message of 1881 recommending the same thing. Secretary Folger in 1883 referred to and reaffirmed his report of 1881 and 1882, and so he did in his report of 1884. President Arthur, in December, 1884, made sundry recommendations, and I will ask that they may be inserted. In his message of 1884, his last message, he said:

I concur with the Secretary of the Treasury in recommending the immediate suspension of the coinage of silver dollars and of the issuance of silver certificates. This is a matter to which, in former communications, I have more than once invoked the attention of the National Legislature.

It appears that annually for the past six years there have been coined, in compliance with the requirements of the act of February 28, 1878, more than twenty-seven million silver dollars. The number now outstanding is reported by the Secretary to be nearly one hundred and eighty-five million, whereof but little more than forty million, or less than 22 per cent, are in actual circulation. The mere existence of this fact seems to me to furnish of itself a cogent argument for the repeal of the statute which has made such fact possible.

But there are other and graver considerations that tend in the same direction.

The Secretary avows his conviction that unless this coinage and the issuance of silver certificates be suspended, silver is likely at no distant day to become our sole metallic standard.

Mr. President, do they not somewhat remind us of the predictions of to-day. They sound very much just as the predictions of to-day—the dire calamities that then prevailed in 1885 and 1886. Now, let us examine and see their sameness. I have before me a letter written by President Cleveland before his inauguration in 1885.

ALBANY, *February 21, 1885.*

To the Hon. A. J. WARNER and others,
Members of the Forty-eighth Congress:—

In referring to their letter, he says:

It is also fully justified by the nature of the financial crisis, which, under the operation of the act of Congress of February 28, 1878, is now close at hand. By a compliance with the requirements of that law, all the vaults of the Federal Treasury have been and are heaped full of silver coins, which are now worth less than 85 per cent of the gold dollar prescribed as "the unit of value," in section 14 of the act of February 12, 1873, and which, with the silver certificates representing such coin, are receivable for all public dues. Being thus receivable, while also constantly increasing in quantity at the rate of $28,000,000 a year, it has followed, of necessity, that the flow of gold into the Treasury has been steadily diminished.

Silver and silver certificates have displaced and are now displacing gold, and the sum of gold in the Federal Treasury now available for the payment of the gold obligations of the United States and for the redemption of the United States notes called "greenbacks," if not already encroached upon, is perilously near such encroachment.

* * * * * * *

These being the facts of our present condition, our danger and our duty to avert that danger would seem to be plain.

* * * * * * *

From these impending calamities it is surely a most patriotic and grateful duty of the representatives of the people to deliver them.

That was February 24, 1885. You see where the country was predicted to be coming. Just upon the brink of a wonderful precipice. Now, let us see how long that continued, for these panics do not subside instanter, as a rule.

In December, 1885, the financial report of Secretary Manning of the Treasury was submitted. The report gives at great length his views, and recommends the repeal of the purchasing clause of the law of February 28, 1878, and the repeal of the law of May 31, 1878, forbidding the retirement of greenbacks and requiring their reissue; in short, to restore bimetallism, stop the coinage of silver, unconditionally repeal the purchasing clause of the Bland act, retire and cancel greenbacks, and wait for an international agreement.

An international agreement! Now, I will read President Cleveland's message in 1885. The President says:

The desire to utilize the silver product of the country should not lead to a misuse or the perversion of this power.

The necessity for such an addition to the silver currency of the nation as is compelled by the silver-coinage act, is negatived by the fact that up to the present time only about fifty millions of the silver dollars so coined have actually found their way into circulation, leaving more than one hundred and sixty-five millions in the possession of the Government, the custody of which has entailed a considerable expense for the construction of vaults for its deposit. Against this latter amount there are outstanding silver certificates amounting to about $93,000,000.

Every month two millions of gold in the public Treasury are paid out for

two millions or more of silver dollars, to be added to the idle mass already accumulated.

If continued long enough, this operation will result in the substitution of silver for all the gold the Government owns applicable to its general purposes. It will not do to rely upon the customs receipts of the Government to make good this drain of gold, because the silver thus coined having been made legal tender for all debts and dues, public and private, at times during the last six months 58 per cent of the receipts for duties has been in silver or silver certificates, while the average within that period has been 20 per cent. The proportion of silver and its certificates received by the Government will probably increase as time goes on, for the reason that the nearer the period approaches when it will be obliged to offer silver in payment of its obligations, the greater inducement there will be to hoard gold against depreciation in the value of silver, or for the purpose of speculating.

This hoarding of gold has already begun.

When the time comes that gold has been withdrawn from circulation, then will be apparent the difference between the real value of the silver dollar and a dollar in gold, and the two coins will part company. Gold still the standard of value, and necessary in our dealings with other countries, will be at a premium over silver; banks which have substituted gold for the deposits of their customers may pay them with silver bought with such gold, thus making a handsome profit; rich speculators will sell their hoarded gold to their neighbors who need it to liquidate their foreign debts, at a ruinous premium over silver, and the laboring men and women of the land, most defenseless of all, will find that the dollar received for the wage of their toil has sadly shrunk in its purchasing power.

It may be said that the latter result will be but temporary, and that ultimately the price of labor will be adjusted to the change; but even if this takes place the wage-worker can not possibly gain, but must inevitably lose, since the price he is compelled to pay for his living will not only be measured in a coin heavily depreciated, and fluctuating and uncertain in its value, but this uncertainty in the value of the purchasing medium will be made the pretext for an advance in prices beyond that justified by actual depreciation.

The words uttered in 1834 by Daniel Webster in the Senate of the United States are true to-day: "The very man of all others who has the deepest interest in a sound currency, and who suffers most by mischievous legislation in money matters, is the man who earns his daily bread by his daily toil."

Mr. President, if you will read this message of 1885 on the Bland law, and read the late message you will find this quotation in both of them, and you will find the conditions predicted almost alike, the same conditions practically, which were predicted as existing in 1885 and 1886 under the Bland law.

When President Cleveland was first elected, and when he issued the celebrated letter from which I am quoting, and then in 1885 sent to Congress the message to which I have referred, urging and pleading for the repeal of the Bland law just as strongly as he asks now for the repeal of the Sherman law, it precipitated some discussion of what was going on in 1885, and what was causing the crisis which was then impending, and I want to examine it.

On July 14, 1886, in the House of Representatives—that was the first Congress assembled after President Cleveland's inauguration—the Forty-ninth Congress, first session, House joint resolution No. 126, directing payment of the surplus in the Treasury on the public debt was passed; yeas 207—144 Democrats, 61 Republican, 2 Independents; nays 67—14 Democrats, 53 Republicans.

July 27, 1886, in the Senate, Mr. ALLISON reported it with a substitute, which was passed. Yes 42—13 Democrats, 29 Republicans; nays 20—14 Democrats, 6 Republicans. It was placed in conference, and the conference report was adopted in the House of Representatives August 3, 1886. Yeas 120—73 Democrats, 47 Republicans; nays 63—34 Democrats, 28 Republicans, 1 Independent, and agreed to in the Senate August 4, 1886, without division.

The President would not sign it. It went to him on the last day of the session, and he killed it by what we call a pocket veto; that is, he refused to sign it. He made no return to Congress, so far as I have been able to ascertain, of his reasons for it; but in a very handsome book called State Papers of Grover Cleveland, which I possess, I find these remarks made in connection with that joint resolution:

This resolution involves so much and is of such serious import, that I do not deem it best to discuss it at this time. It is not approved, because I believe it to be unnecessary, and because I am by no means convinced that its mere passage and approval at this time may not endanger and embarrass the successful and useful operations of the Treasury Department and impair the confidence which the people should have in the management of the finances of the Government.

That was not a very dangerous joint resolution. There was some question as to the right of the President to pay out certain amounts to redeem certain bonds, etc. The joint resolution, as it passed and as it was pocketed by the President, provided:

That whenever the surplus or balance in the Treasury, including amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be, and is hereby made, the duty of the Secretary of the Treasury to apply such excess, in sums not less than ten millions per month, during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government:

* * * * * * * *

Provided, That no call shall be made under the provisions of this resolution until a sum equal to the call is in the Treasury over and above the reserve herein mentioned: *And provided further*, That the Secretary of the Treasury, in his discretion, may have in the Treasury, over and above the foregoing sums, a working balance not exceeding $20,000,000.

One hundred million dollars of actual reserve and $20,000,000 of working balance. It is true that this joint resolution did not discriminate between silver dollars and gold dollars. It referred to the surplus in the Treasury, and I apprehend its terms would have embraced the silver dollars as well as the gold dollars; but the President did not sign it. That joint resolution was considerably discussed in the Senate, and the causes which had precipitated that panic were discussed; and now I want to read something of what was said in the discussion as to the causes of the panic. I read from the CONGRESSIONAL RECORD, volume 17, part 8, Forty-ninth Congress, July 29, 1886, page 7674, from the speech of Senator Beck:

If I may be allowed to guess I could guess that it has a very proper meaning. Last year the Secretary of the Treasury was induced to lock up money in the Treasury, as we all agree now, greatly beyond what the interest of the people required, and very much beyond what was needed for the wants or security of the Government, because of combinations of men of wealth and power in New York and elsewhere, many of whom held bonds as security for national-bank circulation. They did not want to have the bonds paid and the circulation based upon them withdrawn, and they determined that they would ruin the country rather than receive any part of their principal or interest in silver coin. They made earnest and successful efforts through their combinations to alarm our Treasury officials. They endeavored to make them believe that they would bring on a panic in regard to the finances of the country unless all the surplus money was held in the Treasury; and their demand for gold, and gold alone, was acceded to. I believe they alarmed the Secretary of the Treasury. I believe that much of the useless locking up of our money was because of that apprehension, and I do not speak of these things without authority. I have before me a very able review, though a somewhat bitter one, of the speech I made in the Senate last winter, by Hon. Horace White, of New York, a very well informed man. In that review he said, among other things:

"A sort of panic ensued in the money market, and it came to my knowledge that Governor Tilden was one of a considerable number of persons who, without any concert of action, had bought large amounts of sterling exchange in order to protect themselves against loss in case silver should become our monetary standard. Sterling exchange means gold in London. Why was Governor Tilden buying sterling exchange? Because, happening to have on hand a certain number of dollars worth 100 cents each in gold and apprehending that if left in bank they would presently be worth only 90 or 80 or perhaps 75 cents each, he took the precaution to insure that they should continue to be worth 100 cents. He had only to write a few lines to his banker to insure this result. This was a typical case of the domineering 'organizations of wealth' that Mr. Beck has conjured up."

And so on.

A very able man, perhaps as able as Mr. White and as well informed, Mr. Abram Hewitt, of New York, made a speech very lately in which he said:

"I have reason to know when the present Administration came into power its first and chiefest concern was to avoid the danger which had been predicted by the Republican Secretary in his official statement and in his private communications. The amount of gold in the Treasury on the 4th of March, 1885, was $126,000,000. This was a much smaller sum than had usually been held in the Treasury in gold since the resumption of specie payment. It was steadily running down. The public confidence was gone. The hoarding of gold had begun—not by the mass of the people, not in stockings, not in secret hiding places, but by the masters of finance, the men whose business it is to handle millions and to prevent their deterioration; they began to prepare for the hour of danger and the collapse which they thought was impending.

"I know three of the greatest institutions in the city of New York—I shall not name them lest it might possibly bring down upon them the condemnation of those who are prejudiced against banks—but I know three institutions in the city of New York which had accumulated more than $25,000,000 of gold as a preparation for the collapse which they thought was coming."

Mr. CALL. Who was that?

Mr. COCKRELL. Mr. Abram S. Hewitt, of New York, a gold monometallist. This was the predicament of President Cleveland in the beginning of his first Administration. The whole Administration was trembling and shaking with dread and trepidation for fear that the Treasury Department would be dishonored and degraded. Whence did they get their information? From these masters of finance, the New York bankers, brokers, and option dealers.

I am quoting now from Senator Beck:

These men were conspiring to break us down. It was a well-organized effort, no doubt. They sent their emissaries from one end of the land to the other, they held their conventions all over the country, seeking to alarm the laboring masses, and to make good their threats if we dared to say that silver and gold should stand upon an equality before the law and that they should be required to take either at the option of the Government, like other people. It was these combinations, whose power our executive officers knew, which actuated the Secretary of the Treasury to make, at their suggestion or demand, the miserable, abortive, absurd effort last summer to save the country from ruin by the exchange for gold of $10,000,000 of fractional currency.

Just think of the great Secretary going up there and bowing to these masters of finance, and begging them to let him have gold for subsidiary silver coinage!

That abortion I need not do more than allude to, because it was too contemptible to deceive anybody and fell flat before it was consummated.

Mr. President, I shall not consume the time of the Senate by reading, but will introduce some extracts from pages 7675 and 7676:

I am not going to say anything now about or against the $100,000,000 reserve; that will not be endangered by the House resolution. I never have believed there was any necessity for $50,000,000 of reserve; I do not believe it now. It becomes more and more absurd every day to hear about $100,000,000 guarding greenbacks. I do not believe the credit of this Government would be impaired one penny if we were to-day to take $50,000,000 or all of that reserve and pay off the 3 per cent bonds with it.

Whatever may have been thought to be prudent in 1879, when the resumption act was an experiment, eight years of experience have shown that the greenback needs no protection. When we paid off $50,000,000 of 3 per cent bonds between the 1st day of January and the 1st day of July last, nearly $40,000,000 of them were paid in greenbacks at the request of the men who held the bonds. When the character of money in which our customs dues were paid

at the great port of New York during the month of June was looked into it was found that nearly 82 per cent of all the taxes were paid in greenbacks, although the law requires coin, and coin alone, for customs dues. The greenbacks in the Treasury held for the redemption of national-bank notes have been increased in the last five months from $30,000,000 to $60,000,000. Everybody wants greenbacks; nobody wants to have them redeemed, so that there is no sense in holding or hoarding gold for their redemption, far less $100,000,000 that costs us $5,000,000 of interest annually, as we paid 5 per cent for $6,000,000 of it and 4½ per cent for the balance. But I am not going to argue that question now. It will be swept away some day along with the other rubbish.

The 3 per cent bonds provided for in the resolution will all be paid off long before it is possible for the surplus funds, backed by the monthly surplus, to come anywhere near low enough to interfere with this $100,000,000 so-called reserve. Mr. President, this question has been argued all the time as though the Treasury was a great bank and the people of the United States a great private banking corporation, and as though everybody connected with the Treasury or managing its operations had to keep as much reserve in the Treasury of the people as a private banker would have to keep in order to save himself from unforeseen reverses. There is no analogy between them. Whatever there may be in the theory, the common sense of the proposition is all against the comparison and the assumption. The Senator from Maryland [Mr. GORMAN] and myself may be carrying on a bank in Baltimore. We may have the best men in Baltimore as our depositors; we bank on our deposits, of course; that is all we want them for.

But these depositors, when they see that the Senator from Maryland and myself are making money as bankers, and are making it out of their deposits, may say, "It is too good a thing to let Beck and GORMAN have this; we will set up a bank of our own." When they do they of course take away the money they deposited with us, and they take away the business of their friends, who are also our depositors. The two banks divide the profits. We must have a reserve to meet unexpected calls like that upon us. If our depositors who are left think that in Chicago, St. Paul, Minn., or somewhere else money can be loaned at 10 or 15 per cent instead of 3 per cent, which is all they make by depositing in our bank, they draw their money out. We must have a reserve to meet all these contingencies or fail.

The United States have no such contingencies to guard against. The United States have no competitor in their financial affairs. The money derived from our custom-houses and our internal-revenue offices and from our miscellaneous sources comes, as I said, with the certainty of death, and the more prosperous the country is the larger the receipts are. Nobody can divide with us or take from us any of our depositors.

Mr. President, no condition of things can break the United States. When the reserve of a private man is gone he fails. When the reserve of the United States is gone the Congress of the United States imposes a "5 per cent tax on all incomes over $5,000," and $30,000,000 flows into the Treasury; or "5 cents a pound on tea; 10 cents a pound on coffee; double up the tax on whisky and tobacco," and untold millions roll in. The world knows that; the plain people of the country understand it; and to argue here that we are no better off than a private man who must keep a reserve because he has no other means of payment except his own property is to my mind preposterous. No man's credit can be compared with that of the United States, whose power of taxation extends over a continent and over all the wealth of 60,000,000 people.

Everything every bank has can be called on and be required to come to the rescue of the credit of the United States at any moment when any deficiency is likely to occur. It is therefore an absurd proposition from a business standpoint to assume that we occupy the relation of private bankers, although that assumption has alarmed many people and made them believe that we were in danger of being broken down financially unless we keep this reserve intact. Even when at the end of each quarter when pensions and wages are paid, it is thought to be horrible to reduce that $100,000,000 reserve for a day, although it may be known that it will accumulate and be in large excess for three months thereafter, or until the next general quarterly pay-day comes.

I will go, however, to another speech at the same time from the senior Senator from Maryland [Mr. GORMAN]. I quote now from page 7723:

Mr. Hewitt states that he had that information from ex-Secretary McCulloch. But that is not all. The fact is that on the 7th day of February, 1885, nearly one month before the expiration of his term and when the new Administration was about to come into power, he (Mr. McCulloch) was so alarmed at the condi ion of affairs he saw, that payments out of the Treasury of silver certificates were running rapidly back into the subtreasury in New York from customs and internal revenue, receipts in gold on those accounts diminishing, the gold coin and bullion balance was being rapidly reduced, he was compelled on that date, February 7, 1885, to instruct the subtreasurer at New York to withhold payment of gold and greenbacks in the ordinary transaction with the clearing house in New York. In other words, he issued an order which suspended the whole operations of the Treasury with the New York clearing house as they had been carried on since 1879.

Mr. President, I only read this to show what the panic was at that time:

On the last day of February, 1885, just before this Administration came in, the balance, excluding the fractional silver coin, was $120,969,674, of which $42,093,656 were silver dollars, leaving a deficit, if all the obligations due in gold were paid, of $21,123,382. So it ran until July, 1885, when the Treasury found itself in the condition of having $144,052,929, of which $66,627,842 were standard silver dollars, leaving them short $22,574,913 of gold if all obligations were paid.

How similar were those conditions in 1885 and 1886! Just as bad a panic as we have now practically, and gotten up to order by the same men and to have effect upon the President. The President tells us in almost the same language as the present message of the dire calamities that would befall the country. Suppose he had called an extra session of Congress to repeal the Bland act, does any Senator here suppose that it would have been repealed? No. What did we do upon his recommendation to repeal the Bland act? We simply ignored it, as we had a right to do, being an independent and coördinate branch of the Government. He exercised his full constitutional prerogative when he made his recommendation to us, and we recognized our constitutional prerogative in ignoring it. But, Mr. President, if they were all mistaken in 1885 and 1886, may they not be mistaken now?

Mr. President, I will ask to insert extracts from this very able and interesting report of Secretary Manning (1886), pages 37, 39, and 61, where he goes on to show precisely what was the cause of the depreciation in silver—its demonetization by the principal nations of the world:

CONSEQUENCES OF STOPPING SILVER PURCHASES.

To stop the purchase of silver will enable the Treasury, while the monetary system is restoring to its normal conditions, to maintain with certainty and greater ease the present stock of silver coin at par with gold in all our fiscal and local uses, to the great relief from distrust, of the owners and employers of capital, and so to the greater relief and increasing employment of labor—the first fruits of sound finance and the first condition of prosperity.

To stop the purchase of silver of course will cause a new fall in the London market. Speedier and more assured will then be the day of its final restoration to its former place in the money of the world. It is the recent heavy fall which has opened eyes that were blind and ears that were deaf. But a fall of silver, if the expense and influx to the Treasury are stopped, will not enhance the trouble of the Treasury or increase the difficulty of the duty which the laws impose to keep the silver circulation at par with gold within our own jusisdiction. Of course, compulsory employment of a money temporarily and locally inferior, in funded-debt payments, or in daily expense of any sort, means compulsory acceptance, and would force the inferiority to appear, whereas its skillful employment and an optional acceptance, which the laws of Congress do not forbid, will prevent that inferiority from appearing in our domestic trade which nothing can disguise in our foreign exchanges.

* * * * * * *

If the law were repealed which makes compulsory Treasury purchases of silver, and if that repeal were accompanied by the declaration of Congress that the United States now hold themselves in readiness to unite with France, Germany, and Great Britain in opening their mints to the free coinage of silver and gold at a ratio fixed by international agreement, it is the deliberate judgment of the undersigned that before the expiration of another fiscal year this international monetary dislocation might be corrected by such an international concurrence, the two monetary metals restored to their old and universal function as the one standard measure of prices for the world's commodities, the depression of trade and industry relieved, and a general prosperity renewed.

I respectfully recommend to the wisdom of Congress the unconditional repeal of the act of February 28, 1878, accompanied by such a declaration.

Why did he want to stop the coinage? Upon what ground? Remember, he claimed to be a bimetallist. Upon what ground did he want the limited coinage of silver under the Bland law stopped? He wanted it stopped so that it would force England and other European nations to come to bimetallism. The favorite theory for years and years was that we could never secure bimetallism until we forced European nations to it; that we never can force European nations until we stop the coinage of silver and throw it upon the market, glut the market, and then they will come down and agree with us. That is the theory.

We have been talking about that theory ever since 1878, and yet what has been done right in our face? England has stopped the coinage of silver in India, and precipitated a crisis such as the world has not seen. Yet they tell us that if we would stop the coinage of silver, it would bring about an agreement! Are we to be fed upon such milk as that? Is there any strengthening power in such an argument and such presentations? Think of it. I want Senators to think of it. For years and years the principal argument for stopping the coinage of silver under the Bland law has been that we might get an international agreement. When they saw that we were not going to uphold silver, the idea was that then they would come down and agree with us. Yet, while we were doing that, England has gone on steadily and stopped the coinage of silver in India, stopped the mints to free coinage, without consulting us; and in the Brussels conference they even told us that they intended to do it. It was intimated to us strongly enough to put us on our guard, and then we told them we were going to do it.

So that the argument to-day that the stoppage of the coinage of silver or the purchase of silver under that law will tend to make foreign nations come to a bimetallic agreement with us is without foundation. They have taken the lead of us and closed their mints. We shall have to get something else in order to have a standing in any proper and fair argument.

Now, Mr. President, I will go on with this panic of 1885-6. In 1886 President Cleveland referred to the Secretary's message, and again recommended the suspension of the coinage of the standard silver dollar under the Bland act. But that was still to the Forty-ninth Congress. Secretary Fairchild then comes in and makes his report in 1887, and I will insert extracts from that report from pages 47, 48, and 49. They are very interesting:

STANDARD SILVER DOLLARS.

One of the most interesting facts shown by the foregoing statements is the decrease in the number of standard silver dollars owned by the Government and the increased use of the same money by the people in the form of silver certificates. The five, two, and one dollar certificates furnish a convenient currency, and it is evident that the future use of the silver dollar will be almost exclusively in that form.

* * * * * * *

If the Government held no funds save those needed for its daily expenses, it would perform no different function toward currency when it had once coined or printed it than does an individual who receives and pays out money; but the two great trust funds—that for the redemption of United States notes, ($100,000,000,) and that for the redemption of national-bank notes, at present more than $100,000,000, and whatever surplus there may be from to time to time—form, as it were, a reservoir which takes and holds that kind of currency which the people reject. Were it not for this great Government reservoir a redundancy of any form of currency would be shown either by its ex-

portation to countries where it was needed or by its depreciation here. The silver dollar can not be exported because the silver of which it is made is worth less than 75 cents, and that would be its value for exportation.

* * * * * * *

The foregoing tables show that during the sixteen months ended November 1, 1887, this Department was able to pay out at par and keep in circulation $10,464,935 of the coined silver dollars, and $72,597,732 of their representatives, the certificates, in addition to the amounts of each in circulation July 1, 1886. If the Department had been able to print enough certificates, doubtless the whole of this increased use of silver would have been in the form of certificates, and few, if any, coined dollars would have been paid out. On the contrary, many of those out would have been returned and certificates taken in their place.

There should always be in the Treasury enough silver beside that held against outstanding certificates to enable the Government to at once supply any demand for it on the part of the people; but all held in the Treasury in excess of that amount is absolutely useless for any purpose, and is in fact a menace to the silver which the people hold and also to the United States notes and national-bank notes—to the whole circulating medium, except gold; therefore it would be the part of wisdom to prevent any accumulation of silver in the Treasury beyond a sufficient reserve needed to meet any demand which may be made for it. This can be done by fixing the amount of such reserve, and providing that when it is exceeded by say $5,000,000 the purchase of bullion shall cease until the amount held by the Government again equals such reserve.

Another plan, somewhat similar to that recommended by my predecessor in his last annual report, would be to provide that when the reserve was exceeded, an amount of United States notes equal in value to such excess should be cancelled, if enough of them were in the Treasury; but if not, then the purchase of bullion to cease until the maximum reserve should be reached. This would create a vacuum in the circulating medium which would be filled by silver. The amount of United States notes would be gradually reduced until the whole were extinguished; silver dollars or silver certificates would take the place of United States notes as they were retired. This plan would make our currency more uniform and as secure as now.

Neither of these plans, if adopted, would diminish the actual or potential use of silver as currency by a dollar. In my judgment, it would be promoted thereby.

President Cleveland, in his third annual message of December, 1887, makes no mention of the terrible crisis in which the country had been enveloped. That was in 1885. The clouds had cleared away, and the silver question was not so important.

Mr. President, has it ever occurred to the friends of unconditional repeal, when they bring before us the weighty power of the President's recommendation, that it is barely possible that the President may be mistaken now, as he has been so often mistaken heretofore?

I refer to Secretary Fairchild's report for 1888, page 29:

SILVER COINAGE.

The ownership of silver by the Government again was largely decreased, in spite of the increase of the total stock of silver dollars in the country, by the coinage of sixteen months. During the past few years the decrease of circulation caused by the cancellation of national-bank notes and by the deposit of money with the Treasurer by the banks to redeem their notes when presented for that purpose has been but little exceeded by the increased circulation of silver certificates and of standard silver dollars; thus silver seems to have filled the vacuum caused by the retirement of national-bank circulation. The circulating medium in small denominations has been largely converted into silver certificates. And, finally, business has largely increased in the South and in portions of the country where there are few banking facilities.

All of these causes have coöperated to postpone any evil effects which might arise from a continued and excessive coinage of the silver dollar; but the danger still exists, and should be guarded against. This can be done by the adoption of the recommendation of my last report, viz, by fixing the maximum of silver which shall belong to the Government, and by providing that when it was exceeded by $5,000,000, the purchase of silver bullion should cease until the amount owned by the Government should be again reduced to such maximum, or by canceling United States notes to the amount of the excess over the maximum, provided the Government held the notes; if not, then by ceasing the purchase of bullion. Such plan, if adopted, would provide a safety valve which would be self-operative, and would assure the country against any possible danger from silver; for as soon as it exceeded the amount which could be absorbed in the business of the country, it would begin to flow into the Treasury in payment of taxes, and would be there held until business called for it, and when the Government's ownership fell below the maximum, the purchase of the bullion would again begin.

Now I quote President Cleveland's message of December 23, 1888, the last message, in which he says:

The Secretary recommends the suspension of the further coinage of silver, and in such recommendation I earnestly concur. For further valuable information and timely recommendations I ask the careful attention of Congress to the Secretary's report.

We drift along a little further, Mr. President, and I will insert extracts from President Harrison's message of December 3, 1889, in which he goes on to show how the lowering clouds of apprehension and danger had passed away and the country was in good condition:

The evil anticipations which have accompanied the coinage and use of the silver dollar have not been realized. As a coin it has not had general use, and the public Treasury has been compelled to store it. But this is manifestly owing to the fact that its paper representative is more convenient. The general acceptance and use of the silver certificate show that silver has not been otherwise discredited. Some favorable conditions have contributed to maintain this practical equality, in their commercial use, between the gold and silver dollars. But some of these are trade conditions that statutory enactments do not control, and of the continuance of which we can not be certain.

I refer now to his messages of 1890, 1891, and 1892, and to the finance reports.

President Harrison in his message of December 1, 1890, in referring to the Sherman law said:

Some months of further trial will be necessary to determine the permanent effect of the recent legislation upon silver values, but it is gratifying to know that the increased circulation secured by the act has exerted and will continue to exert a most beneficial influence upon business and upon general values.

In his message of December 9, 1891, President Harrison says:

I hope the depression in the price of silver is temporary, and that a further trial of this legislation will more favorably affect it. That the increased volume of currency thus supplied for the use of the people was needed, and that beneficial results upon trade and prices have followed this legislation I think must be very clear to every one; nor should it be forgotten that for every dollar of these notes issued a full dollar's worth of silver bullion is at the time deposited in the Treasury as a security for its redemption.

* * * * * * * *

I am still of the opinion that the free coinage of silver under existing conditions would disastrously affect our business interests at home and abroad.

* * * * * * * *

The exports of gold to Europe which began in February last and continued until the close of July, aggregated over $70,000. The net loss of gold during the fiscal year was nearly $68,000,000. That no serious monetary disturbance resulted was most gratifying, and gave to Europe fresh evidence of the strength and stability of our financial institutions. With the movement of crops the outflow of gold was speedily stopped, and a return set in. Up to December 1 we had recovered of our gold loss at the port of New York, $27,854,000, and it is confidently believed that during the winter and spring this aggregate will be steadily and largely increased.

It will be remembered that on the 14th of January, 1891, the free and unlimited coinage amendment of my colleague [Mr. VEST] was passed by the Senate by 39 yeas—24 Democrats and 15 Republicans; to nays 27—1 Democrat and 26 Republicans; and was pending in the House of Representatives. What was done? The business men got up a banquet in New York and invited ex-President Cleveland—as he was then—to attend and address the meeting. I now hold in my hand the letter of Mr. Cleveland to Mr. Anderson, dated from 816 Madison avenue, February 10, 1891, in which he says:

I shall not be able to attend and address the meeting as you request, but I am glad the business interests of New York are at last to be heard on the subject.

The business interests of New York to be heard!

It surely can not be necessary for me to make formal expression of my argument to those who believe that the greatest peril would be initiated by the adoption of the scheme embraced in the measures now pending in Congress for an unlimited coinage of silver at our mints.

When that sentence was written, then he began to meditate, and then he puts in—

If we have developed an unexpected capacity for the assimilation of a largely increased volume of currency, and even if we have demonstrated the usefulness of such increase, these conditions fall far short of insuring us against disaster if in the present situation we enter upon the dangerous and reckless experiment of free, unlimited, and independent silver coinage.

Yes, Mr. President, when he was writing that letter he began to think of the predictions he had made, beginning in 1885, and every solitary one of them not having been fulfilled, in whole or in part.

Mr. PLATT. What was the date of that letter?

Mr. COCKRELL. That was in 1891, February 10.

You see when he got into the middle of the letter he then began to reflect about the number of times he had made the same identical prediction, and every one of those predictions had failed. He then says:

If we have developed an unexpected capacity for the assimilation of a largely increased volume of currency, and even if we have demonstrated the usefulness of such increase—

Here is an open confession—"good for the soul"—to the world that the predictions he had made before had not resulted as he had anticipated, but that, on the contrary, the ignoring of them by us had been a blessing to the country.

But, Mr. President, why shall we not now, by amendment to this bill, establish such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts?

We have ample time; we have all the attainable data, all the information, facts, and figures necessary to enable us to prepare and legislate into existence a just, efficient, and sufficient monetary system, founded on the constitutional, old Democratic bimetallic principles.

The opponents of silver coinage answer in the doleful tones of their long and oft-repeated predictions and shuddering panicky apprehensions of dire consequences and untold evils to flow from the further coinage of silver. We are gravely and solemnly told—as we have been ever since 1878—that unless we stop all further coinage of silver dollars we will drive all the gold out of our country, and will have our country baptized with an overwhelming inflow of silver, and be driven to a single silver standard. They are the same old stereotyped prophecies. If there be any foundation for them in fact, there has been ample time since 1878 to prove them true or false.

Now we come to the cold facts and figures. Here we have had the predictions made ever since 1877 as to what was going to occur from year to year. Now let us take the cold recorded facts and figures, and see whether one solitary prediction ever has been fulfilled. Has gold been driven from our country out of circulation.

The finance report of Secretary Sherman of December 2, 1878,

the first one made after the passage of the Bland silver law of February 28, 1878, shows (page 9) that on April 11, 1878, he sold fifty million 4½ per cent bonds, funded loan of 1891, at a premium of 1½ per cent and accrued interest, less a commission of one-half of 1 per cent, and that on November 23, 1878, there were in the Treasury, in excess of coin liabilities, $141,888,100 in gold.

Statement of gold coin and bullion and silver dollars and bullion in the Treasury and in circulation on the dates given.

July—	Gold coin and bullion.	Silver dollars and bullion.	July 1—	Gold coin and bullion.	Silver dollars and bullion.
1879	$245,741,837	$41,276,356	1889	$680,063,505	$343,947,093
1884	545,500,797	180,306,614	1890	695,563,029	380,083,304
1885	588,697,036	208,538,967	1891	646,582,852	438,783,502
1886	590,774,461	237,191,906	1892	664,275,335	491,067,518
1888	705,818,855	310,166,459	1893	592,069,133	537,506,279

Gold coin and bullion in Treasury July 1, 1893, $188,555,433. Silver dollars coined, 419,332,450; out in circulation, 57,029,743; and in certificates, $330,957,504, leaving in Treasury only 31,345,203.

Oh, think of the conduct of these silver lunatics from 1878 to 1893! We have persistently ignored the recommendation of every President who has occupied the Executive chair. While every President and every Secretary of the Treasury has predicted that the country was going to destruction, that financial crises would envelop the whole country, we poor silver lunatics have stood and paid no attention to them, and yet the country has been prosperous and at rest. What would this country be to-day if you took the silver money, the coins and the certificates, out of it? Where would we have anything to circulate? We would not be in this crisis. No; but we would be in the deadly paralysis of a single gold standard, and the business of this country would be prostrate and shrivelled, tenfold worse than now. The silver lunatics said "No, we will not repeal it." And we did not. Had we obeyed their commands we would have brought ruin and disaster upon the country.

But now, Mr. President, if all these great statesmen and learned financiers—Secretary and ex-Senator (and now Senator) SHERMAN, ex-President Hayes, ex-President Arthur, Secretary Folger, Secretary McCulloch, President Cleveland, Secretary Manning, Samuel J. Tilden, the New York bankers who hoarded twenty-five millions of gold in 1885—if all and every one of these have, giving way to their fears and apprehensions, made predictions which have not been fulfilled, and have every one of them been mistaken, as the records conclusively and beyond any reasonable doubt show, and all their predictions have been absolutely falsified by the record of subsequent events, is it, I ask, in common reason and sense, criminal, censurable, or improper in us plain, common people to suspect, to believe that they are now as much mistaken as then? Their predictions then were just as honestly and conscientiously made, with all the lights before them, as now. We do not question their honesty and sincerity, and their fears. They have up to this date been grievously mistaken in all their predictions. We just as honestly and sincerely believed then they were mistaken.

The facts and figures show we were correct and right in our views and judgments, and they were mistaken, wrong, in theirs. Would it be wrong in us now to suggest to them our doubts of the correctness of their present apprehensions and predictions?

Is it not time, after the lapse of over fifteen years, that these calamity howls shall be brought to a halt? We hear a great deal in the Eastern press about the calamity howlers out West, but if there have ever been any calamity howlers in the West equal to those of Wall street and the East I should like to have them pointed out. Ever since we took away from them their idol, their god (a single gold standard), they have deluged this country and the press with their calamity howls of the crises and the impending dangers. Talk about a Populist in Kansas being a calamity howler! Put him by the side of a New York banker and he would sneak away in shame! [Laughter.]

So much for the assertion that the coinage of silver will drive gold out of the country and bring us to a silver standard. But our opponents say we have only had limited coinage of silver, and that if we give to silver unlimited coinage with full legal tender, then we will certainly be deluged with an overwhelming mass of silver from every nation, kindred, and tongue, and will have piled into our mints all the old silver spoons, forks, teapots, and plate generally, in addition to the great mass of silver coins now in the various nations.

This is a mere guess, assertion, prediction, prophecy. It can only be determined absolutely by the trial. We can only ascertain all the available data, facts, and figures, and then by reasoning—guided by the past and the probabilities of the future—form our conclusions and make up our judgment.

First. Will the silver plate in the world be dumped into our mints? No one denies that a large amount of silver bullion and coin has been consumed annually in industrial uses, in ornaments, in manufactures, and in fine arts.

Is it so consumed in anything near its purity? Certainly not. It is debased, mixed in greater or less proportion with baser metals, and in its present condition could not be received under any ordinary mintage laws for coinage. It would then be absolutely necessary to have the silver extracted from the baser metals, and when purified, then present for coinage.

Now, is not the silver so used in the existing plate, ornaments, etc., more valuable in the plate, etc., than it would be after paying the cost of extraction and losing the entire value of the manufactures in which it exists? There certainly can be no reasonable doubt of this.

The quantity of silver consumed in industrial uses which would ever find its way to our mints would be infinitesimally small and of no consequence whatever. This pretended claim is simply made as a burlesque to bring ridicule and contempt on the silver cause.

Second. Let us now consider how much of the silver coins in existence in other nations would come to our mints. Would we be flooded with the silver from India? According to our Mint Bureau there are $900,000,000 in silver in India, in the rupee silver coins.

The population of India is 280,000,000, and they have only a small fraction over $3.21 per capita, and the silver rupee is their absolute money, with full legal tender at the ratio of 15 of silver to 1 of gold, and at that ratio has full debt-paying and purchasing power, and for ages past has been their only full legal-tender money, used in all the varied and multitudinous transactions and exchanges. The quantity of silver there in the rupee coins—the full equivalent of the dollar—brought here and placed in our mints for our coinage at 16 to 1, would be 6.2 cents less less than $1, and that amount would be an actual loss on every dollar's worth, beside the cost of transportation, insurance, and interest during time in transit and up to its recoinage here.

Would it pay them to suffer these losses? In view of their financially embarrassed treasury it certainly would not. The Indian Government could not afford it and private citizens would certainly not. And it is practically all in circulation among the people and belongs to them and not to the government. It is their coin money.

Besides all these facts the people have not a sufficient quantity to meet the wants and demands of their daily transactions. Yet we are told that we are to be flooded from India. It is a mere chimera. Certainly there could be none from India.

China, with a population of 400,000,000, has, according to our Mint Bureau, $700,000,000 in silver, which is just $1.75 per capita.

Can anyone believe that there is any danger of a flood from that source? The silver there is in the hands of the people, in bullion largely, simply in pieces of silver and used as money in the ordinary business dealings. It is not reasonable to suppose there is any probability of that silver, in whole or even in part, coming to our mints.

In the Straits Settlements, population not given, there is estimated to be $100,000,000 in silver scattered throughout that country in the hands of the people, used as their only money, and so used for ages past. There can not reasonably be expected any deluge from that source.

In Japan, with a gold coinage of $90,000,000, and $50,000,000 of full legal-tender silver coined at the ratio of 16.18 to 1, and a population of 40,000,000, and $56,000,000 of uncovered paper currency without any gold or silver redemption reserve, the silver is only $1.25 per capita, scattered among the people and in constant use in their business affairs, as standard money equal to gold, and to the use of which they have long been accustomed. If sent here for coinage their silver dollars would only contain 1.01 cents more than our dollar, and this 1.01 cents per dollar would not compensate the expenses of transportation, insurance, and loss of interest. No one can reasonably expect any overflow from Japan. Their dollars would be worth no more here recoined into our dollars than they are in Japan.

In South America, with a population of 35,000,000, they have $45,000,000 of gold and $25,000,000 of full legal-tender silver coined at the ratio of 15½ to 1. The amount of silver there is only 71 cents per capita, and besides this they have the enormous sum of $600,000,000 of uncovered irredeemable paper currency, and need and require many times more silver than they have for their daily business transactions. There can not reasonably be any fear from that source. Their silver dollars at the ratio of 15½ to 1 contain 3.1 cents less than ours, which would be an actual loss on every dollar.

In Mexico, with a population of 11,600,000, they have five millions of gold and fifty millions of full legal-tender silver dollars, coined at the ratio of 16½ silver to 1 gold, and two millions of uncovered paper. Their silver is only $4.31 per capita; is their

only circulating coin money in the hands of the people, used time immemorial as money. Their silver dollar contains 1.03+ cents more silver than ours. Being our near neighbors it is probable that small quantities of their silver coinage might find their way to our mints, but it would be no deluge, and no material amount.

In Egypt, with a population of 7,000,000, they have one hundred millions of gold and fifteen millions of limited legal-tender coins at a ratio 15.68 to 1. Their silver is a subsidiary coin, and amounts to only $2.14 per capita, and is in the hands of the people—used as money in the ordinary business transactions. There would certainly be no deluge from that source, as their dollar contains 1.93 cents less silver than ours. There could be no motive for sending their coin here.

Turkey, with a population of 33,000,000, has fifty millions of gold and forty-five millions of limited legal-tender silver coins—only $1.36 per capita. Their silver coins are in the hands of the people, widely scattered over a large area, and are in constant use in their daily affairs, and all coined at the ratio of 15.1 to 1. The loss on every dollar would be about 5.6 cents. I can not see any probability of any deluge, or even light shower, of silver from that country.

Russia, with a population of 113,000,000—doubtless underestimated—has $250,000,000 of gold and $22,000,000 of full legal-tender silver coins coined at the ratio of 15½ to 1, and $38,000,000 of limited legal-tender silver coins, coined at the ratio of 15 to 1, with the immense sum of $500,000,000 of uncovered paper currency, practically irredeemable and below par. They have use for much more silver than they have. The actual loss on every dollar of their full legal-tender silver would be 3.1 cents and on their limited legal tender would be 6.2 cents. Their paper currency is redeemable in their silver coins. In this financial condition is it reasonable to suppose that any part of the silver coins of Russia now in the hands of her vast population, widely scattered over her vast domains, would be gathered up and sent here to our mints? It seems to me only reasonable and almost absolutely certain that no part of her silver would flow into our mints.

The Scandinavian Union, with a population of 8,600,000, has thirty-two millions of gold and ten millions of limited legal-tender silver coins at a ratio of 14.88 to 1, and twenty-seven millions uncovered paper currency. This silver is a subsidiary or minor coin amounting to $1.16 per capita. If these silver coins were sent to our mints the loss on each dollar would be 6.3 cents. These silver coins are in constant use in all money transactions in limited sums, and no part of it can be spared or sent to our mints.

The Netherlands, with 4,500,000 population, have twenty-five millions of gold and $61,800,000 of full legal-tender silver at the ratio of 15½ to 1, and $3,200,000 limited legal-tender silver coins at the ratio of 15 to 1, with forty millions uncovered paper. Neither their silver coins nor their paper currency are convertible into gold. All their silver coins are in circulation as money in the hands of the people. If their full legal-tender silver coins were sent to our mints the actual loss on each dollar would be 3.1 cents, and on each dollar of their limited legal-tender silver would be 6.2 cents. There is no possibility with such a small amount of silver that they will ever be able to spare it. In addition to that, it does not belong to the government.

Austria-Hungary with a population of 40,000,000 has a stock of $40,000,000 in gold, according to our Mint Bureau, which I think is much below the actual amount, as that Government has been grabbing for and accumulating gold for some time past, having proposed in 1891 to establish the single gold standard, and having established it in August, 1892. They have $90,000,000 of full legal-tender silver coined at the ratio of 13.69 to 1, and $260,000,000 uncovered paper currency, according to our Mint Bureau, but which I think far below the actual amount, as they had at the beginning of 1892 about $345,000,000 of such uncovered paper currency.

Their silver coins are only $2.25 per capita, while their paper currency is from $6.50 to $8.62½. Their paper currency, as well as silver, has been inconvertible. It is doubtless their intention in the end, when their finances will justify, to retire some of their paper and make the remainder redeemable and convertible.

Even with their recently established gold standard it does not seem reasonable or probable that they can resume coin redemption of their uncovered paper, and dispense with their comparatively small amount of silver coins—only $2.25 per capita—gather their silver into the government treasury and send it to our mints for coinage. It would certainly involve a serious loss, amounting to 14.4 cents on every dollar, which any government in the financial stress of Austria, with a national debt of $70 per capita, would hesitate to suffer and could illy afford to incur this loss and send that silver out of the country. There certainly need be no serious apprehension of any overflow from that country of silver to our mints.

Portugal, with 5,000,000 population, has forty millions gold, ten millions limited legal-tender silver money at the ratio of 14.08 to 1—only $2 per capita, and forty-five millions of uncovered paper money. On every dollar of their silver sent to our mints the actual loss would be 14.35 cents. It is certain there would be none sent to our mints.

Spain, with a population of 18,000,000, has forty millions gold, one hundred and twenty millions full legal-tender silver coined at the ratio of 15½ to 1, and thirty-eight millions of limited legal-tender silver coined at the ratio of 14.38 to 1, and one hundred millions of uncovered paper money. In addition to this uncovered paper, $5.56 per capita, Spain has a national debt of over $70 per capita. The full legal-tender silver is $6.66 per capita and the limited legal tender is $2.11 per capita. On every dollar of the full legal tender the actual loss, if recoined in our mints into our dollars, would be 3.1 cents, and on the limited tender 10.1 cents.

Is Spain in the financial condition to gather into her treasury any considerable portion of her silver coinage from its circulation among a tax-ridden people, dollar for dollar with any and all other money in their hands, and dump it into our mints at the actual loss I have named? There can be no reasonable or well-founded apprehension of any such action.

Switzerland, with 3,000,000 population, has fifteen millions of gold. Eleven million four hundred thousand full legal-tender silver money coined at the ratio of 15½ to 1, and $3,600,000 limited legal-tender silver coined at the ratio of 14.38 to 1, and fourteen milons uncovered paper, nearly equal to all her silver.

The actual loss on the full tender coins on every dollar, if sent to our mints, would be 3.1 cents, and on the limited tender 10.1 cents. All her silver is only $5 per capita, and is in the hands of the people, equal to gold and as current money in that country as gold. There can be no reasonable grounds to believe any portion of it will be dumped into our mints.

Italy, with 31,000,000 population, has $93,605,000 of gold, sixteen millons full tender silver at a ratio of 15½ to 1, and $34,200,000 limited tender silver at 14.38 to 1, and $163,471,000 uncovered paper, besides a per capita national debt of over $75. Their paper is at a discount. Their full tender silver is only 51 cents per capita, and their limited tender only $1.10 per capita, combined only $1.61 per capita. No one can reasonably expect any of this silver money to be dumped into our mints, the actual loss being 3.1 on full tender and 10.1 on limited tender.

Belgium, with 6,100,000 population, has, according to our Mint Bureau, sixty-five millions gold, a largely overestimated sum according to Indian currency commission's report, and $48,400,000 full tender silver at ratio of 15½ to 1, and $6,600,000 limited tender silver at ratio of 14.38 to 1, and fifty-four millions uncovered paper, and in addition a national debt of over $60 per capita.

The actual loss on every dollar of her full-tender silver sent to our mints would be 3.1 cents and on the limited tender 10.1 cents. Certainly Belgium is in no financial condition to gather up from the hands of the people using and passing her silver equally with gold and dump it into our mints at the losses indicated.

Now, I go to Germany. Germany is the greatest scarecrow for deluging us with untold masses of depreciated silver so called. There is the country that is going to flood the world with its surplus silver. Germany has a population of 49,500,000, and according to our Mint Bureau, has six hundred millions in gold, an overestimate of probably fifty millions, according to Indian currency commission reports. She has, notwithstanding her single gold standard, one hundred and three millions of full legal tender silver thalers or dollars, as estimated by our Mint Bureau, coined at the ratio of 15½ to 1, in circulation upon a perfect equality with her gold, equal to gold in the payment of all debts and in all purchases, and only equal to $2.08 per capita, and one hundred and eight millions of limited legal-tender silver coined at the ratio of 13.957 to 1, and an uncovered paper circulation of $107,000,000. The per capita of the limited tender silver is only a fraction over $2.18.

In 1890, according to Eleventh Census Report, the German Empire proper had a debt of only $85,181,250, but the States of Germany had a combined debt of $1,874,437,972 owing in different amounts by the several states.

If the German full legal-tender silver were dumped into our mints, the actual loss on each dollar would be 3.1 cents, and on the limited tender 12.7 cents. Consider her indebtedness, Empire and states, her one hundred and seven millions of paper money without any gold or silver coin on hand for its redemption, and her $2.08 full legal tender per capita and her $2.18 limited tender per capita, only $4.26 combined, per capita, and the actual and unavoidable loss to be incurred in sending her silver coinage to our mints, while the coin at home is circulating side by side with gold, and it seems to me certain that there can be and would be no deluge of silver from Germany.

There has been so much said about the silver in Germany that I must beg the indulgence of the Senate to not rely simply upon the reports of our Mint Bureau, but to go to the official records, and see whether the Mint is right, and see whether there are $103,000,000 there of full legal tender. I confess we have all been under that impression. I spoke to my friend the Senator from Iowa [Mr. ALLISON], and asked him if he could give me any estimate of what was stated in the Brussels conference. I had read the report of the Brussels conference, and had found that the German representatives there had submitted a table and that it was not printed with the proceedings, although it was stated that it would be printed. I then went back to the report of the monetary conference of 1881, and I will now read from that report the official statement of the German representatives in that conference.

EXHIBITS OF THE FIRST SESSION.

EXHIBIT A.

[Presented by Baron Von Thielmann, page 13.]

A STATEMENT OF THE MONETARY SITUATION IN GERMANY.

I will not read this, because we all know she changed from a single silver to a single gold standard and introduced a new coin as her standard, a gold mark. Then she made the silver coins of 5, 3, and 1 mark and 50 and 20 pfennigs, and called in the silver coin, and the world has been scared with what she had ready to dump on it ever since. I will read from pages 17 and 18:

If the provisions of the present monetary statutes should be completely carried out, and if, by reason thereof, the sales of silver should be resumed, the Imperial Government would need to dispose of only so much of the four hundred and ten or five hundred millions of marks in thalers now in circulation, as well as of the bar silver which it has held since 1879, as might not be required for the augmentation of the circulation of subsidiary silver coins.

As has been stated in the above title I, the total amount of Imperial silver coins must not, under the present law, exceed 10 marks per capita of the population of the Empire.

The latter, however, having increased between the census of 1st December, 1875, and that of 1st December, 1880, from 42,727,372 to 45,194,172 souls, making a gain, therefore, of 2,466,800 souls, it becomes possible, at this date, under existing legislation, to augment by about 25,000,000 of marks the mass of silver coins struck up to the present time, and which amounts to 427,000,000 of marks. But, besides this, the Imperial Government has recognized, since the year 1880, the propriety of raising the rate of the fractional coinage from 10 marks to 12 marks per capita of the population, in case the monetary reform should be allowed to take its course.

If this new rate be based upon the total of the present population of Germany it would be necessary to coin a further sum of 115,000,000 of marks in silver money, and this would absorb the 31,000,000 of marks in silver ingots—

Referred to here. That is all they had in bullion, 31,000,000 of marks in bullion. He says:

And this would absorb the 31,000,000 of marks in silver ingots which are now on hand, and 73,000,000 of marks in thalers now actually in circulation.

There would remain to be sold, including seventy-four to eighty-one millions of marks in Austrian thalers, a mass of three hundred and thirty-seven to four hundred and twenty-seven millions of marks, that is to say, of 3,740,000 to 4,740,000 pounds of fine silver.

If the Austrian thalers be left out of the calculation, there would only remain to be disposed of two hundred and sixty-three to three hundred and forty-six millions of marks, or, in other words, 2,920,000 to 3,840,000 pounds of fine silver.

Let us take the reasonable medium estimate there, 4,500,000 pounds of fine silver, its value $69,795,000. What is the increase of population since 1880? Four million four hundred and five thousand. What is the per capita? Twelve marks per capita, equal to $12,686,400, reducing the stock of silver to $57,108,600 in legal thalers, the most of it in bank as reserve money. Did she coin it? Has she coined any since 1880?

Germany in 1882 and up to 1889, according to our census reports, and in 1891, coined $11,870,460 in subsidiary silver, which shows that she has carried out her monetary policy, and there can be no possible danger from that source. The Imperial Bank of Germany on the 18th of August, 1893, had gold coin £36,725,250 and silver £12,241,752; so that from $57,000,000 to $60,000,000 is all there is of standard silver thalers in Germany, and they are a full legal tender and circulating at a par with gold. I say all the pretensions that we are going to be flooded with silver from Germany are without foundation.

Now go to Great Britain. Nobody can claim that her $100,000,000 of silver will ever be brought here. Great Britain, the United Kingdom, has 38,000,000 population, $550,000,000 gold and $100,000,000 subsidiary silver coin money, coined at the ratio of 14.28 to 1, and a full legal tender up to $10, now in circulation as money among the people—used in nearly all the transactions in amounts below $10, and redeemable in gold whenever gold is wanted.

It is worse than ridiculous to pretend even that any portion of that silver money will ever be dumped into our mints, at an actual loss in its value of 10.7 cents on every dollar. There is no danger from that source.

Now for France. France has a population of 39,000,000; eight hundred millions gold, the largest stock in any nation, and six hundred and fifty millions silver, coined at ratio of 15½ to 1, and a full legal tender in all payments, the equal in all respects of her gold coin, and absolute money, irredeemable in anything, just like gold.

France also has fifty millions limited legal-tender coins at ratio of 14.38 to 1. The recoinage into our dollars would entail an actual loss of 3.1 cents on her full legal tender and 10.1 cents on her limited tender on every dollar.

France to-day maintains the true bimetallic system, so far as her coined gold and silver money is concerned, but not as to silver bullion, for her mints are closed to silver coinage.

France has $81,402,000 of uncovered paper money, without any metallic reserve for redemption, and an enormous national debt of $4,446,000,000, exclusive of annuities whose capitalized value is estimated by good authority to be not less than $2,000,000,000. That is according to the Eleventh Census Report. This vast indebtedness is held almost entirely by her own citizens, who receive the interest on it, and when paid will receive the principal.

In this condition of France, can any rational person believe it either probable or even possible for any considerable portion of this silver coin money to find its way to our mints for recoinage into our silver dollars at the inevitable loss to be incurred? It seems to me that any such belief can only arise in drowsy moments when dreams, not reason nor judgment, hold possession of the mental faculties.

The Bank of France on August 18, 1893, held gold $335,000,000 and silver $250,000,000.

In all these countries the silver coins are money in circulation among the people, and where full legal tenders are money equal to gold—dollar for dollar. Should they come here it would be as metal, losing every monetary function the moment they crossed their territorial boundaries and at very great loss. If they did come and were coined, what would they do with them? They would put them into our mints and take the standard silver dollars, and what would they do with them? Take them back to their country? Oh, no; it would be only bullion the moment it left the boundaries of the United States. They would buy something that we have to sell. That is what they would do with it. They would have to do that unless these accommodating New York calamity-howling bankers would give them gold coin in exchange for the silver, and I do not believe they would do it. No, no, Mr. President, we have an abundance to spare of the material products of our labor and our factories and would only too gladly exchange them for many, many dollars. There is no danger of a flood from that source. There is no accumulation of silver bullion anywhere in the world.

[At this point the honorable Senator yielded to Mr. SMITH.]

Mr. COCKRELL. Why not then restore that safe system of bimetallism for which, according to professions, whose sincerity I am not questioning, we all hunger and thirst by day and by night?

But, say our friends, the opponents of unlimited coinage, if, as you say, there be no danger of a deluge of silver from the silver coins of foreign countries—the real danger—the deluge from the annual overproduction of silver in the world, coupled with the closing of the mints of all other nations to such coinage, will certainly come, is inevitable.

Here again come predictions, apprehensions of dire calamities, and panicky fears arising from overnervousness, and not from facts and figures.

Let us now calmly and dispassionately reason together and consider the probabilities, based upon the facts and figures of the past.

In ten years, 1882 to 1891, inclusive, according to our Mint Bureau, the world's product of silver was $1,363,799,078, from which we must deduct the amount of silver consumed annually for industrial purposes, estimated by Dr. Soetbeer at 21 per cent, and shown by our Mint Bureau to be in the United States 12.2 per cent, and which I will estimate at only 15 per cent, to be safe beyond question. This will amount to $204,569,860. Deduct this from the gross product and we have left for coinage $1,159,229,218.

The world's coinage of silver in these ten years, after deducting therefrom all the coinage in the United States, India, and Austria, amounted to $638,133,496, which, deducted from the balance left for coinage, leaves only $521,095,722 as the surplus to be consumed by the unlimited coinage in the United States in ten years, being only $52,109,572 for each year. That is no deluge, and we should have no overflow from that.

Take five years, 1887–1891:

World's product	$787,063,791
Deduct 15 per cent consumed in industrial uses	118,059,568
Leaving a balance of	669,004,223
Deduct world's coinage, excluding India, Austria, and United States	322,489,068
Leaving a balance for us to coin of	346,515,155
Being only annually	69,303,031

This would have been no overflow, no inundation of silver.

Suppose our coinage limited to our own product—

In twenty years, 1873–1892, inclusive, we produced	$992,719,000
Deduct 12 per cent for industrial uses	119,126,280
We have for our coinage in twenty years	873,592,720
Annually in each of the twenty years	43,679,637
In five years, 1888–1892, we produced	343,419,000
Deduct for industrial uses	42,208,178
We have left for our coinage in five years	301,210,822
For each year, or annually	60,242,164

There is no deluge in this.

Coinage confined to our own product would, in all reasonable probability, not exceed one dollar per capita annually, no more and not as much, in fact, as the increase in population, commerce, and business will absolutely require for monetary uses.

These facts and figures must dispel the trembling fears of a deluge of silver into our mints if opened to the world's product. If limited to our own product there can be no possible danger of a deluge.

The opponents of unlimited silver coinage have proclaimed all over the world time and again, and it has been repeated by the gold monometallists in foreign countries, that the United States have practically had the single gold standard since 1834 and 1837, and silver was practically demonetized in 1853. There never has been any change whatever by our laws touching the coinage of silver dollars as to 371¼ grains pure silver. In 1834–'37 the quantity of gold to the dollar was reduced, so as to bring us to the standard of 16 to 1. Our mints from 1792 to 1873 were always open to the unlimited coinage of silver dollars and gold coins on exactly same terms, and both coins had equal legal tender—were absolute irredeemable money, without price, and our silver dollar was maintained as the unit of value.

In addition, the half and quarter dollar, the dime and five-cent pieces, were of standard weight and fineness and full tenders equal to gold, until 1853, when they were reduced in weight and limited in tender to $5, simply to keep them as change. Why such misrepresentations? In the Senate, March 8, 1852, Senator Hunter, of Virginia, reported a bill the object of which was to retain our silver currency, which was then leaving the country because of its value being greater than gold; not to demonetize silver. He insisted on bimetallism.

Once monarchs and kings depreciated the coins by reducing the quantity of metal and increasing the paying power. Now governments increase the value and purchasing power by demonetizing one-half of the coin money.

True bimetallism, such as I will show the Senator has recently advocated, was maintained. Sometimes we had more silver, sometimes more gold, but always open mints to unlimited coinage for both alike.

Again, they say our people did not want silver; that no silver dollars were coined up to 1873. It has been hurled in our faces in almost every international monetary conference, and boldly so proclaimed to foreign nations by our own representatives, and hundreds of times here in the Senate. Why this concealment of facts, and these misrepresentations of the conditions existing under our laws?

Consider the real facts and the true conditions. From April 2, 1792, to July 31, 1834, we produced of silver metal practically nothing—insignificant, as stated in Mint Bureau reports.

From July 31, 1834, to December 31, 1844, we produced $250,000, or $25,000 yearly. In 1845–1857—thirteen years—annually $50,000, amounting only to $650,000 in thirteen years. What did we do? We coined of standard silver dollars $2,766,640, and $39,241,110 in half dollars, beside many millions in quarter dollars, dimes and half dimes, all full legal tender equally with gold for all debts up to 1854. From that year on half dollars and smaller coins were only tenders for $5.

From 1792 to 1853, inclusive, we coined $75,961,554.90 in half dollars and small coins, in addition to standard dollars amounting to $2,550,000, aggregating $78,511,554.90. And yet the world is told we coined no silver!

From 1857 to 1873, we coined 5,261,598 standard dollars; in 1870, $445,462; in 1871, $1,117,136; in 1872, $1,118,600, and in one month and twelve days, up to February 12, 1873, $296,600, and if coinage had been kept up at the same ratio for the remainder of that year the total coinage of that year would have been over 2,700,000 silver dollars. Such was our coinage at the very time silver was stricken down by the coinage act of Februnry 12, 1873.

There is another reason, Mr. President. Foreign coins of gold and silver were full legal tender in our country up to 1857; and we coined during that time much more silver than we produced in our country; and the only other silver which came here was silver coin. They were full legal tender, and why did anybody want to recoin them into full legal-tender money again?

It has also been circulated in foreign countries, and believed by them, that our people refused to circulate and use as money our standard dollars, under the laws of 1878 and 1890. Foreigners do not understand that in consequence of the era of greenbacks and fractional currency our people prefer legal tenders, gold and silver certificates, to the actual coin, and that the silver dollars in our Treasury are practically in circulation by certificates, which are preferred to gold in circulation.

The RECORD of October 1, 1893, shows that of a total coinage of 419,332,550 silver dollars, only $29,635,504 are in the Treasury as a part of its reserve; and of the balance, $58,832,668 are in actual circulation, and $330,864,504 in the Treasury, represented by outstanding silver certificates, and are simply held on deposit, to be returned on presentation of the certificates—which simply certify that so many silver dollars have been deposited in the Treasury, payable to the holder on demand. There is no pecuniary obligation whatever to do aught except return the silver dollars specified.

These are the actual, cold facts, and yet the Senator from Ohio—and it is most remarkable—in his speech on the floor of the Senate on May 31 and June 1, 1892, said—and I call the attention of the Senator to the language—

> Shall we sell the silver on hand? We have $400,000,000 in the Treasury. Our people will not readily take it as money. With all the efforts that have been made by Congress there are only fifty or sixty million dollars of silver in circulation. The balance is there in vaults, in cellars, as the security for the payment of the various forms of paper money. Dare you sell that silver? I wanted to provide in the law of 1890 for the disposition of that silver in certain cases, but the conferees would not agree to it, and now to attempt to sell that silver in a falling market would only be adding misery to ruin. I do not like to talk about these things, but it is my duty to state my own opinions. They may be all wrong.

I should not think any Senator having much regard for the integrity of our financial system would want to talk in that style about our silver money.

Mr. DOLPH. Who was that?

Mr. COCKRELL. The Senator from Ohio [Mr. SHERMAN] in his speech in 1892, when he referred to all our silver as metal in the Treasury, and the question was whether we should sell it or not. The Senator from Colorado asked this question:

> Mr. TELLER. I wish to ask the Senator a question. He says we have $400,000,000 of silver. That statement would go out as if the Government owns $400,000,000 of silver. Does the Senator mean to make that statement?
>
> Mr. SHERMAN. It is in our Treasury, the property of the Government, and our Treasury notes are outstanding against it.
>
> Mr. TELLER. Will the Senator tell me who owns that silver, whether it is the Treasury of the United States or the people of the United States who hold the certificates?
>
> Mr. SHERMAN. We hold in the Treasury of the United States $413,000,000 of coined silver. We hold of subsidiary silver $77,000,000. So I was nearly $100,000,000 within the mark. I do not want to say anything about this. We have got this vast mass, and we can not sell it; we dare not sell it.

The Senator from Ohio would not answer the question of the Senator from Colorado, but proclaimed to the world, practically that the United States had four or five hundred million dollars of silver in its Treasury belonging to the United States, which it could sell without a breach of faith, notwithstanding certificates were out calling for nearly every dollar of it. This is our monometallic-bimetallic leader upon the floor of the Senate today, and yet he proclaimed that to the world, and it goes into every nation, kindred, and tongue of the civilized world. But he was pressed still further.

> Mr. TELLER. Will the Senator assert here that the Government has any right to sell the silver dollars; that if there was a law authorizing it the Government would sell the silver dollars, when it is a trustee and holds the money in trust?
>
> Mr. SHERMAN. There is no doubt the Government will hold that coined money for the payment of these notes outstanding, but it has bullion in its keeping that it dare not sell; and it owes for it. That is affecting the money market.
>
> Mr. TELLER. Has it a right to sell a dollar?
>
> Mr. SHERMAN. It has a right to sell the bullion to pay the notes, but there is no law providing for its sale.
>
> Mr. TELLER. Then it has not any right to sell it.
>
> Mr. SHERMAN. Suppose, for instance, that these Treasury notes outstanding should come to the Treasury for payment, would you take the gold in the Treasury to pay them?
>
> Mr. JONES of Nevada. The Government of the United States has no right to sell bullion.
>
> Mr. SHERMAN. The very moment you attempted to force the silver dollar into the hands of the people you would find at once the gap, the dangerous gap, between silver and gold.
>
> [At this point the honorable Senator yielded to a motion to adjourn.]

No, Mr. President, the Senator from Ohio ought to have known and stated distinctly, because he is looked upon as a great financial authority throughout the world, that nearly every dollar of the silver coin in the Treasury was represented by certificates in the hands of the masses of the people, known as silver-coin certificates; that the Government simply held those silver dollars to be returned to the holders of the certificates, and that the only bullion which was in the Treasury was that purchased under the Sherman law. The Treasury had the right to coin it, but no right to sell it. Then the people of the country would have understood it.

No one can tell what was the effect in foreign countries of the publication of that speech to the effect that the United States had $400,000,000 of silver and it was considering the propriety

of selling it. That is the way silver has been handicapped ever since we undertook to break down gold monometallism established by the law of 1873. It has been misrepresented and falsified on every hand, and that, too, by distinguished gentlemen whose words have been taken as true.

Mr. President, in the speech of the Senator from Ohio of August 30, 1893, which I shall not consume the time of the Senate in reading, but which I merely refer to, he proposes to coin this same surplus bullion in the Treasury and use it as full legal-tender money.

In 1892, however, it was different. But think of telling the country that this $400,000,000 was stored in vaults and in cellars and not circulating through its representatives. It was a concealment, a suppression of the true facts.

Where is the gold of the United States? Is it in circulation? Scarcely a dollar of it. It, too, is in the bank vaults and in the cellars as a reserve. The certificates are outstanding. Gold no more circulates in this country than silver. There is not $1,000,000 of gold to-day in actual circulation.

The panic has demonstrated that there is no difference in the estimation of the masses of the people between a coined gold dollar or a coined silver dollar or a greenback or a silver certificate. They have all been taken and hidden away in stockings and in hiding places and in the vaults of safe-deposit companies, and even the despised silver dollar has commanded a premium in the open market in Wall street during the panic. No, there is not a dollar to-day in the United States of any kind which is better than the silver dollar in the estimation of the masses of the people among whom it circulates, and there is not a dollar of any kind that has more paying power or purchasing power than the standard silver dollar.

But gold monometallists tell us that gold is the money of civilization, of enlightened nations, of progressive nations, and the doctrinaires are to dictate to us the degree of our civilization by the gold we use or do not use.

Mr. President, it has been thrown up in our monetary conferences why gold should be used, that it is necessary to use gold in large transactions. Mr. Rothschilds, in the Brussels monetary conference, insisted upon utilizing silver as money, but at the same time said that for the great commercial transactions of the world we must have gold. "Why," he said, "my house sometimes wants to ship millions of dollars, and just think o the load we should have to carry if it was in silver dollars." In other words, the money of the world must be made to suit the convenience of those who handle it by the millions and the tens of millions, and not the great masses of the people who earn it and produce the products for which it must be exchanged. That is the single gold standard.

Our gold monometallists say, "If you give unlimited coinage to silver we shall have too much money in this country." I challenge any man, historian or doctrinaire, to show me any nation on this earth, in any age of the world, that has had more full weighted coins of silver and gold of standard fineness than were necessary for monetary purposes. No, sir; you may search the world over, and no nation, no people have ever had more coined gold and silver of full weight and fineness than they could use for monetary purposes. Such an instance can not be found.

Talk about flooding the world with money to-day. Cast your eye over the world and behold it, and what do you find? To-day all the money of the world, gold and silver, amounts to $5.82 per capita, with which to do the business of the entire world. In what condition is the world? Look at the national debts of foreign countries according to the census of 1890:

National debts of foreign countries	$26,633,016,811
Local debts of foreign countries	1,689,740,252
Total	28,322,757,063

This estimate includes eighty-three principal countries, three hundred and sixty-three principal and a large number of other foreign cities, and all the departments of France.

Per capita debt of some nations: France, $116.35; Great Britain, $87.79; Russia, $30.79; Austria-Hungary, $72.42; Italy, $76.06; Belgium, $63.10; Netherlands, $95.56; Spain, $71.27; Canada, $47.51; New South Wales, $214.87; New Zealand, $298.01; Queensland, $333.46; South Australia, $321; Portugal, $134.11; while our own is only $14.24.

This vast debt does not include many hundreds of millions, even billions of debts on the part of corporations, minor government divisions, and individuals, on which the interest alone each year is from fifteen hundred to two thousand millions. Then consider the revenues of all the foreign governments collected for government purposes, amounting to billions annually. Then consider the billions needed in the billions of transactions between buyers and sellers of the world's productions, the necessaries and comforts of life, etc.; these aggregate amounts are almost beyond calculation. We have no statistics sufficient to enable any fair computation.

One ascertained amount may give some conception of the magnitude of these transactions. According to Mulhall the value in the year 1888 of all the manufactures of textiles, hardware, clothing, beer and spirits, and leather in the world, amounted to $22,370,000,000, an immense product to be paid for by the consumers annually. All the full legal-tender gold and silver coins in the world, in every place, would have to be used three times simply for these products, not considering the purchase of the other articles.

Now, look at our own country, according to the census of 1890:

Debt of United States less cash in Treasury	$891,960,104
State debts less sinking fund	228,997,389
County debts less sinking fund	145,948,045
Municipal debts less sinking fund	724,463,060
School-district debts less sinking fund	36,701,948
Total	2,027,170,546

These are the debts upon which interest must be paid each year.

What are the annual receipts and expenditures of all our governmental machinery, national, State, Territorial, county or parish, municipal, and school districts? According to the most reliable data from the Census Office the expenditures are $1,000,000,000, which is rather below than above the amount; this is at least two-thirds of all our available money twice to be used. The annual interest on national, State, Territorial, county, municipal, and school-district debts is about $1.50 per capita. These revenues or taxes paid at different periods require some hoarding and when paid in are not at once paid out.

Take our railroads in 1893. The funded debts of corporations, railways, street railways, telephone, telegraph, and other quasi public corporations are over five thousand millions; the annual interest to be paid, which, with dividends on stock, rentals, etc., amounted in 1892 to $417,861,702. Operating expenses in 1892, $846,633,503.

There were paid by travelers and shippers to the railway and street railway companies $306,972,023 for passenger fare, and $898,299,623 for freight, etc.; total, $1,205,272,023, nearly equal to all our circulating money.

Our census reports in regard to farm and home mortgages are not completed; when completed they will show many hundreds of millions, and even billions of indebtedness. I have made no calculations from the census bulletins only in part issued. Mr. Frederick C. Waite, of this city, in a letter to the Senator from Colorado [Mr. TELLER] printed as Senate Miscellaneous Document No. 25, says on page 2, $6,500,000,000. If these figures are correct the annual interest charge can not well be less than 8 per cent, probably much more, amounting to $510,000,000, one-third at least of all our circulating money and nearly $8 per capita of all our people.

I hope the completed and final returns of the Eleventh Census may show these figures too high and above the actual indebtedness. We know this class of indebtedness is very large and by no means includes all the indebtedness of our people; the aggregate amount of which can never be ascertained with certainty.

Take the banking institutions, national, State, and private banks, loan and trust companies, and savings associations. According to the report of the Comptroller of the Currency for 1892, their aggregate loans were $4,346,263,221; and their aggregate deposits were $4,888,533,979. An indebtedness to the banks three times greater than our circulating money; and an indebtedness by the banks to their depositors over three times as much as our available circulating money.

The interest on loans to banks at 6 per cent is over $260,000,000 annually. Then consider the amounts of all the sales of imported and domestic products to our people for consumption. Our whole internal commerce, traffic, exchanges, sales, and puschases, aggregate almost an incalculable sum.

It is impossible to ascertain the sum of all such sales and purchases. In the clearing houses in fifty-eight principal cities, the exchanges in 1892 were $61,017,839,087, and only 8 per cent in cash or currency used. Drafts drawn by national banks upon bankers at other places in 1892, $12,994,959,590.

These figures show the vastness of the transactions by banks alone and their many transfers of money from one point to another while using only about 10 per cent in actual cash.

On September 15, 1892, the receipts by the national banks were $331,205,213, about one-fourth of all the available money in the country, of which 9.39 per cent was cash, and 89.61 per cent substitutes, checks, drafts, exchanges, etc.

It is argued that very little money is needed: that these substitutes answer all the purposes of money and are so much more convenient. They say, look at London, where only 2.77 per cent of actual cash is used in the billions of dollars of transactions. Great exemplar!

Henry Carey Baird, in a letter entitled "Bank of France and

French Finance," addressed to the Manufacturer and published in its issue of December 16, 1890, says:

But we, in this country, have never in practice seen the bank-credit system run mad as it exists in England, and especially in London. For instance the London Economist of November 22 tabulates the statements of eleven joint-stock banks in London, June 30, 1890, so far as regards the two items of "Liabilities to the public" and "Cash on hand and at the Bank of England." These liabilities were $848,000,000, while the cash, including that in the Bank of England, was but $87,000,000, or 10.3 cents of so-called "cash" for each $1 of liabilities, exclusive of those to the stockholders.

I have given some of the items in regard to the needs of money in the world and in this country simply for reflection, for consideration, to show what our pretended financial system is. It is not based on metallic money nor yet on paper. We have a wholly inadequate supply of all combined in the world, and more especially in this country. We base our system on confidence, trust, and faith. How easily shaken. And yet with our country in this condition, with this great demand for money, this absolute need for an increase of the metallic basis of our financial system, we are commanded to vote now for the unconditional repeal of the Sherman law and establish and leave in force the single gold standard of the law of February 12, 1873, striking down from further coinage the entire silver of the world, so far as our mints are concerned. Look back at our history and see what the system has been. One-half of the money of the world was stricken down. Jay Cooke's failure in 1873 destroyed confidence, and the deadly panic of 1873 crashed from one end of this land to the other.

Come up a little later. A New York snipe named Ward began banking cloaked in the name of our great military chieftain, Gen. Grant. He became at once a financial oracle in Wall street, ran his course, and fell, and our whole financial system was shaken and tottering almost to a panic. Why? Because confidence, faith, trust, were shaken.

In 1885 doctrinaire financiers conjured themselves into the dreamy belief that some ailment existed in our system, and looking around thought it the Bland silver law, began hoarding gold for a premium, etc.; almost a panic. So it has been every few years.

Our Democratic Administration just coming in as now was in a panicky condition, and the Secretary of the Treasury went to New York and negotiated with those bankers to exchange $10,000,000 of fractional silver for $10,000,000 of gold, but the scare got over before they had to use it. President Cleveland came here pleading, and urging, and recommending the repeal of the Bland law because of the fearful consequences that would follow.

Coming on down, the Argentine Republic's financial structure, based on faith, hope, and charity, crumbled into ruins in 1890, entailing a loss of hundreds of millions in Great Britain, Germany, and elsewhere in Europe. The Baring Brothers, of model London, were driven to the wall. The world's financial structure moved and swayed to and fro and reeled on the brink of panic.

Seventy million dollars left our country then, and yet Congress was not called in session to repeal the Sherman law, for it was not in existence.

Now, let us go back to 1890 and see what it was. Just see the doctrinaires and financiers, the great business men in New York, how much they know about it and how they are affected by every little evening zephyr that comes along whispering this thing and that thing. New York. Wall street in agitation. I will read the headlines:

November 10, 1890—Notable shrinkage in values of all securities.
November 11, 1890—Confusion and demoralization in stock markets.
November 12, 1890—Enormous sales of stock on a seesawing market.
November 14, 1890—Slowly recovering from effects of storm.
November 15, 1890—Depressed by rumors. Wall street agitated by reports from London. The Baring Brothers involved in recent troubles.
November 16, 1890—Thrilling financial events on both sides of the ocean. France stays the tide of panic.
November 17, 1890—Ten millions to lend. Clearing house to issue ten millions. Clearing-house certificates to support the weaker banks.

How much like the present; but the clearing house had to come to the rescue with $38,000,000 this time, instead of $10,000,000 then.

In May, 1893, the banks of Melbourne, Australia, went to the wall with three hundred millions liabilities, to add to the panic over the Argentine collapse, scarcely dead, and to the effects of the Panama Canal collapse, Austria-Hungary in the market for gold, with gold bonds for sale.

Soon another collapse in Australia; five banks driven to the wall, with one hundred and twenty-five millions liabilities. Then our panic.

Why should it not come? It is just as sure as that the day or night shall succeed each other. I will not consume the time of the Senate in reading from a speech I delivered here in 1891 on the free coinage of silver and the increase of the currency. The very identical things were pointed out there and what would bring a panic, just precisely as it has occurred. I will ask to insert that in my remarks from page 21.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). If their be no objection the request of the Senator from Missouri will be granted. The Chair hears none.

The matter referred to is as follows:

"DISTRUST CAUSES BUSINESS DEPRESSION."

This circular was issued in the interest of the gold monometallists of the country and is a protest against the recoinage of the standard silver dollar. It says:

"The rule has heretofore been almost invariable that money returned to the financial centers in November. Why is this year of 1890 an exception? The answer must be that distrust has caused hoarding, especially hoarding of gold.

"The hoarding of gold since the silver act of July 14 went into operation is clearly shown by the following figures."

Then the circular quotes the figures which it pretends are true and says:

"Therefore, the purpose of the silver men is defeated. They want inflation, but in fact produce severe contraction."

Now I quote from another circular. I quote from resolutions adopted by the Chicago Board of Trade January 7, 1891:

"That we deprecate any further legislation by Congress in regard to silver, believing that further agitation of the subject will be injurious to the business and commercial interests of the country and tend to retard"—

What?—

"to retard the increasing confidence of the business world and the speedy return to a healthy state of affairs so much desired by Congress and the country."

You must not do anything to retard the growth of confidence. Confidence is the substratum of the financial system of the United States, and when you shake that the whole fabric totters, and we are told that we must not legislate here in the interest of the great masses of the people and to give a foundation to this financial structure for fear we shall destroy confidence.

But, Mr. President, I want to quote another circular. This is from the circular of Henry Clews, a banker of New York. He says:

"The hoarding of gold has largely come from the holders of the 4½ per cent bonds, which mature next September. Under the Secretary's liberal offer to redeem the same, both principal and interest, they have obtained payment therefor and locked it up simply because the Government has issued money backed by a corresponding amount of silver, and they profess to be scared about the Government credit in connection therewith and make that as a pretext for hoarding."

In regard to the recent panic, I quote also from this same circular of Henry Clews:

"It is apparent now, I think, that in taking a prospective estimate of the outlook it is necessary to note carefully the conditions of general business which preceded the panic. It is also important to keep in mind that this panic differed from almost all its predecessors in the characteristic that it was a rich man's panic. It resembled more closely the panic of 1884 than any other historic parallel of this character, but I venture to predict that the recovery will be quicker and the restoration"—

To what?—

"to confidence more thorough than in the former instance, if all the signs of the times are not deceptive and misleading. The hardest blows fell this time where the material and the preparation for resistance were actually the strongest and not on the rank and file, as in former perturbations of this character."

Mr. COCKRELL. Mr. Clews was so accurate in his description of the "rich man's panic" of 1890, that I will quote from his financial circular of September 9, 1893, in regard to the panic of 1893. He says:

"The winter of our discontent has been made glorious summer" by the death knell of the panic, and now it is over it can be reviewed, and of all the panics that this country has ever had, it has been the silliest, as there was less cause for it than any previous one. It is not unlike the "Bull Run" panic during the war period. From the day that memorable event occurred up to this date, I have never yet been able to find anybody who could give a reason for its occurrence, whether on the battlefield or off at the time. The same can be said of the recent financial panic. I venture to say that no one can now give a good and justifiable reason for it having occurred: for that reason it has been a "Bull Run" panic. The whole country, in consequence, has had to go through a general liquidation of credits. In fact, it started as a gold panic; then came a silver panic, which was followed by a credit panic, and the climax was reached by a money panic. Now the corner has been turned, and building up takes the place of tearing down, the recuperation, I venture to say, will be more rapid than this country has ever experienced after any previous financial eruption.

Why, then, Mr. President, shall we not have more metallic money, silver money as well as gold, irredeemable, absolute money against which no reserve has to be kept; good wherever it goes, which is its own redeemer.

All intelligent writers agree that where money is decreasing in amount, poverty and misery prevail.

But history proves indisputably that every increased influx of the precious metals into human intercourse, by new discoveries or the increased production of the mines, has always been accompanied by a decided amelioration of human necessities by the increase and diffusion of every means for a more humane existence of the masses, which we call the progress of civilization. The great prosperity of Europe which preceded the age of the Reformation followed in the wake of the great increase in the precious metals caused by the discovery of America. The immense development of modern trade by railroads, steamships, and telegraphs followed the tide of gold and silver with which California and Australia supplied the world.

Why withhold from our people these manifold blessings sure to follow an increase of our metallic money?

If we deny it, what follows? Only what the attempt to establish the gold standard has already caused in the past. The paper inflation dogma—greenbackism, populism—all these inflation ideas will prevail as they have in the past. They are the legitimate offspring of gold monometallism. They never existed in the United States when the grand old Democratic party controlled and guided the destinies of this country for over half a century and maintained the true bimetallic system. We never heard of a Greenback party nor of a Populist party nor of an increase of the currency party.

What will follow? Substitutes for metallic money must come

in. Your bank checks, your drafts, your clearing-house certificates, your stock gambling, your financial bulls and bears, and panics, and crises, and revulsions and depressions of property and of prices, losses in the value of securities, and the depreciation of the prices of all the products of human labor. We see them almost every year. It is estimated now that the shrinkage in the value of stock on the stock market amounts to hundreds of millions of dollars. I saw one estimate given, I think in the New York World, which estimated the depreciation of the selling price of stocks at over $500,000,000—not money enough to sustain it and confidence gone.

But it is said that we can not maintain any more silver dollars on a parity with gold, that we can not keep every dollar as good as any other dollar. Once for all I want to say that I am in favor of a dollar just as good as any other dollar. Those who are advocating this bill are not the only men who are in favor of an honest and stable dollar. The President in his message seems to think that there is somebody here who does not want an honest and stable dollar. If that is intended as a reflection upon those who advocate the coinage of the standard silver dollar I repudiate it unhesitatingly. I am just as honestly in favor of an honest and stable dollar as the President and I am not trying to impose upon this country any dishonest or unstable dollar.

But, Mr. President, from the foundation of the Government until to day not one solitary silver coin that the United States has coined, whether full legal tender or subsidiary, has ever been redeemable in gold. I challenge any man to point to one law of the United States that has ever made silver coin full legal tender or a limited legal tender, redeemable in gold. Silver coin of the United States has been irredeemable, whether it was of the full legal tender or the limited legal tender, and I say it is not for this Democratic Administration or any Democratic administration to undertake to force upon this country the principle that silver coin shall be redeemed in gold.

Mr. President, this is not Democracy. I do not believe the Administration is attempting to do it. The resolution that we have passed has not been answered; but if we are to be told that the Administration is redeeming our silver dollars in gold I say, halt! the people of the United States are not ready for that. That issue has never been presented to them. They will never sanction it—never. If they do that, they trample under their feet the glorious record of the Democratic party from the foundation of the Government. They trample under their feet every true principle of Democracy. If, therefore, it is meant that we must maintain the silver dollar at a parity with gold by making it redeemable in gold I say no; gold wants no redeemer, nor does the standard silver dollar.

Such an interpretation destroys the silver dollar as money—coined money. Metallic money is absolute and irredeemable in any other money, is without price. There can be in true coined metallic money no money value. Gold and silver as mere metals may have their market value, but as coined money at the ratio established by law they are equal—each money absolute and irredeemable. That is the law. That is Democracy. Value is a relation—a ratio established by law—and can not be measured. Length and capacity are positive properties of things while value is not a property of anything and arises out of the relations existing between things. We measure the length of a thing by laying alongside it some other thing whose length is known. We measure the capacity of a thing by filling it with something else whose quantity is known.

"Values are not determined by any such bringing of one thing to another."

"Labor once spent has no influence on the future value of the article produced." Value is the purchasing power—power in exchange. While price is the money value of commodities—the power any commodity has to exchange for money.

The demand for money depends upon the amount and character of the trade, commerce, and business of a country, and the number of times such articles are sold and resold, while the supply of money depends upon the quantity in actual circulation and the number of times each piece changes hands in business matters. The amount of money required by the people of different nations to meet their demands and supply will vary according to the conditions of the country and their business.

A country small in area and densely populated requires far less money than a country with a larger area and a more widely dispersed population.

The larger the area and the more sparsely or thinly peopled the greater the amount of money required. Our country and people require a much larger amount of money per capita than any nation of Europe, save probably Russia.

Our silver dollars to-day are at a parity with gold dollars. Why? Because the law makes them absolute money, irredeemable and the equal of gold, a full legal tender in the payment of debts. The value of money as a medium of exchange depends upon the law of the country wherein circulating.

Silver as a metal, a commodity, may vary in its value in the market, but coined legal-tender silver dollars, in relation to coined gold, do not vary in value, and will not as long as the law maintains their full legal-tender and their paying and purchasing power. The law can not fix a value between different commodities nor between coin money and any given commodity. It can not, therefore, fix a ratio of value or equivalency between coined gold and silver metal as a commodity.

The sovereign, according to its organic constitution or law, creates money value. The Constitution gives this express power to coin money and to regulate its value, to fix the ratio or value between the coins. Our laws give to coins of silver and gold at the ratios fixed their value, the legal-tender and debt-paying power.

Now, I will read a little incident here, or refer to it in regard to the value given to gold and silver. It is an incident quoted in the Gold Standard, page 9:

On the testimony of Thomas Baring we are assured that it was found impossible, during the crisis of 1847 in London, to raise any money whatever on a sum of £60,000 in silver. But during a similar crisis in Calcutta in 1864 it was equally impossible to raise even a rupee of paper money on £20,000 of gold. The silver in London was not a legal tender above 40s., while the gold in Calcutta was not so for any sum whatever.

Mr. President, this is not merely a contest to repeal the Sherman law and stop the purchase of silver bullion.

Whether intended so or not by the present advocates of this unconditional repeal bill—and I gladly say that many of its advocates do not so regard it—this is a renewal of the contest to establish a single gold standard throughout the world, and to make gold the only money and all silver coins and paper currency redeemable in gold. It originated in 1863, when our representatives told the monarchical and regal governments of Europe that we were about to flood the world with from $200,000,000 to $400,000,000 annually of the precious metals, backed by the demand of Senator SHERMAN in 1867 for the single gold standard and refusal to agree to bimetallism with the Latin Union, the contest has been kept up ever since. One by one the nations of Europe have been scared and driven to the gold standard in imitation of Great Britain, the so-called mistress of the seas.

If we repeal unconditionally, then no one dare say that our laws do not recognize the single gold standard established in 1873. Gold will be the only metal admitted to unlimited coinage. Silver will depreciate in value, refusals to recognize it debase and humiliate it. It will depreciate in value.

Now, Mr. President, I have quoted some from the distinguished Senator from Ohio in his finance report, showing what policy he wanted, but I now have before me his speech of May and June, 1892, in which he says:

Mr. President, when that law of 1873 was passed the only trouble about it was that we were not as wise as the Almighty Ruler of the universe. We could not see ahead. I have no doubt, however, that if it had been known that silver was going to fall as much as it did after that it might have made a change. But I know myself—and I speak for myself only—that while I did not know it, did not dream of the fall in the price of silver following that law, yet I do now s y, in the light of all the circumstances that surrounded us, that if I had known it I would have kept the silver dollar there and put it on the same footing as the fractional silver dollar, and no better.

The Senator then quoted approvingly from John Jay Knox, late Comptroller of the Currency, as follows:

I am happy to agree with the statement that the silver dollar now coined in this country, if held in England, would be worth a gold dollar, less the loss of interest and the cost of transportation across the Atlantic. This statement is true. I hold in my hand the 5-cent nickel coin. If $100,000 of these 5-cent nickel coins, which are intrinsically worth 1 cent each in the bullion market, were offered for sale in China or in Japan, in England or in France, to a shrewd broker, they would be worth to him exactly $100,000 of gold, less the loss of interest and the cost of transportation from England or France, or China or Japan, to this country. What amount that broker would give for such a large amount of nickel coin or silver dollars is quite another question.

Why is this?

It is because these coins are redeemable in gold; it is because we are upon the gold and not upon the silver standard. When free coinage of silver comes, the promise of this great country, with its great credit unsurpassed anywhere in the world, is withdrawn and our silver dollar, like the Mexican dollar, becomes worth its intrinsic value only at home and abroad.

The Senator from Ohio said in the same speech:

All our money is at par with gold. How is that maintained? We have a careful series of guards and laws which practically make now in the United States gold coin the standard of value, not the legal standard in the sense that the Senator speaks of as the ratio, because whenever that ratio diverges from the market value the ratio ought to be changed always.

In referring to the provisions of law for purchasing silver bullion, he said:

If it had been seigniorage levied upon the people, it would have been the most outrageous seigniorage ever inflicted upon a people by any government in the world; but it was not in the nature of seigniorage, but bought at its market value, and we issued money for it at its coinage value. We have behind it all the silver we bought, and we have that very surplus of silver called the profit fund in our Treasury now, which amounts to $75,000,000. We have treated it as an ordinary income, but that is not the proper way it should be treated. If the time shall come when it will be necessary, the people of the United States can without loss restore this large sum of $75,000,000 for the redemption of the silver coin or for the maintenance of it at the standard of gold.

The careful measures which I have mentioned, by which we have sus-

tained and maintained the gold standard, are now to be swept away by one fell stroke, the free coinage of silver. All the safeguards which experience has shown, not only to our own country but to other nations, to prevent the depreciation of our coin and our currency, are about to be abandoned, a new standard is about to be proposed, and all our money is to be brought down to that standard.

* * * * * * *

If there was but one standard of money, then, as a matter of course, the silver standard might be made the basis of our transactions, but we have gold for our standard; we have an equal amount of gold in the Treasury and in circulation; the precise quantity is shown by the table and is over $600,000,000. This is to be demonetized or left for the use of the rich, who stipulate for gold payments.

The Senator from Ohio, in his speech of August 30, 1893, quotes approvingly from Hon. E. O. Leech, late Director of the Mint:

The closing of the mints of British India to the coinage of silver coins of full debt-paying power is the most momentous event in the monetary history of the present century. It is the final and disastrous blow to the use of silver as a measure of value and as money of full debt-paying power, and the relegation of it to the position of a subsidiary or token metal. It is the culmination of the evolution from a silver to a gold standard which has been progressing with startling rapidity in recent years.

For the last quarter of a century civilized countries have combined to dethrone silver as a precious metal and have declared in unmistakable terms that, by reason of its cumbersomeness, the enormous quantity produce , and the violent fluctuations in its value, silver is not fit to serve as a measure of the value of all other things; that hereafter gold alone shall be the standard of value, and that the business of the world is to be done with gold money and an enlarged use of instruments of credit, such as bank notes, checks, drafts, settlements by transfer, by telegraph, and by clearing house, which nineteenth-century civilization has provided as substitutes for actual money.

This modern preference of gold for silver manifested itself first and most strongly among people of the highest civilization and of the largest commercial pursuits. The reason for it will be found in the immense expansion of modern commerce, requiring very large payments in the settlement of balances and necessitating the use of that metal containing the greatest value in the least bulk, thus making gold the money of commerce; and in the wonderful improvements and developments in modern banking, providing substitutes for money, and avoiding as far as possible the actual handling of cash.

* * * * * * *

This policy has already resulted in changing our currency from gold to silver, and has created widespread distrust of our ability to maintain the gold standard. It is not possible, now that barbaric India, our great silver ally, has pulled down her silver idol and taken steps to conform her monetary system to that of the civilized world, that the United States will continue to act in monetary isolation, in defiance of the rest of the world, and still further imperil its magnificent prosperity and credit by paying gold for a discarded, a depreciated, and a depreciating metal.

It must be remembered that whatever importance there may be in the use of money as a medium of exchange, its greatest value is as a measure of values, and that in this respect the United States has not departed since 1834 from the gold standard. Gold is still the sole standard of value in the United States, both legally and actually, and the determination and ability of the United States to maintain all its money at a parity with gold is still unbated.

While the road back to safe financial principles may be rough and stony it is still open, and the sooner we enter upon it the surer will be our relief from the present distressing and threatening business difficulties.

I also refer to the President's message, page 6:

The people of the United States are entitled to a sound and stable currency and to money recognized as such on every exchange and in every market of the world. Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

This matter rises above the plane of party politics.

I confess I may not understand that exactly.

The people of the United States are entitled to a sound and stable currency.

If he means, however, the money recognized as such on every exchange and in every market in the world, then I say we have no power nor right to establish any such money. No nation has the power to give to its money legal tender or to anything monetary functions beyond its own territorial domain. When it goes beyond that, whatever it is, it goes as a commodity, as bullion if it is metal, and as a mere promise to pay if it is paper. I say Congress has nothing to do with providing for the people of the United States the money to be used in the markets of Australia or India or any other country. If this means a single gold standard then I disapprove of the message. I am not in favor of a single gold standard. That issue has never been submitted to the American people yet. It was not submitted in the last campaign—not a bit of it.

As I said, if the purpose is to go to a single gold standard, then I am unalterably opposed to it. I had hoped before I closed my speech, which I shall do now in a few minutes, to have had a report from the Secretary of the Treasury to ascertain whether silver dollars have been redeemed on demand in gold. As a matter of course, the Treasury Department will, for convenience and accommodation, exchange one kind of money for another; but if these men have come to the Treasury with silver-coin certificates or silver dollars and as their right demanded that gold shall be paid to them, I say it has been in violation of the law and every principle that has guided this Government from its foundation if that demand is yielded to. The Government has no right to do it. I am not in favor of yielding to the imperious demands of foreign bankers and brokers in our country. I refer to what the distinguished senior Senator from Kentucky [Mr. BLACKBURN] said on October 4. He said:

But I know of another interview, which was held by the representatives of the Rothschilds in New York, not in the city of New York, but in the city of Washington, not at the request of the Secretary of the Treasury, but on the seeking of the New York Wall street bankers, not on the 29th of April, but on the 26th or 27th of April. I knew then that the demand was made for the issue of $150,000,000 of bonds. So far from this Administration being a party to that conspiracy, that demand was peremptorily, flatly, and unconditionally refused.

Think of it, the representative of foreign bankers coming here and telling us, "You must issue $150,000,000 of gold bonds that we may as a syndicate have the right to dispose of them and manipulate them." No, Mr. President, it only shows the arrogant, brutal demand of these foreign bankers and syndicates who have determined to force upon the world the single gold standard. Think of it: $30,000,000,000 of national indebtedness, strike down silver and make gold the only money, and add to the purchasing power of that $30,000,000,000 not less than 20 per cent—$6,000,000,000 added to the burdens of the masses of the people of the world.

The President in his message says:

The maxim, "He gives twice who gives quickly," is directly applicable.

In other words, hurry, hurry, haste, haste. That is a very old maxim, but I want to quote some others equally as old:

"Too swift arrives as tardy as too slow."

Of hasty counsel take good heed,
For haste is very rarely speed.

That is pretty well verified right here. Haste has not been speed. "One hates to see men do important things in a hurry."

"The more haste we make in a wrong direction the further we are from our journey's end."

This has been in that direction.

"What is done hastily is not done well."

"Who hastens in the beginning seldom goes far."

But, Mr. President, I want to read some authority on this question of haste. I now quote from John Quincy Adams, who spent several years in studying the question of uniformity in weights, measures, and, incidentally, in coinage; indeed, the latter can not be separated from the other two. He says:

If there be one conclusion more clear than another, deducible from all the history of mankind, it is the danger—

The danger—

of hasty and inconsiderate legislation upon weights and measures. From this conviction, the result of all inquiry is that, while all the existing systems of metrology are very imperfect and susceptible of improvements, involving in no small degree the virtue and happiness of future ages; while the impression of this truth is profoundly and almost universally felt by the wise and powerful of the most enlightened nations of the globe; while the spirit of improvement is operating with an ardor, perseverance, and zeal honorable to the human character, it is yet certain that, for the successful termination of all these labors, and the final accomplishment of the glorious object, permanent and universal uniformity, legislation is not alone competent. All trifling and partial attempts at change in our existing system, it is hoped, will be steadily discountenanced by Congress.

Hasten to do this patchwork, to take a step in the wrong direction, by repealing this act, and do nothing more and nothing else, is the demand.

We have ample time now. Just think of it; there is no election coming on this fall; there is no election coming on until next fall. We are all here; we are all bimetallists; we have laid aside politics apparently. The Administration is led by the distinguished Senators from Ohio [Mr. SHERMAN] and from Rhode Island [Mr. ALDRICH] on the one side, and from New Jersey [Mr. MCPHERSON] and from Indiana [Mr. VOORHEES] on the other. A glorious spectacle. We are just in condition, if we are wise, to devise a financial substitute, a financial policy, a financial measure, not a makeshift.

The panic is over. I had forgotten to talk about that. It has been over so long that everybody has about forgotten about it. I have read just for the edification of the public generally the circular of Henry Clews about the panic, which stated that it was the most senseless panic that had ever occurred in this country. A regular Bull Run panic, emphatically a Bull Run panic. Now it is over.

Mr. GEORGE. What firm was that?

Mr. COCKRELL. It was Henry Clews. Now the panic is over, we are all pacified. I believe there is only one Senator who has ever attributed the present condition to the Sherman law, or claimed that it caused the panic. It is all over now; we have ample time. Remember we were called together expressly for the purpose of considering the financial question. Remember, further, in the campaign it came as if from headquarters that the silver or financial question must be relegated to the rear and the tariff must be placed in front. We did it. It was done in the campaign, and we expected, and I believe the people of the country expected, that the tariff would be pressed to the front. I think they had a right to expect it.

But, Mr. President, the financial question has been brought to the front. It is not the fault of Congress. The President had the right to call Congress together for whatever purpose he

desired. He exercised that right, and he called us together upon the financial question, and when he convened us he had gone to the end of his Executive power. The responsibility now rests with us as to what we shall do. The responsibility rests upon him for having Congress here. We did not call ourselves into existence here. He brought us here. He is responsible for that and we are responsible for what we do. Why should we bow to England? If we are going to adopt a financial policy why not adopt that of France, the country that stood by us in the dark days of the Revolution and helped us achieve our independence and to-day is a sister Republic? Why shall we bow the knee to England? Are we not old enough to establish a financial system? We are one hundred years old. That is a great age. Can you find any other nation on earth that has not established its own policy?

Mr. McPHERSON. May I ask the Senator from Missouri a question?

Mr. COCKRELL. Certainly.

Mr. McPHERSON. Is the Senator from Missouri quite ready to adopt the system of France—that is, to close our mints against silver, as France has done, to stop the purchase of silver as France has done, and to hold in our reserves $250,000,000 of gold to redeem $700,000,000 of silver, as France has done?

Mr. COCKRELL. Not at all. Not a dollar of it is redeemed in silver. I deny it in toto.

Mr. McPHERSON. Gold with which silver may be redeemed.

Mr. COCKRELL. No; it may not be redeemed in gold. It is not redeemable in that way. It can not be done.

Mr. McPHERSON. Standing there, then, as an evidence that the French people, the Bank of France, the French Government have an abundance of gold to maintain all their silver on a parity.

Mr. COCKRELL. No, sir; they have not one dollar of gold to maintain silver. I say to-day (and I challenge anyone to show to the contrary) that there is no nation, kindred, or tongue on earth that has given full legal tender to silver coin and redeemed it in anything else. Metallic money is irredeemable. I read to-day from the Indian currency commission report. They tell you that the silver in France is irredeemable. Every writer tells you that. Look at the law itself. There it is. The silver there is irredeemable. They comment upon the great spectacle of France, Belgium, and those nations maintaining a large amount of silver coin at the ratio of 15½ to 1 at a perfect parity with gold, while it is irredeemable in gold.

Mr. McPHERSON. Why did they close their mints?

Mr. COCKRELL. Simply because they were afraid they were going to be deluged, principally with the silver from Germany, and then with the exaggerated, falsely reported sums that were to come from the United States—$200,000,000 or $400,000,000 a year.

Mr. McPHERSON. If the silver is irredeemable, the silver being irredeemable, not a menace to anything, requiring no gold to maintain its parity and its circulation with gold, why would they be afraid of a deluge of silver? If silver is such a good thing why not take the silver of Germany?

Mr. COCKRELL. The Senator knows perfectly well the existing condition between France and Germany. Germany adopted the single silver standard in 1857, and had a great fierce war with France, the two nations with adjoining territory. France had been overrun and prostrated at the foot of Germany. Germany had demanded $1,000,000,000 of indemnity from prostrate France, and France had raised the money and paid it; and as soon as it was done, having largely paid it in gold, then Germany commenced to discard her silver standard and shipped her money across the border in order to get French gold and try to bankrupt France. That is the reason for it, and a good reason, when your neighbor is trying to cut your throat, to take away from him the instrument he uses.

Now, Mr. President, what shall our system be? I want to quote here (for I do not want to consume the time of the Senate much longer) from our distinguished bimetallic gold monometallist, Senator SHERMAN, in his speech of 1892. I will have his proposal inserted. It is as follows:

Mr. President, the policy of bimetallism, as understood by me, has always been the policy since the Government was founded. We never had in the true sense of the word, the free coinage of silver, strange to say, because, as I stated early in my remarks, Jefferson and Hamilton made a slight mistake in the ratio. Jefferson within twelve years afterwards stopped the coinage of silver, and only a little of it had been used. So we never had in actual practice the free coinage of silver, but we had what is called by scientists the alternative standard, the cheaper standard, that is, whenever one of the two metals fell below the ratio that metal alone became the standard of value, and when the scale changed back again and the other metal became lower, that again became the standard of value, and it so happened that that occurred three or four times in our brief financial history.

When Mr. Jefferson stopped the coinage of silver dollars because they were exported, American silver coin disappeared entirely and our people depended upon abraded Mexican or Spanish coin for change. In 1834, in the time of Gen. Jackson, the Secretary of the Treasury of that day first proposed a change of the ratio. He said that under the existing ratio silver went abroad, and sometimes all the gold went abroad. Two years after that, after full deliberation, Congress did change the ratio. It became 16 to 1, and the result was that silver was undervalued, because 1 ounce of gold was not equal in value to 16 ounces of silver.

* * * * * * * *

Mr. SHERMAN. The result was that silver was undervalued, because 16 ounces of silver were worth more than an ounce of gold, and the result was that silver disappeared. Then ten years afterwards, again under Democratic Administration, Congress passed a law in order to avoid this difficulty, and my memory goes back a little to that time. There was no change here to be had, and in the West we had what were called shinplasters, issued by banks and sometimes by private persons. Senators may have seen some of them. We had no change because silver had gone away. It was demonetized; not legally in the sense of demonetization, but it had gone out of the country; and therefore in order to provide for a currency that would not run away at every change in value, in good Democratic times, in 1854, Congress passed a law reducing the amount of silver in minor coins, 50 cents and quarters and all minor coins, 8 per cent, and then made them only a legal tender for $5, so that they would answer the purposes of change but could not be made the instrument of injustice as a depreciated coin.

Now, that is the law and that has always been the law. The Government of the United States has always adhered to that, and maintained its money always at the same standard. Most of this, it so happened, was in Democratic times. That very silver coin provided for by Mr. Hunter and his associates was adopted in the act for the resumption of specie payment. We provided for this minor coinage, the subsidiary coinage, as it is called in the law, to take the place of the fractional currency. It is the policy we are now acting upon, and the policy I advocate is the policy of our fathers from the beginning of the Government to this time.

Why does the Senator conceal apparently the actual facts, that during all the times to which he refers our mints were open to unlimited coinage of standard silver dollars and gold upon exactly equal terms. Knowing these facts, he opposes opening our mints to unliminted coinage of silver, and yet claims to favor our system from 1792 to 1873, the true bimetallic system, when our mints were so open.

And also I quote from the speech of Senator SHERMAN of 1893:

There is no doubt that the act of 1890 is made the imaginary pretext for many evils it did not produce. It is made to bear the results of wild speculation, of fears well or ill founded as to future legislation, of failures and disturbances with which it has no connection. It is made the scapegoat for extravagance and folly.

* * * * * * * *

Let us not deceive our people as to the reasons for this repeal; for when the purchasing clause is repealed you will still have to deal with the real causes of the prevailing stringency and distrust. I do not vote for this repeal with any expectation that it will in any considerable degree relieve us from the industrial stagnation that has fallen upon all kinds of business and production, and that has thrown out of employment hundreds of thousands of laboring men and women. They care little about the kind of money that is paid them, provided that it is equal in purchasing power to any other money, and is backed by the United States. They do not study the question of ratio, or the difference between silver and gold, and, if left to choice, prefer the notes of the United States to either coin.

* * * * * * * *

Now, I wish to make a few observations in regard to what ought to be done for the future. If the purchasing clause is repealed, what then? I do not want to advise either this Congress or the Administration. I have no right at all to be weighed in their council, but I take it that whether we are Democrats or Republicans we are all Americans, and that every American would desire to do that which is best for all interests and all parties. I think there are certain urgent duties resting upon the Democratic party at this time, and although I am not their adviser, I have the right as an American citizen to give them my opinion, and I will briefly do it.

The Senator then recommends—

1. Strengthening the reserve in the Treasury by issuing bonds or Treasury notes bearing interest, to be sold for gold, to maintain the parity of all our money.

2. In event of deficiency in revenues the Treasury Department should have power to meet and provide for it.

3. Coining the seigniorage in the Treasury and using it in the ordinary operations of the Government.

He then says:

I heartily and truly believe that the best thing we can now do is to suspend for a time, at least, the purchase of silver bullion. We should then turn our attention to measures that are demanded immediately to meet the difficulties of the hour. Let this be done promptly and completely. It involves a trust to your officers and great powers over the public funds. I am willing to trust them. If you are not, it is a strange attitude in political affairs. I would give them power to protect the credit of the Government against all enemies at home and abroad.

If the fight must be for the possession of gold, we will use our cotton and our corn, our wheat and other productions, against all the productions of mankind. We, with our resources, can then enter into a financial competition. We do not want to do it now. We prefer to wait awhile until the skies are clear and see what will be the effect of the Indian policy, and what arrangements may be made for conducting another international conference.

Mr. President, we have tried all these makeshifts which the opponents of the unlimited coinage of silver have forced us to adopt or leave their single gold standard of 1873 still in full force. We have tried them all. Now why not let the true friends of silver once try their policy? We have tried all the expedients that you gentlemen have forced us to take towards the rehabilitation of silver, and now why not let our proposition be tried for a while? Is there any reason for it? Why not let the friends of silver try their policies a while? They were tried in the United States for nearly a century, and they proved satisfactory. They have been tested by time and approved, and now why not let them be tried again?

You ask me what would be my policy. I ought to answer that by asking you what your policy is. What do you gentlemen propose to do when you get the act repealed, if you ever do? We would like to know something about it. We have a right to know.

As a great and growing nation increasing in population more rapidly than any nation, and also in wealth and the development of our manifold resources, this Congress and this Administration owe it to the sovereign people, the great masses whose servant and representatives we all are, to devise and establish by just and wise laws a safe and permanent financial system.

If I had the power to declare and enforce a monetary system for our great country I would open our mints to the unlimited coinage of gold, with full legal tender, and to the unlimited coinage of silver at the present ratio or 15½ to 1, and receive all the silver bullion offered to the mints at its market value and issue in exchange therefor standard silver dollars with full legal tender, and silver coin certificates payable in silver dollars, until 412½ grains of standard silver metal were equal to a coined dollar and then give free as well as unlimited coinage to the silver dollar, and coin all the silver so offered as rapidly as possible into standard dollars; retire the national-bank circulation as rapidly as practicable, and with the increase of the silver dollars, if the currency of the country increased more rapidly than the increase of population and the demands of commerce, I would extinguish the bonded debt as rapidly as possible and retire the noninterest-bearing legal-tender notes gradually, until we, as a nation, owed no man, woman, or child a dollar of debt.

That is the system I would adopt, and I would enforce it by the imperious demand of Andrew Jackson. I want to wipe out the bonded debt, and now, since this fierce contest has come, I want to wipe out every paper obligation of the Government. I do not want any pretext made that this Government is hereafter to keep a gold reserve. Wipe out your bonds and then your greenbacks and have nothing that the Government is compelled to redeem in gold or in silver for that matter.

We want no reserve held in the Treasury of the United States. We want no redemption fund there. We want the money of the United States to be in circulation in the hands of the people, and we do not want our finances to be in such a condition that a few foreign bankers and syndicates can form a ring upon us and draw out our reserves. That is the only reason on earth why I would retire the greenbacks. That is what our country wants as a great country, a permanent financial system. We do not want to be driven around by a parcel of foreign syndicates and bankers. We want to be above their power, above their influence, above their reach.

Then our money would be gold and silver coins of equal legal-tender paying and purchasing power, and our only paper currency the certificates for the deposited coins held in the Treasury for their redemption on presentation, and I would make these certificates call only for dollars in coin, and would pay such kind of coin, silver or gold, as the stock of each on hand might justify. If the prophecies of the opponents of silver should by any possible means be fulfilled, then when we had a sufficiency of silver dollars, together with the gold, I would suspend such coinage. If this plan be impossible of securing, the next best plan would be opening our mints to the unlimited coinage of gold and the silver produced from our own mines, exchanging for the silver at its market price silver dollars or silver coin certificates, as before stated.

According to the figures I have given, the reasonable probabilities are that we would receive of our own mine product for coinage each year, only about $60,000,000, not $1 per capita. Certainly there could be no danger in this.

Suppose we found there was some danger, is Congress impotent to save the country from danger? Not at all. It is in danger now. What we are trying to save the country from is real danger, but the friends who propose the unconditional repeal are trying to save the country from an imaginary danger, a midnight dream, a nightmare without foundation. It has already disappeared and is dissipated. We are trying to save the country from real danger, from gold monometallism, and the evils that have resulted to the world from it.

No one more strongly favors true bimetallism, the perfect equality of gold and silver as bullion or metal, and as coin, than I do, and no one labors more earnestly and consistently to secure such bimetallism than I do. The discriminating legislation of foreign nations and of our coinage act of February 12, 1873, and the very recent action of Austria-Hungary, and especially of India, have so greatly depreciated the value of silver as a metal in the market that it seems unfair to the great masses of our people to permit owners of silver bullion or metal to have the same coined free in our mints into standard silver dollars—silver money—endowed by our laws with full legal tender, with all monetary functions, when unlimited coinage in our mints of silver bullion at its market value in exchange for coined dollars would just as surely bring us to free coinage if our contentions proved true, and remove every possible ground that we are attempting to enact class legislation for the special benefit of silver-mining States and silver-bullion owners.

Therefore I would prefer unlimited coinage to free coinage as I have indicated; and the hue and cry that we propose legislation for silver simply for the benefit of silver miners is false so far as I am concerned. I have not a dollar of interest, directly or indirectly, and never expect to have, in any silver mine or in anybody interested in a silver mine except citizenship in this country. I am not advocating silver here because my people are interested in silver mining or in its metallic value. I am advocating silver for monetary purposes and because my people, in my judgment, demand its use for monetary purposes.

Mr. President, the first step to be taken, however, before we get any plan, is by way of amendment to the pending bill to require the coinage of all the bullion on hand in the Treasury, and to coin it into standard silver dollars, and with them, or with silver-coin certificates to retire and cancel every United States Treasury note issued for the purchase of silver bullion just as quickly as possible. That ought to be done in thirty-six hours. Coin certificates ought to be issued for the full amount of these Treasury notes, based upon the silver in the Treasury; they ought to be put in the subtreasuries and the national depositories, and every United States Treasury note which is outstanding ought to be taken in at once.

That is what the country needs; and it needs it quickly. In my judgment such an amendment ought to be put on the pending bill immediately or passed in a separate bill, which can be passed more quickly than this bill will ever get through in any shape, manner, or form. I would re-establish as quickly as possible the old constitutional Democratic bimetallism as nearly as the changed conditions would permit, with the hope and belief of finally attaining it in full. I would also increase the silver in the half and quarter dollars and dimes to the half, one-quarter, and one-tenth of the standard dollars and have but one currency for the Government and the people, the laborer and the office holder, the pensioner and the soldier, the producer and the bondholder, and wipe out any class distinction by law.

We hear some criticisms of those who only speak their sentiments in regard to the message of the President. Mr. Cleveland is not the Democratic party. The Democratic Senators on this floor do not make the Democratic party. We as well as the members of the House of Representatives, as Democrats, are the agents, the servants, and the representatives of the sovereign people just as Mr. Cleveland is. Mr. Cleveland is at the head of our Democratic Administration, and he has his constitutional functions. We as Democratic Senators here have our constitutional functions, and they are as separate and distinct as the midnight darkness and the noonday brightness. They go in separate spheres.

Why should criticism be had of a Democratic Senator now because he does not bow at once to the unconditional repeal of the Sherman law? Did anybody ever make such a criticism in 1885? Mr. Cleveland then demanded—no, not demanded, but recommended—the repeal of the Bland law. He sent his message to us. He did not call us in extra session; but if he had it would not have made a particle of difference. He sent his message to Congress recommending the repeal of the Bland law. Did we repeal it? No, sir; we did not. We never entertained the proposition. Were we read out of the Democratic party? Not a bit of it.

We come to 1886, when he again recommended the repeal of the Bland law, and we paid no attention to it. It was his duty to recommend it as he honestly believed, and it was our duty as honestly entertained to pay no attention to it. There was no reading of us out of the Democratic party. In 1887 the clouds had been dissipated, the fears and apprehensions had subsided, everything was going along peacefully and quietly, the country was on the road to prosperity, and the President did not say anything about the Bland act in 1887, but in 1888, in the farewell message of that session, he referred to it incidentally, and indorsed the recommendation of the Secretary of the Treasury.

I see no cause for any criticism. We have had struggles before, and we were not ignored or read out of the Democratic party.

I hold in my hand a letter dated "Executive Mansion, Washington, D. C., September 25, 1893," addressed to Hon. W. J. Northen, and signed Grover Cleveland.

I have not the time to read all of this letter, but it is about a safe and stable currency and one dollar being as good as another dollar, all of which we have to-day. The President says:

> In the present state of the public mind this law can not be built upon nor patched in such a way as to relieve the situation.

We do not want to build on it; we do not want to patch it over; but we want to wipe it out and pass a proper substitute for it. That is what we want, and that is just what the President wants. We stand side by side and shoulder to shoulder. I read, however, in this letter:

> I am astonished by the opposition in the S[illegible] to such prompt action as would relieve the present unfortunate situ[illegible]

So am I astonished, profoundly astonished that the President

should expect us, who have fought here for years and years for our honest and sincere convictions in regard to silver, to flee from the battlefield of silver and fall upon a single gold standard. Not quite yet, Mr. President. What right did the President have to expect us to yield because of the panicky apprehensions of Wall street and a few business men? The President continues:

My daily prayer is that the delay occasioned by such opposition may not be the cause of plunging the country into deeper depression than it has yet known, and that the Democratic party may not be justly held responsible for such a catastrophe.

Mr. President, would it be sacriligious in me, would it be improper in me to recommend to the President, when he offers up his prayers to accompany them with that grand old Presbyterian song:

God moves in a mysterious way
His wonders to perform;
He plants His footsteps in the sea,
And rides upon the storm.

* * * *

Ye fearful saints, fresh courage take;
The clouds ye so much dread
Are big with mercy, and shall break
In blessings on your head.

* * * *

Behind a frowning providence
He hides a smiling face.

* * * *

The bud may have a bitter taste,
But sweet will be the flower.

Blind unbelief is sure to err,
And scan His work in vain;
God is His own interpreter,
And he will make it plain.

The President has had fears that these lowering clouds were about to swamp this country ever since 1885. There is only one man in public life who has more unfulfilled predictions on record than the President, and that is JOHN SHERMAN. [Laughter.]

This is no disrespect to him. He is an honest and a brave man, and he has the courage to tell us what he thinks. But, oh, how often he has been mistaken! [Laughter.] There is no danger to the Democratic party. When Mr. Cleveland and every Senator here, and every member of the other House, and all the members of that grand old party who compose it to-day shall have passed to that bourn whence no traveler returns, the Democratic party will only be in its youthful vigor and manhood.

It is the only political organization which has survived the wreck and ravages of time for over a century. It was not organized to die and fade away from this earth. Its principles, crystallized and proclaimed by the immortal Jefferson, became vitalized with immortality, and they will stand as beacon lights and as monumental landmarks; they will be pillars of cloud by day and pillars of fire by night to guide the Democratic hosts to victory when all of us shall have passed away.

No, no, Mr. President, our differences will not destroy the Democratic party. It will survive us and all our struggles, and continue to bless the country as it has; and the enforcement of its principles will bring it to true Democratic bimetallism.

[NOTE.—Since the foregoing speech was delivered, the Secretary of the Treasury, in response to the resolution of the Senate, has reported to the Senate that he has not redeemed silver certificates issued on the deposit of silver dollars in gold or gold obligations. I am very glad to be able to make this statement, which sustains what I stated to be the law and removes from the Secretary any ground of criticism.]

Remonetization of Silver.

SPEECH
OF
HON. WILLIAM V. ALLEN,
OF NEBRASKA,

IN THE SENATE OF THE UNITED STATES,

Saturday and Wednesday, October 7 and 11, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. ALLEN said:

Mr. PRESIDENT: The first time I appeared in the Senate I felt as though I ought to apologize for doing so. The first time I had occasion to submit some observations upon the measure now under consideration I felt that I was under an obligation to apologize to the Senate for doing so and for breaking what I understand is an unwritten rule which has been in force in this body for many years, that a new member shall listen rather than talk. I presume if any apology is due from me to-day it is not to the Senate of the United States, but to Wall street and Lombard street for delaying somewhat the passage of the measure now before the Senate.

I have no desire, Mr. President, to consume unnecessary time.

Mr. STEWART. Will the Senator from Nebraska yield that I may suggest the want of a quorum?

Mr. ALLEN. No, I do not care for a quorum.

Mr. STEWART. All right; but I think Senators would learn something if they would come here.

Mr. ALLEN. I will make them hear me whether they are here or not.

The PRESIDING OFFICER (Mr. GALLINGER in the chair). The Senator from Nebraska will proceed.

Mr. ALLEN. I have no desire now to consume unnecessary time; and while it may be believed by those who have not been engaged in the active consideration of the question now before the Senate that much time has been consumed, and perhaps uselessly, I am well convinced in my own mind that the discussion which has gone on here for two months has been productive of very great benefit not only to the members of the Senate, but to the country at large.

The question, Mr. President, is of too much importance, it is too far-reaching in its effects upon the people of this generation and future generations of our countrymen, it has too much effect upon the form and substance of our republican system of government to be considered hastily.

I had the honor on the 24th of August to submit some observations in the Senate on the amendment which I propose to offer to the pending bill, providing for the free and unlimited coinage of silver at the ratio of 16 to 1, a return to the policy established by the Government on the 2d of April, 1792. I then discussed two propositions which it seems to me can not be controverted or successfully assailed.

The first proposition is that the Constitution of the Government under which we live recognizes silver as money, and the second proposition is that whenever a power is conferred upon any branch of the Government for the public benefit it becomes a duty enjoined upon that branch of the Government to enforce it, and power and duty under such circumstances are synonymous words. I had occasion in that speech to cite quite liberally quotations from judicial authority sustaining the several propositions then laid down. To-day, however, I propose to touch upon several other branches of this really important question. I desire to show that in the Senate of the United States false ideas of political economy are taught. Without further preliminary remarks, I now refer in a general way to the coinage legislation of this country.

On the 2d of April, 1792, the first mint of the United States was established at Philadelphia under an act of Congress passed at that time establishing a mint and regulating the coins of the United States. Under that act of Congress the dollar was declared to be the unit of value in this country. Silver and gold were admitted upon equal terms to the mint and to free coinage, and both were made full legal-tender money, and continued so from that time until the passage of the act of February 12, 1873, commonly known as the demonetizing act. Thus from the origin of the Government down to February 12, 1873, both gold and silver were money of this country. There had been no restriction upon the coinage of either of these metals, and there was no occasion at the time of the passage of the demonetizing act for any restriction.

All the marvelous growth of this country, from the days of its colonial existence to 1873, had been made under what was and is known as the double system of money, under a system admitting both gold and silver to free and equal coinage at the mints. However, on the 12th of February, 1873, the silver money of this country was stricken down by the act of Congress of that date.

It is needless for me to say that a great many of the people of this country believe that the demonetization of silver was a crime against the prosperity of the nation. I do not personally know anything about its history. Not having been a member of this body at that time, I am not able to say whether it was by procurement or not; but certainly the effect of the passage of that act has been detrimental to the prosperity and happiness of our people.

In 1878 Congress, under the compulsion of a strong public sentiment, enacted the law of February 28, 1878, commonly known as the Bland-Allison act, reëstablishing the coinage of silver in a qualified way. Instead of rehabilitating silver fully and putting it upon an absolute equality with gold as it existed before 1873, the Bland-Allison act provided for the purchase of a certain quantity of silver by the Government and the coinage of a maximum

or minimum sum per month, giving the Secretary of the Treasury discretionary power to coin not less than two million nor more than four million dollars' worth monthly.

July 14, 1890, the Sherman act (so called) was passed requiring the purchase monthly of four and a half million ounces of fine silver and the coinage of $2,000,000 per month up to July 1, 1891, from the silver thus purchased, and after that time the coinage in the discretion of the Secretary of the Treasury, and the issuance of legal-tender notes in the purchase of the bullion. It is that act which is now under consideration.

Briefly, then, the course of this nation has been in 1873 to strike down and destroy silver as the money of our people. In 1878 there was a partial re-establishment of silver as money, but so hampered and restricted by legislation as to make it almost inefficient. For instance, the Bland-Allison act contained a provision giving persons the right in a contract to discriminate against silver, something that had never been done before in the history of this country. The Sherman act retains the same provision, giving parties who make contracts the power to name the specific kind of money they will receive in liquidation of their contracts, and by that means putting it in the power of the money sharks to practically nullify silver legislation.

From 1873 to this moment silver has not occupied in the history of this nation the position the Constitution intended it should occupy and the position the requirements of the country demanded it should occupy; and because of this a disparity exists between the bullion value of silver and the coin value of gold at the present time, and it is urged that the true policy of this nation is to abandon silver until the parity, to which my friend from New Jersey [Mr. MCPHERSON] occasionally refers, is established.

Our friends upon the other side have taught many political heresies, and one of the heresies taught by them in this discussion has been that chief of heresies, intrinsic value. My friend, the Senator from Oregon [Mr. DOLPH], on two separate days sent out for a dictionary, had it brought in here, and read it to us to show that there was such a thing as intrinsic value in money.

What is meant by intrinsic value? The advocates of the gold standard tell us that intrinsic value is that commercial value which resides in the money, thing, or metal, and that there must be a correspondence between that thing and the coin value, or the money is fiat money, and therefore unsound. I think I have heard my friend from New Jersey [Mr. MCPHERSON] ring the changes on that question since this extraordinary session has been in existence. I have taken occasion once or twice to point out that it is the office or function performed, and not the thing which is the evidence of the money, which makes the money; it is the power or function which performs the office of exchange which makes the money, and not the commercial value of the material which is used in the performance of that function.

I know that this doctrine is met in the spirit of selfishness. I can understand how a few men, controlling the volume of gold in the world, can hire the closest financiers of this nation, and the cheap fellows of other nations to write essays, describing the beauties of the theory of intrinsic value. I can understand that, because, if once the theory of intrinsic value is overthrown, the occupation of the money changer, like the occupation of Othello, is gone.

I do not propose, however, to rest this point on my own argument or deductions. I propose to submit authorities which can not be questioned.

In February, 1877, a commission sitting in this city, consisting of Senator JONES of Nevada, as chairman, and Senators Boutwell and Bogy, and Representatives Willard and BLAND, held a session of the United States monetary commission. At that time Henri Cernuschi, a distinguished Italian scholar, appeared before the commission by invitation and gave valuable testimony, not only on the subject of the intrinsic value of money, but upon kindred subjects of vast importance. That gentleman, in answer to a question of the chairman of the commission, said:

I was an LL. D. and a graduate at Pavia, Italy, in 1842. The political events of 1848 caused me to leave my native country, and I came to Paris, where I became a banker. In 1870 I retired from business.

This is briefly the character of the man who testifies upon this subject.

On page 7, of this little book, he says:

I will give you my definition of money—

It is true that we must have a proper definition and a proper conception of the office to be performed by money before we can consider it properly.

I will give you my definition of money: Money is a value created by law to be a scale of valuation and a valid tender for payments.

Further down on the same page he says:

Certainly every one understands that, as regards paper money, the value is created by law; but it is, perhaps, not easy for every one to admit that, with regard to metallic money also, the value is created by law. It is, however, the fact. If you suppose that gold is not money, is not legal tender—if you suppose that silver is not money, is not legal tender—the value of gold and the value of silver is lost.

On page 8 he says:

This fact that money is a value created by law is one of great importance, and I can cite you the highest authorities in proof that what I say is true.

The question was put to the witness:

Q. Supposing the gold and silver metals to have no other use than as money, would they then maintain the same value that they now maintain as money?

A. There would be a diminution of their purchasing power, because the purchasing power of money is in direct proportion to the volume of money existing. If all gold and silver are used solely as money, all the ornaments and all the jewelry will be melted and coined, and the volume of money will be increased. It will be exactly as if a new mine of money had been opened. And the volume of circulating money being made larger than before, there will be a corresponding diminution in the purchasing-power of every metallic dollar.

On page 11 of this book he says:

Mr. Chairman, the doctrine that money is a value created by law was promulgated twenty-two centuries ago. It was advanced by Aristotle, the great philosopher—is practical and so positive that I would dare call him an American philosopher. I quote from his writings:

"Money (nomisma in Greek) by itself is but a frivolity, a futility, a trifle, and has value only by law (nomos in Greek), and not by nature, so that a change of convention between those who use it is sufficient to deprive it of all its value and power to satisfy all our wants. (Politica.)"

In virtue of a voluntary convention, money (*nomisma*) has become the medium of exchange. We say "nomisma," because it is not so by nature, but by law "nomos,' and because it is in our power to change it and to render it useless. (Ethica.)

After Aristotle we have the Pandects of Justinian, the great source of all modern laws.

I cite here a quotation from the Pandects of Justinian found in this book:

The origin of buying and selling began with exchange. Formerly money was unknown, and there existed no terms to differentiate merchandise and price, but everyone, according to the wants of the time and circumstances, exchanged things useless to him against things which were useful; for it happens frequently that one is in need of what another has in excess. But as it seldom coincided that what one possessed the other wanted, and conversely, a material was "elected" whose legal and perpetual value remedied by its homogeneity the difficulties of barter. This material being officially coined, circulates and holds its power, not so much from its substance as from its quantity: since then each of the two things exchanged is no longer called merchandise, but only one, the other is called price.

So Justinian says the power of money resides not in the substance, but in the quantity. Quantity is exactly what nature produces.

I turn now to volume 1 of Macleod's Elements of Economics, and on page 231 I find:

This unhappy phrase "intrinsic value" meets us at every turn in economics; and yet the slightest reflection will show that to define value to be something external to a thing, and then to be constantly speaking of intrinsic value, are self-contradictory and inconsistent ideas. And it came to be held that labor is necessary to and is the cause of all value.

On page 232 of the same volume the following occurs:

The expression "intrinsic value" is so common that persons are apt to overlook its incongruity of ideas; it is, however, a plain contradiction in terms, and if we use words of similar import whose meaning has not been so corrupted, its absurdity will be apparent at once. Thus, who ever heard of intrinsic distance, or of an intrinsic ratio? The absurdity of these expressions is apparent at once, but they are in no way more absurd than intrinsic value. If we speak of the intrinsic value of money, we may just as well speak of the intrinsic distance of St. Paul's, or the intrinsic ratio of five. To say that money has intrinsic value because it is material and the produce of labor, and that a bank note or bill of exchange is only the representative of value, is just as absurd as to say that a wooden yard measure is intrinsic distance, and that the space between two points a yard apart is the representative of distance.

On page 235 of the same book occurs the following:

That unfortunate confusion of ideas between the value of a commodity being the quantity of another commodity it will purchase, and the quantity of labor embodied, as it were, in the commodity itself, which is chiefly owing to Smith and adopted by Ricardo, has not only led to that mischievous expression "intrinsic value," the source of endless confusion in economics, but also to the search for something which very slight reflection would have shown to be impossible, namely, an invariable standard of value.

From pages 230 and 231 of the same book I read the following:

There is nothing which troubles this controversy more than for want of distinguishing between value and virtue.

Value is only the price of things, and that can never be certain, because it must be there at all times and in all places of the same value; therefore nothing can have intrinsic value.

But things have an intrinsic virtue in themselves, which in all places have the same virtue—the loadstone to attract iron, and the several qualities that belong to herbs and drugs, some purgative, some diuretical, etc. But these things, though they may have great virtue, may be of small value or no price, according to the place where they are plenty or scarce; as the red nettle, though it be of excellent virtue to stop bleeding, yet here it is a weed of no value from its plenty. And so are spices and drugs in their own native soil of no value but as common shrubs and weeds, but with us of great value, and yet in both places of the same excellent intrinsic virtue.

All articles of commerce have but one value, and that is the commercial value, a value fixed by the law of supply and demand. An article may have intrinsic virtue and a commercial value at the same time. For instance, all food products have intrinsic or life-giving virtues or qualities, and at the same time they have a commercial value, and in the sense that they have life-giving and life-sustaining qualities, they may be said to possess intrinsic virtue as well as commercial value, but when you go into the domain of commerce, it is an absolute absurdity to

speak of anything, more especially money, which is the representative of all things, as having intrinsic value.

What is meant when Senators use the expression "intrinsic value?" Is it not meant that nature through some subtle process has placed in gold or silver certain qualities which are inherent, which can not be removed? Is it not an internal virtue, a thing placed there and conferred by nature, and not by man? And yet it is a common occurrence that these very articles, which are said to possess intrinsic value, fluctuate, according to the law of supply and demand—up to-day and down to-morrow.

I believe if there is any fallacy which has been taught in this country and which is far reaching in its evil consequences, it is this fallacy of intrinsic value in money.

The material of which money is coined or on which it is stamped is withdrawn from the field of commerce when being used as money. It is as dead in its effect upon the commercial value of the class of articles to which it belongs as though it were in the bowels of the earth or in the bottom of the ocean; it is taken out of circulation as an article of commerce, and is used exclusively as a medium of exchange, performing the money function and losing its place as an article of commerce.

Works on political economy of recent date are discarding this doctrine of intrinsic value in money. It is the function, the office performed by the thing called money, which gives it its money value. It is the volume, the number of units in circulation, and which are exchanged against all other things, which gives money its proper power and its proper money value. There is no more necessity for a dollar's being made of gold or silver, for that matter, than there is for a yardstick to be made of ivory or gold. You might as well say that by measuring a yard of cloth with a yardstick made of gold, you would give the cloth measured more value than it would have if it were measured with a yardstick of wood or some other inferior material. The wealth resides in the articles which are exchanged, and not in the money which effects the exchange.

Mr. President, among the Jews gold as money dates from the time of David. King Pheidon, of Argos, it is said, introduced silver money into Greece about the middle of the eighth century before Christ. The Romans struck silver money for the first time in 209 B. C., and in 207 B. C. they struck the first gold coins. Among modern nations Venice, in 1285, and Florence, seem to have been the first to have coined gold in any quantity. Henry III, of England, about 1272, coined gold, but with so little success that, for a long time after, Edward III, about 1377, was regarded as the first English monarch who had coined gold. Edward III was able, only after a voluntary circulation had continued for a long time, to prohibit anyone from refusing *rose nobles*, a peculiar sort of coin of that date, current at 6*s.* 8*d.* and stamped with the figure of a rose.

Wampum was legal tender in Massachusetts in 1640 to the amount of 12*d.* In 1640 the court of Massachusetts re-rated wampum at 4 of the white and 2 of the black for a penny. In 1635 musket balls were used in Massachusetts for change at a farthing apiece, legal tender for sums under 12*d.*

Early in the eighteenth century tobacco was adopted as currency: it was placed in warehouses and the receipts passed as currency.

Some African tribes used cowrie shells, 200 being valued at 1*d.* The Mexicans, when conquered by the Spanish adventurers, were using grains of cacao as money. When the intercourse between the Europeans and the negroes upon the river Gambia first commenced the medium of exchange was iron; next it was tobacco. The legal currency of Lacedæmonia was made of iron, and that of the early Romans of copper.

I quote, Mr. President, from Say's Political Economy, volume 1, chapter 21, section 2, page 239:

> Money is a mere intermedial object of exchange between an object in possession and the object of desire. The choice of its material is of no great importance. Money is not desired as an object of food, of household use, or of personal covering, but for the purpose of re-sale, as it were, and re-exchange for some object of utility after having been originally received in exchange for one such already. Money is, therefore, not an object of consumption. It passes through the hands without sensible diminution or injury, and may perform its office equally well whether its material be gold or silver, leather or paper.

[At this point the honorable Senator yielded to Mr. PETTIGREW.]

Mr. ALLEN. In the book from which I have quoted, the work of Cernuschi, on page 8 occurs the following:

> Money is a value created by law.

The doctrine that money is a value created by law was promulgated twenty-two centuries ago. It was advanced by Aristotle, the great philosopher, a pupil of Plato, and is to be found in his works of a political character. It has been advocated in one form or another from that time to the present moment by those who have given careful thought to the subject of money; and, with the exception of a few political economists of fifty years ago, the political economists and writers upon the subject of money, of recognized authority, admit that it is not at all essential in the money thing to have any especial commercial, or what is commonly called intrinsic, value.

This Italian from whom I have quoted, who was himself a distinguished man in his own country, a practical financier for years, fully educated, qualified and equipped, seems to have made a thorough study of this question. He scouts the idea advanced in this Senate that there is any such thing as intrinsic value in money.

If Senators who talk about this matter—and I have heard my friend from Oregon [Mr. DOLPH] talk about it a good deal—mean to say that the intrinsic value they refer to resides in the function or office that money performs; that the volume of money should keep pace with population and with the growth of wealth, then I fully concur with them that there must be intrinsic value in that sense. But I have heard no Senator offer a reason (and if there be a reason I pause to hear it now) why there should be any commercial value in the thing which evidences money or which is called the money thing.

Mr. PALMER rose.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Illinois?

Mr. ALLEN. Certainly.

Mr. PALMER. The best reason I can give is that commercial value is essential as a means of limiting its quantity. I ask the Senator whether his Italian philosopher suggests any means of limiting the quantity of money?

Mr. ALLEN. Oh, yes.

Mr. DOLPH. Will the Senator from Nebraska yield to me for a moment?

Mr. ALLEN. Certainly.

Mr. DOLPH. So far as the definition of intrinsic value is concerned, as applied to gold and silver, I do not care to discuss it. I do not care whether the term is properly used, if it is to be critically discussed and explained, when we speak of the intrinsic value of gold and silver. All that I have ever said in the Senate is that "intrinsic value" has for over two hundred years been used by the common people and by writers as synonymous with commercial value as distinguished from the money value of metals when stamped by the Government, and I read from Webster, and from a later lexicographer, to show that I was correct. Therefore, when I speak of the intrinsic value of gold and silver as distinguished from its money value as coin, I am simply using a phrase that the whole world understands. I do not care whether some critic thinks that the phrase is correct; it has been properly used for some two hundred years by the great mass of people.

In regard to the other proposition it seems to me that the Senator from Nebraska confuses two questions. Whether intrinsic value is necessary to make good money is another question. I do not care now to go into the question as to whether the Government, by simply stamping paper, without making any promise to redeem it in gold or silver, and making it a legal tender, can make good money. We should not agree upon that proposition if the Senator contends that it can be done.

Mr. ALLEN. Let me call the attention of the Senator to the fact that in 1813 and 1814 the English, Prussian, and Russian Governments issued several million dollars of international paper money that always stood cent for cent and dollar for dollar with gold and silver.

Mr. DOLPH. I am not familiar with the matter the Senator refers to.

Mr. ALLEN. It was an international money.

Mr. DOLPH. But I will risk my reputation that there was some obligation on the part of those governments behind that paper to redeem it. If the Senator takes issue with me upon that matter, I will endeavor to look it up. The Continental Government issued money, and the Senator will remember that it depreciated until it took $500 of that Continental paper money to equal $1 in gold or silver.

Mr. ALLEN. The Senator from Oregon does not answer the question I put to him. The Senator makes a mistake in assuming that I take the position of an unlimited issue of irredeemable paper money.

Mr. DOLPH. Or a limited issue. The principle would be the same if it were a limited issue.

Mr. ALLEN. I defy the Senator from Oregon or any other Senator in this Chamber to point out an instance in all history where the volume of paper money was limited by a government and it was given full legal-tender quality that it was not good money.

Mr. DOLPH. I defy the Senator from Nebraska to point out an instance in all history where paper money was issued without some promise of the Government behind it to redeem it in some

way in something more valuable that it did not depreciate until it was not worth anything.

Mr. ALLEN. I am not talking about the question of irredeemability. That is a creation of the Senator's own mind. I simply say this, that there is not an instance in all the history of finance, from the time the morning stars sang together until this moment, in any government in the civilized world where the volume of paper money was qualified and limited and given a legal-tender quality that it was not good money. You can go back to the time of the Bank of Venice and come down to this moment.

Mr. DOLPH. What does the Senator say to my proposition that all good paper money has had the promise of a government back of it to redeem it in some form in something more valuable than itself? The principle is the same as if a man without property should issue his promissory notes and undertake to float them. Nobody would take them, because, while there was a promise to pay, there would not be the ability to pay. Of course, if this Government should issue a large amount of paper money, agreeing to redeem it in gold coin and make provision for its redemption in gold coin, I do not know how much it could float, but a very large amount. If, however, it did not agree to redeem it in gold or silver coin, it could not float it; it would not remain at par with gold and silver money.

Mr. ALLEN. The Senator from Oregon will stray from the text. The question of irredeemable paper money is not being discussed now. I have taken no position upon that subject whatever, nor do I think the Senator from Oregon will be able to lead me there. Paper money that has heretofore been issued and has been in use in civilized countries has been a redeemable paper money. Now, let me ask the Senator if it is not true that the English Government to-day has several millions of dollars of paper money which has not a dollar of coin behind it. I think the amount is something like $100,000,000.

Mr. DOLPH. I do not think that is correct, but I am not prepared at this moment to go into a historical statement with regard to the finances of Great Britain.

Mr. ALLEN. I mean to say that there is circulating in that Empire that amount of money that has not a dollar of gold or silver behind it. Let me ask the Senator this question: Is it not true that this Government has issued a redeemable paper money without a dollar of gold or silver behind it, which paper money has always stood at par with gold and silver, even when they were at a premium?

Mr. DOLPH. Now, the Senator from Nebraska and I may be getting pretty near together. I do not consider the amount of reserve in our Treasury as of extreme importance so long as the Secretary of the Treasury is authorized to issue bonds and sell them at an hour's notice at any time for gold coin upon the markets of the world. He can provide $500,000,000, if that amount could be obtained, by the sale of bonds in a single day under the authority he now has for the redemption of our legal tenders and other notes which are payable in gold coin. But I undertake to say that the paper money of the Government of Great Britain which the Senator talks about has behind it the bonds of the Government, and they are redeemable by the Government in coin, whether the coin is actually in the Bank of England or anywhere else for that purpose or not.

Mr. PALMER. I wish to ask the Senator a question simply to ascertain his meaning.

Mr. ALLEN. Certainly.

Mr. PALMER. What does the Senator mean by having neither gold nor silver behind the paper? What does he mean by that phrase?

Mr. ALLEN. I mean to say that it is uncovered paper, in the ordinary sense of the term.

Mr. PALMER. Is that any more satisfactory than the other question? Does the Senator mean to say that there is no ultimate redeemability about it?

Mr. ALLEN. I have not said so.

Mr. PALMER. Oh!

Mr. ALLEN. I have been contending with the Senator from Oregon that he has not comprehended me. I am not discussing that question at all, but I say that the Senator from Oregon and the Senator from Illinois have not yet shown the Senate, nor can it, in my judgment, be shown that this so-called intrinsic value is at all essential to money. The Senator from Illinois says he thinks it is essential because of the ability to control its volume, if I understand him rightly.

Mr. DOLPH. Will the Senator tell me whether he uses the term "intrinsic value" as synonymous with commercial value? Does he think that good money must be either something that has commercial value or is exchangeable into something that has commercial value?

Mr. ALLEN. Now the Senator from Oregon agrees with me.

Mr. DOLPH. I will not discuss the question of the meaning of "intrinsic." We will take the term "commercial value." I repeat, I ask the Senator if he takes the position that it is not necessary that good money should be made of something that has commercial value, or that it must be money that can be exchanged into that which has commercial value?

Mr. ALLEN. Now, I want to compromise with the Senator from Oregon. I will not continue speaking of "intrinsic value," but will say commercial value. Let us then call it commercial value. Now, let me ask my friend from Oregon what office does commercial value in the money thing or the money material perform when the thing is being used as a medium of exchange? Point it out.

Mr. DOLPH. My dear sir, it makes the gold coin of the United States worth 100 cents on the dollar, not only in the United States, but in every civilized world upon the face of the globe. It is the commercial value of the gold that is in the gold coin that does that, and whenever a gold coin is taken from the United States the fact that it has upon it the stamp of the Government or the devices provided by law does not affect its value a particle. It is sold by weight and melted up and recoined in the foreign country, or sold there as bullion.

Mr. ALLEN. I have heard that argument used a great many times. We are told sometimes by gentlemen who maintain the theory the Senator from Oregon maintains, that the value of gold bullion is equivalent to the coin or money value of gold. They point to the fact that the gold bullion is equivalent to the gold coin in its value. Therefore they say it is good money, it is sound money the world over. Now, what makes the gold bullion in the gold dollar worth its face in the coined metal?

Mr. DOLPH. The fact of the great law of supply and demand, which gives value to every product of human industry. The fact that it is valuable for ornament and for use, valuable in the arts, and valuable for money. It is not the fact that it contains the stamp of the Government upon it or is made legal tender in the United States. These, when it leaves the United States, are of no value whatever. I admit that being used for money by many nations of the earth helps to give it commercial value, if you prefer that term to intrinsic value. It has more value by reason of the fact that it is used for money in the great commercial nations of the earth than if it were used alone in the arts.

But that does not show that the stamp of the Government, or the laws of the United States that make it a legal-tender, fix its value. The United States can help to make iron, or copper, or lead, or silver more valuable by providing a bounty so that mines will be more successfully worked and there may be a larger product of those metals; but that would not be fixing the value of a metal by legislation and by the stamp of the Government. All that governments do to enhance the value of gold when they provide for its use as money is by providing a greater use for it and making more demand for the market. They do increase the value of it, but just as they could increase the value of iron or copper or coal under such legislation as I have suggested.

Mr. ALLEN. The Senator from Oregon still runs away from the text. He does not answer the question, and I put it again: When gold or any material is being used as money and as a medium of exchange what office or function in that exchange does the commercial value of the thing used as money perform?

Mr. DOLPH. When the metal out of which it is used is commercially worth as much as the face of the coin, it makes the coin worth 100 cents on the dollar in this country and everywhere.

Mr. ALLEN. I understand that, if the Senator please, but what particular function in the thing called money does the commercial value of that thing perform?

Mr. DOLPH. It gives it its value.

Mr. ALLEN. Now, then, I have got the Senator down to the point. He says it gives it its value. Mr. President, that is a most fatal admission for the Senator from Oregon to make. There is not a schoolboy of 15 years of age in the State of Nebraska or in the Senator's own State who does not know that when you give a metal unlimited and free coinage the bullion is worth the coin value in consequence of coinage laws. It is the fact that the Senator can go to the mints of the Unites States and have his bullion coined into dollars without expense to him that makes that bullion worth a dollar.

Mr. DOLPH. Of course that is true. With the free coinage of silver the money value of the silver dollar would be the same as the commercial value of the silver in it. That is what I have been talking here whenever I have talked on this subject; and that is the reason why free coinage is not practicable. It would be the commercial value of the silver that would give the money value to the dollar.

Mr. ALLEN. Now, let me ask my friend from Oregon one more question. Suppose there was free and unlimited coinage of silver, would that make the silver bullion in the silver dollar worth the face of the coin?

Mr. DOLPH. The face value of the dollar?

Mr. ALLEN. Yes, the face value of the dollar?

Mr. DOLPH. No, not the par value of the dollar, but the silver dollar would be worth no more than the commercial value of the bullion it contained.

Mr. ALLEN. That is a strange doctrine. Now, the Senator from Oregon has put himself in a peculiar position.

Mr. DOLPH. With free coinage it is understood, without any undertaking by the Government to redeem it in something more valuable, either by receiving it for public dues or for any other use or as the equivalent of gold, and undertaking to maintain the gold standard or otherwise.

Mr. ALLEN. The Senator from Oregon says now with reference to gold, that the commercial value or the bullion value of the gold is equivalent to its coin value. He admits that it is equivalent to the coin value of the gold in consequence of the free and unrestricted coinage. That is the proposition the Senator makes. Suppose I go to my friend, the Senator from Oregon, who has some gold bullion in his pocket and offer him $4.90 for it. He will not take it because he can go to the mint and have it coined into a $5 piece and that is worth more to him, and it costs him nothing to coin it. Then it must be true that the value of the bullion in a dollar under a system of free and unlimited coinage is always equivalent in value to the coin. That the Senator from Oregon admits with reference to gold, and yet when it comes to the question of silver the Senator declares that the silver money will drop down to the bullion value of the silver in the coin.

Mr. DOLPH. Let me call the attention of the Senator to the trade dollar which contained more silver than the standard dollar, and which depreciated and was worth no more than 80 cents.

Mr. ALLEN. Yes, I understand that; and it was because the trade dollar lacked the essential of all money, and that is the legal-tender quality.

Mr. DOLPH. It was a legal tender to the amount of $5 until 1876.

Mr. ALLEN. It was a legal tender to the amount of $5, but that was practically striking out the legal-tender quality. It never was designed for circulation at home. It was because it was simply a token money and was restricted in its legal-tender quality that it did not possess the value of the standard dollar of 412½ grains.

Mr. DOLPH. Will the Senator yield to me again?

Mr. ALLEN. Certainly.

Mr. DOLPH. I suppose what would be the rule in the United States would be the rule in Mexico, would it not?

Mr. ALLEN. I do not care anything about Mexico.

Mr. DOLPH. The Senator knows that Mexico coins silver dollars with more silver in them than in our own dollar, and yet you can take one of our silver dollars into Mexico and get nearly two of their Mexican dollars for it.

Mr. HARRIS. Will the Senator from Nebraska yield to me for a moment?

Mr. ALLEN. Certainly.

Mr. HARRIS. I want to ask the Senator from Oregon if the legal-tender dollar, that will pay as much debt, that will buy as much property, whether that dollar be composed of gold or silver or paper, is not within its own jurisdiction the equal of any other legal-tender dollar, and when you go beyond its own jurisdiction there is not one of your dollars that is a dollar; they go as commodities? If your gold eagle goes, it goes as bullion: if your silver dollar goes, it goes as bullion; if your paper dollar goes, it goes as a mere promise to pay; but none of them are money when they pass beyond the jurisdiction of their own country.

Mr. DOLPH. Very well; that is true, as I stated before; but the gold dollar is worth just as much if you melt it up or hammer it into a slug or a bar when it leaves the country as the gold piece is worth here.

Mr. ALLEN. I beg the Senator's pardon, it is only worth——

Mr. DOLPH. Now, the rule that will work in the United States will work in the adjoining Republic of Mexico.

Mr. ALLEN. Oh, no.

Mr. DOLPH. Oh, yes, it should do it if it is a universal rule, as the Senator says it has prevailed in all time from earliest history substantially. Then it will work as well in Mexico as it will in the United States. In Mexico to-day their silver dollars are worth only about half as much as a gold dollar and will only purchase commodities at that rate. Then how is it that the rule does not work in Mexico?

Mr. ALLEN. The Senator from Oregon is not going to get me down into Mexico. But the law of the United States giving our money full legal tender power and the difference in the civilization of the two countries account for any difference in their money.

Mr. DOLPH. A moment ago the Senator wanted to go through all time and over all the world, and now he is bound to stay within the limits of the United States.

Mr. ALLEN. We are solving the question so far as its effects in this country are concerned. I put the Senator in this position according to his own admission, and I desire to repeat it so that the country may know the position these gentlemen occupy; and that is this, that the gold bullion in a gold dollar is worth the coin, under a system of free and unlimited coinage of gold; but the bullion in the silver dollar, under a free and unlimited coinage of silver, is not worth the bullion in the coin.

Mr. DOLPH. A gold dollar.

Mr. ALLEN. Oh no, the bullion in a silver dollar is not worth the coin.

Mr. DOLPH. "The coin value of the metal?" I do not understand exactly what the Senator means.

Mr. ALLEN. I mean the 412½ grains of standard silver that are coined into a dollar.

Mr. DOLPH. Under our present system such a dollar is now the equivalent of a gold dollar, because, as I have asserted, and I do not care to go over the ground again, it is substantially redeemed by the Government in gold; but under free coinage, where everybody would carry bullion to the mints and have it converted into the standard dollar, the coin value of a silver dollar as measured in gold would be exactly what the commercial value of the silver was.

Mr. ALLEN. We have not a dollar of silver money redeemable in gold in this country, and never had.

Mr. DOLPH. That is substantially the case.

Mr. ALLEN. Our silver money is money of final payment in this country; and yet it must be patent to the Senator from Oregon, as it certainly is to the thinking people of the United States, that the free and unlimited coinage of any metal makes the bullion equivalent to the coin. It is only when you have restricted coinage, such as we had under the Bland-Allison act and such as we have under the Sherman act, where there is a great body of surplus metal that is not admitted to the mints and not coined, and the surplus is used as a commodity, that there is a disparity between the bullion value and the coin value.

Mr. DOLPH. Will the Senator yield again?

Mr. ALLEN. Certainly.

Mr. DOLPH. The Senator asserts a most remarkable proposition. Up to the time of the so-called demonetization of silver there were only a little over 8,000,000 silver dollars coined in the United States and the whole amount of silver coinage, the fractional coins and all others, I think did not exceed $100,000,000 in eighty years of our existence. Between 1873 and 1878 we coined more silver in the United States than we had ever coined in all our history. In about four months after the passage of the Bland act we coined as many silver dollars as we had coined in eighty years. We made a market for more silver under the Bland act and the Sherman law than we ever had before and could ever hope to have under the free coinage of silver. Still, the Senator says that we are not using it all; that we have left such a surplus to go upon the markets of the world that we have depreciated the price of silver. It is a most astonishing statement.

Mr. ALLEN. The Senator from Oregon forgets the fact that this country has been growing some. Besides, the surplus always fixes the value of an article, and there being silver not admitted to the mints it becomes simply a commodity and fixes the commercial value of the silver in the silver coin.

Mr. DOLPH. It has not grown in that proportion.

Mr. ALLEN. We coined in round numbers probably of subsidiary coins and silver dollars something like $100,000,000.

Mr. DOLPH. And on our purchases of silver by the depreciation of silver we have lost more since 1878 under the purchases of the Bland act and the Sherman act than we coined in eighty years of our existence.

Mr. ALLEN. The Senator from Oregon seems to overlook the fact that this country has developed so rapidly and its population has become so great that it requires much more money than we needed in the early history of our nation. The Senator seems to forget the fact that the development of the country, the increase of wealth and population call for much more silver money to-day than was called for at the time he mentions.

But all that, Mr. President, is foreign to the proposition. I say neither the Senator from Oregon nor any other Senator nor any human being can point out any distinction or can show that gold as money is worth any more under a system of free and unlimited coinage than silver is worth under like circumstances. It is because the bullion value is equivalent to the coin value of the dollar that fixes the bullion value of gold to-day. It is because there are no restrictions thrown around it here or in Europe, and it is because there is restriction in the form of limited coinage in this country that depreciates, as my friend says, the bullion value of silver.

Now, Mr. President, I was discussing the question of "intrinsic value," and I am glad my friend from Oregon has abandoned the name and comes out and agrees with me that we shall call it commercial value after this.

Mr. DOLPH. Oh, no; I did not agree to any such thing. I said the Senator could have his choice.

Mr. ALLEN. Then I will take my choice. The authorities from which I have cited are somewhat divergent from my friend from Oregon upon this important question. I desire to return to and read from page 22 of this little work by Cernuschi, heretofore cited. Says this gentleman:

Here I beg to make another quotation from an American author. I refer to a letter written by Mr. John White, who, in 1829, was treasurer of the Bank of the United States, addressed to Mr. Ingham, Secretary of the Treasury. The letter is a very interesting one. It is as follows:

[Office Bank of the United States. John White, cashier.]

BALTIMORE, *November 16, 1829.*

Upon a careful review, it appears to me that the following singular but instructive conclusions are evidently deducible:

Whatever degree of uncertainty may exist as to the precise quantity of the precious metals which was imported into Europe during the fifty-three years succeeding the discovery of America, the records of that time abundantly testify that gold constituted the chief part of the supply, and that, nevertheless, its great preponderance did not produce any sensible effect upon the market value in reference to silver. It is evident that the enormous importations of silver consequent upon the explorations of Potosi—which mine alone is estimated to have supplied $150,000,000 of silver (in ten years subsequent to 1545)—did not vary the relative value of these metals by a rise in gold, as we find that Queen Elizabeth and her eminent advisors considered it expedient, in 1560, to reduce the standard proportions from 11$\frac{1}{12}$ to a fraction under 11.

The discovery of the alluvial mines in Brazil in 1695 quadrupled the annual average amount of gold previously produced; yet in 1717, when this inundation, as it may be termed, was at its height, the value of gold remained the same as in 1650—1 to 15.

Although it appears that the explorations of new mines, but especially of Biscaina, Sombrerete, Catorce, and Valenciana in Mexico, toward the middle and latter half of the last century, increased to enormous amount, yet the market value of silver was almost uniformly higher in England than in 1717.

These extraordinary circumstances in the history of the precious metals appear to invite and authorize the inference that it is impossible to affix with accuracy or utility the value of gold and silver by a comparison of the quantities produced.

Then this author, after quoting the letter I have read, says:

You will observe that these statements (which will be found in the Senate documents of 1830) are of the greatest importance. Yet, if the variability in the relative production of silver and gold does not affect their relative value, some reason must be found for explaining why the old ratio 1 to 10 and to 12 has risen gradually to 1 to 15½, and why the gold coins relative by to the silver coins are now lighter than they were during the sixteenth and seventeenth centuries. It seems to me that the fact is due to certain mint regulations concerning the duties of seigniorage and brassage paid by individuals whose gold and silver were coined at the public mint. As these duties were levied rather with reference to the weight of the metals than to their legal value, the cost of coinage was less to the owners of gold than to the owners of silver. For coining a million of dollars of gold the cost was much less than for coining a million of dollars silver.

This difference in the cost of mintage gave certainly a preference to gold against silver. When a payment was to be made by one country to another, it was certainly more preferable to send gold than to send silver, because in melting down the gold in order to obtain a new coin in a foreign country, the coinage expenses were much less than the expenses in melting down and recoining silver. When the country was so deprived of gold, its mint changed its ratio in favor of gold in order to induce the return of gold. Your law of 1834, raising the value of gold as against silver from 1:15 to 1:16, was enacted precisely with the aim of inviting the importation of gold, and furnishes an illustration of my meaning. When the mint of a country had so changed the ratio between gold and silver in reducing the weight of the gold coins, the mints of the other countries followed the example: and these migrations of gold coins and reduction of their legal weight, being repeated many times, have had the effect of raising, step by step, the general mint ratio from 1:12 to 1:15½. Subsequently the rise has ceased, because of the duties of seigniorage and brassage having been considerably reduced, and then gold has lost the great advantage which the former mint regulations assured to it.

On page 27 I read:

So you see that the voyage of gold or silver is not the result of the changing productiveness of the mines, but that it is dictated by the laws alone. If you establish in India your ratio of 1834—1 to 16—and introduce in England your ratio of 1792—1 to 15—you will see all the gold of England going to India and all the silver of India going to England. The relative value in the market between gold and silver is the result of a struggle between the laws of the different countries. If a treaty was made establishing everywhere the same relative weight between gold and silver coins, with everywhere a uniform charge for the coinage of the two metals, there would be no more reason for exporting the one than for exporting the other. The globe is round. If the mint laws are the same in every nation the exportation of gold or silver leaves no profit. "No more temptation," as was remarked by Isaac Newton.

And if the relative value of gold and silver has always been determined by the conflict of the several legislations, how can we deny that, when the legislations will be everywhere and forever the same, the relative value of the metals will always remain the same?

To fix by law a relative value between sugar and coffee, between two perishable commodities, or between a legal tender and a commodity, would be a ridiculous attempt.

There is the argument of the Senator from Oregon thoroughly met and refuted.

But nothing is easier, nothing more rational and convenient, than to fix by law the relative value between two everlasting legal tenders, gold and silver. If it is admitted that law can fix the weight of the gold coins, how can we assume that law can not fix simultaneously the weight of the gold coins and of the silver coins?

Now, Mr. President, it occurs to me, as I have said before, that there can be no question about the fact that the masses of the people of this country have been misled upon the subject of the "intrinsic value" of money. Every penny-a-liner has been employed to deceive and mislead the people upon this subject. The people accustomed to attend to their own duties, to work daily in the field and in the shop, have left too long for their own benefit the determination of the question of finance to the politicians and to an interested press and the banking institutions of the country. We have been told repeatedly, and are daily told, that there is such a thing as sound money in the country and such a thing as dishonest money.

Mr. President, there is not a dollar in this nation and there never has been a dollar in the nation, with full legal-tender qualities, from its origin to this moment that it was not an honest dollar and worth as much as any other dollar. It is only because the volume of gold is scarce: because it is in the grasp of the Shylocks, because they control it and, through it, control the destinies and the progress of the peoples of the earth, that we hear so much about the necessity of sound money, of honest money. This very heresy of intrinsic value is one of the things that has been seized upon to deceive and mislead the people, thus permitting a gang of aggressive money-changers to control the destinies of the people through a limited volume of money, through the control of gold.

I repeat, sir, during the interesting discussion in this Chamber, extending now over sixty days, no Senator has offered a reason (if he has I have not heard it) why any especial commercial value should reside in silver or gold or paper used as money.

Mr. PEFFER. It has not been discussed.

Mr. ALLEN. My friend from Kansas says it has not been discussed, and that is my recollection. It seems to have been passed over. It seems to have been assumed here that we must have gold or we must get some other metal equivalent to gold and of limited output before we can have such a thing as sound money.

And why so? It is simply to give the money lords control of the volume of money and afford them the power to reach out into the mines of the West, into the great fields of the West and South, and into the factories of the country and control the price of labor and the price of the property of the common people. It is based upon selfishness, and is unsound. If you adopt silver as money, it is too plentiful. The occupation of these men will be gone; they can not control it; the money will get out among the common people and they will become prosperous, getting fair wages and good prices for their products. There is the trouble; and this very doctrine of "intrinsic value" has been seized upon as one of the things by which the people have been led to believe that we must have money of a particular commercial value.

Now, Mr. President, I again make the challenge to the Senators representing the other view of this question. I repeat, what function does the commercial value of the money material perform in exchange? Why is it needed? Why is it needed, when it is simply the office of money to exchange one thing for another or to liquidate contracts? Why is there a necessity for commercial value in the money thing of, say, 90 or 100 per cent, as against 10, or 20, or 30, or 50 per cent?

Mr. ALLISON. I do not like to disturb the Senator, but he is now arguing a very interesting point as respects money, and I should like to ask him, in view of the letter he has just read from Mr. John White, whether money does not perform the double function of exchange and the measuring of values? If we measure values in silver, for example, the value depends upon the silver which measures it. I agree with the Senator from Nebraska that if we have free and unlimited coinage—I want to occupy but a moment——

Mr. ALLEN. All right; go ahead.

Mr. ALLISON. If we have free and unlimited coinage of silver in the United States, I agree with the Senator that silver bullion and the gold dollar will represent the same thing. There is no doubt about that in the United States, and that will be our measure of value because the unit of value in the United States is a dollar; and if we say that 412½ grains of silver are a dollar that will be the measure of value in this country. But, as the Senator quoted from Mr. White a moment ago in that letter, if we undertake to use both gold and silver as a measure of value, then we raise a new question of ratio between them; and as he truly stated, as was just quoted by the Senator, if there is a ratio of 15 to 1 in England and another ratio of 16 to 1 in India, all the gold will go to one country and all the silver to the other, because one metal is over-valued in one country and the other metal is over-valued in the other country, as respects the two metals.

Mr. ALLEN. That has been our own experience.

Mr. ALLISON. Now, the contention here, at least my contention, has been that with this disparity in the bullion value or commercial value, if you please, of these two metals, if we open our mints to the free coinage of silver, the silver will be the dollar in use here and the gold will be expelled; I do not mean immediately, but in time. Now, why? Because gold will have more value elsewhere as a measure of value than it has here.

Now, that is all there is in this question. It is a question of ratio. I do not dispute that if we have the free and unlimited coinage of silver in this country the man who owns silver bul-

lion and carries it to the mint will get a dollar's worth of silver, and his bullion here will be equivalent to a dollar; but the measure will be a measure far below the measure we have now. Therefore I have argued that it is unjust to change that measure from gold to silver at this time. That is what I regard as the kernel of this question.

Now, when we come to the commercial value—if I may interrupt the Senator one moment further—why is it that silver and gold have a commercial value? It is because their chief use is money; and gold now being used chiefly by what we call the commercial world, it has a wider demand than silver has at this moment, and therefore it has, as between the bullion in the silver dollar and the bullion in the gold dollar, a greater value than the silver dollar; and its commercial value depends upon its use. That is true of both gold and silver. I believe that if we would follow the suggestions of Mr. White in that letter and the commercial governments of the world would agree upon a common ratio which he there proposed in 1829, then there would be use for both gold and silver, and there would be no object in exporting one and importing the other.

Mr. WHITE of Louisiana. May I interrupt the Senator from Nebraska one moment?

Mr. ALLEN. Certainly.

Mr. WHITE of Louisiana. If I understand the object of the Senator's argument as to intrinsic value it would be to demonstrate that the question of the value of bullion has nothing to do with the question of coinage, because the value to be attributed to the coin results from the stamp of the Government and the legal-tender power given to the dollar. That is the position the Senator has taken, as I understand him?

Mr. ALLEN. With some qualifications, that is correct.

Mr. WHITE of Louisiana. That is correct?

Mr. ALLEN. Yes, sir.

Mr. WHITE of Louisiana. Then the Senator comes to this position. As I understand his position it is that the question of the intrinsic value of the silver dollar has nothing to do with this discussion whatever. The position of the Senator is that the promise of the Government will make it good whether it is good or not, and therefore we ought to do it. Now, I ask the Senator, if that be his position, why is he voting for a bill for silver coinage when an issue of paper money would answer his purpose more completely than silver coinage?

In other words, let me put this question to the Senator: If the Government wants to issue paper how would it issue it? It would issue it for something, would it not? The Government would do as was suggested by the Senator from Kansas [Mr. PEFFER] some time ago, send a man with a carpetsack full of money to the capital of each State and provide for its ratable distribution.

Mr. PEFFER. The Senator does not mean to say that I used such language?

Mr. WHITE of Louisiana. That is the result I understand of the Senator's argument. Now, if the Government issues paper it gets a *quid pro quo* for it, does it not?

Mr. ALLEN. It ought to.

Mr. WHITE of Louisiana. It ought to do so. It could not issue it otherwise.

Mr. ALLEN. Not necessarily.

Mr. WHITE of Louisiana. What would it issue it for? Would it give it away?

Mr. ALLEN. Certainly not.

Mr. WHITE of Louisiana. It would not give it away. Therefore, when the Government issued paper it would get a *quid pro quo*.

Mr. ALLEN. It ought to do it.

Mr. WHITE of Louisiana. But when the mints are opened to free coinage and the bullion man steps up with his bullion and presents 57 cents of bullion and gets the stamp of the Government, the Senator says it is the promise of the Government that makes it worth a dollar. He gets the promise of the Government that that shall be a dollar. What does he give to the Government? What does the Government get for the difference between 57 cents and the dollar which the Senator says it becomes worth by virtue of the promise of the Government?

Mr. ALLISON. The people?

Mr. WHITE of Louisiana. What do the people get? The people have promised this silver man. They say to this silver man, "You have given me 57 cents of bullion. I have handed you back," according to the argument of the Senator, "100 cents, my promise, of value." Now, I ask the Senator, in that case what does the Government get as an equivalent in consideration of the promise? It would be a great deal better I think to issue paper, for the Government to print our money and issue it for all, so that all the people of the United States can have something for the promise.

Mr. ALLEN. I take very great pleasure in answering the questions of both my friend from Iowa and my friend from Louisiana as far as I can. They have, however, embraced enough in their questions to require a day or two of discussion.

I desire to say that the question of the Senator from Louisiana reminds me of the old mathematical problem of putting eleven men in ten beds and having only one man in each bed at a time. The Senator from Louisiana assumes that there are only 60 or 70 cents' worth of silver in a dollar. Now, let us look at that for a moment. The Senator estimates silver bullion, uncoined silver, from a coined gold standpoint. That is not the proper way to estimate it at all. Here is gold appreciated and given an unusual power in consequence of its free and unlimited coinage and the restricted coinage of silver; and from that standpoint, from the heights of gold coined, the Senator from Louisiana wants to look down on restricted and demonetized silver and estimate it from that standpoint.

The truth is that gold, in fact money, is not a proper point to start from in estimating the value of anything. You can not take a metal like gold, that is circumscribed in its volume, that is constantly appreciating, and say that it is a proper standpoint from which to view labor or the products of labor, or silver or anything that is crippled by restrictive legislation. That will not do. Remove the restriction of limited coinage of silver and give gold and silver an equal opportunity before the law in performing the office of money, and they will readjust themselves and stand where they stood in 1873 and before that time.

Mr. WHITE of Louisiana. May I interrupt the Senator again?

Mr. ALLEN. Certainly.

Mr. WHITE of Louisiana. Does the Senator think that the divergence between the value is the result of the demonetization of silver?

Mr. ALLEN. I have no doubt of it.

Mr. WHITE of Louisiana. Then the proposition of the Senator is that governmental action since 1873 has had the effect of reducing the value of silver?

Mr. ALLEN. I think so.

Mr. WHITE of Louisiana. Then, if governmental action has had the result of reducing the value, and that governmental action is coterminous with and is as wide as civilized mankind, and the Senator is legislating for only a part of civilized mankind, I ask the Senator how he expects to destroy that universal effect by partial legislation when the evil comes from universality and not from partiality?

Mr. ALLEN. I will answer the question of the Senator.

Mr. PEFFER. In regard to that point and in connection with it, I wish to ask the Senator from Nebraska—for I think it will be helpful to the discussion, and I call the attention of the Senator from Louisiana especially to it—whether it is not a fact that the dollar value, as originally established in the act of 1792, was 371¼ grains of pure silver; second, whether at any time in this country or in any other there has been a statute requiring that the bullion used in making coin shall have any specific value; and, third, whether the present value of the dollar is not 371¼ grains of silver, independently of any commercial value that silver bullion as a commodity may have in the open market; in other words, simmering it down to one question, whether it is not a fact in law that 371¼ grains of pure silver arranged under the law in a coin named a dollar, is a dollar to-day independently of the commercial value of either gold or silver, or cotton, or wheat, or any other commodity?

Mr. ALLEN. The question of the Senator from Kansas, in my judgment, must be answered in the affirmative.

To come back to the Senator from Louisiana for a moment: I made the assertion that you can not look at demonetized silver from the standpoint of unlimited and free gold coinage. The truth is that money of any kind is not the proper point to start from in estimating values. That is another fallacy which has been put forth to deceive and mislead the people of this country. The only proper point to start from in estimating value is that sea-level of prices fixed by standard articles of consumption throughout the world. Starting from that point silver stands to-day, crippled and uncoined as it is, nearer the true value of such articles than gold.

Mr. WHITE of Louisiana. The Senator started with the statement—I hope he will not beg the question—that the depreciation of silver resulted from legislation. That was his proposition. He followed that by the further proposition that the remonetization of silver would lead to the increment of value, restore value. I asked the Senator the question if he considered that legislation had the result of depreciating silver, and he said yes. Now, if this legislation was world-wide and had taken place since 1872 in every great commercial country of the world, and that was the cause of the depreciation, which he admitted, I asked how he expected to cure that evil by a partial application of a remedy, by legislation in this country alone?

Mr. ALLEN. I desire to answer the Senator from Louisiana in all candor and fairness. In the first place, the Senator's premises are incorrect. He assumes that silver is not worth to ex-

ceed 57 cents; that is, that the bullion value of the metal in a dollar of silver is worth but 57 cents. That is an incorrect assumption.

Mr. WHITE of Louisiana. I beg the Senator's pardon. I started with no such premise; but for the purposes of this question I am not considering the value of silver at all. The Senator admitted that silver had depreciated.

Mr. ALLEN. Oh, no; only as viewed from a gold standpoint.

Mr. WHITE of Louisiana. And he said that that depreciation came from legislation. Then I wanted to know from him if that legislation was general, how he expected to cure the general evil by particular local legislation? That can not be escaped by discussing the question of the value of silver. Whatever may be the value of silver the premise is that it is depreciated, and that the efficient cause of the depreciation is legislation. Now, if legislation has been the cause of the depreciation, how are you going to restore the appreciation without removing the legislation which has been general throughout the commercial world?

Mr. ALLEN. I think I shall be able to answer the Senator from Louisiana very successfully. He must not assume that I admit that there is a depreciation of silver in the comprehensive and broad sense of that term. There is a disparity between coined gold and silver bullion; and, viewed from the standpoint of gold coined, there is a depreciation of silver; but I shall come to that in a moment.

I say that the United States produces pretty nearly 46 per cent of the total silver output of the world. Release the binding power of limited coinage in this country, come back and wipe out the act of 1873, cut silver loose from its restrictions, place it where the framers of the Constitution placed it, where it stood when at a premium in 1873, and that moment silver and gold throughout the world will reëstablish themselves, and the one will be worth as much as the other. That is the determination of the whole question.

Mr. WHITE of Louisiana. May I state to the Senator further, that after we demonetized this metal in 1873, there was a depreciation in silver. That depreciation reached its level here probably not long ago when India demonetized silver. Nobody questions that.

Mr. ALLEN. India did not demonetize silver.

Mr. WHITE of Louisiana. India demonetized silver, and went to a gold basis; at any rate India acted. Let us not stop to quibble about words. She certainly acted, whatever that action was. The result of that action was unquestionably in the markets of the world to depreciate silver and drop the value of silver bullion all over the world. There is no question about that.

Mr. ALLEN. It dropped the gold value of silver.

Mr. WHITE of Louisiana. It dropped the value of silver bullion all over the world.

Mr. ALLEN. The gold value.

Mr. WHITE of Louisiana. It dropped the value of silver for every purpose all over the world. Then, does the Senator propose to restore by remonetization here, that which was lost by the action of India, when we can not repeal the action of India?

Mr. ALLEN. The premises of the Senator from Louisiana are wrong again. There is the trouble with him. He still wants to stand upon the mountain heights of unlimited gold coinage, and look down on discredited silver and estimate it in its stricken and prostrate condition.

Suppose, Mr. President, two men were put out here to run a race, and they were almost equal in their fleetness, it would be a question under such circumstances if each was unhampered which would succeed; but about the time the race is to be run you take one man and cut off one of his legs, then it might be said, "Why that fellow can not run; he is not as valuable, not as swift as the other man; he has not the intrinsic value for racing, as is suggested to me by my friend from Kansas [Mr. PEFFER], because one of his legs has been cut off. I say that is a fair illustration of this proposition of the Senator from Louisiana. Now, here is gold which is pampered and favored, and silver stricken down and the life almost beaten out of it, and Senators say silver has not the value of gold; is not worth as much. Release it from bondage and it will reëstablish itself fully.

That is the position these gentlemen constantly take here and before the country, that necessarily there is a difference between the value of gold and silver, and, therefore, the commercial theorist wants something, as my friend from New Jersey [Mr. MCPHERSON] says, to establish the parity.

Let us take this matter up and put silver upon the same basis with gold; let us put these two metals before the world, so far as position is concerned, unrestricted and unhampered by adverse legislation, and the moment the United States of America cuts the leading strings which bind silver, that moment throughout the civilized world you will find that silver will reëstablish itself with gold, that the price of one will be the price of the other where the coinage is unrestricted. Certainly if this Government puts the two metals upon an equality and gives to them free and unlimited coinage, the man who owns bullion in some other country will not sell it at the present price, because it will be worth its coin value, as the Senator from Iowa [Mr. ALLISON] admitted.

But there is another thing—and that is one of the surprising things to me—Senators tell us in effect that we must bring our laborers, the workingmen of this country, down to the level of the workingmen of Europe. They say you must first get Europe, or the commercial nations of the earth, to agree to the coinage of silver; you must have some kind of an agreement with those countries. It is a mere subterfuge. Four times in thirty years this nation has had a monetary conference, and four times that monetary conference has eventuated in nothing. There is no intention to reëstablish these metals.

Every monetary conference which has been held with reference to this subject has been organized, I was about to say, for the purpose of destroying silver, for the purpose of making dearer money throughout the civilized world, for the purpose of reducing the value of the property of the common man, for the purpose of reducing the value of the wages of the laboring man. Through the constant shrinkage of the volume of money and the value of the property of the people of this country and of the people of civilized Europe, the right of the free coinage of silver is to be taken from them. So there is nothing to be expected, nothing to be gained from a monetary conference.

The Senator from Louisiana gives us to understand that the people of this country are in this position, that, if we can not go to England or Germany or some other of these nations and get them to agree on the coinage of silver so that our country may be prosperous, then we must suffer our present condition.

Mr. President, what a monstrous proposition! This great nation made its struggle for liberty, its struggle against the political institutions of Europe, its struggle for the establishment of a republic in the New World, and established it, based upon different political principles and different social conditions, based upon the equality of every man, woman, and child before the law; and yet before one hundred and thirty years of our national existence have gone by, we are told in the Senate of the United States that the prosperity of our people is dependent upon the consent of the monarchical governments of Europe!

[At this point the honorable Senator yielded for an adjournment.]

Wednesday, October 11, 1893.

Mr. ALLEN. Mr. President, when taken from the floor on last Saturday I had not finished my discussion of the question of the intrinsic value of money. I was at that time engaged in a running debate with the Senator from Louisiana [Mr. WHITE], the Senator from Oregon [Mr. DOLPH], and the Senator from Iowa [Mr. ALLISON]. I answered the questions put to me at that time by them, but I now desire to give a more specific and concise answer than I then gave.

Turning my attention, then, to the questions of the Senator from Louisiana, I desire to say:

If silver was demonetized or reduced in value by law, can it be remonetized or increased to par value by remonetizing silver?

England stopped coining silver in 1816; Germany in 1871. The United States demonetized silver in 1873, and India ceased coining it in 1893. If the United States goes back to free coinage, it carries up the price of silver, which was in good condition until the United States demonetized it in 1873.

Did not France limit the coinage of silver because the United States, the greatest silver-producing nation, refused to stand by it? Did not England suspend the coinage of silver in India, believing that the United States was going to take unfavorable action?

Although Germany ceased coining silver in 1871, and England had not coined silver since 1816, silver held its own until it was demonetized in 1873 by the United States. If it is remonetized by the United States, is it not reasonable to suppose that it will gradually go back to the position it occupied before 1873? In other words, will not the same privileges and laws produce the same effects now as they did prior to 1873?

Turning my attention to the Senator from Oregon, who spoke of the coinage of $8,000,000 in silver prior to 1873, I have this to say: The reason only $8,000,000 in silver was coined from 1792 to 1873 is that in 1794 and 1795 the ratio established by the United States was 15 to 1, when the true ratio was more than 15 to 1. This caused gold to go to countries where it could buy more than silver. In other words, gold was at a slight premium. United States bank notes circulated from 1791 to 1811 and from 1817 to 1833, when the deposits were removed.

Gold was undervalued until 1834. It was then over-valued by the ratio being increased to 16 to 1. From 1834 to 1873 it was more profitable to ship the silver and sell it as bullion than to coin it. There was, after 1853, less silver in the subsidiary coin in proportion than there was in the dollar, and consequently subsidiary silver was coined extensively.

From 1792 to 1853 there was a little over $87,000,000 of silver coined, principally subsidiary. The total coinage of gold from 1792 to 1847 was $43,000,000.

We made an error in 1792 by over-rating silver. We made another error in 1834 by underrating it. We made the arch-error in 1873 by demonetizing it when we had not a dollar of silver in circulation. There was no silver then circulating. Why, then, should we have demonetized it?

The legislation in respect to silver in this country has been a series of gigantic blunders.

Turning my attention, Mr. President, to the question put by the Senator from Iowa, which was certainly a very adroit and skillfully put question, I desire to say that we now find the Senator reduced to that point where it becomes necessary to defend the fallacy of intrinsic value by relying upon and bringing forward another fallacy, viz, that gold and silver, or that money is a perfect measure or standard of value, all of which I deny in toto.

In 1834 the gold eagle of the United States was reduced in weight from 270 to 258 grains, and the alloy increased from 1 part in 12, to 1 part in 10, yet the coins bore the same name as before.

The original so-called measure of value in France, England, and Scotland was the pound weight of silver. No coin of that weight was ever struck; but a pound of silver was cut into 240 coins, called pence. Twelve of these pence were called a solidus, or shilling. Thus, as applied to silver, the "lb." weight and the "£" denoted equivalent weights, the former of uncoined metal, the latter of coined metal. But in course of time more than 240 pence, so called, and at last in Elizabeth's reign, 744 pence came to be coined out of a pound of silver. Yet all the while 240 of these pence were called a "£;" £ and pound, both a contraction of the Latin libra, were no longer equivalent. The pound of weight continued stable; the £ of money had dwindled to less than one-third, yet the name pound continued to attach to 240 pence, although the pence embodied a less and less quantity of silver to the measure—that is to say, the denomination represented a less quantity of silver. It is therefore clear that money is not a perfect measure of value.

The French have a perfect system of weights and measures. Their mathematicians measured an arc of the earth's circumference, and thus determined the absolute length of a degree of latitude; three hundred and sixty times this length makes up the length of the earth's circumference, an invariable measure, recoverable again if it should be once lost. This measure, divided by 40,000,000 gave the French nation their meter, which is a perfect unit for the measure of length. A tenth part of the meter cubed gave them their liter, which is a perfect unit for their measure of capacity. The weight of a hundredth part of a meter cubed of distilled water at the temperature of maximum density, is the gram, an invariable unit of weight. A linear unit of 10 meters squared gives the arc, the unit of surface.

A perfect measure of anything demands for its starting point something absolute and invariable; in value there is nothing absolute. We begin with a relation and therefore an unchangeable measure is not to be looked for. (Perry's Political Economy, pages 219–225.)

Now we come to the main point.

Labor is the real measure and standard of values. Man's labor, assisted by nature, acting and exercised upon the soil, brings forth grain and fruit, vegetables and crops; exercised upon the mine, brings forth the coal and iron, the base and precious metals therefrom; this same labor acting upon the sea, brings forth its products, and man's labor acting upon the raw material, produced by man's labor, brings forth the finished product of manufacture.

This labor may cause greater or less results according to circumstances, surroundings, machinery used, etc., but the result of this labor is production, and the amount of production depends upon the amount of labor sensibly employed; the result of production is the various products which fill the markets of the world; these products are wealth, and labor is the measure and standard of this production; of these products, this wealth, these values. As the labor decreases, the amount of product decreases, and vice versa. Money is simply a medium of exchange of different denominations and not a measure of values; it is useful to facilitate the exchange of these values created by labor and discharge pecuniary obligations. "Labor is the ultimate price that is paid for everything" (Ricardo).

The law of supply and demand is measured and regulated by labor; that is, labor regulates the supply of commodities as well as the demand, and it is admitted by all economists that supply and demand regulate the price, fix and measure the value of commodities. Let us cease to "muzzle the ox that treadeth out the corn," give honor to whom honor is due and credit to whom credit is due. Let us now cease to worship the golden calf of money as a measure of value and give the praise and credit to labor where it justly belongs. Labor, and the law of supply and demand, a child of labor, measure values.

There should be a sufficient volume of the medium of exchange to effect or carry on the trade or exchanges of the people.

Directing attention again, Mr. President, to the question I was then discussing, I desire to read from a little book entitled Labor and Capital, by Edward Kellogg. I read first from page 41:

Value consists in use; it is that property, or those properties which render anything useful. A house that could not be occupied would be worthless unless its materials could be employed for some other purpose. A horse is valued for his useful qualities; if he becomes disabled he is worthless, for his use is destroyed. So of everything necessary to the support and comfort of man, it is valuable because it is useful.

The same is true of ornaments. They are valuable because they are useful for ornamental purposes. If diamonds were deprived of their beauty, their use and therefore their value as ornaments would cease to exist. A valuable portrait might be rendered worthless by erasing the features. The canvas and the paint, the material of the picture, would remain, but its use would be destroyed.

The value of all property is estimated by its usefulness. For instance, the income that a city lot can be made to produce determines its value. The interest on the money that its improvements will cost must be first deducted, together with the taxes, insurance, and repairs necessary to keep the improvement permanently good. The surplus it will yield after making these deductions determines the true value of the lot.

There are two kinds of value—actual value and legal value. Actual value belongs to anything that inherently possesses the means of affording food or which can be employed for clothing, shelter, or some other useful purpose, ornamental or otherwise.

Legal value belongs to anything which represents actual value or capital. Its existence depends upon actual value. The worth of things of legal value depends upon their capability to be exchanged for things of actual value.

The author, Mr. President, here gives an example of this doctrine and shows the distinction between actual and legal value:

The followiug illustration shows the distinction between actual and legal value, and the dependence of the latter upon the former. The national debt of England exceeds £800,000,000 sterling, say $4,000,000,000.

This book was written in 1846, I think.

It bears interest at about an average of 3 per cent per annum, amounting to an annual sum of $120,000,000. A hundred and twenty millions of dollars' worth of the products of labor of actual value must be sold annually to pay the interest; to pay the principal would require a large proportion of the wealth of the country.

If the paper, the legal value which represents and secures the debt and interest, were collected and burned, it would not diminish the real wealth of the nation. It would merely cause a change in the individual ownership of property. But alter the circumstances, and suppose a similar amount of actual value to be consumed, houses, manufactories, machinery, fences, grain, etc., to the amount of $4,000,000,000, and nearly every improvement would be swept from the British Islands. Destroy merely the 3 per cent interest of actual value or the debt for one year—*i. e.*, products to the amount of $120,000,000, and a famine would ensue; for actual value, the products of labor, would be destroyed instead of a legal representative, as in the case of the conflagration of the paper securing the interest.

Again, this author says, on page 43:

The power of money, like the power of a bond and mortgage, is legal.

On the same page:

The value of notes of hand, bonds and mortgages, book accounts, and money, depends upon their capability of being exchanged for property. Their power to accumulate is given by law, and they accumulate a mere legal representative; that is, interest in money which is valuable only because like the principal it can be exchanged for a certain amount of actual value. Hence, the value is in the property, and not in the money or in the obligations. Money and all obligations are mere representatives, and depend upon property for their value.

I read now from page 71:

The natural powers of any material do not make it money. Its powers and agency as money are delegated to it by law, in addition to its natural capabilities. When gold is used the powers conferred upon it make it an equivalent for every species of property. If gold had not been selected for the material of money, and a legal power given to it to exchange property, and to accumulate interest for its use, a man would have as little occasion for more gold than he needs for utensils and ornaments, as for more clothes than he can wear, or more tools than he can use. It would have been subjected to the same laws of trade as other merchandise, and must have waited a demand for consumption before it could have been sold. It is clear that gold possesses no peculiar or inherent excellence to endow it with power to determine the value and control the use of all other things. But when it is made the agent of these legal powers, it becomes necessary to acquire the gold in order to discharge debts; and the quantity of the metal being limited, its owners are enabled to extort from the necessitous a very high price for its use. If gold were not used as the material of the currency, its abundance would cause no inflation of business, nor would its scarcity produce distress, because, compared with other metals, its use is very limited.

In that quotation the author foresaw quite fifty years ago the fact we realize to-day, that the chief value in gold is a selfish value that can control and depreciate the purchasing power of labor and property. That is the very thing we are contending with to-day—that is, a limited volume of gold that is to be exchanged against all the property and all the labor of the civilized world.

The author proceeds:

The following statement will show the different effects upon our own people of the use of the precious metals as utensils and their use as the material of money. All will probably admit that there were, in 1846, twelve thou-

sand families in the city of New York owning, on an average, $800 worth of gold and silver ware, such as tea, coffee, and dinner services, vases, ornaments, etc. Including jewelry, the amount of the metals probably far exceeded the sum named. But calculating the twelve thousand families to have owned $800 worth each, they owned, in the agregate, $9,600,000; while, according to the bank reports, the specie in all the banks in the State of New York on the 1st day of November, 1846, amounted to but $8,048,348.

Suppose the twelve thousand families owning these silver and gold utensils and ornaments had in one week collected them together and shipped them to England. The shipping of these wares would have had no more effect upon the monetary affairs of the State or nation nor upon business than the shipping of the same amount in cotton and tobacco, but had the people drained the $8,048,348 of coins from the banks, and shipped them abroad, the banks throughout the State and throughout the United States would have been compelled to suspend specie payments, and hundreds of thousands of our people would have been bankrupted or thrown out of employment. Yet by shipping the gold and silver wares more than one million and a half more of the precious metals would have left the country than by shipping the coin.

The shipment of the smaller amount would have shaken the country to its center, while the shipment of the larger amount could not have unfavorably affected business. And yet our gold and silver utensils and ornaments are more in use than our coins, for the coins are mostly in kegs and boxes in the vaults of banks, and if they are moved at all it is usually from one bank vault to another without even emptying them from the kegs. If money is merchandise, why should not the shipment of our gold and silver utensils affect the business of the nation as much as the shipment of our coins? The same twelve thousand families were doubtless the owners of a much larger amount of the capital stocks of the banks than the $9,600,000, and could at any time have sold stock enough to draw all the specie from the banks, and thus have caused a suspension of payments and distressed producers even without shipping the specie.

On page 270 of the same book I read:

Governments have falsely assumed that the value of money consists in the inherent worth of the gold, silver, and copper materials out of which it has been coined. This is not only palpably a false assumption, but the laws of nations prove it to be so; for in nearly every civilized nation the governments have authorized paper money (when secured by state and national stocks, bonds, and mortgages, etc.) to be issued in the form of bank notes and to circulate as money. England has made paper money a tender in payment of debts.

Bank notes are called money, although the laws do not make them a tender for debts. Banks are, however, chartered by law, and, therefore, the bank notes issued by them are generally considered as money, and answer all its purposes. They are founded, or based, on a promise to pay specie on demand. Let us see, however, if they are not practically money, instead of being merely representatives of gold and silver coins. A man exchanges at a bank in New York a hundred dollars in specie for a one-hundred-dollar bank note, and takes it to the Western country to buy land.

The note is thus put in circulation there, is loaned and reloaned on interest, and is used in the purchase of property and products. It is continually active; while the silver for which the bank note was taken in lieu lies dead in the vault of the bank, and is neither used to purchase property or products, nor to fulfill contracts, nor to produce an income.

The bank note has performed all while the specie has performed none of the functions of money. If the former should circulate for any number of years, and should be loaned for an income, and used to purchase property thousands of times, and when it was returned to New York there should be no specie in the vault of the bank to redeem it, still every purchase made by the bank note would be valid, and every mortgage for which it had been received would be a binding lien upon the property of its drawer for the payment of specie both for the principal and the interest.

Coins and bank notes have a legal power to accumulate, not natural to either of them. Both are generally received in tender for debts, so that one is practically as much money as the other. In fact, if either is to be despoiled of its character as money it must be the specie, for this is mostly deposited in the vaults of the banks, and while so deposited is not practically money; but the bank notes, which perform more than ninety-five hundredths of the exchanges, are really the money of the country, and fulfill all its uses with greater convenience and celerity than could gold and silver. Paper made to represent landed property instead of specie, and endowed with legal power to accumulate, measure, and exchange property, would answer every purpose of money, and would be money.

I read now from page 4 of Bryant on Money:

When one has brought himself to fully and thoroughly know what it is that makes the value or purchasing power of money—

Using "value" and "purchasing power" as synonymous—

he has obtained the key that unlocks all other mysteries of money, and has possessed himself of the knowledge that will enable him to defeat and overthrow the most adroit and insidious argument that the advocates of hard money can possibly concoct. You have possessed yourself of the lamp of truth, whose light will penetrate and reveal the schemes of these people, no matter how cunningly they may strive to conceal them with sophistry and insidious arguments.

I am endeavoring to leave out some epithets in the text which I think ought not to go in the RECORD.

What is it, then, that gives money its value or purchasing power in the markets? In finding the answer to that question we shall discover that the principle that gives money its value or purchasing power is the same principle, identically, unqualifiedly, and absolutely, the same principle that gives anything whatsoever its value or purchasing power in the market, namely, the principle of quantity relatively to the uses—the law of supply and demand.

But this unquestioned and unquestionable truth is greatly obscured and mystified by the operations of law—the national legislation of a people—which steps in to interfere with money, as it does not do with anything else, and can not do. For instance, law can make that money which costs little to produce it immensely more valuable than that which was produced at a great outlay of labor. Law can give a paper dollar ten or a hundred thousand times greater value, or purchasing power, than a gold or any other kind of a dollar, in despite of the fact that the gold dollar costs perhaps a hundred times as much as the paper dollar.

One might term this the miracle of law and of money, since the same is not true of anything else produced by man. This truth arises from the fact that it is entirely practicable to regulate the quantity of the money issued or permitted to circulate; and from the further fact that the quality of any one or several kinds of money is utterly the creature of law, the law which makes it a full or a restricted legal tender, or not a legal tender at all.

We can illsutrate th s fact regarding the principles of money by supposing that the United States were to issue, say, fifty millions of paper dollars and make them the only legal money to pay any tax or debt due to the Government; and, say, five hundred millions of silver dollars, and make them the only legal money to pay any private debt due from one person to another; and, say, one hundred millions of gold dollars which were not legal money for any purpose whatever, leaving the people free to accept or reject them, just as they pleased.

What would be the result from that action of our Government? Simply this: The law of "supply and demand" would at once assert itself, and work in combination with what the law had decreed regarding the money, whereby there has been created three kinds and three qualities. Whereas if the law regarding each had been the same there would have been but one kind and one quality, even if it were made of a hundred different materials. As every tax or debt due to the Government would have to be paid in the paper dollars, thereby creating an enormous demand which could only be met by the small supply of fifty millions, the paper dollars would command a very high premium over the silver or gold dollars.

I think, Mr. President, that Senators who on Saturday undertook to answer the position which I stated, namely, that there is no necessity for any commercial value or any specific amount of commercial value in the money thing, have wholly failed to make it appear that that quality is essential. I again assert if there is any reason to be offered by Senators upon the other side of this question why there should be any specific amount of commercial value in the thing called money, I pause now and here to hear it. [A pause.] There is no necessity for it.

It is simply one of those fallacies which has been advocated so constantly and so frequently by politicians, through the newspapers, and by a certain class of political economists, that perhaps the great mass of the people of the United States have come to the conclusion that there is a necessity for some commercial value in the money thing or the money material, whereas the truth is that the only office of money is simply to exchange articles of property and labor as a matter of convenience in the transaction of business. Whenever anything is taken from the domain of commerce and coined into money, its commercial value is lost as effectually to the commercial world as though it were at the bottom of the ocean or as if it had never existed, and it ceases to perform any office in the commercial world and to influence the market value of the species to which it belongs.

Now, I desire to direct the attention of the Senate briefly to another fallacy which has passed current here, and which has gone uncontradicted, it seemingly being tacitly admitted that it is a truism in political economy, and that is the so-called double standard. Ever since I came into the Senate on the 7th of August, in almost every speech which has been delivered here, I have heard it iterated and reiterated that we have a double standard of money, some contending that we must maintain a double standard, others contending that we must go on to a single gold standard; but throughout the entire discussion it has been assumed that we have a double standard of money.

Mr. President, if my position is the correct one—and I think it is, and believe it to be capable of demonstration—that money is the function performed by the thing and not the material which is evidence of that function, then it is true that there can be no such thing as a double standard of money, unless you give to one part of that money full legal-tender quality and a restricted legal-tender quality to the other.

It is true that we use both gold and silver, but we use them simply as evidence of the money thing, the money function. Whether we use gold, or silver, or paper, or any other article, if these things are declared by law to represent 100 cents in exchange, then they are money, they are all based upon the law, and there is not a double, but a single standard if the full legal-tender power is given. As well might we say that a wagon which is composed of iron and wood is a double wagon or two wagons. It takes the wood and the iron to constitute the thing called a wagon; and when it is completed and fashioned by the labor and skill of man, it is a wagon, and not two wagons.

As well might we say that the brass, steel and gold in a watch constitute a triple watch; it would be as sensible to say that, when the truth is that it takes all three of these different materials to constitute the thing we call a watch. So we might go on with illustrations where two or three different materials enter into the construction of anything, and we might speak of those different materials as constituting two or three different things of their particular class.

So I say when the law of this nation fixes the volume of money, when it says that so many dollars shall be issued, that they shall have full legal-tender power and be received by the people in the liquidation of their debts, in the payment of their taxes, in the discharge of obligations, public and private—if the full legal-tender power is given to that thing called money, then it is a single standard, regardless of whether it be represented by gold, silver, copper, or paper, or all of them.

Mr. HOAR. May I ask the Senator a question?

Mr. ALLEN. I yield with pleasure.

Mr. HOAR. The Senator is making a very interesting and clear statement of his doctrine; and I wish to ask him whether he goes to the length of considering that the use of the costly materials of gold and silver by mankind for the purposes of money or for the manufacture of valuable articles is a sheer waste of so much value?

Mr. ALLEN. I may get to that at length, Mr. President, but I have not reached it yet.

Mr. HOAR. I understood the Senator to say that the intrinsic value of the thing used for money, to use that convenient phrase, did not in the least make it any more valuable for money purposes, but that it derives its whole value from law giving it the legal-tender and exchangeable quality. If that be true, would not the use of $10,000,000,000 worth, or whatever it may be, of gold and silver in the money furnished for mankind be, in the Senator's judgment, a sheer waste?

Mr. ALLEN. For domestic purposes that is true, but to answer the demands of the world, to pay the balance due the world, if we owe them anything, I am perfectly willing to use the Senator's kind of metal. For domestic purposes, however——

Mr. HOAR. That was not my question. I did not ask whether the Senator was willing to use it or not, but whether the Senator marches fully up to what seems to me the logic of his position. He says that the use of gold and silver, which have a certain intrinsic value in the estimation of mankind, other than the value which they get on account of being used as money and the demand for that purpose is of no sort of importance, that we might just as well take an entirely valueless substance and make it money by law, and it would answer every purpose and function. If that be true, does it not clearly follow, in the judgment of the Senator, that from the beginning of mankind the nations of the world have been guilty of an enormous and inexcusable waste in using these valuable substances for the purposes of money?

Mr. ALLEN. Well, Mr. President, I shall hardly be drawn by the question of the Senator from Massachusetts into passing judgment upon the entire world in all of its past history.

[At this point the honorable Senator yielded to Mr. DUBOIS.]

Mr. ALLEN. Mr. President, to resume the course of my argument when interrupted, the Senator from Massachusetts [Mr. HOAR] asked me a question the tendency of which was to lead me into a discussion of the question of irredeemable paper money. I declined to discuss that question on Saturday last. I decline to discuss it now.

I have taken no position in favor of irredeemable paper money, nor do I propose to take any position in favor of it. I will not be led upon grounds of that kind in this discussion, and the Senator from Massachusetts and other Senators may as well understand it now as at any other time. I do take the position, as I asserted awhile ago, that one of the rankest heresies that has been taught in the Senate Chamber, one of the rankest heresies that has found expression in the metropolitan press, one of the rankest heresies that has emanated from the closet financiers of this country who are undertaking to formulate public sentiment upon this question is the rank heresy of a double standard.

Money, as I have said, consists in the function performed and not in the metal or paper that is evidence of that function. The power of money is controlled by the quantity that is in circulation against the quantity of business and property in the country. It is the quantity with full legal-tender power that gives it its purchasing power and its debt-paying power, and therefore its value. The theory of a double standard is one of the arguments that has been used to lead the public mind of this country astray and to make the people believe that there are three or four different kinds of money in this country, when the truth is there is but one kind of money, evidenced by three or four different kinds of material.

Another heresy that has been taught here, and I desire to say that these are matters that I have not myself heard fully discussed in the Senate, they seem to have been taken for granted: another of the fallacies taught is that there is no such thing as a contraction of the volume of money by going upon what is called the single gold standard. I think I heard my distinguished friend from Delaware [Mr. GRAY] assert repeatedly here that the fact that we went upon a gold basis did not have any influence or effect upon the price of property or labor; that labor and property brought as much, exchanged for as much, were as valuable in the market under a single gold standard and a contracted gold standard as they would be and were under a larger volume of money.

It is a little singular that when you come to the discussion of this gold question Senators should say that a contraction of the volume of money has no effect upon the price of property or labor, and just the moment you speak of enlarging the volume of money, making it greater, they begin to fear the effect of what they call the inflation of money. Inflation will affect prices, so they say and so we know, but they tell us that contraction, which is the other extreme, will not affect them.

Mr. President, if it be true that inflation will affect prices of property and labor, then it is equally true that the other extreme, which is contraction, will affect the prices of property and labor and shrink the prices of those things. If you touch a pendulum that hangs at a perpendicular and swing it out to the left, will not the return action of that pendulum be within a hairbreadth as far to the right of the perpendicular line as it went to the left? So if you start at a given point in the volume of money and inflate that money, will it not have an effect upon prices; and if then you go like the pendulum to the other extreme, does it not equally affect the price of property and labor?

This country is suffering to-day by reason of a contracted volume of money. The lockouts, the strikes, the difficulties that we hear of going on throughout this country are due, in my judgment, in a large measure to a contracted and constantly shrinking volume of money.

I propose to go into the discussion of the question somewhat fully to see if this fallacy can not be thoroughly exposed. Its effect upon the country has not been fully discussed here, and it occurs to me that it is of such importance that it ought to be fully considered.

Mr. President, this question of contraction has occasioned more evil in this country in the last twenty-five years, in my judgment, than all other questions combined. It is a question that has been deftly and skillfully kept from the people. It has been persistently directed at the prosperity of the business and the homes of the people of this nation, and has been prolific of evil consequences. I direct your attention for a moment to some expressions upon this question to be found in the report of the Brussels monetary conference in 1892. I turn to page 90 of that report and read from the remarks of Mr. Allard, the honorable delegate of Belgium:

I do not think that the proposal of Mr. de Rothschild—

Speaking of the proposal that Mr. de Rothschild had made that this country should continue the purchase of 4,500,000 ounces of fine silver monthly against £5,000,000 annually on the part of Europe. Says Mr. Allard:

I do not think that the proposal of Mr. de Rothschild is a sufficiently efficacious remedy for the evils from which the nations are now suffering and from which they have suffered during the last twenty years. The crisis which oppresses us is no birth of yesterday. It dates from 1873, the moment when free coinage of silver was suspended in Europe. The true remedy, which would be at the same time efficacious and thorough, would be the re-establishment of free coinage.

On page 92 of the same book I read from Mr. Allard:

Unfortunately Mr. de Rothschild is not troubled by the fall in prices. He is disposed to think "that wheat at 30*s.* a quarter, instead of 45*s.*, is rather a blessing than otherwise." But, I ask him, what do the British farmers think of it? In Belgium, I can assert, agriculture is suffering from this deep evil.

Speaking of the question of a congestion of prices of produce—

In Belgium, I can assert, agriculture is suffering from this deep evil; and as for England, I do not think that Mr. de Rothschild's views are shared by Mr. Chaplin, formerly minister of agriculture, who has traversed the whole of England in the search for remedies to be applied to these evils. It appears, too, from the reports contained in the English newspapers a week ago, that Monsignor Walsh, the archbishop of Dublin, is concerning himself with the monetary question, on account of the disasters which are befalling Ireland. When giving evidence before an English commission on the subject of Irish evictions, he spoke in an absolutely bimetallic sense. He pointed out the evils which had been produced in England by the scarcity and the appreciation of gold, and also the extremely difficult, embarrassing, and disastrous position in which the Irish farmers were placed by the same cause.

Mr. de Rothschild does not appear to be much disturbed by this fall in prices, which, nevertheless, affects all the interests of his country. In view of this, it is a remarkable fact that he does not deny scarcity of gold, but, on the contrary, himself states that that scarcity exists.

In this connection I desire to read the expression of de Rothschild's which called forth this criticism upon the part of Mr. Allard. I read from page 69 of this book:

Advocates of bimetallism maintain that the fall in the price of silver has brought about a corresponding fall in the prices of various commodities.

Proceeding upon the line of reasoning employed on the question of the contraction of the currency:

This may or may not be the case; but, supposing the former hypothesis to be correct, I am not prepared to say that it would be a misfortune for England or the world in general.

Mr. de Rothschild, the great money monarch of this world, who is at the head and front of this movement to dethrone silver, is not prepared to say that it would not be a blessing to have a shrinkage in the prices of farm produce and labor throughout the civilized world. He continues:

Nor do I share the opinion of certain distinguished exponents of that theory who deplore the fact of the Indian exporter being able to send wheat remuneratively to England, thus interfering seriously with the interests of the British farmer; but I hold that wheat at 30*s.* a quarter, instead of 45*s.*, is rather a blessing than otherwise.

That wheat at 30 shillings a quarter, rather than 45 shillings, is a blessing to Mr. de Rothschild and his class of people, rather than otherwise. What does that mean? It means wheat in Liverpool at 90 cents a bushel as against $1.35 a bushel, or relatively so; it means that the great wheat fields of this country, the great farms of America, are to be made less and less productive to the tillers of the soil, to the masses of the people, in consequence of this system of shrinking the volume of money. When Mr. de Rothschild looks into the New World, and looks throughout the civilized world where agriculture is being conducted, and sees constantly falling prices of farm produce and less and less

compensation to the farmer and the laborer, when he sees stealing over the people of this country, and over the people of civilized Europe, a condition of serfdom, then Mr. de Rothschild sees a condition arising in the financial affairs of this nation that is to be regarded as a blessing, rather than a curse!

Mr. President, the American Senate is asked to join in this raid upon the rights of the people of their own country, to shrink the values of property, to join De Rothschild and his gang of Shylocks in a raid upon the rights of the great common people of this nation, of his own nation, and of every nation which encourages agriculture, and that is to be done by means of a contracted volume of money.

I read now from page 325 of this book, as follows:

To render money more scarce or more abundant is to make all prices rise or fall. An increase of money, as in 1850, corresponds to the growth, the progress, the life of society; monetary contraction will always lead to an anæmia, sickness, and crisis.

If you diminish the quantity of blood in the human body will it not bring about anæmia? Diminish the amount of money in the social body and that diminution will bring about a crisis.

The author of these remarks was a prophet when he said that if you diminish the volume of money to a certain point it will bring about a crisis. With what are we contending to-day? We are contending with a monetary crisis brought about by the fact that the volume of money in this country is so small that eight or ten thousand men can control it as against nearly seventy million people. It is because a comparatively insignificant portion of the people of this country have the volume of money under their control that this crisis is precipitated upon the country; and the cry is set up by these fellows, by the newspapers, and the gangs which they represent, that this crisis is produced by the Sherman act, when the Sherman act was simply seized upon as a subterfuge or an excuse to precipitate the panic, the great ulterior purpose being to still further contract the volume of the currency, to make the volume of money still smaller and smaller, so that labor and labor's product will be lower and lower and the people be brought eventually into subjection to the will of this class of men.

Strange as it may seem, Mr. President, there appear to be men high in office in this country, occupying responsible positions, holding within their grasp, as it were, the destiny of the people of this country, who are influenced by considerations of this character, who seem to be lashed into the support of this infamous measure contrary to their wishes. They do not seem to be strong enough to resist the demands and the threats of the taskmaster.

What we demand is that the blood taken from us twenty years ago be given back. History proves that we are right. When America was discovered, towards 1500, all prices rose in Europe in the exact measure of the quantity of money which arrived from the New World.

A chicken worth 4 sous in 1500 was worth 15 in 1600. Forty-eight years after the discovery of America, rents in England had risen 400 per cent. The immense discoveries acted upon this growing society with a power which the same discoveries would not exercise in our days. In 1548 Bishop Latimer, at the court of Edward VI, claimed that the landlords ground down the farmer—it was then as to-day the subtle action of money which disturbed social relations in England. Europe has recently contracted its circulation; prices have fallen just as they rose in the sixteenth century.

What did we see from 1851 to 1873? That is modern history, familiar to everybody. Prices increased 15 per cent. You may see it in my diagrams; California and Australia poured out their floods of gold upon our civilization.

It would be difficult, without doubt, to estimate the immense benefit which resulted for all the nations of the universe, the chief of which are here represented, but I can give you a point of comparison.

In France land which was valued on the average at 1,292 francs the hectare in 1851 rose to 2,000 francs in 1874. According to the statistics of Mr. Alfred Neymarck, the total value of cultivated land in France increased from 67,000,000,000 to 120,000,000,000, a rise of 53,000,000,000 in twenty-three years in France alone. I leave you to calculate the benefits which, following the same in those proportions, the whole world must have experienced. According to Mulhall, there was four times as much business done in 1880 as in 1850; that was the glory and climax of the commercial, industrial, and agricultural world.

It was too good. It could not last forever. "Peoples, like individuals, enjoy dangers," says Joubert; "when they are lacking, they create them."

That is what they did in 1873; they demonetized silver, and the danger was born.

Gold became rare, as was natural, as was certain, and as had been predicted; the duty was put upon it of replacing silver.

Mr. Currie and Mr. Weber, our honorable colleagues, will not agree. We have white grapes and red grapes for making wine. If we discarded the white, would not the red grapes certainly rise in value? We eat beef and mutton. Can it be admitted that if beef were prohibited the price of mutton would not rise?

Mr. President, how true that statement is. Suppose in this country a law were passed prohibiting the consumption of one class of meat products, does not every citizen know that the prices of other classes which were not prohibited would be doubled in value? The demand would be doubled for them, and that is what increases prices. If the Government should, for instance, strike down wheat, if it should be decreed that the people should not eat wheat bread, would it not create a greater demand for corn, oats, and other kindred products? It certainly would, because the functions performed by wheat would be transferred to other products. So it is with silver. Whenever the Government strikes down silver, and says that it shall not be used for money purposes, and puts the entire basis of the currency upon gold, that increases the value of gold and gives it a greater purchasing power than it would otherwise possess. That is contraction.

It was for the same reason—

Says this author—

that gold appreciated, that it bought more and more commodities, and prices fell in consequence. This is a great revolution in which all take part, and which prevails in England more than anywhere else.

Have we not been witnessing the consequences of contraction in England within the last few years? In fact there is a tremendous strike involving hundreds and thousands of men going on there to-day. Strikes and lockouts have been the watchwords in England for the last twenty years. A great army of men, led by a former secretary of agriculture there, is introducing a social revolution in that country by reason of the shrinkage in the value of property and the fall in the wages of labor. Less than thirty thousand men in the British Empire own its soil. Not one man or woman out of a hundred—I might say out of a thousand and be within the bounds of truth—ever own a foot of soil upon which their feet stand. They are born in a country where they own no part of its soil; they live and die and own no portion of it except in the potter's field, that portion necessarily dedicated to them as a last resting place by the public; and yet the example of this pirate of the high seas, the example of this country, which is constantly degrading her own people, is held up to us as an example worthy of our emulation!

The only object—

The author continues—

with which a man works is that he may sell his products for more than they cost.

When a fall of prices takes place in the interval, personal interest ceases to act, and what Bastiat called so aptly the mainspring of humanity ceases to operate.

Hence, the crisis under which industry suffers, and the alarming figures published by Mr. Giffen, for the board of trade, which note since 1866 a growing depression in England.

Hence, the contraction of English industry, the closing of workshops, and labor crises.

But why, one asks, was silver demonetized? The story would be amusing if it had not had such fatal consequences. Gold and silver had been in circulation more than two hundred years in a legal proportion of 15½ of silver to 1 of gold, and that legal proportion had given rise to a scandal: there were variations of value between the two metals.

During two hundred years variations were noted from a maximum of 15.92 to a minimum of 14.14: that is, a deviation of as much as 1.8. It was horrible! It was necessary to stop at once such an abuse. How was it done? Silver was deprived of the right of conversion into coin.

The variations went from a maximum of 24 to a minimum of 15.92; that is, a variation of 8 points, or more than four times as much as what was formerly complained of. The means employed recalls the famous Gribouille, who threw himself into the water to avoid being wet by the rain.

Adam Smith, the father of political economy, says, page 205:

From the high or low money price either of goods in general, or of corn in particular, we can infer only that the mines which at that time happened to supply the commercial world with gold and silver were fertile or barren.

Any rise in the money price of goods which proceeded altogether from the degradation of the value of silver would affect all sorts of goods equally, and raise their prices universally a third, or a fourth, or a fifth part higher, according as silver happened to lose a third, or a fourth, or a fifth part of its former value.

John Stuart Mill, in Principles of Political Economy, says, page 301:

The proposition which we have laid down respecting the dependence of general prices upon the quantity of money in circulation—

The author uses the word "quantity" rather than "quality"—

must be understood as applying only to a state of things in which money—that is, gold or silver—is the exclusive instrument of exchange, and actually passes from hand to hand at every purchase, credit, in any of its shapes, being unknown. When credit comes into play as a means of purchasing, distinct from money in hand, we shall hereafter find that the connection between prices and the amount of the circulating medium is much less direct and intimate, and that such connection as does exist no longer admits of so simple a mode of expression. But on a subject so full of complexity as that of currency and prices, it is necessary to lay the foundation of our theory in a thorough understanding of the most simple cases, which we shall always find lying as a groundwork or substratum under those which arise in practice. That an increase of the quantity of money raises prices, and a diminution lowers them, is the most elementary proposition in the theory of currency, and without it we should have no key to any other.

So, Mr. President, here is laid down a proposition, in direct contradiction of the argument made in this Senate Chamber that the contraction of the volume of money and putting a country upon a gold basis, will not have any effect upon the prices of property and labor. Again, he says:

If the whole money in circulation was doubled prices would double. If it was only increased one-fourth prices would rise one-fourth. The very same effect would be produced on prices if we suppose the goods (the uses for money) diminished instead of the money increased; and the contrary effect if the goods were increased or the money diminished. So that the value of money—all other things remaining the same—varies inversely as its quantity; every increase in quantity lowering its value and every diminution raising it in a ratio exactly equivalent.

Ricardo plainly says in regard to this question:

That commodities would rise and fall in price in proportion to the increase or diminution of money, I assume as a fact that is incontrovertible. That such would be the case, the most celebrated writers on political economy are agreed. * * * The value of money does not wholly depend upon its

absolute quantity, but on its quantity relative to the payments it has to accomplish, and the same effect would follow either of two causes, from increasing the uses for money one-tenth, or from diminishing its quantity one-tenth; for, in either case, its value would rise one-tenth.

William Stanley Jevons, professor of political economy and logic in Owen University, England, says:

I can not but agree with Mr. Macculoch, that, putting out of sight individual cases of hardship if such exist, a fall in the value of gold (increasing the quantity of money) must have, and, as I should say, has already a most powerful, beneficial effect. It loosens the country from the old bonds of debt and habit, as nothing else could. It throws increased rewards before all who are making and acquiring wealth, somewhat at the expense of those who are enjoying acquired wealth. It excites the active and skillful classes of the community to new exertions, and is, to some extent, like a discharge of his debts is to the bankrupt and insolvent long struggling against his burdens. All this is effected without the break of national good faith, which nothing could compensate.

In his work on Money and the Mechanism of Exchange, Prof. Jevons says, on page 338:

To decide how much money is needed by a nation, we must first determine the quantity of work which money has to do. This will be proportional, *caeteris paribus*, to the number of the population. Twice the number of people, if equally active in trade and performing it in the same way, will clearly want twice as much money. It will be proportional, again, to the activity of industry and to the complexity of its organization. The more goods are bought and sold, and the more often they pass from hand to hand, the more currency will be needed to move them. It will be proportional, again, to the prices of goods, and if gold falls in value and prices are raised, more money will be needed to pay the debts increased in normal amount.

Prof. Thompson, in his Political Economy, quotes from many eminent authors, as follows:

Mr. Ricardo (following Say and Torrens) also elaborated the theory of international exchanges, in connection with the notion that money is a purely passing instrument of exchanges, changing its purchasing power according to the amount of it that a country possesses. From this it was an inference that a drain of money from a country would either have no effect or would correct itself by so increasing the purchasing power of money in comparison with commodities as to make the country a bad place to sell in, but a good place to buy in.

Quoting Thomas Tooke, he says:

Hence new uses will be found for it when it is abundant, new avenues of commerce will be opened, new branches of industries will be essayed, until increased production finds employment for the increase of money. If money has increased, industry and trade are increased, and thus the tendency to depreciation is met and strongly counteracted.

Prof. Chevalier, of France, than whom no greater authority on money has ever lived, in speaking of the increase of money, says:

Such a change will benefit those who live by current labor and enterprise; it will injure those who live upon the fruits of past labor. In this respect it will work in the same direction with most of the developments which are brought about by that great law of civilization to which we give the noble name of progress. * * * It has been wisely said that there is no machine which economizes labor like money, and its adoption has been likened to the discovery of letters.

Prof. A. L. Perry, in his work on Political Economy, page 66, says:

Price is indeed only a case under the class values, but practically it becomes a very important thing in political economy, because the value of almost all exchangeable things is determined through price. So far as commodities, personal services, and claims are exchanged against each other directly without the intervention of money or the use of the denominations of money price plays no part though value does, but these cases are few and insignificant as compared with the whole. It is hardly necessary to add that price, though relative, is specific and not general, and consequently that there may be a general rise or fall of prices. If the money of a country becomes relatively more abundant than before, general prices will rise in that country for reasons already made apparent; and when money becomes less abundant prices will fall for corresponding reasons.

Mr. Fawcett, in his Hand Book of Finance, pages 146 to 148, says:

The decline of prices since 1872-'73 is explained by the increased value of gold. The first effect was to cause a collapse in "speculative securities"—viz, bonds of railroads, etc., which were based on the expectations of a continuance of high prices for commodities, or, in other words, a low value for gold. The losses which followed caused panic and a decrease in manufacturing industry and improvement enterprises. This diminished employment for labor and necessarily decreased the consumptive demand for all commodities. Theorists have been jangling for three years about the cause of the reaction which began in 1872-'73, and the decline of prices which has continued almost without interruption since. These causes are, however, not obscure. The progress of the physical sciences and of labor-saving inventions has undoubtedly had an important tendency to reduce the prices of nearly all manufactured articles and to a small extent also the value of raw materials. But the increased burden of debt, the increase of traffic (thus requiring a larger volume of the circulating medium), and the demonetization of silver have all contributed to increase the value of gold beyond its equitable value as a measure for values of commodities.

The era of golden debt, like the era of gold, has had its culmination, and the causes at work are now preparing the way for some new era in financial affairs which will, in all probability, be as unique as either of the two which have preceded it. No man can yet foresee what it is to be. It is, however, not difficult to distinguish a few tendencies that must operate toward the new development. The first of these is the decline in the rates of interest for money in order to reduce the burden of funded and mortgaged debt everywhere. This will be accomplished partly by the repudiation and complete loss of a very large portion of the existing volume of funded debts, and partly by the concentration of capital (seeking safety rather than high rates of interest), on a smaller amount of the debt. Another tendency that must continue is the necessity for supplementing the stock of gold in the world with the stock of silver, and a universal recognition of both metals as money at about the same relative values they maintained prior to the era of gold. Until these things are accomplished "prices" will continue to decline, and the commercial world will be in distress.

I read now from Alison's History of Europe. In speaking of a shrinkage of the volume of money, he says:

The evils complained of arose from the unavoidable result of a stationary currency, coexisting with a rapid increase in the numbers and transactions of mankind, and these were only aggravated by every addition made to the energies and productive powers of society. * * * But if an increase in the numbers and investings of men coexists with a diminution in the circulating medium by which their transactions are carried on, the most serious evils await society, and the whole relations of its different classes to each other will be speedily changed; and it is in that state of things that the saying proves true, that "the rich are every day growing richer and the poor poorer."

[At this point the honorable Senator yielded to Mr. DUBOIS.]

Mr. ALLEN. Mr. President, Henry Clay, during the debates on the subtreasury in 1840, made the following eloquent, truthful, and logical speech. It shows clearly that his great mind had grasped the idea that price, not only of products but of labor, depended upon the quantity of money in circulation:

The proposed substitution of an exclusive metallic currency to the mixed medium with which we have been so long familiar, is forbidden by the principles of eternal justice. Assuming the currency of the country to consist of two-thirds of paper and one of specie, and assuming also, that the money of a country, whatever may be its component parts, regulates all values, and expresses the true amount which the debtor has to pay his creditor, the effect of the change upon that relation and upon the property of the country would be most ruinous.

All property would be reduced in value to one-third of its present nominal amount, and every debtor would, in effect, have to pay three times as much as he had contracted for. The pressure of our foreign debt would be three times as great as it is, while the six hundred millions, which is about the sum now probably due to the banks from the people, would be multiplied into eighteen hundred millions! * * * Have gentlemen reflected upon the consequences of their system of depletion? I have already stated that the country is borne down by a weight of debt. If the currency be greatly diminished, as beyond all example it has been, how is this debt to be extinguished?

Right here, Mr. President, it is pertinent for us to inquire how it will be possible for us through a shrinking and falling volume of money to be able to discharge our obligations if this country goes upon a single gold basis, our volume of money is contracted, and debts made payable in gold?

Mr. Clay further said:

Property, the resource on which the debtor relied for his payment, will decline in value, and it may happen that a man who honestly contracted a debt, on the faith of property which had a value at the time fully adequate to warrant the debt, will find himself stripped of all his property, and his debt remain unextinguished.

Debts contracted, payable in lawful money, when gold and silver have been money from the organization of the Government down to the present moment, followed by a contraction of the currency—debts, I say, contracted under these circumstances, if they become eventually payable in gold, or gold equivalent, under a complete demonetization of silver, will produce the fall in prices and the ruin so vividly portrayed by Mr. Clay of Kentucky in this speech.

Certainly that is a condition of affairs among the people of this nation that any high-minded, patriotic man does not care to see. It is to prevent this condition, it is for the purpose of lightening their burdens as far as can be done through just legislation, that the friends of silver desire that this purchasing clause shall remain in the law until something better in the line of silver legislation is offered.

Continuing, Mr. Clay says:

The gentleman from Pennsylvania [Mr. Buchanan] has put the case of two nations, in one of which the amount of its currency shall be double what it is in the other, and, as he contends, the prices of all property will be double in the former nation of what they are in the latter. If this be true of two nations, it must be equally true of one, whose circulating medium is at one period double what it is at another. Now, as the friends of the bill argue, we have been and yet are in this inflated state; our currency has been double or in something like that proportion of what was necessary and we must come down to the lowest standard. Do they not perceive that inevitable ruin to thousands must be the inevitable consequence? A man, for example, owning property to the value of $5,000 contracts a debt for $5,000. By the reduction of one-half of the currency of the country his property in effect becomes reduced to the value of $2,500. But his debt undergoes no corresponding reduction. He gives up all his property and remains still in debt $2,500. Thus this measure will operate on the debtor class of the nation, always the weaker class, and that which for that reason most needs the protection of Government.

Mr. President, at this point allow me to give the effect of this contraction upon the interests of the agricultural classes. Let me suppose that we are under the present system of bimetallism and of miscellaneous currency, with probably a somewhat expanding, rather than contracting, volume of money. Let me suppose that I have earned $1,000. I take that money and invest it in a farm, borrowing $1,000 to put with it in purchasing the farm, giving a mortgage on my farm to secure the borrowed money.

Now, suppose, through some means, before that mortgage becomes due, which is ordinarily from five to seven years, the volume of money has contracted, so that the value of money is made double what it was when I purchased the farm, borrowed the money, and gave the mortgage. When I gave the mortgage, for instance, 1 bushel of wheat would pay $1. But when the time comes to pay the mortgage it takes 2 bushels of my wheat to pay

$1, or it takes two days of my work to pay $1, whereas 1 bushel of wheat or one day's work would have paid the $1 at the time the money was borrowed.

Now, under such a system as that, Mr. President, we all understand that prices fall, produce becomes comparatively worthless, and the slightest misfortune renders it impossible for the farmer to discharge his obligation. The time comes when the mortgage matures. The time comes in the history of that transaction when the farm, that was well worth $2,000 when it was bought, becomes scarcely security for the $1,000 mortgage that is against it. The time comes when a great many farmers, situated as I have described myself in the supposed case, can not meet and discharge their obligations.

What is the result? When the mortgagee calls for the payment of this debt it can not be met. The mortgage is foreclosed. The sheriff sells my farm. Now, I ask what has become of the honest money that I put into that transaction? By this robber system of contracting and doctoring the currency, by this system which stealthily comes into the humble homes of this nation and robs them of their prosperity, it has simply been merged in the $1,000 of the mortgagee and made it that much more powerful in the markets of the world. Then I step out with a loss of my money, and my property is gone.

I am not supposing a case that does not exist. I say there are thousands, even hundreds of thousands, of acres of some of the most magnificent portions of our domain that in the last few years have passed out of the hands of the people into the hands of loan and trust companies and corporations of different kinds. Hundreds of thousands of honest men and women have been driven out under the stars in consequence of this system of contraction.

Yet, Mr. President, we are invited to a feast of contraction again. We are invited to agree to continue to contract the volume of money, to strike down the purchasing power of silver, to cease using silver as money, excepting that which we have on hand and coined, and to return to gold values in everything, maintaining the parity, as it is said, of silver and gold, which means fixing a gold value on silver.

Mr. DOLPH. Will the Senator yield to me?

Mr. ALLEN. In a moment. We are invited to do this, and to make the condition of our countrymen a thousand fold worse in the future than it has been in the past.

Now, I yield to the Senator from Oregon.

Mr. DOLPH. Do I understand the Senator to say that we are asked to repeal any law by which silver is now being coined into standard dollars or into any other money? If the present law is to continue, it provides for an increase of the circulating medium.

Mr. BLACKBURN. Will the Senator from Nebraska allow me to answer?

Mr. ALLEN. Certainly.

Mr. BLACKBURN. I say that under the provision of the law known as the Sherman law of 1890, compulsory provision was made for the coinage of not less than two millions of standard silver dollars every month up to July 1, 1891.

Mr. DOLPH. Which time has passed.

Mr. BLACKBURN. Which time has passed. But I say that even that law, bad as you describe it, and bad as I admit it to be, at least left it discretionary with the Secretary of the Treasury after July 1, 1891, to go on with the coinage of silver bullion in sufficient amount to meet the Treasury notes that were issued against its deposit.

Mr. DOLPH. Is that discretion of the Treasury Department interfered with by the measure now before the Senate, so far as silver bullion is concerned?

Mr. BLACKBURN. With the permission of the Senator from Nebraska, I answer, and say yes; that that discretion is not only interfered with, but it is abrogated, and the pending bill professes to repeal that provision of the Bland-Allison law and put silver back under the operation of the demonetization law of 1873.

Mr. DOLPH. The Bland-Allison law was repealed when the act of 1890 was enacted.

Mr. BLACKBURN. And the repeal of the purchasing clause of the Sherman law remits us to the act of 1873, which discredited silver as money in this country.

Mr. DOLPH. The passage of this bill will simply repeal the purchasing clause of the Sherman act of 1890. It stops the further purchase of silver, but it does not demonetize the silver dollar.

Mr. BLACKBURN. No; it reënacts the demonetization act of 1873.

Mr. DOLPH. But it does not demonetize a single silver dollar.

Mr. BLACKBURN. Because the act of 1873 had already demonetized silver.

Mr. DOLPH. No; the act of 1873 did not demonetize a single silver dollar.

Mr. BLACKBURN. Did it not drop the standard silver dollar from the list of coins in this country?

Mr. DOLPH. It stopped the coinage, but it did not demonetize a dollar in circulation.

Mr. BLACKBURN. Precisely.

Mr. DOLPH. We have now over six hundred millions of silver, including bullion and notes, which have been issued by the Treasury on the bullion purchased. We have over $600,000,000 in circulation, and it is not proposed to demonetize a dollar of that sum.

Mr. BLACKBURN. Mr. President, the Senator from Oregon will not say that we carry in our circulation to-day $600,000,000 of silver money.

Mr. DOLPH. Including bullion in the Treasury.

Mr. BLACKBURN. That is not in circulation.

Mr. DOLPH. It is represented by Treasury notes, which are in circulation.

Mr. BLACKBURN. Which are paid in gold on demand.

Mr. DOLPH. Gold or silver, at the option of the Secretary of the Treasury.

Mr. BLACKBURN. Have they ever been paid in silver?

Mr. DOLPH. I can not say as to that.

Mr. BLACKBURN. I can.

Mr. DOLPH. They should have been paid in silver.

Mr. BLACKBURN. So I say, but they have not been.

Mr. DOLPH. Then we agree upon one thing.

Mr. BLACKBURN. Yes.

Mr. DOLPH. But what I was trying to ask the Senator from Nebraska was, what law have we now for an increase of the circulating medium? No law except the act of 1890, which provides for an issue of Treasury notes for the purchase of silver bullion. That is the only increase.

Mr. ALLEN. That is nearly $50,000,000 annually.

Mr. DOLPH. I understand that, and I admit it. I admit that the repeal of the purchasing clause of the act of 1890 will stop the increase of the circulating medium; and to that extent, unless there shall be some other provision made for increasing the circulating medium, the volume of currency will be contracted.

Mr. STEWART. I should like to ask the Senator from Oregon if there is any other way to stop purchasing silver except to repeal the Sherman law?

Mr. DOLPH. I think so.

Mr. STEWART. Any legal way?

Mr. DOLPH. I will not say any legal way. I think the amount required by law to be purchased by the Secretary of the Treasury has not been purchased during the last three or four months; and I should not be surprised to see the purchases suspended altogether.

Mr. STEWART. Do you think that would be right?

Mr. DOLPH. It would be as much right as it would be to suspend any part of them.

Mr. STEWART. Do you think it would be right to suspend any part of the purchases?

Mr. DOLPH. I leave that subject for the Senator to discuss.

Mr. STEWART. I should like to have the opinion of the Senator from Oregon.

Mr. DOLPH. I think that no executive officer, not even the President himself, has the right to suspend the operation of any law of Congress.

Mr. ALLEN. Mr. President, when the Senator from Oregon interrupted me to put a question, which was perfectly proper to be put and which I am glad he did put, I had asserted that the repeal of the purchasing clause of the Sherman act would be, in effect, demonetizing silver and producing a contraction of currency or the volume of money, whatever you see fit to call it, using those two expressions as synonymous. Let me answer the Senator. Under the Sherman act to-day there is issued, in round numbers, $50,000,000 annually of money, legal-tender notes redeemable in coin, gold or silver, at the option of the Secretary of the Treasury. Now, let me ask the Senator from Oregon if that does not increase the volume of money or the thing that performs the office of money in payment of debts?

Mr. DOLPH. Of course that is in circulation. I said that, and I admit that the currency will be contracted to that extent; yet the volume to be maintained will not be increased by that increase, if the measure now before the Senate should pass.

Mr. ALLEN. Let me ask the Senator from Oregon one more question. If you repeal the purchasing clause of the Sherman act and do not substitute anything, do you not stop the possibility of the coinage of more silver?

Mr. DOLPH. Not at all. The Secretary of the Treasury can proceed to coin all the silver bullion already in the Treasury.

Mr. ALLEN. I admit that, to the extent of 174,000,000 ounces.

Mr. DOLPH. Congress can provide for the use of the silver at any time.

Mr. ALLEN. Yes; Congress can "provide." There is the trouble. After you have coined the 174,000,000 ounces of bul-

lion in the Treasury Department then you stop the coinage of silver, and I say you stop the issuance of the $50,000,000 Treasury notes.

Mr. DOLPH. Do we not stop that if we repeal the Sherman act?

Mr. ALLEN. I admit that, Mr. President, and therefore when you stop the coinage of silver you not only stop the coinage, but you demonetize it or take the money power or function away from silver as a metal.

Mr. DOLPH. You can not demonetize a thing until it has been monetized.

Mr. ALLEN. I shall not stand here and split hairs with the Senator from Oregon.

The PRESIDING OFFICER. The Senator from Nebraska has the floor.

Mr. ALLEN. The people of this country understand quite well that when you stop the coinage of silver, the volume of money stands still and we are deprived of the $50,000,000 of Treasury notes now annually issued; that while population and wealth are growing the volume of money is standing still; and that between the contraction of the volume of money on the one side and the increase of population on the other, the gap is growing wider and wider. The Senator understands that and the people understand it.

Mr. President, I return to the remarks of Mr. Clay. He said:

But if the effect of this hard-money policy upon the debtor class be injurious it is still more disastrous if possible on the laboring classes. Enterprise will be checked or stopped, employment will become difficult, and the poorer classes will be subject to the greatest privations and distresses. Heretofore it has been one of the pretensions and boasts of the dominant party that they sought to elevate the poor by depriving the rich of undue advantages. Now their policy is to reduce the wages of labor, and this is openly avowed.

This was in 1840.

And it is argued by them, that it is necessary to reduce the wages of American labor to the low standard of European labor, in order to enable the American manufacturer to enter into a successful competition with the European manufacturer in the sale of their respective fabrics.

My protectionist friends may find some consolation in this language.

Thus is this dominant party perpetually changing; one day cajoling the poor and fulminating against the rich, and the next, cajoling the rich and fulminating against the poor. It was but yesterday that we heard that all who were trading on borrowed capital ought to break. It was but yesterday we heard denounced the long established policy of the country by which it was alleged the poor were made poorer and the rich were made richer.

Mr. President, of all the subjects of national policy not one ought to be touched with so much delicacy as that of the wages, in other words the bread of the poor man. In dwelling, as I have often done, with inexpressible satisfaction upon the many advantages of our country, there is not one that has given me more delight than the high price of manual labor. There is not one which indicates more clearly the prosperity of the mass of the community.

In all the features of human society there are none, I think, which more decisively display the general welfare than a permanent high rate of wages and a permanent high rate of interest. Of course I do not mean those excessively high rates of temporary existence, which result from sudden and unexpected demands for labor or capital, and which may, and generally do, evince some unnatural and extraordinary state of things; but I mean a settled, steady, and durable high rate of wages of labor and interest upon money.

Such a state demonstrates activity and profit in all the departments of business. It proves that the employer can afford to give high wages to the laborer in consequence of the profits of his business, and the borrower high interest to the lender in consequence of the gain which he makes by the use of capital. On the contrary, in countries where business is dull and languishing and all the walks of society are full, the small profits that are made will not justify high interest or high wages.

Mr. President, in 1840 the same causes that are at work to-day producing distress to the American farmer and laborer were at work. The chief cause in producing the condition of affairs that we are witnessing to-day, namely, the contraction of the volume of money, was at work at that time. The result then was, as it is to-day, to shrink the price of property, the price of produce, and to deprive the honest laborers of work, making paupers and destroying homes. Yet to-day we are invited to take the same course that was taken then. We are invited to repeat the history of 1840 in this country.

They did not then undertake to abandon silver and gold, the money of the Constitution. The men who lived in this country in 1840 had some respect for the Constitution. It had not then become a mere bauble, to be kicked about by parties and to be respected or ignored as convenience might dictate. Notwithstanding they stood by the money of the Constitution (gold and silver), the volume was contracted, just as is attempted to-day to put us in the scandalous and the unenviable attitude of struggling with our labor and our property in the scramble for gold.

Mr. DOLPH. Will the Senator yield to me?

Mr. ALLEN. Certainly; cheerfully.

Mr. DOLPH. Does the Senator dispute the proposition that there is more money in circulation to-day in the United States per capita than ever before?

Mr. ALLEN. Oh, yes; I dispute it seriously.

Mr. DOLPH. Then the Senator disputes the reports of the Secretary of the Treasury on that subject, which are issued from time to time.

Mr. ALLEN. No; so far as the Secretaries tell the truth I do not dispute them.

Mr. DOLPH. Does the Senator dispute what the Secretary of the Treasury does say, that we now have in circulation over $25 per capita for all the population of the United States?

Mr. ALLEN. No; I do not dispute that in the sense in which the terms are used by the Secretary.

Mr. DOLPH. Do you dispute the fact that the circulation per capita is larger than it ever has been before?

Mr. ALLEN. I do.

Mr. DOLPH. Then the Senator disputes the reports which the Secretaries of the Treasury have issued from time to time.

Mr. ALLEN. It does not make any difference whether I do or not.

Mr. DOLPH. I merely wanted to know the fact.

Mr. ALLEN. I dispute that the volume of per capita circulation in this country is greater to-day than it has ever been. It is surprising to me that my friend from Oregon, who has been here ten or twelve years in the public service, does not understand that to be true. In 1865 there were over $47 per capita in circulation in this country.

Mr. PEFFER. Fifty-two dollars.

Mr. ALLEN. Fifty-two dollars, my friend from Kansas says.

Mr. DOLPH. I dispute that proposition.

Mr. ALLEN. Does the Senator from Oregon dispute that the sun is shining?

Mr. DOLPH. Yes, I do to-night. [Laughter.] The Senator mistakes gaslight for sunlight, and that is what he has done in regard to currency.

Mr. ALLEN. In 1865, if the Senator from Oregon will read the history of his country, he will find that there were $47 per capita, and my friend from Kansas [Mr. PEFFER] says, $52; but it was not what the Senator from Oregon or the Secretary of the Treasury calls money. That is the trouble. It was made up of a variety of evidences of debt in the form of certificates of indebtedness and 7-30 notes, etc. All these were in circulation. Although I am a younger man than the Senator from Oregon, I know from ocular evidence that the smaller bonds were in circulation among the people, and passed current and were used as money. Now, I ask the Senator from Oregon if, counting all these things as money that I have enumerated——

Mr. DOLPH. But they were not.

Mr. ALLEN. I ask him if the volume of money, counting those, was not greater than it is to-day?

Mr. DOLPH. I say that the interest-bearing obligations of the Government were not money. They did not perform the office of money.

Mr. ALLEN. Mr. President, we all know that they did perform the office of money, were used as a medium of exchange until they eventually were called in, and over $1,000,000,000 were burned between 1866 and 1873; they were burned up until Congress was compelled to pass the act of 1874 to prevent the destruction of greenbacks, and fix them at their present volume of $346,000,000 in round numbers. Your Secretary of the Treasury, Mr. McCulloch, was destroying the money of the people.

Mr. DOLPH. I was not talking about greenbacks.

Mr. ALLEN. Oh, no; you think they are not money.

Mr. DOLPH. They have always been money, or performed the function of money.

Mr. ALLEN. Now, does the Senator from Oregon dispute that, taking these small bonds, I speak of, the evidences of indebtedness I have mentioned, with the bank currency and all of the various forms of currency, we did not have more than $25 per capita.

Mr. DOLPH. I have stated to the Senator that what he calls currency and money was not money, in any sense of the term, and did not perform that function.

Mr. ALLEN. There is the trouble. Prof. Walker, who is "a gold bug," says that whatever performs the money function is the money thing; that whatever performs its office is money. So some of the principal writers, sustaining the view the Senator from Oregon upholds, give utterance to the same great truth, that the thing which performs the office of money is money for all purposes. The Senator from Oregon admits that in 1865, calling the things money which I have enumerated, we had a per capita circulation almost twice as large as we have to-day.

Mr. PEFFER rose.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. ALLEN. Certainly.

Mr. PEFFER. With the permission of the Senator from Nebraska, I should like to set this matter right. I have in my hand the finance report of the Secretary of the Treasury for 1866. On page 25 I find a statement of the public debt of the country at that time. It is divided into two parts, bonds and notes. The amount

of bonds given is $1,210,221,300. Then there are two classes of bonds due, one in 1867 and the other in 1868, amounting together to about $18,000,000. Then come the different classes of notes which were in circulation as currency. Upon that point, of course, the Senator from Oregon will differ with me; but of that in a moment. There were compound-interest notes due in 1867 and 1868 amounting to $159,012,140.

Mr. DOLPH. They are notes that bore interest and the interest was compounded, I suppose?

Mr. PEFFER. Of the 7.30 Treasury notes due in 1867 and 1868 there were $806,251,550.

Mr. DOLPH. They were interest-bearing obligations, were they not?

Mr. PEFFER. Then there were other bonds past due and not presented, Texas indemnity bonds, etc., $559,000; of bonds, Treasury notes, etc., past due and not presented, $3,815,675.80. Then there were temporary loans, ten days' notice, $120,176,196.65; certificates of indebtedness past due and not presented, $26,391,000; then there were United States notes, commonly called greenbacks, $400,891,368; fractional currency, $27,070,876.96; gold certificates of deposit, $10,713,180, making a total of bonds and notes of $2,783,425,871.21.

The following is a statement of the public debt, June 30, 1866, exclusive of cash in the Treasury:

Bonds, 10-40's 5 per cent, due in 1904	$171,219,100.00
Bonds, Pacific railroad, 6 per cent, due in 1895 and 1896	6,042,000.00
Bonds, 5-20's 6 per cent, due in 1882, 1884, and 1885	722,205,500.00
Bonds, 6 per cent, due in 1881	265,317,700.00
Bonds, 6 per cent, due in 1880	18,415,000.00
Bonds, 5 per cent, due in 1874	20,000,000.00
Bonds, 5 per cent, due in 1871	7,022,000.00
	1,210,221,300.00
Bonds, 6 per cent, due in 1868	8,908,341.80
Bonds, 6 per cent, due in 1867	9,415,250.00
Compound-interest notes, due in 1867 and 1868	159,012,140.00
7.30 Treasury notes, due in 1867 and 1868	806,251,550.00
	983,587,281.80
Bonds, Texas indemnity, past due, not presented	559,000.00
Bonds, Treasury notes, etc., past due, not presented	3,815,675.80
	4,377,675.80
Temporary loan, ten days' notice	120,176,196.65
Certificates of indebtedness, past due, not presented	26,391,000.00
	146,567,096.65
United States notes	400,891,368.00
Fractional currency	27,070,876.96
Gold certificates of deposit	10,713,180.00
	438,675,424.96
Total	2,783,425,879.21

By turning over to page 168 of the same report, I find a recapitulation of the outstanding United States notes and fractional currency, which are described as not now used for circulation, and I will repeat them:

Demand notes redeemable in coin	$288,121
One-year 5 per cent notes	2,151,287
Two-year 5 per cent notes	5,209,335
Two-year 5 per cent coupon notes	1,078,550
Three-year compound-interest notes	172,369,511
Making a total of	181,096,804

Of notes that had been withdrawn and held in abeyance, as it were, and reported as "not now used for circulation." These different classes of notes, five of which I have enumerated, were all used for circulation, but at that time were in the Treasury and were not being sent out.

On page 164 I find this language:

Currency—

That is to say, paper notes of the Government that had been used as money and called very properly currency—

Currency has been retired, counted, and destroyed during the fiscal year, as follows:

Old issue demand notes	$200,440.75
New issue legal-tender notes	6,764,370.65
One-year 5 per cent notes	6,316,104.50
Two-year 5 per cent notes	2,506,427.50
Two-year 5 per cent coupon notes	33,383,097.50
Six per cent compound-interest notes	81,246,822.50
Gold certificates	64,913,800.00
First issue fractional currency	2,897,307.88
Second issue fractional currency	7,596,479.78
Third issue fractional currency	5,414,844.49
Discounted on above for mutilations	17,813.35
Total	211,239,515.41

If we put the $181,000,000, in round numbers, on page 168 of the report, with the $211,000,000, on page 164, we have nearly $400,000,000. Add that to the amount of notes still outstanding at the end of the year, which was $1,500,000,000, or about that, and we have $1,900,000,000 of notes of different kinds, which were then in circulation as currency. Add to that the $170,000,000, or thereabouts, of national-bank notes, and we have a total of nearly $2,100,000,000 of paper money then outstanding among the people. Divide that by the population, and you will find that it amounts to a trifle over $52 per capita.

Then, if the Senator from Oregon will take up the report for 1869, which I do not happen to have here, on page 244 he will find a recapitulation under the head of all the different kinds of Government paper that had at any time been issued and circulated and used as money, he will find the 7.30 notes, compound interest notes, demand notes, and all of the different classes of notes to which I have referred here.

Then, if the Senator will take up the report of 1869, and look at the statements in very small type on some of the pages he will find a description of the 7.30 notes, the compound interest notes, and all the other different classes which had been issued and were made legal tender.

So I think there can be no question about these different classes of notes having been out and circulating as money.

As I have repeatedly said, in my humble opinion, the Treasury Department, from 1869 to the present time, has been purposely—I use the word "purposely," and if it is any more forceful I will say "willfully and knowingly"—deceiving the people in reference to this matter.

Mr. KYLE. Is it not true that John Jay Knox, once Comptroller of the Currency, regarded the 7.30 notes as money?

Mr. PEFFER. They were so accepted by all the Secretaries of the Treasury until 1870.

Mr. KYLE. I should like to state to the Senator from Nebraska, with his permission, that he is occupying no very unusual ground in making the statement he has just now made in relation to the circulation of the 7.30 notes. He is occupying the position formerly occupied by the Republican party itself and by one of the most prominent Republican journals.

I have before me a statement of one of the most prominent journals of the United States, the Chicago Inter Ocean. Let me give a statement made in that paper for 1865. The author gives the currency of the country as $1,651,282,373; population 34,819,581, and the per capita circulation $47.42.

I will now supplement this by the Inter Ocean's report of the per capita amount of currency for each succeeding year down to 1877:

The volume of currency was for—		The volume of currency was for—	
1866	$50.76	1872	$17.00
1867	36.68	1873	17.48
1868	22.05	1874	17.89
1869	19.80	1875	17.35
1870	19.20	1876	15.89
1871	18.47	1877	14.40

In the same connection, the Inter Ocean makes this remark in regard to the circulation of the 7.30 notes:

The 7.30 three-year notes, whose circulation as currency is most scouted, were outstanding on the 1st of September, 1865, to the amount of $830,000,000, every dollar of which was legal tender for its face value under the terms of the law "to the same extent as United States notes."

That is Republican authority. Further, touching the point of the amount of the present circulation, I am not disposed to dispute the statement of the present Secretary of the Treasury or any previous Secretary of the Treasury, but I have a statement made, by one whom I consider one of the best authorities upon the Republican side of this Chamber, in late years and that is the late lamented Senator Plumb. In his speech upon this floor in June, 1890, he makes this very remarkable statement, which I hope the Senator from Oregon will consider:

Let us see, therefore, how much money is available for actual use among the people. From the total of $1,550,000,000, arrived at as above, must be first deducted an average of $260,000,000, which the Treasury always keeps on hand, and about which something has heretofore been said in the debate on this bill. That leaves as the maximum which by any possibility can be used $1,300,000,000.

There ought, in fairness, to be deducted from this $150,000,000, error in estimate of gold in the country, which would reduce the money outside the Treasury to $1,150,000,000. From this is to be subtracted the $700,000,000 kept as a reserve (in the banks), as before computed, leaving a balance of but $550,000,000 which is available for delivery or other use in the transactions of the business of all the people, or a trifle over $8 per capita. But the force of my argument is not materially weakened by conceding the gold coin to be as estimated by the Treasury Department, which would leave in actual circulation $700,000,000. In order to make up this amount all doubt must be resolved in favor of the Treasury and against the people, both the doubt as to the lost and destroyed notes and that as to the gold supply. If I was deciding this case upon what I consider the best evidence, I would be bound to say that I believed the money in actual circulation did not much, if at all, exceed $500,000,000.

This, I believe, has been followed out by the statements of other prominent Republicans on this floor. The Senator from Oregon, therefore, is not combating the present statement of the Senator from Nebraska, but the statements of the ablest financiers we have in this nation to-day.

Mr. DOLPH. Will the Senator from Nebraska yield to me now. I think as the trio have got after me on this question I am entitled to reply.

Mr. ALLEN. I yield to the Senator from Oregon with pleasure.

Mr. DOLPH. Mr. President, it does not take a financier to understand that a note bearing interest or compound interest ceases to circulate as money the moment the interest accrues upon it. As soon as there is a half year's interest or a quarter year's interest on such a note it would be kept in the vaults of the bank, and it would not perform the functions of money. As a matter of fact, these notes did not perform the functions of money.

As far as the newspapers are concerned, if the statement which has been read by the Senator from South Dakota is better authority than the report of the Secretary of the Treasury, then I will have to give up this proposition or any other which may be mooted. The Senator might get up and assert that this body had outlived its usefulness, is obstructing the necessary measures upon which the prosperity of the country depends, and should be abolished. The Senator from South Dakota can prove that assertion by any number of newspapers in the United States.

Mr. KYLE. We do not have to refer to the Chicago Inter-Ocean; we can refer to other prominent Republican newspapers and magazines; we can refer also to the Secretary of the Treasury before the year 1869, and to the Comptroller of the Currency before that time.

Mr. DOLPH. I do not think so.

Mr. KYLE. And they understand the question quite as well as the Senator from Oregon.

Mr. DOLPH. If the Senator will read the reports of the Secretaries of the Treasury and then put his own construction upon those reports, he can make out to his satisfaction that a certain set of facts exists. That is what I object to.

Mr. ALLEN. The Senator from Oregon will certainly not ignore current history.

Mr. DOLPH. The difference between myself and the Senators who assert that our per capita circulation has been so large in previous years, is that they assert certain notes have performed the function of money, which I think did not.

If the Senator is going to prove by the statements of Senators on this floor any proposition in regard to the currency, or in regard to almost anything else under the sun, he can do it. What proposition in regard to the currency can not be proved by the utterances of Senators on this floor in the last six weeks? Certainly the most absurd propositions in regard to the amount of circulation, the office of money, and the fundamental principles in regard to money and in regard to the use of gold and silver have been asserted.

I do not care to continue this discussion. I should have gone out and got the statement of the predecessor of the present Secretary of the Treasury to show the precise per capita circulation in this country during a series of years, but I wanted to hear what Senators had to say. I did not wish to be discourteous to them. I shall endeavor to procure that document, and will let the Secretary of the Treasury determine which is right, the Senator from Nebraska or myself.

Mr. ALLEN. I hope the Senator from Oregon will not run away from this contest. I think if he continues to inquire——

Mr. DOLPH. I think I have the statement now. Will the Senator allow me to have it read at the desk?

Mr. ALLEN. Certainly. The Senator, however, is quoting from a scratch book.

Mr. DOLPH. I know; but I am quoting what I assert to be an extract clipped from the report of the Secretary of the Treasury.

Mr. ALLEN. The same as the newspaper the Senator from South Dakota quoted from.

Mr. DOLPH. I ask that the paper which I send to the desk may be read.

The VICE-PRESIDENT. The Secretary will read as requested, in the absence of objection.

The Secretary read as follows:

Third. Upon the subject of the amount of money in circulation I submit the following table prepared by the Treasury Department:

Amounts of money in the United States, and in circulation, on July 1 of each year from 1860 to 1892, inclusive.

July 1—	Amount of money in United States.	Amount in circulation.	Population June 1.	Money per capita.	Circulation per capita.
1860	$442,102,477	$435,407,252	31,443,321	$14.06	$13.85
1861	452,005,767	448,405,767	32,064,000	14.09	13.98
1862	358,452,079	534,697,744	32,704,000	10.96	10.23
1863	674,867,283	595,394,038	33,365,000	20.23	17.84
1864	705,588,067	669,641,478	34,046,000	20.72	19.67
1865	770,129,755	714,702,995	34,748,000	22.16	20.57
1866	754,327,254	673,488,244	35,469,000	21.27	18.99
1867	728,200,612	661,992,062	36,211,000	20.11	18.28
1868	716,553,578	680,103,661	36,973,000	19.38	18.39
1869	715,351,180	664,452,891	37,756,000	18.95	17.60
1870	722,898,461	675,212,794	38,558,371	18.73	17.50
1871	741,812,174	715,889,005	39,555,000	18.75	18.10
1872	762,721,595	738,309,549	40,596,000	18.70	18.19
1873	774,445,610	751,881,809	41,667,000	18.58	18.04
1874	806,024,781	776,083,031	42,796,000	18.83	18.13
1875	798,273,509	754,101,947	43,951,000	18.16	17.16
1876	790,683,284	727,609,388	45,137,000	17.52	16.12
1877	763,053,847	722,314,803	46,353,000	16.46	15.58
1878	791,253,576	729,132,634	47,598,000	16.62	15.32
1879	1,051,521,541	818,631,793	48,866,000	21.52	16.75
1880	1,205,929,197	973,382,228	50,155,783	24.04	19.41
1881	1,408,541,823	1,114,238,119	51,316,000	27.41	21.71
1882	1,480,531,719	1,174,290,419	52,495,000	28.20	22.37
1883	1,643,489,816	1,230,305,096	53,693,000	30.60	22.91
1884	1,705,454,189	1,243,925,969	54,911,000	31.06	22.65
1885	1,817,658,336	1,292,568,615	56,148,000	32.37	23.02
1886	1,808,559,694	1,252,709,525	57,404,000	31.50	21.82
1887	1,900,442,672	1,317,539,143	58,680,000	32.39	22.45
1888	2,002,955,949	1,372,170,870	59,974,000	34.39	22.88
1889	2,075,350,711	1,380,361,649	61,289,000	33.86	22.52
1890	2,144,225,159	1,429,251,270	62,622,250	34.24	22.82
1891	2,195,224,075	1,497,440,707	63,975,000	34.31	23.41
1892	2,372,599,501	1,601,347,187	65,520,000	36.21	24.44

Amounts of money in the United States and in circulation, etc.—Continued.

NOTE.—The difference between the amount of money in the country and the amount in circulation represents the money in the Treasury.

Mr. DOLPH. Will the Senator from Nebraska yield to me just a moment?

Mr. ALLEN. Certainly.

Mr. DOLPH. The Senator will see that in 1873, when the discontinuance of the coinage of the standard dollar was made, the per capita circulation, according to this report, was $18.04, and that it has gradually increased every year from that time until 1892, when it was $24.44 per capita. That is money in circulation. I will state that during the years 1861, 1862, 1863, and 1864 the money of the United States was only circulating in the States that were still in the Union. It did not circulate in the States that had seceded; and, therefore, taking that into consideration, there has been a remarkable uniformity, with a slight increase every year, since 1860.

In regard to the notes which the Senator would include among our circulation, the truth is that they were not put out to pay the debt of the Government like the legal-tender notes. I understand that with the exception of a few that officers and soldiers in the Army were allowed to take, they were sold by the fiscal agents of the Government just like the bonds, and performed the same office; that they did not really circulate any more than the bonds, and were immediately retired from circulation.

Mr. PEFFER. With the consent of the Senator from Nebraska——

The VICE-PRESIDENT. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. ALLEN. Yes, sir.

Mr. PEFFER. I think this is a good time to set this matter right. In the first place I desire to call the attention of the Senator from Oregon and of all other Senators present to the fact that in the statement which has been read purporting to have come from the Secretary of the Treasury (and I do not doubt but that it came from that source) the Secretary counts as money not only the silver certificates which are in circulation among the people, but also the silver dollars in the Treasury which are covered or represented by the certificates. It is the same in relation to the gold certificates, so that perhaps about $600,000,000 are doubled in the report. The truth is that the only money which can be properly called money, that which is acting singly, is now between $1,500,000,000 and $1,600,000,000, and not $2,100,000,000 as the report of the Secretary shows.

I wish to call the attention of the Senator from Oregon, and other Senators as well, to a matter which I find on pages 40 and 42 of the Finance Report for 1866, giving an abstract of the different acts of Congress authorizing the issue of papers which enter into the circulation of the country. I hope the Senator from Oregon will give me his attention, for I have found repeatedly in this Chamber when I have called attention to these facts that about the only response I receive is a smile, as much as to say, Is it possible that the Senator from Kansas does not know any better? Perhaps that is the case, but I have, ignorantly or otherwise, followed the acts of Congress and the reports of the Secretary of the Treasury.

Mr. DOLPH. I do not understand the Senator's proposition. Will he repeat it? My attention was diverted for a moment.

Mr. PEFFER. Now that I have the Senator's attention, I will state that in the act of June 30, 1861, there was a large number of Treasury notes, 7.30 notes, provided for; and the Senator will find that in the act it is provided that they shall be a legal tender to the same extent as United States notes for their face

value excluding interest, and may be paid to any creditor of the United States at their face value, etc. What does the language that they shall be a legal tender mean if it does not mean—the Senator can answer me after I get through; I wish to take up all this matter at once so that it will be connected—I ask what such language means if it does not mean what the Secretary of the Treasury in his report, I believe for 1864, stated it means, that the 7.30 notes were prepared and issued as a kind of security circulation, so that there would be a double incentive to their circulation; that they should draw interest, and to that extent persons would accept them instead and in place of the United States notes or the greenbacks?

I find on page 43, and also on page 25, that there were outstanding at the end of the fiscal year 1866 $159,000,000, in round numbers, of that particular issue of currency. Then I find that, in the act of March 3, 1863, Treasury notes to the amount of $400,000,000 were authorized; and I find in the same act that they were made a legal tender for their face value, excluding interest. I find that of those notes $120,176,196 were reported as being in circulation at the end of the fiscal year 1866.

Now, turning to the report of the Treasurer, F. E. Spinner, who knew as much about this matter as any other man in this country, I find that, on page 244, Mr. Spinner gives a recapitulation, and I will read it.

Mr. HOAR. Will the Senator before he begins to read point out where those notes are reported as being in circulation?

Mr. PEFFER. Yes, sir; right here. (Indicating).

Mr. HOAR. Now, if the Senator will pardon me——

Mr. PEFFER. I ask the Senator not to interrupt me just at this moment.

Mr. HOAR. A very erroneous impression is made by what the Senator has stated.

Mr. PEFFER. I will come back to it in a moment. On page 244, under a subheading "Outstanding Circulation", I find these words:

Recapitulation of all kinds of Government papers that were issued as money, or that were ever in any way used as a circulating medium, and that remained outstanding and unpaid on the 30th day of June, in the year 1869.

I will read the different classes of notes without giving the figures showing the amounts. Seven and three-tenths notes; that is to say, the 7-30 notes, old issue; 7-30 notes, new issue; temporary loan certificates; certificates of indebtedness; 6 per cent compound interest notes; gold certificates; 3 per cent certificates; old two-year 6 per cent notes; one-year 5 per cent notes; two-year 5 per cent notes; two-year 5 per cent coupon notes; demand notes, payable in gold; legal-tender notes; fractional currency, first series; fractional currency, second series; fractional currency, third series. Then he adds the discount on mutilated currency, making a total of $475,679,033.57 of those different classes of papers which were issued and used for currency during the war still outstanding at the end of the fiscal year 1869.

Mr. ALLEN. The trouble with the Senator from Oregon——

Mr. HOAR. The Senator from Kansas said he would go back to his first statement. As I understand the volume from which he has read, the phrase which the Senator used, doubtless by an inadvertence, does not occur in it. It is not stated that there is so much currency or so much circulation. It is an account of the indebtedness of the United States. When the seven-thirties; which were made face value without interest, had any interest accumulating they could not be made a legal tender without the loss of the interest, and therefore they ceased to be legal tender, ceased to be in circulation, and are properly enumerated as the report enumerates them as indebtedness not in circulation at the time.

Mr. PEFFER. That is the way I intended to give them.

Mr. HOAR. The Senator said in circulation, but doubtless inadvertently.

Mr. PEFFER. I stated what the record shows, the amount of those particular notes still outstanding. Then I referred to the reports on pages 25, 164, and 168, showing that these different classes of paper, as they are termed, had been used among the people as a circulating medium.

I have not said, neither do any of us intend to say, that they were issued originally upon the same plan and with the same object in view to the full extent that the greenbacks were issued, because they were limited to an issue of $400,000,000; but it was found that there was a necessity for a further circulation, a temporary circulation.

The greenbacks were intended for a permanent circulation, but in the midst of a great war there was a need for a greater circulating medium; so there were a great many different shifts and devices resorted to in order to provide circulation, and one of them was these compound-interest notes, one of them was demand notes, one of them 7-30 Treasury notes, and two-year notes, and three-year notes, and so on, and then as a summing up, at the end of the year 1869, after about $1,300,000,000 of this paper currency had been withdrawn from circulation, there was still outstanding $475,000,000, including the greenback circulation that was still out, showing that there were, if I remember correctly, over a hundred million dollars of this kind of paper money in circulation. The Treasurer, Mr. Spinner, who had charge of the entire transaction, the receipt and disbursement of all of this currency, gives it plainly over his own signature that these different classes of paper were used as money at one time or another during the period of their existence.

Mr. DOLPH. If the Senator from Nebraska will allow me, some Senator sitting near me stated that the Senator from Kansas said that silver dollars and silver certificates, and I think gold dollars and gold certificates, were both counted in the current statements of the condition of the Treasury.

Mr. PEFFER. Yes.

Mr. DOLPH. To swell the amount?

Mr. PEFFER. Yes.

Mr. DOLPH. I think the Senator is clearly mistaken about that.

Mr. PEFFER. I think I can show the Senator I am not.

Mr. ALLEN. Let me ask the Senator from Oregon if it is not true that the silver bullion was counted at its commercial value?

Mr. DOLPH. It is not used in the statements. The Treasury notes are used, and very properly, because they are money; but the Senator from Kansas is certainly mistaken in stating that in the current statements of the condition of the Treasury both gold and silver certificates and gold and silver coin deposited when certificates were issued are counted as cash in the Treasury or as money. I hold in my hand the statement for September 1, 1893, which is as follows, as far as gold and silver coin are concerned: Gold coin, general stock coined or issued, $547,516,035; in the Treasury, $78,019,667; amount in circulation September 1, $469,466,368; amount in circulation September 1, 1892, $411,154,411; standard silver dollars, general stock coined or issued, $419,332,450; in the Treasury, $357,677,820; amount in circulation September 1, 1893, $61.654,630. The Senator is certainly mistaken in the statement he makes as to both coin and certificates being counted.

Mr. PEFFER. If the Senator will consult the Statistical Abstract of the United States for 1892, at page 29, he will find a full statement of this whole matter. I will give him the book in a moment. He will find the amount of United States notes and the national-bank notes. There is no fractional currency, and there are no State bank notes. He will find that the total circulation is $1,601,347,187. That includes the silver certificates.

Mr. DOLPH. What amount?

Mr. PEFFER. All that are out.

Mr. DOLPH. What is the amount?

Mr. PEFFER. Three hundred and thirty-one million six hundred and four thousand three hundred and four dollars.

Mr. DOLPH. Exactly; and how much silver coin?

Mr. PEFFER. Silver dollars in the Treasury and in circulation.

Mr. DOLPH. And in circulation.

Mr. PEFFER. Four hundred and ninety-one million fifty-seven thousand five hundred dollars.

Mr. DOLPH. Exactly. That is not counted in making up the gross amount of money in circulation.

Mr. PEFFER. That is just what I say; it ought not to be counted, because it is covered by certificates.

Mr. DOLPH. I was told the Senator said it was.

Mr. PEFFER. The statement that was read from the desk puts the total of money at $2,303,000,000, when in truth it is only $1,600,000,000. That is the point I made, and if I have not proved it I am mistaken.

Mr. DOLPH. I desire to make one further suggestion which ought to go into this discussion. I have already stated the fact that during the years 1861, 1862, 1863, and 1864 the population which was accommodated by this circulation was decreased by reason of the secession of certain Southern States, and United States currency was not used in those States. Another fact must be taken into consideration: All our currency was depreciated. Our circulation was mainly legal-tender notes which were worth much less than par, and it took a larger amount of depreciated money than of the present currency to accommodate a given number of people.

Mr. STEWART. I should like to ask the Senator from Oregon one question.

Mr. DOLPH. I am occupying the time of the Senator from Nebraska.

Mr. ALLEN. All right.

Mr. STEWART. Does the Senator think we have too much circulation now?

Mr. DOLPH. Oh no, I do not think so.

Mr. STEWART. The Senator does not think we have too much?

Mr. DOLPH. No. Does the Senator from Nevada?

Mr. STEWART. I do not.

Mr. DOLPH. Then we agree upon that point.

Mr. STEWART. Does not the Senator think we ought to have some more as our population increases?

Mr. DOLPH. I think the circulating medium ought to be increased as the population increases.

Mr. STEWART. How would the Senator increase it?

Mr. DOLPH. I am not prepared to submit a plan now. I am in the minority. Let the majority do that.

Mr. STEWART. Has the Senator any idea how we could get a larger circulation?

Mr. DOLPH. There are a good many ways. I do not propose to interrupt the Senator from Nebraska to go on and make a suggestion as to a financial plan. That is for the Administration to do.

Mr. ALLEN. I will yield to the Senator from Oregon ample time to answer the question. The trouble with the Senator from Oregon is that he is contending all the while that the per capita circulation was smaller than I have stated it to be, and he does not admit that any of the notes and certificates and evidences of indebtedness which I have described were any portion of the volume of money in circulation in 1865.

Mr. DOLPH. No, the law read by the Senator from Kansas is to the effect that they were legal tender for the face, not including interest. Suppose half a year's interest accrued, three cents and a half on every dollar, is it likely that they would be circulating, that people would pay debts with them when they could pay with currency and sell those notes at a profit for currency? They were just as much the obligation of the Government as bonds, and they were not in circulation when worth more than the face.

Mr. ALLEN. It is known that these notes were in circulation, and it is true that many of them were bought up and used for banking purposes, but they simply went into the banks and put into circulation other money and currency that was used so that the total volume of money was just as great whether they eventually went out of the hands of the people as if they had remained in circulation. It was the contraction of that volume of currency, embracing all of the different items I have mentioned, that started the decline of prices and the decline of products in this country.

But the trouble with the Senator from Oregon, the trouble with the Secretary of the Treasury, the trouble with gentlemen dealing with this question is they will not let the people of this country know the truth about it. When they come to make up their calculations as to the amount of money in circulation and the per capita, they exclude all these items, Senators in this Chamber know were actually used as money in 1865 and for some time afterward. There is the trouble. It is a suppression of the truth, which is as bad as the expression of a falsehood. It is because Senators will not talk out plainly, because the Secretary of the Treasury will not tell the people the truth about this matter that there is so much higgling and questioning about per capita circulation. The truth is it was over $47 per capita, as proved by the Senator from Kansas. According to the report from which he read, it amounted to more than that up to the close of the war.

Mr. ALDRICH. Will the Senator allow me to interrupt him for just a moment?

Mr. ALLEN. I ask the Senator to wait a moment until I finish with the Senator from Oregon. At the close of the war something like 11,000,000 people more were to be supplied with the same volume of money. That, of itself, caused a less per capita sum of money; and in addition to that, as was declared by Gen. John A. Logan in the lower House in 1874, as found in the CONGRESSIONAL RECORD of that year, on page 139, the circulating medium was actually contracted $1,018,167,784 by the process of calling in this paper, and absolutely destroying it and taking it out of circulation.

Now I will yield to the Senator from Rhode Island.

Mr. ALDRICH. It may seem intrusive to take the Senator's time to answer a statement made by the Senator from Kansas, but I trust the Senator will be courteous enough to allow me to say just a word in regard to that point.

Mr. ALLEN. Certainly.

Mr. ALDRICH. The Senator from Kansas made a statement which, if it were true, would be a serious indictment of the Treasury Department and of the statistics which that Department sent to the Senate. He stated that in the published reports showing the per capita circulation of the United States both silver certificates and silver dollars against which the silver certificates were issued were counted. I hold in my hand the statement to which the Senator referred.

Mr. PEFFER. I referred to the statement made here.

Mr. ALDRICH. Which was read at the Clerk's desk?

Mr. PEFFER. Yes.

Mr. ALDRICH. This statement shows that in 1892 the total amount of money in the United States was a trifle over $2,000,000,000; amount in circulation, $1,601,000,000; per capita circulation, $24.41. In the amount in circulation the silver certificates and the silver dollars are not both included, as will appear from the detailed statement which I have here.

Mr. PEFFER. Now, will the Secretary please read again what he read a few moments ago?

Mr. ALDRICH. I have it in my hands.

Mr. PEFFER. Just read the statement for 1892.

Mr. ALDRICH. Eighteen hundred and ninety-two: Amount of money in the United States, $2,372,000,000; amount in circulation, $1,601,347,167; circulation per capita, $24.41. It shows that the Senator was mistaken, and I thought the matter of enough importance to call the attention of the Senate to the fact.

Mr. PEFFER. That is all right.

Mr. ALLEN. The Senator from Rhode Island will, I think, agree with me that the reports of the Treasury Department are very unsafe guides sometimes.

Mr. ALDRICH. I do not agree with the Senator at all upon that subject. They are not unsafe guides if they are properly understood.

Mr. ALLEN. In 1892 the Secretary of the Treasury gave the per capita circulation of this country at $25.38. The very last report in the Harrison Administration, made, I think, some time in February of the present year, gave the circulation at $25.38; and in less than sixty days from that time the Cleveland Administration put it down to something like $23. I will not undertake to state the exact amount. So it seems to make a little difference who has control of the Treasury Department upon the question of per capita circulation.

Now, I should like to ask the Senator from Rhode Island what money has been retired in this country since that time, or what has taken place in the financial history of the nation since the report of the Secretary of the Treasury under the Harrison Administration to cause a decrease in the per capita circulation of something like $2?

Mr. ALDRICH. I have no knowlege of the statements the Senator refers to. I have never seen them. If I had them here I think likely I could remember.

Mr. ALLEN. I speak in round numbers. It will be found in the report of the Director of the Mint for 1892.

Mr. ALDRICH. I have no idea of entering into a discussion with the Senator from Nebraska in regard to matters which I have not within my knowledge.

Mr. ALLEN. I speak of this for the purpose of showing that these reports are only approximately true, that they can not be taken as reflecting the actual fact. We all understand that the last report of Mr. Harrison's Secretary of the Treasury put the circulating medium of this country (and when I speak of circulating medium, I mean everything that operates as money) at something like $25 per capita.

I do not pretend to give the exact figures, but that was the amount approximately. And yet within something like seven months from that time the Cleveland Administration gave it as about $23 per capita. I ask any Senator in this Chamber to point out to me what the difference has come from. From what legislation? What has been done at the Treasury Department to make the difference? Mr. President the people of this country will not be imposed upon by statements of that kind.

Mr. HOAR. Has the Senator the statement in his possession?

Mr. ALLEN. I am speaking, if the Senator from Massachusetts pleases, in round numbers. I will send out and get the figures, if desired.

Mr. HOAR. I am not speaking about the exact dollars or cents, but my question was if the Senator has in his possession the statement of the Cleveland Administration to which he refers?

Mr. ALLEN. I have not the report of the Director of the Mint. I will get it in a short time. Possibly I have it here.

Mr. HOAR. I should like to see it.

Mr. DOLPH. When does the Senator from Nebraska say the amount was $1,600,000,000?

Mr. ALLEN. I say it was reported under the Harrison Administration as being something like $1,600,000,000.

Mr. DOLPH. The table I had read shows the amount in 1892 to have been $2,372,599,501.

Mr. ALLEN. That is the compilation made very recently, I think.

Mr. DOLPH. This was issued in 1892, the last year of the Harrison Administration.

Mr. ALLEN. Mr. President, I do not propose to take a pencil and go to figuring upon this subject, and get down to a question of fractions. The truth is that the people of this country

understand that the statistics are manipulated, and they are manipulated to deceive the masses of the people.

Mr. WHITE of Louisiana. Will the Senator be kind enough to give some statement of the manipulation, so that we can understand him? Will he be kind enough to give us some fact?

Mr. ALLEN. Mr. President, I do not propose to stand here and answer such questions as are put to me by the Senator from Louisiana. I am speaking in round numbers of the amount of money reported. I am speaking of what thousands of people of this country believe, and what I believe.

Mr. WHITE of Louisiana. Will the Senator allow me to interrupt him?

Mr. ALLEN. Certainly.

Mr. WHITE of Louisiana. The Senator says he does not propose to answer such questions as I ask. The Senator, under the responsibility of the great office which he fills here, has seen fit to rise upon this floor and state that the people of this country know the reports of the Treasury Department are fabricated and manipulated.

Mr. ALLEN. The Senator from Nebraska said nothing of the kind.

Mr. WHITE of Louisiana. What did the Senator say?

Mr. ALLEN. I said that the people of this country believe that the reports are manipulated, and instances have been cited.

Mr. WHITE of Louisiana. Manipulated?

Mr. ALLEN. And I said the Senator from Nebraska thinks so, and I say so again.

Mr. WHITE of Louisiana. Then I ask the Senator from Nebraska will he be kind enough in making such a grave and serious charge as that to give us one statement of fact, and not his opinion to justify that which he has said, so that we can meet him in debate and not rely upon the mere loose expressions of an opinion when he prefers a grave charge and points to no single fact which sustains it.

Mr. ALLEN. The Senator from Nebraska will pursue his own course in this debate, as long as he keeps within the rules of debate, and I do not propose to go into any further particularization upon this proposition. Instances have already been cited and fully read—I repeat it, and I know what I say—you can find it in the country press, you can find it in the expressions of the people that there is almost a universal distrust of the accuracy of these statistics. Who does not know that it is in the mouth of all the people that the census of 1890 was a fraud? That is the belief of the people of this country, and when I say the people, I mean the people with whom I have come in contact, and they number a good many thousands in the States over which I have traveled. It is believed that the census of 1890 is a rank fraud, and yet that census was conducted by a great officer selected for that purpose. The people of this country believe the census was manipulated, to put it in no stronger language, for the very purpose of deceiving them.

Now, Mr. President, when the Secretary of the Treasury undertakes to put out a statement as to the amount of money in circulation, the per capita in circulation, why does he not tell the people that the certificates of indebtedness, interest-bearing notes and similar forms of currency are not reckoned in that account? Why does he lead them to believe that all the things they knew as a part of the currency twenty-five or thirty years ago were taken into the account, when, as a matter of fact, he does not take them into account? Why does he not tell them that? Why does the Senator from Oregon and other Senators constantly reiterate in this Chamber that the circulation per capita is greater than ever before, when they tacitly admit that to count the certificates of indebtedness, to count all the notes which were in circulation, there was a per capita circulation in 1865 of almost double the per capita circulation to-day?

Mr. KYLE. Will the Senator from Nebraska allow me?

Mr. ALLEN. Certainly.

Mr. KYLE. I should like to ask the Senator why it is, in his judgment, that the present Secretary of the Treasury, or the one who was his predecessor, does not include in the circulating medium the 7.30 notes and others mentioned by John Jay Knox when Comptroller of the Treasury and by Treasurer Spinner, and included also in the report by President Grant himself and other distinguished Republicans before him?

Mr. ALLEN. Mr. President, I do not know. The ways of Republican and Democratic politicians are beyond my comprehension.

Mr. KYLE. I should like to ask whether those are not specific instances in which the accounts have been manipulated by the late Secretaries of the Treasury?

Mr. ALLEN. I think so. I think everybody understands that. Instances have been fully cited, as I have before stated.

Mr. KYLE. I think the question of the Senator from Louisiana is satisfactorily answered.

Mr. ALLEN. Now, Mr. President, in 1864 there were in round numbers in circulation in this country, including all forms of money, greenbacks, postal and fractional currency, interest-bearing legal-tenders, certificates of indebtedness, national-bank notes, old State-bank circulation, $941,000,000. Adding to that $836,000,000 of 7.30 Treasury notes, which Mr. Spinner said were engraved, stamped, and paid out to the soldiers as legal-tender money, it makes when the war closed $1,771,000,000 in circulation.

Mr. SQUIRE. I should like to ask as a question of fact, is it true that the last item read by the Senator from Nebraska was in circulation? I do not so understand it.

Mr. ALLEN. The Senator from Washington is an older man than I am, and I have seen those notes in circulation. I was not at that time running any portion of the Government, but I know they were in circulation. As a soldier I know that; and if the Senator from Washington was where that kind of money was paid out he got some of it.

Mr. SQUIRE. I was a soldier, and I am very proud to learn that my friend from Nebraska was a soldier. I served for nearly four years during the war. I never had any of that kind of money in my possession; I never saw it circulated as money, and I never heard of it except that I heard the same statement made once before, but I have never heard it corroborated.

Mr. ALLEN. On the 30th of June, 1873, Secretary Sherman reported the paper circulation of this country to be $750,062,000, so that between 1865 and 1873 there had been a contraction of something like $1,021,000,000. Gen. Logan, in the speech I have just referred to, put the amount at $1,018,167,784.

Mr. PEFFER. Within what dates?

Mr. ALLEN. Between October, 1865, and June 30, 1873. Now, there is the source of much of the trouble experienced in this country at that time. What was the condition of the country? Concurrently with the contraction of the money the tramp made his appearance in the country.

There was a constant increase in the number of failures and the amount of money lost in failures. There was not a tramp act upon the statute book of any State in the United States of America before the great contraction of 1865 to 1873 which brought ruin and destruction to thousands of homes in this country. Then for the first time there appeared upon the statute books of many States legal enactments which declared certain men to be tramps who were going from house to house begging, or asking for something to eat or for clothing, and declaring penalties against them, when they were simply victims of currency contraction.

I recall well, and let me ask the Senator from Washington if he recalls, the fact that those tramps went from the East into the great Mississippi Valley and into the trans-Mississippi country by the thousands in 1873, 1874, 1875, and 1876. They went there by the thousands, and why? Simply because the volume of money had been contracted until there was a contraction of business, and constant failures in business; and the man who depended upon his daily work for his support was thrown out of employment and compelled to seek new fields of labor.

Yet, Mr. President, we are told that this infamous system of contraction must go on. It is true that we are not told it in so many words; but when Senators undertake to repeal the act of 1890 without giving us anything in place of it, when they undertake to stop the output of necessary money, when they undertake to compel the volume of money of this country to stand still, while its population and its wealth are increasing, they tell us effectually by the attempt to inaugurate a system of that kind that the volume of money to-day is too large and that we must go to a gold basis, deserting the silver of the Constitution.

Mr. SQUIRE. Will the Senator refer to this pamphlet, showing the amount of money in circulation in the United States on July 1 of each year from 1860 to 1892, inclusive? It is an official document, and I ask him if it is correct or not correct. It shows an increase every year from 1860 down to 1892.

Mr. ALLEN. I do not think I will permit the Senator from Washington to inject anything into my speech.

Mr. SQUIRE. But the Senator asked me a question.

Mr. ALLEN. I will examine the document the Senator hands me, and if it is an official document and germane to the discussion I will introduce it later in my remarks.

Mr. PEFFER. All that has been gone over.

Mr. SQUIRE. I did not hear it.

Mr. ALLEN. I have no desire to run away from this discussion. If I am wrong I am perfectly willing to stand here and acknowledge it. I have no caprice, no pride to serve in this matter.

Mr. SQUIRE. If the Senator will allow me, I am told by those who sit near me that this matter was brought up before, and therefore I will not renew it. I will withdraw the question. In my absence it was brought up.

Mr. ALLEN. I read from page 72 of the volume entitled "The Philosophy of Price, and its relation to the Domestic Currency," by N. A. Dunning:

Undue contraction, on the other hand, is fraught with like evil to the same

classes. I can not better illustrate this than by quoting from Sir Archibald Alison, in his England in 1815 and 1845; or a Sufficient and Contracted Currency, wherein he says:

"The period of a contraction of the currency and consequent fall in the money prices of all the articles of human consumption is one in which great profits are sure to be realized by the larger capitalists and great losses sustained by the smaller. The former prosper because the magnitude of their transactions enables them to realize a handsome income upon the whole from a declining and, at length, almost inconceivably small amount of profit from each transaction; and they gradually get the monopoly of the market in their own line of business by the extinction of the lesser capitalists whom the fall in the price of commodities has ruined, or the diminished profits have repelled from entering into competition with them.

* * * "Small traders, therefore, and farmers without capital are speedily ruined in such a state of things, and the laboring or destitute condition is only rendered the more distressing by the contrast which it affords to the wealth and splendor with which the holders of large capital in the same line of business are surrounded. * * * A period of contracted currency is one of embarrassment, difficulty, and generally, in the end, of insolvency to the small farmer and moderate land owner.

* * * "If a supply proportioned to the increase of men and the wants of their commercial intercourse is not afforded, the circulating medium will become scarce; it will rise in price from that scarcity, and become accessible only to the more rich and affluent classes. The industrious poor, or those engaged in business but possessed of small capital, will be the first to suffer."

I ask if that has not been the experience of the poorer classes of this country. The poorer classes of this country have always suffered, as they must always suffer, as the first victims of a contracted system of money. Every panic in this country—I say it deliberately—from the organization of this country down to the present moment, has marked the minimum in the circulating medium of the country. There never was a panic from the first time down to this moment when the circulating medium of this country had not reached its minimum, and as a result of contraction combined with other causes a panic ensued.

So to-day we are asked to continue this infamous system of contracting the currency. We are not only asked to do that, but we are asked to enlarge the opportunity of the national banks to grind the face of the poor by extending their power to issue money to the par value of their bonds with almost unlimited and unchecked power to contract or expand it at their will. We are asked to put in possession of the banks and banking corporations of this nation the financial welfare and destiny of our people.

We are asked to abdicate the power to make and control money. We are asked to abandon the sovereign power of making and regulating the value of money, placing these powers in the hands of men whose profit consists in shrinking the prices of property and shrinking the values of labor.

Continuing, and quoting from Doubleday's Financial History of England:

As the memorable 1st of May, 1823, drew near, the country bankers as well as the Bank of England naturally prepared themselves, by a gradual narrowing of their circulation, for the dreaded hour of gold and silver payments on demand, and the withdrawal of the small notes. We have already seen the fall in prices produced by this universal narrowing of the paper circulation. Ths effects of the distress produced all over the country, the consequence of this fall, we have yet to see.

The distress, ruin, and bankruptcy which now took place were universal, affecting both the great interests of land and trade; but among the landlords whose estates were burdened by mortgages, jointures, settlements, legacies, etc., the effects were most marked and out of the ordinary course. In hundreds of cases, from the tremendous reduction of the price of land which now took place, the estates barely sold for as much as would pay off the mortgages; and hence the owners were stripped of all and made beggars.

I was myself personally acquainted with one of the victims of this terrible measure. He was a school-fellow, and inherited a fortune, made principally in the West Indies. On coming of age and settling with his guardians, he found himself possessed of fully £40,000, and with this he resolved to purchase an estate, to marry, and settle for life. He was a young man, addicted to no vice, of a fair understanding, and most excellent heart, and was connected with friends high in rank and likely to afford to him every proper assistance and advice. The estate was purchased, I believe, about the year 1812 or 1813, for £80,000, one moiety of the purchase money being borrowed on mortgage of the land bought.

In 1822-'23 he was compelled to part with the estate in order to pay off his mortgage and some arrears of interest, and when this was done he was left without a shilling, the estate bringing only half of its cost in 1821! Thus, without imprudence or fault of any kind was this amiable man, together with his family, plunged into irretrievable and inevitable ruin, by the act of a Legislature which ought to have protected both, and which was fully warned of the consequences of what it was about to do; but which, in requital, chose to laugh those who warned to utter scorn. My readers must not suppose that this was either an exaggerated or uncommon case. On the contrary, the country teemed with similar examples, and on commencement of the session of 1823 the tables of both houses were loaded with petitions detailing scenes of hardship and destitution appalling in the extreme.

Now, Mr. President, there is a complete illustration of what is taking place in this country to-day. I know that it is a common thing for a great many gentlemen and newspapers in the East to say that the party to which I have the honor to belong is a wild and woolly party, and makes statements which are not strictly correct; but I say to these gentlemen that farms in many of the Western States are passing into the hands of corporations by the thousands. I make a statement which is capable of demonstration.

Mr. PALMER. Will the Senator from Nebraska allow me to ask him a single question?

Mr. ALLEN. Certainly.

Mr. PALMER. I am quite well aware of the embarrassments of the farmers of the West, but has there in fact been any reduction of the amount of money in circulation in the last ten years?

Mr. ALLEN. I can only answer the Senator by saying that when you reduce the price of wheat from 75 to 50 cents a bushel, when you reduce the price of oats from 30 to 18 cents, when you reduce the price of corn from 35 to 20 cents you might ask if there is a decrease of money in circulation among the people who produce this grain.

Mr. PALMER. I have felt the force of what the Senator states very much myself in my own person; but the question I have asked him is, has there been any reduction in the circulation? Now, the cause of the reduction of prices may be a different thing; but has there been any reduction in circulation? He attributes in some measure the reduction in prices to that cause. I understand there has been no reduction in the circulation. Then it must be attributed to some other cause, as I suppose.

Mr. ALLEN. I do not know that I fully understand what the Senator from Illinois means in the reduction of circulation. If a man produces a crop in 1893 that will bring him $1,000 and in 1894 produces identically the same quantity and it will bring him only $800, it occurs to me there is a deficit of $200 in his case.

Mr. PALMER. I infer that there is less demand for his product, but the simple question is, is that reduction the consequence of a reduction in the amount of the circulation of money?

Mr. ALLEN. That is a most fatal confession for the Senator from Illinois. The Senator from Illinois infers there is not so great a demand for his product, and what does that mean? It means that money is so scarce among the consuming classes that they are compelled in some measure to go hungry, and are unable to purchase the product.

Mr. PALMER. May it not be overproduction.

Mr. ALLEN. I will have occasion before this debate is through to show that from 1808, when the senior Mill wrote his first works upon political economy, there never was a grander humbug imposed upon a civilized people than the doctrine of overproduction.

Mr. PALMER. Very well. Let me ask my friend from Nebraska, has the circulation been reduced? If not, then that argument fails. Is not that logical?

Mr. ALLEN. I do not yet understand what the Senator from Illinois means by asking whether the circulation has been reduced.

Mr. PALMER. The Senator will allow me to state that the circulation has increased rather than diminished, as I understand from the tables read this afternoon. That is, there is a larger amount of money per capita in circulation this year than there was the year before. Yet prices have fallen. If prices have fallen it has not been because the amount of money in circulation has diminished; it must be attributed to some other cause, as I think.

Mr. ALLEN. I understand the Senator from Illinois to say that the circulation has rather increased than diminished?

Mr. PALMER. I understand so.

Mr. ALLEN. That is, the per capita circulation?

Mr. PALMER. Yes, sir.

Mr. ALLEN. But the Senator from Illinios does not seem to take into account the fact that among the common people of this country (I mean the class of people who earn their livelihood by toil, mental and physical, and not the fellows who are handling gold and money as an occupation) there is not actually to-day in circulation $15 per capita.

Mr. PALMER. I agree with the Senator.

Mr. ALLEN. But the great quantity of the money of this country of which Senators speak so frequently and refer to as increasing in volume is to be found in the form of reserves, in banks and organizations of that kind, and is as useless to the masses of this country as though it were in the bottom of the ocean.

Mr. SQUIRE. How are you going to get it out?

Mr. PALMER. I still agree with the Senator; but will it not be so under any monetary system?

Mr. ALLEN. No, sir; it will not be so when the volume of currency in this country is increased, not inflated, but whenever it is gradually and healthfully increased. The Senator from Washington asks me how we are going to get it out. I will answer him. When there is more honest money made in manufacturing and in farming than there is in banking and buncoing the country through banks and other organizations, then that money will be compelled to go out and get into active production and employ labor.

Mr. PALMER. The Senator, I understand, means to assert that under new conditions the people will earn a larger proportion of the common fund than they do now.

Mr. ALLEN. Let me illustrate for the benefit of the Senator. When water reaches the top of the bank and goes above it, it overflows, does it not?

Mr. PALMER. That is the law.

Mr. ALLEN. Water and air and all the elements seek an outlet, do they not? Money seeks an investment where it will make money, does it not?

Mr. PALMER. That is the rule, I think.

Mr. ALLEN. Now, the volume of money is by slow, certain, and safe processes increased—not suddenly inflated, but increased safely—so that when the man who has his money in banking or the curbstone broker can make more with it by putting it in factories, in something that will employ labor; then under those circumstances, it will go into productive business and give employment to labor, and it is in circulation.

Mr. PALMER. Certainly.

Mr. ALLEN. Then it is in circulation. What does that mean? It means that every tramp, every poor honest person beneath the sun has an opportunity of earning an honest living.

Mr. SQUIRE. If the Senator will permit me I should like to have him discuss one point a little further. In answer to my question as to how the money can be gotten out he goes on to speak about the banker and the curbstone broker, and all that sort of thing. I ask him whether he does not consider it desirable that there should be banks in his State; whether it is not to the advantage of the Western communities, such as he and I have the honor in part to represent, to have banks there; whether we do not get more money through the organization and establishment of banks than we did before they came there; whether every community in the West does not welcome such an institution; and whether we do not get more money in that way? That is the experience in my part of the country. We want banks and we want capital. In the first place, we want men, good men, working men; and secondly, we want capital.

Mr. ALLEN. The Senator from Washington puts a question that I have heard put a great many times. It is a very common thing. I mean no disrespect to the Senator from Washington when I say that the gold bugs usually stand around and put this question. I mean simply to say that the Senator puts a question I have heard put a hundred times.

Mr. SQUIRE. I sympathize with the Senator on this question in many respects. I am for more money, and I want it to get into the West.

Mr. ALLEN. Allow me to say that the Senator from Washington does not seem to understand my position. I am not an enemy of legitimate banking. I recognize the fact that legitimate banking is so fixed in our commercial affairs that it is a necessity. As far as legitimate banking interests are concerned in this country I am friendly to them. But when it comes to a point where more money is to be made in this country by banking than in honest industry there is something wrong in the banking system. Let me say to the Senator from Washington that I live in a county having something like 17,000 population. In that county there are twelve banks, three or four of them national banks, all banks of capital, absolutely safe, and three banks in that county could do every dollar's worth of honest banking business there is to be done there.

Mr. SQUIRE. I ask the Senator is there not a benefit from having a multiplication of banks in this respect, that there are more men to give ear to applications, and to diversify the arrangement in reference to loans? Instead of having the business confined to a few people, so that access to the bank is limited, is it not better to have it distributed somewhat?

Mr. ALLEN. Not necessarily so.

Mr. SQUIRE. We find it so in my town.

Mr. ALLEN. When the banking business is more profitable, and a man can make more out of his money by hoarding it and banking with it than he can by using it in some productive industry, then the system of banking is wrong.

Mr. SQUIRE. I do not think we have too many in our State.

Mr. ALLEN. Many of your people, through the rates of interest and the manipulations of money, are feeling the effects of the system to-day; and many of them are being deprived of their property and of the beneficial result of their labor.

Mr. SQUIRE. We have not had a bank failure in my town.

Mr. ALLEN. I am not talking about a bank failing, but I am talking of the money that is taken out of manufacturing, the money that is taken out of productive industry, and the great army of honest men and honest women who are compelled to stand idle and beg for bread in the streets, or for an opportunity to labor, in consequence of capital being hoarded that ought to be in productive enterprises of some kind giving men employment.

Mr. SQUIRE. I ask the Senator if it is not true that during the past year—it has been well advertised—the farmers of the State of Nebraska have retired large amounts of mortgage loans? Is not that true of the farmers in Kansas and Nebraska? It was stated repeatedly last year that they were prosperous, and on account of it they retired a large amount of their mortgages. It has been stated that even as high as half of all the outstanding mortgages were retired by the proceeds of the sale of their grain last year.

Mr. ALLEN. I can not speak for Kansas. In the State of Nebraska a great many mortgages have been retired, it is true, but I want to say to the Senator from Washington the way some of them were retired was by foreclosure. I state what is the truth when I say that a portion of them—I do not pretend to state the percentage, but a portion of them—were retired in consequence of foreclosure of the mortgage, and in consequence of the sheriff selling out the mortgagor. Then they were marked upon the record as paid. Of course they were paid.

Mr. SQUIRE. I think the Senator needlessly brings discredit upon his part of the country.

Mr. ALLEN. Let the Senator from Nebraska take care of his own State.

Mr. SQUIRE. I do not wish to interfere with the Senator's remarks, but——

Mr. ALLEN. I do not say that the majority of the mortgages were foreclosed.

Mr. SQUIRE. I should like to have the West given credit for what it deserves.

Mr. ALLEN. I do not say that the majority of the mortgages are so, but I do say that it is true of a great portion of the mortgages of that State, and I say that a portion of the mortgages in the Senator's own State are marked canceled in consequence of the same law of foreclosure. That is the rule throughout the entire country. There is no use undertaking to disguise the fact. You can not deceive the American people by asserting strongly that they have a sufficient amount of money. They understand that the suffering under which they are laboring today is because of a restricted volume of money, and their consequent inability to get just compensation for their labor and property.

Mr. PALMER. May I be allowed to ask the Senator from Nebraska a question?

Mr. ALLEN. Certainly.

Mr. PALMER. Is there any less money per capita in circulation now than there was when these mortgage debts were contracted?

Mr. ALLEN. I think so.

Mr. SQUIRE. Will the Senator allow me one moment?

Mr. ALLEN. Certainly.

Mr. SQUIRE. I should like to see more money in the country, particularly in the Western part of it. I sympathize with the Senator on many points, but I do not like to have him misrepresent, as I think he does, the fact in regard to the payment of mortgages. I know it is not true of mortgages in the State of Washington; and I had not supposed it was true of mortgages in the State of Nebraska, that the payments made are upon foreclosures and sheriff's sales. It has been repeated over and over again, not this year but last year, that very large amounts of the mortgage indebtedness of the people of the State of Nebraska and Kansas were paid off from the proceeds of their crops for the year. I supposed it to be true, I hoped it to be true, and I do not like to have words said here in this public way in the Senate of the United States that throw a cloud upon the people of the West and their enterprise, and all that relates to their growth and prosperity.

Mr. ALLEN. I must absolutely decline to suffer the Senator from Washington to give me instruction about the State of Nebraska and its condition. I know something about the State, and I assert again that I do not say that is the rule in the State of Nebraska——

Mr. SQUIRE. That is all I ask. If the Senator admits it is not the rule it is all I ask. I understood him differently.

Mr. ALLEN. No, I did not say it was the rule, and the RECORD will not bear out that construction at all.

Mr. SQUIRE. I so understood the Senator.

Mr. ALLEN. I said, and I repeat, and I hope the Senator from Washington will understand me, that a great many of the mortgages which are marked paid and cancelled are cancelled in consequence of the foreclosure and extinguishment of the title of the mortgagor. Now, is that plain? That is what I said, and I repeat it, and it is true.

Mr. SQUIRE. It is not true of my State.

Mr. ALLEN. I say to some extent it is true of the Senator's own State or the reports from his State are incorrect.

Mr. SQUIRE. The statistics will not show it. You can not show one. I defy you to show one.

Mr. ALLEN. I am not carrying my pockets full of statistics. If I had known I was to have this colloquy with my friend from Washington I would have brought the statistics here.

Mr. HAWLEY. With the Senator's permission I will put my little contradiction in for my State.

Mr. ALLEN. I am glad to hear from my friend from Connecticut. I understand that the agricultural population of the

State from which the Senator hails has changed considerably in the last twenty-five or thirty years. I may be mistaken in that, and if I am I should be pleased to be corrected. I ask the Senator from Connecticut if it is not true that throughout the New England States generally people of the old stock who settled that country and opened it up in agriculture have in a great many instances been driven from their farms, and if those farms are not to-day being settled by French Canadians and people of that class? Is not that true?

Mr. HAWLEY. I do not feel disposed to help the Senator out in prolonging this debate by entering into a discussion of the resources and character of my people; but I can say very briefly that there have been great changes in the industrial condition of New England; that the villages and cities have grown as the common law of civilization in England and America; that the urban population has grown more than the rural; but I can say that there are more separate land holdings in Connecticut now than there ever have been before; the State is more cut into small farms. As to the upland farms away back—you can not get far from a railroad, you can not get out of hearing of a whistle in my State, but you can get 8 or 10 miles away from a station, and there a farm is not worth near so much as it is near the thriving villages sustained by protection, where there is a good market for everything the farmer can raise. On the whole, thank you, sir, the State is very prosperous, with $120,000,000 in savings banks. The amount has been very slightly reduced lately.

Mr. ALLEN. The Senator from Connecticut does not answer my question.

Mr. HAWLEY. What was it?

Mr. ALLEN. I put the question to the Senator if it was not true that many of the farms of New England to-day, including the State the Senator represents, are passing into the hands of French Canadians and the old population have been driven away from them.

Mr. HAWLEY. My dear sir, we are just in Connecticut and just in America. As to the Senator and myself, I have been here two hundred years, constructively, but that is nothing in the history of the world. Of course our people are changing. My grandfather and grandmother on one side were Scotch people, born in the Highlands, and they owned a little property after they got here. Good Scotchmen, good Englishmen, good Irishmen, good Germans, good French Canadians come into my State. The French Canadians came in large numbers, and at first they spent six months, earned $100, and went back thinking they were rich. Now, they have been for some years settling there. I can take a new village and point out rows, streets I might say, of comfortable homes inhabited by French Canadians with good American-French Canadian children growing up there, of course going to school and becoming good people. Of course we are undergoing changes. It is true of Connecticut that fully one-half of her people are either natives of some foreign country or the children of one or both foreign parents. That is one of the inevitable things we can not help. But I am happy to say with regard to a large portion of that adopted population, it is rooting itself in the soil, and many of the French and Germans get out of the villages and up into the hill country and pick up a farm from which a Yankee has gone away who could do better somewhere else.

Mr. ALLEN. The Senator from Connecticut does not answer my question yet.

Mr. HAWLEY. Try it again, then. I will answer everything.

Mr. ALLEN. I ask the Senator from Connecticut if it is not true that the native population—not all of them, understand, but a portion of the native population of New England—have not been compelled to abandon their farms, and if they have not been succeeded by a cheaper class of labor?

Mr. HAWLEY. They have not been compelled to abandon their farms.

Mr. ALLEN. The Senator from Connecticut says they have not been compelled to abandon their farms, and yet I say it is currently believed throughout this country that there are thousands of vacant farms in New England.

Mr. PEFFER. They advertise them.

Mr. HAWLEY. There are.

Mr. ALLEN. I have a friend living in the State from which the Senator comes, and not later than June of the present year he told me that there is farm after farm in that State with a good, tenantable house that is absolutely abandoned.

Mr. HAWLEY. There are houses in plenty and farms in plenty for sale there.

Mr. ALLEN. And my friend says the farms are not only abandoned to-day, but they have been abandoned for years, and the only class of people who are settling in those hills and valleys is a class of cheap laborers from another country.

Mr. HAWLEY. I deny the debased labor. They get as good wages as any Yankee—every one of them.

Mr. ALLEN. They probably deserve it more.

Mr. HAWLEY. You can not expect our people ——

Mr. ALLEN. That is the condition. The Senator from Connecticut speaks of his own State.

Mr. HAWLEY. Will the Senator just wait a moment?

Mr. ALLEN. Certainly.

Mr. HAWLEY. When land in my State costs $10, $20, $30, $40, $50, and $60 an acre, how do you expect us to raise wheat and products of that description in competition with the West where the land cost $1.25 an acre and the freight is away down not more than a mill or a mill and a half a ton? Of course, they compete with our cheaper and coarser kinds of farming, but our people turn themselves to dairying and to market gardening, and a great number of things of that sort, and they manage to live. Do not disturb yourself about the death of the Yankee there. Put him on a bare rock and he will make money trading if there is another man on the rock.

Mr. ALLEN. I have no doubt of it.

Mr. HAWLEY. Turn him out of the Union, if you please, and he will make a profitable bargain to get back the next week.

Mr. ALLEN. The Yankee lineage of the Senator from Connecticut is no more extensive than mine. My ancestors settled in New England long before the Revolutionary contest. So the Senator from Connecticut has no advantage of me in that respect.

Mr. HAWLEY. About a hundred years ahead of you. Mine settled there in 1639.

Mr. ALLEN. Mine were there at least long before New England was developed. But still the Senator evades the question; and that question is whether there are not farms by the thousand in New England which have tenantable houses that have been absolutely abandoned by the native population. I say there are.

In some instances the native population have been succeeded by a lower class of labor; I do not say a dishonorable labor or an undesirable class of people; but by a class of laborers who can work cheaper than the native population. The native population is gathering into cities and villages. Since the Senator from Connecticut and his people have found out that they can pull the wool over the eyes of the people of this country through tariff taxation, and live upon exactions of that kind, they are perfectly willing to abandon the farms. It is a lucrative field to loot the other industries of this country.

Mr. HAWLEY. My colleague [Mr. PLATT] gives me the figures, which I should like to go in here to show the suffering condition of the Connecticut farmers.

Mr. ALLEN. I can not suffer the Senator to interrupt me further. He has admitted that there are thousands of vacant farms in New England, and that the Yankee farmers in the hill country are being supplanted, in a degree, by foreigners. That is sufficient.

Mr. HAWLEY. It is in answer to the Senator's question.

Mr. ALLEN. I can not suffer the Senator from Connecticut to inject that into my speech. It is not relevant to the point at issue.

Mr. HAWLEY. You opened wide the door for this discussion, and I have now got the facts.

The VICE-PRESIDENT. The Senator from Nebraska declines to yield.

Mr. HAWLEY. All right. I shall take a turn at the Senator again if he does not let my State alone.

Mr. ALLEN. On page 74 of the book from which I have been reading, I find:

> Numberless as are the evils by which kingdoms, principalities, and republics are wont to decline, these four are, in my judgment, most baleful: Civil strife, pestilence, sterility of the soil, and corruption of the coin. The first three are so manifest that no one fails to apprehend them, but the fourth, which concerns money, is considered by few, and those the most reflective, since it is not by a blow, but little by little, and through a secret and obscure approach that it destroys the State.

How true that is. It is the gradual, stealthy, and constant manipulation of finances, either by active legislation, or by refusing to legislate when essential to the interests of the people, that in the course of years, through the operation of contraction, the great wealth of a nation is centralized into the hands of the few and the masses are comparatively poor.

I read again from page 75 of the same book, Philosophy of Price, a quotation from Archibald Alison's history of Europe:

> The two greatest events in the history of mankind have been brought about by a successive contraction and expansion in the circulating medium of society. The fall of the Roman Empire, so long ascribed in ignorance to slavery, to heathenism, and moral corruption, was in reality brought about by a decline in the silver and gold mines of Spain and Greece. * * * And as if Providence had intended to reveal in the clearest manner possible the influence of this mighty agent on human affairs, the resurrection of mankind from the ruin this cause had produced was owing to the directly opposite set of agencies being put in operation. Columbus led the way in the career

of renovation; when he spread his sails across the Atlantic he bore mankind and its fortunes in his bark. * * * The annual supply of the precious metals—of money—for the use of the globe was tripled before a century had elapsed; the price of every species of produce was quadrupled. The weight of debt and taxation insensibly wore off under the influence of that prodigious increase; in the renovation of industry the relations of society were changed, the weight of feudalism cast off, the rights of man established.

Bryant, in his work on money, says:

Any reduction in the price which the producer or the artisan is able to obtain for his labor, or the products of his labor, is an injury, misfortune, and loss to every single member of society excepting solely those who live upon the interest of loaned money. If the reduction is temporary, then the loss is temporary; if it is permanent, then the loss is permanent.

Albert Gallatin, ex-Secretary of the United States Treasury, in his work on money, published in 1831, says:

It is well known that the discovery of America was followed by a great and permanent fall in the price of the precious metals, which reduced to one-fourth of their previous relative value all other commodities.

I might continue in this line of discussion and consume much time in citing valuable extracts from standard authors and men of acknowledged authority, to show the proposition, denied in the Senate, that a contracted volume of money does produce a shrinkage of values and a shrinkage of the products of labor, and thus results, if persisted in, in throwing out of employment thousands and hundreds of thousands of our people, not only depriving them of the means of livelihood, but throwing many of them as a burden upon the balance of society, to be supported by different forms of charity. Not only that, but it has driven many people into the pathway of crime. A contracted volume of money and the evils flowing from it have their full responsibility for the criminal classes in this country; and yet we are told that we must reduce the laborer of this country, we must reduce the farmer of this country to a position where he becomes the competitor of the laborer and farmer of Europe.

I read an extract from President Grant's message delivered in 1873. He said:

In view of the great actual contraction that has taken place in the currency—

I think that was denied by the Senator from Oregon——

Mr. SQUIRE rose.

Mr. ALLEN. Not the Senator from Washington [Mr. SQUIRE], but the Senator from Oregon [Mr. DOLPH], and yet Gen. Grant says there was a great contraction. He was a man who stood at the head of the Government, who must have known of "the contraction continuously going on." It had not stopped then, but was going on; the volume of money was getting scarcer and scarcer; it was becoming harder and harder to get a dollar; the price of labor was going down; the price of products was going down; and yet, says Gen. Grant:

In view of the great actual contraction that has taken place in the currency, and the comparative contraction continuously going on, due to the increase of population, increase of manufactories, and all the industries, I do not believe there is too much of it now for the dullest period of the year.

Speaking of the volume of money—

During the last four years the currency has been contracted, directly, by the withdrawal of 3 per cent certificates,—

There it is again, those 3 per cent certificates were part and parcel of the circulation—

compound-interest notes, and 7.30 bonds—

I ask the Senator from Washington if the expressions of Gen. Grant are not good authority?

Mr. SQUIRE. I do not think the expressions used there relate to currency in the ordinary sense. Of course those negotiable instruments were to be used in the banking institutions of the country and were in possession of the people, but they were not used as currency passing from hand to hand.

Mr. ALLEN. Gen. Grant continues—

outstanding on the 4th of March 1869 (all of which took the place of legal tenders in the bank reserves), to the extent of $63,000,000.

During the same period there has been a much larger comparative contraction of the currency. The population of the country has largely increased.

It occurs to me, if anything can be said to be settled by the history of Western Europe, by the history of this country, and by citations from standard writers upon political economy, as a proposition of logic, it is that a contracted volume of currency means high-priced money, and low-priced property and labor. And, if persisted in, it means the centralization of the wealth of a nation into the hands of a few, the ultimate debasement of labor, and the destruction of liberty itself. The only wise policy upon the part of this Government is to gradually expand the currency, the volume of money in this country, to keep pace with the growth of population and the increase of wealth, so that every natural agency of the nation may be utilized in the production of wealth, and every honest man, woman, and child beneath our flag may have remunerative wages for their labor and an opportunity to make an honest living.

A government that suffers the avenues to success to be closed, that does not keep open the avenues to success constantly for its people, is not a just government to its citizens; and when this Senate is invited to pursue a course which will bring a cloud upon every American home and distress and want to our people, it ought to be the province of the Senate to declare to the world, to declare to Lombard street, to declare to Wall street, to declare to the stock-brokers and money jobbers all over this world, that, so far as we are concerned, we are still Americans, and we still stand for the American home and its integrity.

Mr. President, while I am upon this branch of the question, I desire to refer to another matter. We are told that 95 per cent of the business of this country is done upon bank credits and that we do not need as much money under our system of business as we formerly needed. But who uses this argument? It is the man interested in a contracted volume of money.

Is it not true, Mr. President, that to-day for every dollar of actual cash we possess we have bank credits of at least $5? Is it not true that that is the most dangerous system of currency a nation can have? When the Government abandons its power to make money, when it abandons the control and exercise of the sovereign power which lies at the foundation of national success, when it turns every American laborer, every American farmer, every American home over to the mercies of bank corporations who are interested in making money for themselves, who have the power to expand or contract the volume of money to the injury of the masses and to their own advantage, it is not only wrong, but it is an abandonment of constitutional duty.

That constitutional duty is, that Congress, being charged with the power to coin money and regulate its value, being given plenary power over the money of the country which affects so vitally the industries of the people at large, should stand guard by keeping that power in its own hands, and raise the shield of protection over every home and every citizen.

Not only that, Mr. President, but because of over-expanded bank credits, because the Wall street gang has been suffered to run wild in speculation, they are enabled to produce a crisis in this country at any time they see fit to do so.

Mr. President, how does the extract I am about to read sound in connection with this doctrine of contraction of the currency? It will be found in Henry C. Baird's works in the first volume:

An inexhaustible supply of cheap labor has so long been a condition of our social system, whether in town or country, whether for work or pleasure, that it remains to be seen whether a great enhancement of labor would not disturb our industrial, and even our political, arrangements to a serious extent. Two men have been after one master so long that we are not prepared for the day when two masters will be after one man; for it is not certain, either, that the masters can carry on their own business as well, or that the men will comport themselves properly under the new régime. Commercial enterprise and social development require an actually increasing population, and also that the increase shall be in the most serviceable—

That is, brute force, brute labor—

that is, the most laborious part of the population, for otherwise it would be at the command of capital and skill.

Is not that a splendid exhibition of temper toward the laboring people of this country? There must be an increase of debased labor in this country, so that two men shall hunt one master, just as they are hunting him in the coal regions to-day. Two men perform one man's work, one working three or four hours in a day and the other working three or four hours in a day, and dividing between them and their families that which in justice and fairness ought to go to one family. Labor being debased, it is here advocated that the thing this country needs to-day is more brute force to produce wealth, not for the workers, but to produce more wealth for the wealthy classes.

The quotation I have read is an authentic quotation from Henry C. Baird, or quoted by him in the Philadelphia Inquirer and reproduced in the Irish World under date of April 5, 1879, quoted from the London Times.

Now, let us see more about this. I now read from a book called Whither are we Drifting, on page 56, from what purports to be an extract from the New York Times under date August 12, 1877. I do not say that the quotation is correct, because I have been unable to verify it, but I have verified many quotations in this book and found them correct.

Mr. DOLPH. Who is the author?

Mr. ALLEN. I suppose the editor of the paper is the author. I do not know.

Mr. DOLPH. Who is the author of the book?

Mr. ALLEN. A man by the name of Willey. Perhaps the Senator does not know him. He is a Populist.

Mr. DOLPH. I have met a number of them.

Mr. ALLEN. And you will meet more of them before the next Presidential election is over.

Says this author:

Is there deliverance? There seems to be but one remedy, and it must come—a change of ownership of the soil, and a creation of a class of land owners on the one hand and of tenant farmers on the other—something similar in both cases to that which has long existed, and now exists, in the older countries of Europe, and similar, also, to a system that is common in our own State of California. * * *

Everything seems ripe for the change; half the farms in the country are ready to be sold if buyers would only appear, and hundreds that can now be bought for less than their value twenty or thirty years ago need only judicious outlay to make them as productive as ever. Few farmers can hope to provide their sons with farms of their own, and there is no place for these young men in the overcrowded cities.

There you have it. There must be two classes. The farmer must give up his farm; he must abandon it, the farm must pass into the hands of a landed aristocracy, and he must content himself with becoming a tenant farmer. He can not hope to leave to his son or his daughter the farm that he purchased when he was a young man. They must join the great army of tramps or become peasants in a country like this. There is the bold declaration that the great masses of our people are becoming peasants under a system like this; that their destiny is the destiny of peasantry, and yet a man who raises his voice in defense of these people and against this system of contraction, is to be held up to ridicule and scorn and pointed out as an obstructionist in the Senate.

And then—

Says this article—

will begin a new era in agriculture and one that seems to be very desirable.

Desirable that the people lose their farms and become peasants!

I object to the system of bank credits taking the place of actual money, because, first, the safety and welfare of this nation depend upon the nation's controlling the volume of money. Depend upon the nation exercising its constitutional obligation to the people to coin the money and regulate its value; to see that the people have enough of sound and scientific money with which to do the business of the country; to see that the people are not overreached and robbed by those who produce a contracted volume of money through bank credits, through a system of contraction, and through a system of usury. I object to it, because when you resort to it you imperil every sacred interest of every American citizen, you imperil the safety of the country. Look at the singular spectacle to-day of bankers and stock jobbers and corporations in this Capitol sending their petitions, and coming here in person and undertaking to influence legislation in this nation in their particular interests! Here they come, as though the only thing to be considered by the American Senate was the man engaged in shaving notes, bonds, or stocks, or making money out of the reinvestment or loaning of money.

Mr. President, not only that, but when some of us have the temerity to stand up here and protest that there are other people to be considered; when we protest that the common laborer is a citizen of the United States; when we protest that the farmer is a citizen of the United States, and the rights of these two classes of persons, humble though they may be, are as sacred under our Constitution as the rights of the highest and most exalted man; while we are not met with absolute rudeness, yet we are met with that kind of a sneer which implies that we are weak-minded or wrong in some respect in standing up for the rights of these people.

We have been told here that if we continue to coin silver at the ratio of 16 to 1 under the operations of the so-called Gresham law, gold will go out of this country and the country will go upon a silver basis. Now, no man has undertaken to tell us what going upon a silver basis means, so far as its effect upon our industries and our prosperity is concerned; but it has been left to implication that if we go upon a silver basis or standard something absolutely terrible will happen to the American people; and yet we have used silver money from the time of the organization of this Government down to the present time, and our civilization has not been hindered by it. The truth is that England and all nations of Europe that enjoyed any prosperity in their early history enjoyed it while they were using silver as money.

So there is nothing in the argument that by the use of silver alone as money, *per se*, our civilization will be degraded. I ask Senators now who deplore this condition of affairs to point out to me, to point out to the people, how this country will be injuriously affected in consequence of our going to a silver basis.

But it will not go there, because after the passage of the Bland-Allison act the gold in this country accumulated—speaking in round numbers and without giving exactly the amount—from $250,000,000 to $600,000,000; and yet there was in circulation and being constantly coined silver money at the ratio of 16 to 1.

But the law laid down by Sir Thomas Gresham never reached the case of the coinage of pure metal. It was debased coin; it was clipped coin; it was counterfeit coin that drove out of circulation and out of the country the better class of coins. This law has been invoked here, and is constantly being invoked as an argument against the free and unlimited coinage of silver. I do not propose, for one, to suffer this discussion to end and leave the country to believe that this law has affected or will affect us in the least if we coin silver at the old ratio.

But one of the principal arguments used against the use of silver is what my distinguished friend from Illinois [Mr. PALMER] lamented awhile ago as overproduction. It is claimed, and claimed seriously, that silver is being produced in such great quantities as to cause an overproduction of the metal, and that the fall in the bullion price of the metal is caused thereby. Therefore, my friend from New Jersey [Mr. MCPHERSON] says, the parity can not be maintained. Why there is overproduction we are not told. Never was there a ranker fallacy promulgated upon the face of the earth than this doctrine of overproduction. There is not a respectable political economist, from the days of the senior Mill to the present moment, that has taught it. It is simply one of those fallacies that we find constantly urged from the stump, that we find constantly advocated by a certain class of newspapers, the effect of which is to mislead the people.

Let me start briefly, Mr. President, by quoting from the senior Mill:

The demand of a country is its purchasing power. The purchasing power is the country's annual production. The country's annual production is the supply. Things which are equal to the same thing are equal to each other, and general demand and supply must therefore be equal.

Yet that truism was uttered in 1808, long before that in fact. It has been and is a truism in political economy; and yet we hear iterated and reiterated throughout this country this doctrine of overproduction. There may be local congested conditions, in consequence of lack of proper means of distribution, in consequence of under-consumption; but there is not, and never has been, such a thing as general overproduction. It is rank political fallacy.

I quote from James Mill, from his work called Commerce Defended, found in a volume published in 1808, called English Tracts, published at London, England. I have only been able to find one volume of this work in the United States. Through the courtesy of the Senator from Massachusetts [Mr. LODGE] I was enabled to get the use of this volume from the Atheneum Library at Boston. James Mill, the father of John Stuart Mill, in a book published in 1808 called English Tracts, published at London, thus speaks of the doctrine of overproduction:

No proposition, however, in political economy seems to be more certain than this which I am going to announce, how paradoxical so ever it may at first sight appear; and if it be true, none undoubtedly can be deemed of more importance:

The production of commodities creates, and is the one and universal cause which creates, a market for the commodities produced. Let us but consider what is a market. Is anything else understood by it than that something is ready to be exchanged for the commodity which we would dispose of? When goods are carried to market what is wanted is somebody to buy. But to buy one must have wherewithal to pay. It is obvious therefore the collective means of payment which exist in the whole nation constitute the entire market of the nation. But wherein consist the collective means of payment of the whole nation? Do they not consist in its annual produce, in the annual revenue of the general mass of its inhabitants? But if a nation's power of purchasing is exactly measured by its annual produce, as it undoubtedly is, the more you increase the annual produce, the more by that act you extend the national market, the power of purchasing and the actual purchases of the nation.

Whatever be the additional quantity of goods therefore which is at any time created in any country, an additional power of purchasing, exactly equivalent, is at the same instant created: so that a nation can never be actually overstocked either with capital or with commodities; as the very operation of capital makes a vent for its produce. Thus to recur to the example which we have already analyzed: fresh goods to the amount of £5,500 were prepared for the market in consequence of the application of the £5,000 saved by the landholder. But what then? Have we not seen that the annual produce of the country was increased; that is, the market of the country was widened, to the extent of £5,500, by the very same operations?

Mr. Spence in one place advises his reader to consider the circumstances of a country in which all exchange should be in the way of barter, as the idea of money frequently tends to perplex. If he will follow his own advice on this occasion he will easily perceive how necessarily production creates a market for produce. When money is laid out of the question is it not in reality the different commodities of the country, that is to say the different articles of the annual produce, which are annually exchanged against one another? Whether these commodities are in great quantities or in small, that is to say, whether the country is rich or poor, will not one-half of them always balance the other? And is it not a barter of one-half of them with the other which actually constitutes the annual purchases and sales of the country? Is it not the one-half of the goods of a country which universally forms the market for the other half, and *vice versa*? And is this a market that can ever be overstocked? Or can it produce the least disorder in this market whether the goods are in great or in small quantity? All that here can ever be requisite is that the goods should be adapted to one another, that is to say, that every man who has goods to dispose of should always find all those different sorts of goods with which he wishes to supply himself in return.

What is the difference when the goods are in great quantity and when they are in small? Only this, that in the one case the people are liberally supplied with goods, and in the other they are scantily; in the one case that the country is rich, in the other that it is poor; but in the one case, as well as in the other, the whole of the goods will be exchanged, the one-half against the other, and the market will always be equal to the supply. Thus it appears that the demand of a nation is always equal to the produce of a nation. The demand of a nation is exactly its power of purchasing. But what is the power of purchasing? The extent, undoubtedly, of its annual produce. The extent of its demand, therefore, and the extent of its supply are always exactly commensurate. Every particle of the annual produce of a country falls as revenue to somebody. But every individual in the nation uniformly makes purchases, or does what is equivalent to making purchases, with every farthing's worth which accrues to him. All that part which is des-

itned for mere consumption is evidently employed in purchases. That too which is employed as capital is not less so. It is either paid as wages to laborers who immediately buy with it food and other necessaries, or it is employed in the purchase of raw materials.

The whole annual produce of the country, therefore, is employed in making purchases. But as it is the whole annual produce too which is offered for sale, it is visible that the one part of it is employed in purchasing the other; that how great soever that annual produce may be it always creates a market for itself; and that how great soever that portion of the annual produce which is destined to administer to reproduction, that is, how great soever the portion employed as capital, its effects always are to render the country richer and its inhabitants more opulent, but never to confuse or to overload the national market. I own that nothing appears to me more completely demonstrated than this reasoning.

It may be necessary, however, to remark that a nation may easily have more than enough of any commodity, though she can never have more than enough of commodities in general. The quantity of any one commodity may easily be carried beyond its due proportion; but by that very circumstance is implied that some other commodity is not provided in sufficient proportion. What indeed is meant by a commodity's exceeding the market? Is it not that there is a portion of it for which there is nothing that can be had in exchange? But of those other things then the proportion is too small. A part of the means of production which had been applied to the preparation of this superabundant commodity should have been applied to the preparation of those other commodities till the balance between them had been established. Whenever this balance is properly preserved, there can be no superfluity of commodities, none for which a market will not be ready.

This balance, too, the general order of things has so powerful a tendency to produce that it will always be very exactly preserved where the injudicious tampering of government does not prevent, or those disorders in the intercourse of the world produced by the wars into which the inoffending part of mankind are plunged, by the folly much more frequently than by the wisdom of their rulers.

This important and as it appears demonstrative doctrine affords a view of commerce which ought to be very consolatory to Mr. Spence. It shows that a nation always has within itself a market equal to all the commodities of which it can possibly have to dispose: that its power of purchasing is always equivalent to its power of production, or at least to its actual produce; and that as it never can be greater, so it never can be less. Foreign commerce, therefore, is in all cases a matter of expediency rather than of necessity.

The intention of it is not to furnish a vent for the produce of the industry of the country, because that industry always furnishes a vent for itself. The intention of it is to exchange a part of our own commodities for a part of the commodities which we prefer to our own of some other nation; to exchange a set of commodities which it peculiarly suits our country to produce, for a set of commodities which it peculiarly suits that other country to produce. Its use and advantage is to promote a better distribution, division, and application of the labor of the country, than would otherwise take place, and by consequence to render it more productive. It affords us a better, a more convenient, and more opulent supply of commodities than could have been obtained by the application of our labor within ourselves, exactly in the same manner as by the free interchange of commodities from province to province within the same country, its labor is better divided and rendered more productive.

It thus appears of what extraordinary importance to every community is the augmentation of capital, that is to say, the augmentation of that part of the annual produce which is consumed in the way of reproduction. If we but recall the thought of that important doctrine first illustrated by Smith, that a progression is necessary in national affairs to render the circumstances of the great body of the people in any degree comfortable, our humanity, as well as our patriotism, will become deeply interested in the doctrine of parsimony

Dr. Smith shows that even when a country is stationary the subsistence of the laboring classes is reduced to the lowest rate which is consistent with common humanity—that is to say, it is barely sufficient to enable them to maintain their present numbers, but not sufficient to enable them in the least degree to augment them. But if we recollect how much greater than this is the power of multiplication in the species, how natural it is for the average of families to be more numerous than merely to replace the father and mother, we shall see with feelings of commiseration how wretched must be the circumstances of those families that are more numerous, and of how many human creatures brought into existence it must be the miserable fate to perish through want of subsistence.

But if such is the dismal situation of the great body of the people when the national affairs are but stationary, how much more shocking to our feelings are their circumstances when the situation of the country is retrograde? In this situation the laborer is unable to earn even at a rate which is sufficient to maintain the numbers of the laboring class. Calamity now comes down with a heavier hand. That class must even be thinned by the dreadful operation of deficient subsistence. On the other hand, when the affairs of the country are progressive the wages of the laboring class are sufficient not only to maintain their existing numbers, but to augment them.

When the reward of labor is liberal, the laborer can support a moderate family with ease; and plenty and comfort diffuse themselves throughout the community. Have we not seen that this progressive state of society, that all these happy consequences, result from continual additions made to the capital of the country, or to that part of the annual produce which is devoted to reproduction? And have we not seen that the retrograde condition, with all its deplorable consequences, results from making continual additions to that part of the annual produce which is taken for mere consumption? Little obligation then has society to those doctrines by which this consumption is recommended. Obstacles enough exist to the augmentation of capital without the operation of ridiculous speculations. Were the doctrine that it can increase too fast as great a truth as it is an absurdity, the experience of all the nations on earth proves to us that of all possible calamities this would be the least to be feared. Slow has been its progress everywhere, and low the degree of prosperity which has in any place been given to the mass of the people to enjoy.

OVERPRODUCTION.

I know of no more suitable introductory to this question of overproduction than to give the views of Amasa Walker on production as set forth in his Science of Wealth, book 2, chapter 1:

All values are created by modifications of existing matter. Man can not create one particle, but he can modify what he finds, or change its condition, in three ways, viz:

By transmutation, by transformation, by transportation.

First, by transmutation.

This is eminently the work of the agriculturist, who, availing himself of the chemical agencies of the earth and air, transmutes seeds into vegetables, fruits, and grains; and these again, by the aid of animal organizations, into butter, beef, hides, etc. This is the most extensive branch of industry, and employs probably four-fifths of the human race from generation to generation. It is the base of the great pyramid of production. It furnishes the material and the support of all other forms of labor; and not this only, but it renews and restores their waste with an unceasing supply of fresh bodily and mental power.

The air of trade and of the mill heats and rises, and cold currents rush in from the prairie and the mountain. The foot of the farmer is ever turned to the marts of commerce and the busy gatherings of men. He comes with clumsy tread and homespun dress; but he takes the first place in the market and the synagogue. Basil enters Constantinople as night is falling, stares about on the magnificence of the city, and falls asleep upon the steps of the church St. Diomede. He is tired of Macedon. He has business on the throne of the world. He who restored the laws of the Eastern empire and reclaimed the lands deluged by the barbarian floods is the exemplar of the countryman, at all times gazing rudely around on the luxury his homely virtues are to appropriate. The millionaire dashes by in his spendid turnout; a raw, tall lad, with a bundle on a stick, looks on with wonder, the employer of that man's children.

Just as agriculture sends to the markets and the mills of the world their materials, so it sends them their workmen. Strength and even life go fast in the eager competition of manufactures and trade. Cool air, fresh blood flows in from the country to supply the waste. The bare, bleak hills where nature grudges every morsel of food, and stabs cruelly through every chink in the wall, every rent in the clothes, feed the busy cities with men. The streams of vigorous life run off from them to refresh the plains below.

Agriculture has no need to receive back, in any form, her contributions to the other occupations. The power to give without exhaustion lies in the liberal, healthful reproduction of man, when living in intimate relations with nature. Here, after all hurts, humanity comes for healing. War and pestilence, the fierce contest of the mart, the stifling atmosphere of the mill, may waste our kind in quick or lingering deaths; but still, by the side of the brooks men will be born to hold up the frame of industry and social order when their supporters faint and fall. Yet agriculture does not get back a certain share of what it gives. Because it is not a labor of ambition, because honors are not to be gathered in the fields it cultivates, because the excitement of machinery and associa ion are not to be found in its work or play, because quick wealth is not to be realized in its slow increase, the farmer turns himself to the city; and because it is not a labor of ambition, and for each of the other reasons given, the citizen, weary with all, goes back to the open fields and fresh air of the country. The cabbages of Diocletian, the eggs of John Ducas Vataces, the apples of Sir William Temple, are the return made to agriculture for Basils, Astors, and Lawrences.

But the department of agriculture is not confined to the popular view of it. When grain is produced the seed must be planted in prepared ground; the long interval of growth to maturity must be filled with care and labor; and at last the work of harvesting completes the round of duties that go to the production of the grain. But there are great industries in the department of agriculture where harvesting alone is performed by man. Nature has done all the rest. Man's part is to find and to take of her bounty. Such an industry is mining, whether of coal or iron, whether of diamonds underground in Golconda or sponge under water in the Archipelago. Such an industry is the fisheries, whether of whales off Greenland, of cod off Newfoundland, or of pearl oyster off Ceylon. So great, indeed, is the scientific extension of the department of agriculture, that even the smelting of the ore and the transportation from the fishing grounds to the port from which the venture began are included in it, because these first put the products in the possession of the capitalist in an available form.

Man modifies matter and changes its condition—

Secondly, by transformation.

This is the business of the manufacturer and the mechanic. These create values by changing the forms of matter, as cotton and wool into cloth, iron into tools and implements. This is the second great department of human industry.

But man modifies matter or changes its condition—

Thirdly, by transportation.

The merchant does not primarily create value in objects, but enhances that already existing by transporting such objects from one locality to another.

The characteristic illustration is of the most familiar kind. Cotton bought at New Orleans, in 1860, for 12 cents per pound, transported to Liverpool, would have sold, say, for 15 cents. By his capital and skill the merchant has added 25 per cent to the value of exchangeability of the cotton. He has increased the wealth of the world so much. He, therefore, has produced value. Such transactions are useful alike to the producer and to the consumer of the articles transported.

[The honorable Senator here yielded to Mr. DUBOIS.]

Mr. ALLEN. I read now from page 111 of Perry's Political Economy:

A leading proposition of production is the following: Production may go on indefinitely in all directions without ever a fear of reaching a general glut of products. This proposition was first fully developed by Say, in the fifteenth chapter of his well-known treatise on Political Economy, and the proof of it, and some of the consequences of it are well worthy of our attention. I shall put the proof of it in this form: the desires of men which the efforts of other men can satisfy are unlimited in number and indefinite in degree; and therefore, mutual efforts can continue to be put forth in exchange, until these unlimited and indefinite desires of all men are all met—a goal which never can be reached. This opposition demolishes at a stroke the fallacy which pervades Dr. Chalmer's book on "Political Economy," namely, that the universal market is limited, and therefore, were it not for the unproductive consumption of the rich and luxurious, and the equally unproductive consumption of wars, there would soon be a general glut and production must cease for the lack of a vent for its products.

What constitutes a market for anything? This, that somebody desires the service thus offered, and is willing to render a return service acceptable to the offerer. Only two things can limit the universal market, first, a lack of desires, and secondly, a lack of return services. But there can be no lack of desires at any time, and there will be the greatest plenty of return services where production is most busy and most universal.

Therefore, again, no general glut of products is possible to occur. A truth which we have already seen in another connection, reappears here as a consequence of this proposition, and will reappear again and again, namely, that all persons are interested commercially, as well as morally, in the prosperity of other persons, and each nation which has anything to exchange is directly interested in the prosperity of all other nations, because the more production everywhere the better market everywhere. A market for products is made by products in markets.

But while no such thing as a general glut of products ever did or ever can occur, a glut in respect to certain services is very common. Through want of foresight or miscalculation particular services are offered in too great

abundance or of a kind not adapted to the demand, and in respect to these the market is truly said to be glutted. This frequently happens with editions of books—more copies are printed than can be sold at remunerative prices. Also, when fashion changes the goods which were fashionable, but are so no longer, are apt to be in excess of the demand.

The only precaution that can be taken to avoid losses of this character is the cultivation of foresight, by studying as accurately as possible the nature of human desires and the changes that have been observed to take place in them. This constitutes mercantile sagacity; and the most successful producers in all departments are those who best develop this sagacity, who adapt their services to the existing and coming demand, who, to excellence in the substance of their services, add taste and attractiveness to their form, who tend rather to lead the fashions for the many than follow in their wake. The field of production is like the billowy and heaving sea: to navigate most successfully requires foresight, a wise courage, a power of adaptation to varying circumstances, skill to veer and tack when the wind changes, and a will to run before a favoring breeze with all sails set.

Production, as a general rule, is no dead level of monotonous exertion: since its sphere is life with its wants, man with his desires; and there is scope for the development of ingenious mind in almost all its departments. Since all exchange is due to the diversity of relative advantage, whoever develops his powers of observation, of application, of adaptation, to a higher point, and avails himself more skillfully of all peculiar facilities, will reap a larger share of the harvest of exchange.

I now cite and read from Shadwell's System of Political Economy, beginning on page 24:

But whether for good or for evil, the feeling undoubtedly exists, and as the desire of wealth is also universal, it follows that all men desire to obtain wealth by the least labor possible, and this proposition may be safely taken as a basis for the science of political economy.

From the fact that this aversion to labor is universal, it follows that there can be no such thing as permanent overproduction. If we look at a single trade, we find that those who are engaged in it frequently produce more than they can sell at remunerative prices, and that the market is consequently "glutted," and many traders ruined. This has frequently happened in England when the harvest has been unusually abundant; the farmers have found themselves unable to dispose of their corn at such prices as will allow them to pay their rents, and have been obliged to use wheat for feeding cattle. The cotton manufactures of the North of England frequently exhibit similar phenomena, as do also the shipbuilding and other trades.

The most celebrated instances have been those which have followed on the opening of a new trade between two distant countries. When, in 1806, the English were for the first time able to trade direct with Buenos Ayres, they formed the most extravagant expectations of its capacity for purchasing their goods. Not merely did they send skates, stoves, and warming pans to a country where they were never required, but they sent such enormous quantities of all sorts of goods that they were unable to warehouse them, and were obliged to leave them on the beach.

After the discovery of gold in Australia in 1851, the high prices which prevailed there gave rise to a large exportation from Europe of all sorts of goods, which continued long after it had ceased to be profitable, and on such a scale that large quantities of brandy were sold in Melbourne for one-tenth of the price which they had cost in London, and many cargoes were unable to meet with any warehouse accommodation, and were spoiled by exposure in the open air. By such facts as these, some economists have been led to suppose that there is a natural tendency to overproduction in all trades, and that there is some danger that an enterprising people will produce more of all sorts of goods than they can use; but this is to suppose that men will work without an object, while, in fact, they only produce in order to gratify their wants, and will soon leave off producing when they have got more than enough. Wheat may be superabundant for a single year, because farmers can not tell beforehand how great the product of their labor will be; but if they find that for two or three years running they produce more wheat than is required, they sow less of that grain and more of something else.

The case of Buenos Ayres has been cited by M. Louis Blanc as proving that England was suffering from overproduction, and as showing the shifts to which we were obliged to resort in order to find a market for our surplus produce. But we did not send goods to Buenos Ayres because we did not know how else to get rid of them; we produced them in order to send them there because we thought that we could obtain in exchange the various comforts for ourselves. If we had known that we could not do so, we should have produced at home the things we wanted. Since 1806 our wealth has increased enormously, and we are still as far as ever from being able to produce all that we want. M. Louis Blanc himself draws a melancholy picture of the poverty which prevails among the lower classes in France and England; and so long as such continues to be the case, it is idle to talk of our having produced more than we want, and if the time should come when there were no human wants unsatisfied, then human beings would cease to labor, and in either case overproduction is impossible.

Right here, Mr. President, let me say that gentlemen who advocate this doctrine of overproduction never seem to think of the fact that in this land of plenty, where overproduction exists, as they claim, want is constantly increasing; and that there are hungry men, hungry women, and hungry children in a country where prices are falling, as they claim, in consequence of overproduction. It is this fallacy, with others that have been urged in this Senate Chamber, and that are being urged in the metropolitan press and through other channels, that are calculated to mislead the people of this country. There is and there can be no ranker political fallacy than the doctrine of overproduction. It is under-consumption and the lack of means of distribution, one principal element of which is money, that produce local and temporary congested conditions in trade.

And it is characterized as a fallacy here and throughout these works:

It is perpetually reappearing in different forms, among which may be here specified the belief that our colonies are useful because they provide a market for our exports.

When the people of this country, the farmers and laborers, and what I may properly term the great masses of the common people, feel the effects of this system of contracted money, they are told that their misfortune is due to overproduction; that they produce too much, that God is too bountiful, that the people suffer too much corn, wheat, and oats to grow, and produce too much food. Therefore, in a land of plenty, in consequence of there being too much, there must be starvation and hunger as a result. In consequence of too much, laboring men must be poor.

Richard T. Ely, in his work on Political Economy, at page 149, uses this language:

The purpose of production is consumption, and if more is produced more must be consumed. Power to consume is measured by purchasing power, and power of consumption sets a limit to production. There is no such thing as general overproduction, for more economic goods of all kinds have never been produced than men really use to satisfy their legitimate wants. On the contrary, not enough has ever yet been produced for this purpose. Sometimes production does not go forward evenly, and there is an undue amount of labor and capital directed to certain pursuits. But until all men are well-clothed, housed, fed, and furnished with material appliances for their higher life, like books, pictures, musical instruments, church buildings, etc., it will be a manifest absurdity to talk about general overproduction.

I read from the first volume of J. B. Say's Principles of Political Economy, perhaps the most eminent Frenchman who has ever written on this subject. I read from page 107, chapter 15:

It is common to hear adventurers in the different channels of industry assert that their difficulty lies, not in the production, but in the disposal of commodities; that produce would always be abundant if there were but a ready demand, or vent. When the vent for their commodities is slow, difficult, and productive of little advantage, they pronounce money to be scarce; the grand object of their desire is a consumption brisk enough to quicken sales and keep up prices.

But ask them what peculiar causes and circumstances facilitate the demand for their products, and you will soon perceive that most of them have extremely vague notions of these matters, that their observation of facts is imperfect, and their explanation still more so: that they treat doubtful points as matter of certainty, often pray for what is directly opposite to their interests, and importunately solicit from authority a protection of the most mischievous tendency.

I read from this same book, on page 108:

A man who applies his labor to the investing of objects with value by the creation of utility of some sort can not expect that value to be appreciated and paid for, except where other men have the means of purchasing it. Now, of what do those means consist? Of other values, of other products, likewise the fruit of industry, capital, and land. Which leads us to a conclusion, that may at first sight appear paradoxical, viz, that it is production which opens a demand for products.

There is the reverse of the doctrine of overproduction taught, that it is the production of things which opens the way for a demand for the things produced, and this in the very nature of things must be true.

Should a tradesman say, "I do not want other products for my woolens, I want money," there could be little difficulty in convincing him that his customers can not pay him in money without having first procured it by the sale of some other commodities of their own. "Yonder farmer," he may be told, "will buy your woolens if his crops be good, and will buy more or less according to their abundance or scantiness. He can buy none at all if his crops fail altogether. Neither can you buy his wool or his corn yourself, unless you contrive to get woolens or some other article to buy withal.

You say you only want money. I say you want other commodities and not money. For what, in point of fact, do you want the money? Is it not for the purchase of raw materials or stock for your trade, or of victuals for your support? Wherefore, it is products that you want and not money. The silver coin you will have received on the sale of your own products and given in the purchase of those of other people will the next moment execute the same office between other contracting parties, and so from one to another to infinity, just as a public vehicle transports objects one after another. If you can not find a ready sale for your commodity, will you say, "It is merely for want of a vehicle to transport it?" For after all, money is but the agent of the transfer of values.

I call the attention of the Senate specifically to this language:

Its whole utility has consisted in conveying to your hands the value of the commodities which your customer has sold for the purpose of buying again from you: and the very next purchase you make, it will again convey to a third person the value of the products you may have sold to others. So that you will have bought, and everybody must buy the objects of want or desire, each with the value of his respective products transformed into money for the moment only.

I read from page 111, volume 1, of the same author:

Thus, the mere circumstance of the creation of one product immediately opens a vent for other products. For this reason, a good harvest is favorable not only to the agriculturist, but likewise to the dealers in all commodities generally. The greater the crop the larger are the purchases of the growers. A bad harvest, on the contrary, hurts the sale of commodities at large. And so it is also with the products of manufacture and commerce. The success of one branch of commerce supplies more ample means of purchase, and consequently opens a vent for the products of all the other branches; on the other hand, the stagnation of one channel of manufacture or of commerce is felt in all the rest.

But, it may be asked, if this be so, how does it happen that there is at times so great a glut of commodities in the market, and so much difficulty in finding a vent for them? Why can not one of these superabundant commodities be exchanged for another? I answer that the glut of a particular commodity arises from its having outrun the total demand for it in one of two ways, either because it has been produced in excessive abundance or because the produce of other commodities has fallen short.

It is because the production of some commodities has declined that other commodities are superabundant. To use a more hackneyed phrase, people have bought less, because they have made less profit; and they have made less profit for one of two causes, either they have found difficulties in the employment of their productive means or these means have themselves been deficient.

It is observable, moreover, that precisely at the same time that one commodity makes a loss another commodity is making excessive profit.

I now read from page 114:

That in every community the more numerous are the producers, and the more various their productions, the more prompt, numerous, and extensive are the vents for those productions: and, by a natural consequence, the more profitable are they to the producers; for price rises with the demand.

On page 115 the same author says:

That each individual is interested in the general prosperity of all, and that the success of one branch of industry promotes that of all the others. In fact, whatever profession or line of business a man may devote himself to, he is the better paid and the more readily finds employment in proportion as he sees others thriving equally around him. A man of talent, that scarcely vegetates in a retrograde state of society, would find a thousand ways of turning his faculties to account in a thriving community that could afford to employ and reward his ability.

A merchant established in a rich and populous town sells to a much larger amount than one who sets up in a poor district, with a population sunk in indolence and apathy. What could an active manufacturer or an intelligent merchant do in a small, deserted, and semi-barbarous town in a remote corner of Poland or Westphalia? Though in no fear of a competitor, he could sell but little, because little was produced.

I now desire to call the attention of the Senate to the works of John Stuart Mill on Political Economy, pages 337, 338, 339, and 341 of this volume, and I will send it to the Secretary's desk and ask to have the Secretary read it, because the type is so small that I can not read it myself.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). If there be no objection, the Secretary will read as requested. The Chair hears none.

The Secretary read as follows:

Because this phenomenon of oversupply, and consequent inconvenience or loss to the producer or dealer, may exist in the case of any one commodity whatever, many persons, including some distinguished political economists, have thought that it may exist with regard to all commodities; that there may be a general overproduction of wealth; a supply of commodities in the aggregate, surpassing the demand; and a consequent depressed condition of all classes of producers. Against this doctrine, of which Mr. Malthus and Dr. Chalmers in this country and M. de Sismondi on the continent, were the chief apostles, I have already contended in the First Book; but it was not possible, in that stage of our inquiry, to enter into a complete examination of an error (as I conceive) essentially grounded on a misunderstanding of the phenomena of value and price.

The doctrine appears to me to involve so much inconsistency in its very conception, that I feel considerable difficulty in giving any statement of it which shall be at once clear and satisfactory to its supporters. They agree in maintaining that there may be, and sometimes is, an excess of productions in general beyond the demand for them; that when this happens, purchasers can not be found at prices which will repay the cost of production with a profit; that there ensues a general depression of prices or values (they are seldom accurate in discriminating between the two), so that producers, the more they produce, find themselves the poorer, instead of richer, and Dr. Chalmers accordingly inculcates on capitalists the practice of a moral restraint in reference to the pursuit of gain; while Sismondi deprecates machinery, and the various inventions which increase productive power. They both maintain that accumulation of capital may proceed too fast, not merely for the moral, but for the material interests of those who produce and accumulate; and they enjoin the rich to guard against this evil by an ample unproductive consumption.

At this point Mr. DUBOIS suggested the absence of a quorum.

Mr. ALLEN. I ask the Secretary to continue reading from the book that I sent to the desk the remainder of the marked extract.

The PRESIDING OFFICER. If there be no objection, the Secretary will read as requested. The Chair hears no objection.

The Secretary read as follows:

He has produced, but the wrong thing instead of the right. He wanted, perhaps, food, and has produced watches, with which everybody was sufficiently supplied. The new comer brought with him into the country a demand for commodities, equal to all that he could produce by his industry, and it was his business to see that the supply he brought should be suitable to that demand. If he could not produce something capable of exciting a new want or desire in the community, for the satisfaction of which some one would grow more food and give it to him in exchange, he had the alternative of growing food for himself; either on fresh land, if there was any unoccupied, or as a tenant, or partner, or servant of some former occupier, willing to be partially relieved from labor. He has produced a thing not wanted, instead of what was wanted; and he himself, perhaps, is not the kind of producer who is wanted; but there is no overproduction; production is not excessive, but merely ill-assorted.

We saw before, that whoever brings additional commodities to the market, brings an additional power of purchase; we now see that he brings also an additional desire to consume, since if he had not that desire he would not have troubled himself to produce. Neither of the elements of demand, therefore, can be wanting, when there is an additional supply; though it is perfectly possible that the demand may be for one thing, and the supply may, unfortunately, consist of another.

Driven to his last retreat, an opponent may, perhaps, allege that there are persons who produce and accumulate from mere habit; not because they have any object in growing richer, or desire to add in any respect to their consumption, but from *vis inertiæ*. They continue producing because the machine is already mounted, and save and reinvest their savings because they have nothing on which they care to expend them. I grant that this is possible, and in some few instances probably happens; but these do not in the smallest degree affect our conclusion. For, what do these persons do with their savings? They invest them productively; that is, expend them in employing labor. In other words, having a purchasing power belonging to them more than they know what to do with, they make over the surplus of it for the general benefit of the laboring class.

Now, will that class also not know what to do with it? Are we to suppose that they too have their wants perfectly satisfied, and go on laboring from mere habit? Until this is the case, until the working classes have also reached the point of satiety, there will be no want of demand for the produce of capital, however rapidly it may accumulate, since, if there is nothing else to do, it can always find employment in producing the necessaries or luxuries of the laboring class. And when they too had no further desire for necessaries or luxuries, they would take the benefit of any further increase of wages by diminishing their work; so that the overproduction which then for the first time would be possible in idea, could not even then take place in fact, for want of laborers. Thus, in whatever manner the question is looked at, even though we go to the extreme verge of possibility to invent a supposition favorable to it, the theory of general overproduction implies an absurdity.

What, then, is it by which men who have reflected much on economical phenomena, and have even contributed to throw new light upon them by original speculations, have been led to embrace so irrational a doctrine? I conceive them to have been deceived by a mistaken interpretation of certain mercantile facts. They imagined that the possibility of a general oversupply of commodities was proved by experience. They believed that they saw this phenomenon in certain conditions of the markets, the true explanation of which is totally differedt.

I have already described the state of the markets for commodities which accompanies what is termed a commercial crisis. At such times there is really an excess of all commodities above the money demand; in other words, there is an under-supply of money. From the sudden annihilation of a great mass of credit, everyone dislikes to part with ready money, and many are anxious to procure it at any sacrifice. Almost everybody, therefore, is a seller, and there are scarcely any buyers, so that there may really be, though only while the crisis lasts, an extreme depression of general prices from what may be indiscriminately called a glut of commodities or a dearth of money.

But it is a great error to suppose, with Sismondi, that a commercial crisis is the effect of a general excess of production. It is simply the consequence of an excess of speculative purchases. It is not a gradual advent of low prices, but a sudden recoil from prices extravagantly high; its immediate cause is a contraction of credit, and the remedy is, not a diminution of supply, but the restoration of confidence. It is also evident that this temporary derangement of markets is an evil only because it is temporary. The fall being solely of money prices, if prices did not rise again no dealer would lose, since the smaller price would be worth as much to him as the larger price was before. In no manner does this phenomenon answer to the description which these celebrated economists have given of the evil of overproduction. That permanent decline in the circumstances of producers, for want of markets, which those writers contemplate, is a conception to which the nature of a commercial crisis gives no support.

The other phenomenon from which the notion of a general excess of wealth and a superfluity of accumulation seems to derive countenance, is one of a more permanent nature, namely, the fall of profits and interest which naturally takes place with the progress of population and production. The cause of this decline of property is the increased cost of maintaining labor, which results from an increase of population and of the demand for food, outstripping the advance of agricultural improvement. This important feature in the economical progress of nations will receive full consideration and discussion in the succeeding book. It is obviously a totally different thing from a want of market for commodities, though often confounded with it in the complaints of the producing and trading classes. The true interpretation of the modern or present state of industrial economy is, that there is hardly any amount of business which may not be done, if people will be content to do it on small profits.

Mr. HOAR. Will the Senator allow me to ask him a question at this point?

Mr. ALLEN. Certainly.

Mr. HOAR. I understand he is having a quotation read from this document to show that there is no such thing as overproduction. I desire to ask the Senator in all candor if he does not think his speech is an overproduction at this moment?

Mr. ALLEN. Mr. President, I do not know what the Senator from Massachusetts means, whether he means to insult me——

Mr. HOAR. Not in the least.

Mr. ALLEN. By saying my speech is unnecessary and not germane to the subject.

Mr. HOAR. Not wholly unnecessary. I merely asked the Senator if he did not think it was an overproduction under the circumstances.

Mr. ALLEN. I do not think that the question of the Senator from Massachusetts calls for even an answer.

Mr. HOAR. Very well, I will not press it.

The PRESIDING OFFICER. The Secretary will resume the reading.

The Secretary continued, as follows:

And this all active and intelligent persons in business perfectly well know; but even those who comply with the necessities of their time grumble at what they comply with, and wish that there were less capital, or, as they express it, less competition, in order that there might be greater profits. Low profits, however, are a different thing from deficiency of demand; and the production and accumulation which merely reduce profits can not be called excess of supply or of production. What the phenomenon really is, and its effects and necessary limits, will be seen when we treat of that express subject.

I know not of any economical facts, except the two I have specified, which can have given occasion to the opinion that a general over-production of commodities ever presented itself in actual experience. I am convinced that there is no fact in commercial affairs which, in order to its explanation, stands in need of that chimerical supposition.

The point is fundamental; any difference of opinion on it involves radically different conceptions of political economy, especially in its practical aspect. On the one view we have only to consider how a sufficient production may be combined with the best possible distribution, but on the other there is a third thing to be considered—how a market can be created for produce or how production can be limited to the capabilities of the market. Besides, a theory so essentially self contradictory can not intrude itself without carrying confusion into the very heart of the subject, and making it impossible even to conceive with any distinctness many of the more complicated economical workings of society. This error has been, I conceive, fatal to the systems, as systems, of the three distinguished economists to whom I before referred, Malthus, Chalmers, and Sismondi, all of whom have admirably conceived and explained several of the elementary theorems of political economy, but this fatal misconception has spread itself like a veil between them and the more difficult portions of the subject, not suffering one ray of light to penetrate. Still more is this same confused idea constantly crossing and bewildering the speculations of minds inferior to theirs.

It is but justice to two eminent names to call attention to the fact that the merit of having placed this most important point in its true light, belongs principally, on the Continent, to the judicious J. B. Say, and in this country to Mr. Mill; who (besides the conclusive exposition which he gave of the subjects in his Elements of Political Economy) had set forth the correct doctrine with great force and clearness in an early pamphlet, called forth by a temporary controversy, and entitled "Commerce Defended;" the first of his writings which attained any celebrity and which he prized more as hav-

ing been his first introduction to the friendship of David Ricardo, the most valued and most intimate friendship of his life.

Mr. ALLEN. Mr. President, I am induced to quote thus liberally from these different works on political economy, as I said some time ago, in consequence of the persistent and constant reiteration of the doctrine of overproduction. It has been asserted here repeatedly, it has seemingly been taken for granted, that there is such a doctrine as overproduction, not only general overproduction, but overproduction with reference to this specific metal of silver; and it has occurred to me that it is proper and needful to refute this doctrine even at the expense of some time in citing authorities for the purpose of clearing the public mind; and this I shall do notwithstanding the statement of the Senator from Massachusetts that my speech may be an overproduction. It occurs to me that I have in numerous instances read speeches coming from representatives of his section of the country, and from that Senator himself, which were an overproduction of mere words. Now, I cite the work of Roscher, volume 2, page 205:

The greater number of such crises are doubtless special; that is, it is only in some branches of trade that supply outweighs demand. Most theorists deny the possibility of a general glut, although many practitioners stubbornly maintain it. J. B. Say relies upon the principle that in the sale of products, as contradistinguished from gifts, inheritances, etc., payment can always be made only in other products. If, therefore, in one branch there be so much supplied that the price declines, as a matter of course the commodity wanted in exchange will command all the more, and therefore, have a better vent. In the years 1812 and 1813, for instance, it was almost impossible to find a market for dry goods, and other similar products. Merchants everywhere complained that nothing could be sold. At the same time, however, corn, meat, and colonial products were very dear, and therefore, paid a large profit to those who supplied them.

Every producer who wants to sell anything brings a demand into the market exactly corresponding to his supply. (James Mill.) Every seller is *ex vi termini* also a buyer; if therefore, production is doubled, purchasing power is also doubled. (J. S. Mill.) Supply and demand are in the last analysis, really, only two different sides of one and the same transaction. And as long as we see men badly fed, badly clothed, etc., so long, strictly speaking, shall we be scarcely able to say that too much food or too much clothing has been produced.

I read now from page 104 of McCulloch's Political Economy:

An excess of one particular commodity may be occasionally produced, but it is quite impossible that there may be too great a supply of every commodity. The fault is not in producing too much, but in producing commodities which either do not suit the tastes of those with whom we wish to exchange them, or which we can not ourselves consume. If we attend to these two grand requisites, if we produce such commodities only as can be taken off by those to whom we offer them for sale, or such as are directly available to our own use, we may increase the power of production a thousand or a million of times, and we shall be just as free of all excess as if we diminished it in the same proportion.

Every person in possession of commodities is qualified to become a demander. But, if, instead of bringing them to the market, he chooses to consume them himself, there is obviously an end to the matter; and it is plain that the multiplication of such commodities to infinity could never occasion a glut. Suppose, however, that he does not consume them himself—that he wishes to obtain other commodities, and that he offers them in exchange. In this case—and in this case only—there may be a glut; but how does it arise? Not certainly because there has been an excess of production, but because the producers have not properly adapted their means to their ends. They wanted, for example, to obtain silks, and they offered cottons in exchange for them; the proprietors of the silks were, however, already sufficiently supplied with cottons, and they wanted broadcloths.

The cause of the glut is, therefore, obvious. It consists not in overproduction, but in the production of cottons which were not wanted, instead of broadcloths which were wanted. Let this error be rectified, and the glut will disappear. Even on the supposition that the proprietors of silks are not only supplied with cottons, but that they are also supplied with cloth, and every other commodity which it is within the power of the demanders to produce, the principle for which we are contending would not be invalidated. For if those who want silks can not obtain them in exchange for broadcloths, or such other commodities as they are either possessed of, or can produce, they have an obvious source on hand; they can abandon the production of the commodities which they do not want, and apply themselves directly to the production of those which they do want, or of substitutes for them.

In no case, therefore, whether a country has or has not an intercourse with its neighbors, or whether the market for its commodities can or can not be extended, can an increased facility of production ever be attended with the slightest inconvenience. We might with equal truth pretend that an increased fertility of the soil and an increased salubrity of the climate are injurious. Such commodities as are carried to market are produced only in the view of obtaining others in exchange for them, and the fact of their being in excess affords of itself a conclusive proof that there is a corresponding deficiency in the supply of those they were intended to buy or to be exchanged for.

An universal glut of all sorts of commodities is, therefore, impossible. Every excess in one class must be balanced by an equal deficiency in some other. It is not the increase, but the wrong application of productive power, the improper adaptation of means to ends, that is in every case the specific cause of gluts. And it is plain that the real and only effectual remedy for this evil is to be found in the perfect freedom of industry, and in the establishment of a liberal and enlarged system of commercial policy.

And again:

It is to this interference on the part of the Government that nine-tenths of the gluts which now occur may be traced.

Speaking of restrictive legislation. I cite the remarks of Mr. Allard in the report of the Brussels Conference, to which I have heretofore referred, upon the subject of overproduction as applied particularly to the question of money:

But we are told that if prices have fallen it is due to overproduction. Mr. Cramer-Frey has told us prices fall; that is very simple; it is because we produce too much. The honorable delegate from Switzerland is astonished that with "juvenile ardor" I rise up against that claim.

If I should join him in telling you gravely that for twenty years all mankind had been so obstinate as to produce more than it could consume; that for twenty years, like the Danaides, the universe has produced things for which it had no need, it would not seem serious to you; and you would be right. That is, however, the paradoxical character of the singular theory of overproduction by which our opponents would prove that our privations result from an excess of production and that labor engenders poverty.

I think it would be better to say no more of it, since facts within our knowledge make a formal denial of that claim. The stores are everywhere empty, business suffers on all sides, and the commercial world is invaded, as all admit, by an anæmic influence which threatens death.

The statistics of Mr. Sauerbeck have clearly proved that the allegation of overproduction as a cause of falling prices is absolutely false.

From 1850 to 1873 the total production of the world increased each year 2.8 per cent. That was the age of California and bimetallism. Prices increased 40 per cent.

From 1873 to 1885 the production of the world increased yearly only 1.6 per cent; a decrease of nearly one-half. Prices should have increased; but on the contrary they fell 32 per cent.

This is the demonstration of Mr. Cramer-Frey's mistake in continuing to believe in overproduction, which was disproved long ago.

The truth, gentlemen, was told by Mr. Goschen, in England, in 1883: "The fall of prices comes from the rise of gold." He expressed his thought in these typical phrases: "Fortunate are they who own sovereigns, and unfortunate they who own commodities, products, and other goods."

Who are the fortunate ones of whom Mr. Goschen speaks?

The classes who receive fixed incomes in gold—owners of bonds of States, of provinces, and of cities, and of long-term leases.

And who are the unfortunates? The producers, the workers, and, in the first rank, the farmers.

Fixed incomes increase in value, products fall, and annuitants are enriched at the expense of labor. This is the truth, and thence arise, gentlemen, these conflicts of labor and capital in England and elsewhere, struggles against a flagrant injustice which has been brought about between so many people; and this is a serious, profound, lamentable, but, above all, a formidable revolution, of which we feel every day the disastrous consequences.

You have heard Mr. de Rothschild, in the introduction to his proposal, praise the fall of prices, in which he perceived the happiness of the laboring classes.

History, as well as what takes place in our day, protests, it seems to me, against this judgment.

From 1810 to 1840—this is history—the precious metals diminished in their production; the locomotive was invented and the steam loom transformed the world; electricity was applied, production was enormous, prices fell 49 per cent. The revolution broke forth everywhere in 1848.

If you read the writers of that time, such as Sismondi, you might think you were reading our own history.

Why did the fall of prices and the revolution of 1848 cease? Mr. Goschen taught England the reason on April 18, 1883. "An eminent French economist," he said, "has declared that France would certainly not have escaped bankruptcy in 1848 without the enormous expansion of currency produced by California and Australia. That expansion left to a commercial prosperity which permitted France to extricate herself from her political embarrassment."

My excellent colleague and friend, Mr. Weber, said the other day that these were only lamentations; that all the bimetallists were modern Jeremiahs. Yes, gentlemen, we weep, not exactly over the fall of Jerusalem or the captivity of Babylon, but we lament over the evils of modern times, over the ruin of agriculture and the accumulating losses of trade, over the evils which burst upon our modern society.

We have the right to lament and complain. We derive the right from the prophecies which we made, and to which you obstinately refused to listen, when we predicted everything which has taken place to-day before you demonetized silver in 1873.

I will cite some of these modern Jeremiahs. They are well known to you and deserve attention.

There is the Baron Alphonse de Rothschild, for instance: "As a sequel," he said in 1869, two years before the demonetization of silver, "we should have to demonetize silver completely. That would be to destroy an enormous part of the world's capital; that would be ruin."

This man was the father, I understand, of the Rothschild now living.

There is Jeremiah the first. Let us pass to the second. It is Mr. Wolowski, professor at the Collège de France. "What will be the result?" he said. "It will be serious. An immense shock will disturb the universal market. An enormous fall of prices will be the necessary consequence of the rise of the metal." And you blame us if we lament and weep over the fall which we predicted with all the consequences which it involved for mankind. Yes, we are Jeremiahs; but you must admit that our prophecies are fulfilled.

Further, upon the same page, page 329:

Open your eyes, gentlemen, for every day these Jeremiahs become more and more in the right in their opposition to you.

The fall of silver is obstinately spoken of, and the rise of gold is obstinately denied. Consider Mexico, where silver is produced. The metal is not depreciated there, for it buys as many commodities as before. "No matter," say the monometallists, "silver is depreciated, for we see that it is." "But," you tell them, "there is a crisis everywhere." "There is no crisis," they reply. "But," you say, "gold is more and more appreciated." "Quite wrong," they say; "there is no appreciation of gold; there is only overproduction." "But, after all, we are not Danaides, working without purpose. We manufacture so much less than before that all feel impoverished and ruined." "No," the monometallists repeat, "perish the colonies rather than a principle. We deny all that."

Are all these denials as valuable as the smallest proof? With Mr. Goschen, I ask the monometallists kindly to tell us—

First. Why they hold to the theory of monometallism?

Second. What benefits the application of their theory has brought us up to the present?

That is what we have been asking for twenty years without obtaining a reply, as Mr. Goschen observed to the manufacturers of Manchester.

I notice that in building upon fragile foundations based upon simple denials very singular systems are developed; thus our honorable opponent and colleague, Mr. Currie, told us that in his opinion the system of the future would be the gold standard without gold circulation, an idea well wedded to the notion that the inconvertibility of bank notes is one of the plagues which we should have the courage to contemplate calmly, an idea which does not much alarm my honorable colleague, Mr. Weber.

Many persons see a great advantage in the rise of exchanges. The manufacturers of Moscow demand an increase of inconvertible paper currency in

order to raise the price of gold, which acts as a premium upon exportation. That was the principle advocated by Mr. Karkoff, during his life the director of the Moscow Gazette. I doubt, gentlemen, whether, in a conference whose object is metallic money, its increase and the study of means for an increased use of silver, you will be disposed to accept such reasoning.

Mr. SQUIRE. I should like to ask the Senator a question.

Mr. ALLEN. Certainly.

Mr. SQUIRE. I ask the Senator from Nebraska to what he attributes the depression in the prices of grain this year as compared with last year, and the year before, and the year before that? Is it owing to a greater lack of currency as compared with those years?

Mr. ALLEN. I will cheerfully answer the Senator as I approach that question.

Mr. PALMER. I ask pardon; I did not hear the answer of the Senator from Nebraska.

Mr. ALLEN. I said I would cheerfully answer the inquiry of the Senator from Washington when I get to the question, but I can not suffer the continuity of my argument to be interrupted and anticipate a question that does not properly come into the discussion at this time.

Mr. SQUIRE. I thought it was germane to what the Senator was discussing. He was talking about overproduction. That is the reason why I asked the question.

Mr. ALLEN. I was talking about the general principles of overproduction. I have said distinctly and asserted repeatedly that I will come to the question as to whether there has been any overproduction of silver or grain eventually in this discussion. Yet I do not see that the question of the Senator from Washington is germane to the question I am now discussing. Suppose I should say that I thought it was in consequence of the decline of silver, I might be mistaken in that statement, and yet it might be true that the decline in the prices of farm produce was due to some other cause which was affected by the volume of money. I do not propose to be led off into discussions on immaterial matters of that kind, with all due deference to the Senator from Washington. My time is somewhat limited, and I think I ought not to be interrupted in that way.

Mr. SQUIRE. The Senator will excuse me, I did not want to interrupt the current, or as he expresses it, the continuity of his argument.

Mr. ALLEN. I call attention to the following tables as bearing upon the question of the production of gold and silver.

The world's production of gold and silver for four hundred years, from 1493 to 1893, has been (United States Mint Report, August 16, 1892):

Gold	$8,204,303,000
Silver	9,726,072,500
Total	17,930,375,500

Annual production of gold and silver of the world for last ten years, 1883-1892, inclusive.

Years.	Gold product.	Silver product.	Total.
1883	895,400,000	$115,300,000	$210,700,000
1884	101,700,000	105,500,000	207,200,000
1885	108,400,000	118,500,000	226,900,000
1886	103,000,000	130,000,000	226,000,000
1887	105,775,000	124,281,000	230,056,000
1888	110,197,000	140,706,000	250,903,000
1889	123,489,000	162,159,000	285,648,000
1890	113,149,600	172,234,500	285,384,100
1891	120,518,800	186,733,000	307,251,800
1892	130,816,600	196,605,200	327,421,800
Total	1,115,446,000	1,442,618,700	2,558,064,700

Production of gold and silver of the world, 1892.

Gold	$130,816,600
Silver	196,605,200
Total	327,421,800

From 1792 to 1873 is given by report of United States commissioner, and from 1873 to 1892, inclusive, by the Director of the United States Mint. The production of the gold and silver of the United States from 1792 to 1892, inclusive, has been:

Gold	$1,969,692,976
Silver	1,158,831,869
Total	3,128,524,845

So that really the total output of the silver mines of this country from 1792 to the present time has been less than the total gold output. Yet notwithstanding the fact that gold has exceeded silver in the number of dollars mined in this country from the organization of the Government down to this moment, we hear this senseless cry of the overproduction of silver, and that, too, notwithstanding the countries of the civilized world and the semi-civilized world are calling to-day for more material of which to make money. This cry has gone up for the purpose of deceiving somebody and leading the people to believe, to their injury, that the disparity between gold coin and debased silver bullion is caused by the overproduction of silver.

Mr. PALMER. Will the Senator from Nebraska allow me to ask him a question.

Mr. ALLEN. With great pleasure.

Mr. PALMER. What country has demanded silver for coinage?

Mr. ALLEN. The Latin Union is standing by the coinage issued by the French nation.

Mr. PALMER. The Senator has not answered my question. He says that countries are demanding silver for coinage. I ask him what country has made that demand in any form whatever?

Mr. ALLEN. That any nation upon the face of the earth has spoken out in words and said we want more money, or more silver, I do not pretend. I suppose the Senator from Illinois will understand me in a more comprehensive sense. I say, for instance, that Switzerland and countries of that kind are constantly protesting that the supply of money is inadequate to the demands of trade, business, and labor.

Mr. TELLER. Will the Senator from Nebraska allow me to make a suggestion to the Senator from Illinois?

Mr. ALLEN. Certainly.

Mr. TELLER. If the Senator from Illinois will take the reports of the United States Mint he will find that the coinage of silver every year for a great number of years has equaled the production of silver less that which is used in the arts. I assure him that he can find no stock of silver bullion anywhere in the world that is carried over from one year to another.

Mr. PALMER. The Senator from Colorado is exceedingly kind to undertake to answer a question without answering it. The statement made by the Senator from Nebraska was that countries were demanding silver for coinage. The Senator from Colorado has not answered that question.

Mr. TELLER. It seems to me that when they are putting it through their mints it is pretty good evidence that they are demanding it. The Senator is sticking in the bark.

Mr. PALMER. If the Senator is satisfied with that answer, I have asked the question and that is the best answer I can get.

Mr. TELLER. That is a perfect answer.

Mr. PALMER. I do not think it is. It is a very imperfect answer.

Mr. ALLEN. I desire to say to the Senator from Illinois that I did not bring with me data for all these statements. If the Senator from Illinois has been reading the foreign news during the past summer he has found that two or three of the smaller kingdoms I have mentioned have been upon the point of revolution in consequence of a shrinking volume of money. They have been meeting in conventions and discussing the question of the fall in prices of farm labor and farm products. They have been inquiring into the cause of their condition and they have in every instance come to the conclusion that it is produced by a contracted system of money; and in every instance they have declared that the quantity of gold at their disposal was not adequate for monetary purposes. If that is not a demand for silver or a demand for the extension of the metallic money of those countries, I do not know what constitutes a demand.

Mr. SQUIRE. Will the Senator permit me to ask him a question?

Mr. ALLEN. With great cheerfulness.

Mr. SQUIRE. I do not ask it for the purpose of interrupting the continuity of the Senator's remarks, but for the purpose of ascertaining the fact and getting the information. If the Senator is not prepared to give it, I hope some other Senator, perhaps the Senator from Colorado, may be permitted to give the information. The point I wish to arrive at is this: Since the suspension of free coinage in India, I should like to know whether there is any authentic information extant as to whether the Indian government or the powers that be there which control the subject have purchased silver to be coined? Has the coinage been proceeded with by the government since the suspension of free coinage in that country? I have tried to find out, and I did not know but that the Senator might be informed.

Mr. ALLEN. The avenues of information I have are simply current standard periodicals and literature of the day.

Mr. SQUIRE. I have asked the question several times of those whom I supposed had information on the subject.

Mr. ALLEN. I am frank to say that my latest information is that the Indian government is occupying what they call the expectant attitude. They are in an attitude to act one way or the other as circumstances may seem to dictate. Probably the Senator from Colorado can give the Senator from Washington all the information he desires.

Mr. TELLER. I will answer the question so far as I understand it. I understand that the British Government since the closing of the Indian mint by the British Government has not

coined any silver in India, but it is a fact I suppose the Senator from Washington must know, because it has been a matter of a good deal of discussion in the English press at least, that the export of silver, or rather the import into India, has been very large and continuous. There is great question as to what becomes of it when it gets to India, but there seems to be no falling off of the export from Europe to India. There is an article in the last Contemporary Review on the subject. I think it is the last number; if not, next to the last. The English papers have been full of it for several weeks.

Mr. SQUIRE. Are there no apparent reasons for it?

Mr. TELLER. It goes there and they buy it. What they do with it is somewhat uncertain.

Mr. SQUIRE. They do not coin it?

Mr. TELLER. They do not coin it because they can not. In the policy of closing the Indian mint it was calculated that the Government would buy and coin as much silver as was coined by the open mint. That policy may be abandoned because they have had a good deal of difficulty so far in getting it for coinage, and probably the policy will be abandoned. The policy is pronounced by the best people of England to be an absolute failure. There is no question about that.

Mr. PALMER. As the Senator from Colorado has the floor——

Mr. TELLER. I have not the floor.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Illinois?

Mr. ALLEN. Certainly.

Mr. PALMER. As the Senator from Colorado is talking, I ask him if the English Government has bought an ounce of silver for coinage in India?

Mr. TELLER. It has not, I understand.

Mr. ALLEN. Will the Senator from Illinois permit me right in this connection to ask him a question? Is it not true that for the purpose of the settlement of this question the English and the Indian governments are synonymous expressions?

Mr. PALMER. I think so.

Mr. TELLER. I should like to say that the Indian Government has no more to do with Indian affairs than I have—not a particle. The secretary of India is appointed by the Crown. He is a member of the English cabinet.

Mr. PALMER. I ask pardon. Will the Senator repeat what he said? I did not quite catch it.

Mr. TELLER. I say the Indian people have no more to do with the administration of Indian affairs than I have.

Mr. PALMER. That is the way I understand it.

Mr. TELLER. There are 287,000,000 people there under English authority, and they are governed by the secretary and a council and a viceroy. The secretary is appointed by the Crown and is a member of the English cabinet. The viceroy is also appointed by the Crown and is subject to the direction of the secretary of India. Then there is a council of twelve people. A majority of the twelve must be men who have resided at least ten years in India. That council legislates under the direction of the viceroy and the secretary, with the assistance of the governor and the lieutenant-governor of the different provinces. When they legislate for a province the governor and lieutenant-governor take part in it, but the whole direction is from Great Britain. It was stated in Parliament—I can not recall the member who stated it—that the two hundred and eighty odd million people in India had never been consulted about the closing of their mints. That is not true. Some of the people of India did know about it, but most of them probably did not.

Mr. ALLEN. Will the Senator from Colorado permit me to ask him a question? Is it not true that the Hindoo population of India have nothing whatever to do with the general government of India?

Mr. TELLER. They have absolutely nothing to do with it. The people who compose the council are citizens of England and not citizens of India. All the qualification is that there shall be a council of twelve who have at some time lived in India at least ten years, but they may not live in India at that time but in Great Britain.

Mr. ALLEN. They are entirely dependent on the British Crown?

Mr. TELLER. They are entirely dependent on the secretary, who is an absolute monarch under the Queen of 287,000,000 Indian people. There is a sort of self-government there. I do not mean to say that they do not have some local government, but on questions like the mintage of silver they are not consulted. The merchants of Bombay and Calcutta and other places protested very vigorously (as anybody will see who will look over the testimony that has been presented to us) against the closing of the mints, but it did not count for anything.

Mr. PALMER. I ask pardon of the Senator from Nebraska. I understood him to assert that there were governments which were demanding or seeking or buying silver for coinage. The Senator from Colorado, at my instance, undertook to answer that question. I understand that he has not answered it by affirming it to be true that any government has demanded or sought silver to coin it.

Mr. TELLER. The Senator is just dwelling upon words. How does a government demand it? The Senator from Nebraska means that people want silver and they get it, but they do not get enough. That is all there is of it. I assert that all the production of silver every year enters into coin. I assert that on the statement of the Director of the Mint. It will appear that every year more silver is coined than is produced. Of course this includes what is recoined. Neither the Senator from Illinois nor any other man can find a million pounds of bar silver in existence now that was in existence six months ago.

Mr. PALMER. I have not asserted anything in that respect. The question that I asked the Senator from Nebraska was whether any government had sought or desired to purchase silver for the purpose of coinage. The Senator from Colorado undertook to answer that question. He has not answered it. He tells me that I am dealing in words. Mr. President, words signify ideas so far as I can connect the two together. They are not mere matters of form. It is not an answer to me to say that I am dealing in words. I am asking the question the best way I can.

Mr. ALLEN. I supposed the Senator from Illinois understood me when I said I did not assert that any government was making an official demand for more silver coin. When I say that the people of those countries are demanding silver I simply intend to give voice to what I understand to be the sentiment of the masses of the people of those countries; that is, when they get together in conventions and public meetings to consider the question of their property and the condition of the unemployed and investigate the question they come to the conclusion that it is in consequence of a shrinking volume of money, and that there is not gold enough at their command for money purposes.

Then I assume as a consequence that they are demanding more money in the form of silver coin to swell the volume of their currency and meet their demands. I mean it in a comprehensive sense, that the people of those countries need an increased volume of currency; that they are informed of the cause of their condition, and that they are clamoring for an increased volume of money to relieve them. That is what I mean. I do not mean to assert now, and I hope the Senator from Illinois will understand it, that any government through official channels is making a demand for silver. I suppose under such circumstances the Government would go into the market and buy the silver officially without making any audible demand for it. But I mean to assert that whenever the question of contraction and the control of money is investigated, the masses of the people of the civilized world attribute the shrinkage of property and the condition of the unemployed in a great measure to a contraction in the volume of money.

Mr. LINDSAY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Kentucky?

Mr. ALLEN. Certainly.

Mr. LINDSAY. I should like to ask the Senator a question. If the Senator from Colorado be correct that the demand for silver in India has been as great since the demonetization of silver by the British Government as it was before, does the demonetization of silver by India in any way account for the decline in the value of silver? In other words, if India takes up as much silver now as it ever did, can the demonetization of silver there account for the decline in value?

Mr. ALLEN. I think the Senator from Kentucky must have misapprehended the answer of the Senator from Colorado.

Mr. TELLER. I did not say the export was as great as it had been. I said it had been marvelously great. It was supposed by everybody that when they closed their mints there would be no more silver going to India until the British Government bought it; but to the astonishment of the English people it continues to go there, and they are still unable to tell why it goes and what becomes of it. That is what I said.

Mr. LINDSAY. I ask the Senator from Colorado a further question. I do not think I misunderstood him, but of course I accept his latter statement.

Mr. TELLER. I did not say so. I do not know what the Senator understood me to say.

Mr. LINDSAY. I think the RECORD will show the Senator did say it, but we will not cavil about that. If it be true that more silver is coined each year under existing laws than is produced in the world, will the demonetization of silver by any country account for its decline in value?

Mr. TELLER. The truth is that most of it is coined as token

money. That is where the trouble comes. It is token money and not standard money. The Senator can see the difference between standard and token money.

Mr. SQUIRE. I have the figures here.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Washington?

Mr. TELLER. I wish to say one word further in answer to the Senator from Kentucky. It is not the consumption of silver that puts it on an equality with gold; it is the use to which it is put that elevates it.

Mr. SQUIRE. On this point I have been looking up the statistics, and I find something that may be of interest to us all. Perhaps the Senator from Colorado is familiar with the figures. I was not until this moment. It seems that for the month ending June 30, 1893, the number of rupees that were imported into India was 9,990,341, and the number of rupees for the three months ending June 30, 1893, was 30,468,570. The exportation from the United States is also given, showing an exportation of four or five million for each of those months.

Mr. TELLER. From what is the Senator reading?

Mr. SQUIRE. I am reading from the statement of imports and exports of the United States, on page 127. It gives the imports of British India.

Mr. TELLER. For what year?

Mr. SQUIRE. Eighteen hundred and ninety-three. This is a statement for August, 1893, but it gives the importations of rupees into India for the three months ending June 30 of the present year, and also for the previous year, showing that the silver is being imported into India notwithstanding, as the Senator from Colorado says, there is no coinage going on.

Mr. TELLER. How does it compare with the last year? I have not looked at those statistics.

Mr. SQUIRE. It is slightly in excess of that of last year, taking the three months.

Mr. TELLER. For June?

Mr. SQUIRE. Yes, that is the case for June. For the month ending June 30 last, it is 9,000,000 rupees. For the month ending June 30, 1892, it is 8,747,846 rupees. I understand the number of dollars to be about half that amount, showing that the importation of rupees into India, if calculated in dollars, would be very nearly the same as the exportation of silver from the United States. There is nothing very remarkable about that. The exportation of silver from the United States for the last three or four months is larger than it had been in any previous year for some time.

Mr. DANIEL. If I am not interrupting the Senator from Nebraska, will the Senator from Kentucky allow me to ask him a question?

Mr. LINDSAY. Certainly.

Mr. DANIEL. Does not the Senator from Kentucky believe that the demonetization of silver has had an effect on its value?

Mr. LINDSAY. I do.

Mr. DANIEL. Suppose it gets so cheap that all of it would be used for horseshoes, might there not be an increased demand for it at a smaller price?

Mr. LINDSAY. I think that is stating it rather more broadly than the facts will ever warrant.

Mr. DANIEL. I think so too. Is it not true that it is the use to which it is applied at a fixed value by law as money which has maintained its price and maintains its price now as in former times?

Mr. LINDSAY. Will the Senator from Virginia permit me to ask him a question? The theory of his side is that the supply of gold is inadequate to the uses of the world, and that therefore the people of the governments are demanding silver. I ask the Senator what proportion of the gold annually produced is coined into money, all the mints of the world being open to gold?

Mr. DANIEL. About half of the gold.

Mr. LINDSAY. I will ask the Senator further, if there was such an overwhelming necessity for a greater volume of metallic currency why did not that other half go into money?

Mr. DANIEL. Because it is needed in necessary arts and because it is used by those who are extremely wealthy and who employ it in plate. The higher it gets the more the extremely wealthy use it in jewelry. They buy it on that account. They appreciate it and fancy to possess it, and therefore take it away from currency use for the great body of the people. If my answer is not satisfactory I hope the Senator from Kentucky will give me his views on the subject.

Mr. LINDSAY. My view is that there is a demand outside of the need of currency greater than there is for currency, and therefore it is not coined.

Mr. DANIEL. That is right

Mr. LINDSAY. The people who make jewelry and sell it pay the market price for gold, and therefore it is not coined.

Mr. TELLER. They do not pay more than the coin price.

Mr. LINDSAY. I do not know about that.

Mr. ALLEN. Let me ask the Senator from Kentucky whether, where there is a strong demand for the use of gold in the arts, so that it is sufficient to take one-half or a great portion of the annual gold output into the arts, that does not cause an appreciation of that portion of gold which is coined?

Mr. LINDSAY. Yes, but it proves more than that. It proves that there is not such a great demand for further coinage as the gentlemen insist upon, otherwise the mint value of gold would be greater than the market value of gold.

Mr. ALLEN. That would depend altogether upon whether those who use gold prefer to use it in the form of ornaments and for utilitarian purposes, or for coin.

Mr. LINDSAY. I will reply to the Senator in this way. It is said that the Indian people still take silver in quantities approximately as great as they did before its demonetization. They use it for ornament, they use it for plate, just as the surplus gold is used for ornament, or plate, or carried into the arts. Yet the Senator says the demand for silver in India does not appreciate the value of it, while the demand for gold does appreciate the value of it.

Mr. ALLEN. I do not understand the Senator from Kentucky. Does he say that I claim the demand in India does not appreciate the value?

Mr. LINDSAY. The Senator from Virginia and the Senator from Colorado say that it does not appreciate the value because of the use to which it is put. Now, gold that is not coined is put to similar use, and yet you maintain that that demand does appreciate the value of the coin.

Mr. ALLEN. If I understand correctly, the use of gold money in India as a legal tender has not yet taken place.

Mr. LINDSAY. I did not say the use of gold money, but I was putting it upon the point that the demand for silver in India is as great now as it was before its demonetization, that is, for ornaments or for purposes to which the Indian people put it. The Senator maintains that because it is not coined it does not appreciate its value. The same line of reasoning will apply to the gold that is not coined.

Mr. ALLEN. If the position of the Senator from Kentucky be true, and if it be true that the English Government, manipulating the affairs of the Indian Government, intends to put the Indian Government upon a gold basis, then if the silver money of that country is to be used as token money, and is not to be a standard money, if that expression is correct, it must be that the value of silver money has been affected by the express intention of the Indian Government and go to the gold basis as well. The use of either metal as money causes an appreciation in its value, as I have clearly shown early in my remarks.

Now, Mr. President, turning my attention for a moment to the question of the demand for gold in the arts, I find that of the annual output of gold in this country of $33,000,000 last year $19,329,000 were consumed in the arts, leaving only $13,671,000 for coin purposes, from which should be deducted and necessarily must be deducted the amount consumed in the recoinage of our abraded coin.

But I return to the matter I was discussing when interrupted. The product of gold and silver of the United States for 1892 was as follows: Gold, $33,000,000; silver, $74,989,900. I speak, of course, of the coin value—that is, the coin value of the silver at the ratio of 16 to 1—and it makes a total of $107,989,900.

[At this point the honorable Senator yielded to Mr. DANIEL.]

Mr. SQUIRE. May I interrupt the Senator from Nebraska for one moment?

Mr. ALLEN. Certainly.

Mr. SQUIRE. I understood the Senator to state that he did not think any gold was used in India. I do not want to interrupt the continuity of his thought and argument, but I should like to state that I have been looking over the statistics on the subject, and for the benefit of all I wish simply to cite the fact which appears in the summary statement that is corrected down to September 27 of the present year. The gold rupees imported into the Indies from the United Kingdom increased largely during the three months ending June 30 over the importations for the preceding year. There have been importations in gold rupees going on all the time.

The importation of gold rupees for the three months ending June 30, 1892, was 937,173, while for the three months ending June 30, 1893, the sum was 2,199,323, showing a very appreciable increase in the importation of gold. It seems to me that in coming to a fair understanding of this subject we might as well take the fact into consideration that gold is being used in India.

Mr. ALLEN. I think the Senator from Washington entirely misapprehends what I said. I said, or at least I intended to say, that it is my understanding that the English Government, since

the suspension of the coinage of silver in India, has not actually made gold a legal tender in India. That is what I desired to say, and what I think I did say.

Mr. SQUIRE. I understood the Senator to say there was no gold in use in India.

Mr. ALLEN. Oh, no; I made no statement of that kind, because there has been a small quantity of gold in use in India for years; but gold has not been a legal tender in India, I understand, for many years, nor do I understand that gold is yet a legal tender in India. I may be mistaken about that, but I know of no order or statute that has been passed within the last sixty or ninety days making it a legal tender there, and certainly there was none before that time. That is the statement I made. Certainly it is the statement I make now.

Mr. SQUIRE. I did not suppose it true that gold is not used at all as a legal tender. Why should gold be imported there if it has no legal-tender value?

I doubt very much the correctness of that statement.

Mr. TELLER. Will the Senator from Nebraska yield to me?

Mr. ALLEN. Cheerfully.

Mr. TELLER. I will state to the Senator from Washington that no gold has been a legal tender in India since 1852. It was a legal tender from 1774 to 1835, but very small quantities were in use. From 1841 to 1852 there was again an attempt to establish the double standard, which failed; and since 1852 gold has not been a legal tender there.

Mr. SQUIRE. Then I would ask the Senator, inasmuch as gold is not a legal tender there, what creates its value? If the legal-tender quality is that which makes a metal valuable and it has not the legal-tender quality there, why should it be imported? Does not that contradict the argument on that subject to some extent?

Mr. TELLER. Gold goes to India because the Indian people are very fond of ornaments of gold.

Mr. SQUIRE. It goes there in coin?

Mr. TELLER. It goes there generally in bullion, not in coin. There never were any gold rupees.

Mr. SQUIRE. Estimated rupees.

Mr. TELLER. Estimated rupees. It goes in bullion, and it goes into hiding. It goes into trinkets, into armlets, and anklets, and that class of jewelry, and never comes out except it did come out in the great famine. When the people were starving they brought their trinkets out and exchanged them for food, etc. It does not go to India for monetary purposes.

Mr. ALLEN. I introduce here a table showing the world's production of gold and silver, calendar year 1892, giving production of American continent of $205,097,321, and balance of world of $122,324,490, compiled from reports of the United States Mint for the year 1892.

	Gold.	Silver.	Total.
AMERICA.			
United States	$33,000,000	$74,989,900	$107,989,900
Dominion of Canada	925,000	407,100	1,332,100
Mexico	1,147,500	59,000,000	60,147,500
Argentine Republic	82,000	620,000	702,000
Colombia	3,472,000	1,298,000	4,770,000
Bolivia	67,000	15,488,000	15,555,000
Chile	1,436,600	2,942,000	4,378,600
Brazil	438,000		438,000
Venezuela	1,000,000		1,000,000
Guiana (British)	1,800,000		1,800,000
Guiana (Dutch)	542,000		542,000
Guiana (French)	998,229		998,229
Peru	75,000	3,112,000	3,187,000
Uruguay	93,500		93,500
Central America	163,492	2,000,000	2,163,492
Total	45,240,321	159,857,000	205,097,321
BALANCE OF THE WORLD.			
Japan	508,400	1,798,800	2,307,200
Africa	22,069,578		22,069,678
India (British)	3,057,900		3,057,900
Korea	750,000		750,000
Australia	33,870,800	17,375,677	51,246,477
Russia	23,546,000	550,000	24,096,000
Germany		7,921,336	7,921,336
Austria-Hungary	1,399,648	2,161,951	3,561,599
Sweden	73,100	152,000	225,100
Norway		235,400	535,400
Italy	94,280	1,146,370	1,240,650
Spain		2,140,400	2,140,400
Turkey	7,000	55,000	62,000
France	133,000	2,955,600	3,088,600
Great Britain	66,600	255,650	322,250
Total	85,576,306	36,748,184	122,324,449

Total of the world, $327,421,811.

Percentage of world's total of gold and silver produced in 1892.

America produced	62.7	per cent of world's product
Balance of world produced	37.3	per cent of world's product
	100	
United States produced	37.6	per cent of world's product
United States produced	37	per cent of the silver.
United States produced	25	per cent of the gold.

It is a peculiar fact that while England produces but little gold and silver, the Bank of England issues no notes under £5, or nominally $25; it mints half sovereign gold pieces, and silver is used for all smaller denominations. Ireland and Scotland issue £1 notes, while United States, the richest gold and silver nation on earth, issues $1 paper money, of three forms, viz, greenbacks, Treasury notes and silver certificates—to the disadvantage of her industries.

NATIONAL DEBTS OF COUNTRIES PER CAPITA.

[Public debt, Eleventh Census United States, 1890.]

I give the following table of the per capita of the national debts of all foreign countries, and the national debt of the United States; also select from the itemized table of the indebtedness of foreign countries the following per capita of Great Britain, and some of her dependencies or colonies governed and directed by England. The latter I give to show the financial condition of the countries controlled directly by England and her money policy, that our people may study it to see whether they care to adopt a policy which has brought such a heavy burden of debt to the people of some of the richest colonies in agricultural and mineral wealth of the world. The money question is the principal issue now before the people. Shall we submit to the dictation of the manipulators and against the workers and producers of this country, the terrible effects of which are now being felt, and unless stopped will grow infinitely worse? This is for the people to answer—yes or no.

National indebtedness of all foreign countries, per capita	$32.90
National indebtedness of the United States, per capita	14.24
English Empire and dependencies:	
National indebtedness of Great Britain and Ireland, per capita	87.75
National indebtedness of New South Wales, Australia, per capita	214.87
National indebtedness of South Australia, Australia, per capita	321.00
National indebtedness of West Australia, Australia, per capita	150.23
National indebtedness of Tasmania, Australia, per capita	147.65
National indebtedness of Victoria, Australia, per capita	161.63
National indebtedness of Queensland, Australia, per capita	333.46
National indebtedness of New Zealand, Australia, per capita	298.01
National indebtedness of Cape of Good Hope, Africa, per capita	77.56
National indebtedness of Natal, Africa, per capita	45.76
National indebtedness of Canada, America, per capita	47.51

Add to the above per capita of national indebtedness of the English colonies the indebtedness of the people, that of the railroads, of private and corporate companies, for homes and loans from banks, the same as itemized in Table A of United States, and the per capita of indebtedness will be increased several hundred dollars.

National debt of foreign countries	$26,633,016,811
Local debt of foreign countries	1,689,740,252
National debt of the United States	891,969,104
State, municipal, and county, United States	1,135,210,442
Total	30,349,927,609

I desire the attention of the Senate to the per capita of gold and silver in coin and bullion in the United States and in France August 16, 1893, or about that date:

Gold in coin and bullion in the United States	$604,000,000
Silver in coin and bullion in Mint and Mercantile Safe Deposit Company in the United States	615,000,000
	1,219,000,000
Population August 1, 1893, United States, 67,000,000.	
Per capita, gold in United States	$9.01
Per capita, silver in United States	9.18
Total per capita in United States	18.19
Per capita, gold in France	20.52
Per capita, silver in France	17.95
Total per capita in France	38.47

Per capita in France $38.74, as against $18.19 in this country.

The table I have submitted, which I think is substantially correct, shows that the French people have a per capita of metallic money substantially twice the amount of the American people. I think it has become proverbial in this country that the French people are a typically prosperous people. If I am correctly informed, every natural agency in the French Republic is being utilized in the production of wealth; every man who desires labor has an opportunity to labor for remunerative wages; and the Frenchman is the owner of his home. Now, to what is that due? It is due to the fact that the French Republic has undertaken to secure the prosperity of her own people. She has not trusted to banking or corporate institutions exclusively for the prosperity of her people, but her legislation has been humane and just, and has taken within its reach and grasp all classes of the people of France. As a result the French are a remarkably prosperous people, notwithstanding the tremendous tribute that was levied upon them by the Prussian Empire after the close of the Franco-Prussian war.

Mr. PALMER. Will the Senator from Nebraska present or indicate the French law which has produced the results he attributes to the French legislation? Can he tell us what it is?

Mr. ALLEN. If I go to an apple tree and see lying under the limbs of that tree an apple of peculiar shape and color and taste and find hanging on the limbs above apples identical in shape,

color, and taste, I will naturally conclude that the apple which is upon the ground grew upon that tree and fell from there, according to the law of gravitation, although I did not see it fall.

Mr. PALMER. As I never saw the tree, will not the Senator describe it to me?

Mr. ALLEN. I witness the fact that the French people are prosperous. I suppose the Senator from Illinois does not doubt that?

Mr. PALMER. I do, but still I would ask the Senator to furnish the law which has made them prosperous, if he knows of such a law.

Mr. ALLEN. It is the most singular thing in the world that the Senator should ask me at this time in the morning, pretty nearly 3 o'clock, to furnish a French law that has made those people prosperous.

Mr. PALMER. I ask pardon; I do it because I suppose the Senator knows what the law is.

Mr. ALDRICH. Will the Senator from Nebraska allow me to supplement the question of the Senator from Illinois?

Mr. ALLEN. I do not know whether the Senator from Illinois is really serious in what he says.

Mr. PALMER. I am serious.

Mr. ALLEN. It occurs to me that there is a tinge of insincerity in it.

Mr. PALMER. Not the slightest.

Mr. ALDRICH. I should like to ask the Senator from Nebraska whether he attributes the great prosperity of the French people, to whom he has been alluding, to the fact that they suspended the free coinage of silver in 1875 and never resumed it.

Mr. ALLEN. Oh, no; I do not attribute it to anything of the kind. They have prospered in spite of the unfavorable silver legislation in 1875.

Mr. GALLINGER. I should like to inquire of the Senator from Nebraska if it is not a fact that the French people per capita consume very much less than the people of the United States, and if that may not account for what he asserts, and which I do not know to be true or otherwise, that they have their little homes?

Mr. ALLEN. My knowledge of the French people is necessarily confined to the same channels that are open to other Senators. I do not suppose there is any particular difference between the consuming power of the Frenchman and the German.

Mr. GALLINGER. If the Senator will permit me, I should like to ask him a further question: If it be true that as compared with our people the French are so exceedingly prosperous, why is it that immigration from France is so much greater to this country than from this country to France?

Mr. ALLEN. The natural opportunities for a man here under favorable legislation must be greater than they are in an old country like France. But does the Senator from New Hampshire pretend that the condition of the people here can not be affected by evil legislation so as to make the general condition of the people of this country unequal in point of prosperity to the people of France?

Mr. GALLINGER. By way of answer to that interrogatory I will say that I make no such contention as that; but after listening to the Senator from Nebraska, who has been berating the people of the United States for some twelve or fifteen hours, advertising to the world that we are almost a nation of paupers, I stand here to say that my information leads me to believe that there are no people on the face of God's green earth as prosperous and as happy and as contented as the people of the United States.

Mr. ALLEN. The Senator from New Hampshire attributes to me an assertion which I never made. I desire to call the attention of the Senator to it now that we may have a perfect understanding. I have not berated the people of the United States.

Mr. GALLINGER. Then the Senator has been very unfortunate in his language.

Mr. ALLEN. I have not berated the people of the United States, and I am reasonably correct in my statements.

Mr. GALLINGER. Then I say the Senator from Nebraska has been very unfortunate in his choice of language.

Mr. ALLEN. The Senator from Nebraska understands the ordinary English language and its use. What the Senator from Nebraska has said is that the condition of millions of the people of this country is due to unwholesome laws, and, if the Senator pleases, rotten legislation. Now, because I say they are the victims of that kind of legislation is that berating them? Is it not rather commiserating their condition when asking for a change of the legislation that brings about such results? Eradicate this rotten legislation and let the whole country prosper.

Mr. WHITE of Louisiana. Will the Senator from Nebraska allow me to interrupt him?

Mr. ALLEN. Let me get through with the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from Nebraska declines to yield to the Senator from Louisiana.

Mr. ALLEN. I decline for the present.

Mr. WHITE of Louisiana. Excuse me; I was going to ask the Senator if he supposes that in France, to which he has referred so glowingly, there is none of the human misery and suffering to which he alludes as the condition in this country?

Mr. ALLEN. Plenty of it.

Mr. WHITE of Louisiana. Is there more there than there is in this country, according to the Senator's idea?

Mr. ALLEN. I can not say what is the exact extent of misery and suffering in France, but it is less than in the United States.

Mr. WHITE of Louisiana. Then, if the Senator can not say, why does he contrast the condition of France with the condition of this country and contrast the marvelous results produced by what he supposes to be French legislation with the bad results produced by our legislation?

Mr. ALLEN. I mean to say that in a country which in natural conditions is not equal to this country, in consequence of humane legislation upon the part of the French Government, the people have been made wonderfully prosperous. What would be the capacity of this country, what would be its condition——

Mr. McPHERSON. What does the Senator mean by——

Mr. ALLEN. Wait until I get through with my friend from Louisiana. What would be the condition of the people of this country with legislation just as humane and favorable to the masses of the people as the legislation of France?

Mr. WHITE of Louisiana. What legislation does the Senator refer to?

Mr. ALLEN. I am not going into specific legislation there. I mean to say that the volume of money in France is sufficient to put every wheel in motion, to stimulate production until all persons have work at remunerative wages and can save something. Whether it is due to any specific legislation there I do not know. But I know in this country, where the situation of the people is better than in France, the per capita circulation is much less, and those conditions do not exist.

Mr. WHITE of Louisiana. Will the Senator allow me?

Mr. ALLEN. Certainly.

Mr. WHITE of Louisiana. I asked the Senator just now if he affirmed that the conditions in France are better than here and he said he would not undertake to say that they are.

Mr. ALLEN. No; I understood the Senator from Louisiana to ask whether I affirm that there are more suffering, want, and distress in that country than in this.

Mr. WHITE of Louisiana. Then I asked him whether he would affirm that there was more suffering in this country than in France, and he said he would not. Now, immediately after saying he will not do that, he turns around and says there is such a condition in France that every man is prosperous.

Mr. ALLEN. Relatively so. There might be one or two in France who are not prosperous. I suppose the Senator understands that I am speaking in general terms of a population of something like thirty-eight or thirty-nine million people. In the technicality of language it would not be true that they were all prosperous if there was one man not prosperous; but I am speaking about the general prosperity of people of France.

Mr. WHITE of Louisiana. Does the Senator know anything about the increase of pauperism in France?

Mr. ALLEN. I have made no special study of that matter, but I have some information on the question.

Mr. WHITE of Louisiana. Then if the Senator does not know the fact, why does he make the affirmation that pauperism does not exist there?

Mr. ALLEN. I must decline to further answer the question of the Senator from Louisiana, for the evident purpose of that question is simply to confuse the discussion. I assert again, and it is asserted in our magazines and newspapers, it is believed in intelligent circles in this country, that the French people, considering all things, are the most prosperous people financially upon the face of the earth as a whole. I shall later in this discussion show the condition of hundreds of thousands of the people of the United States at the present time.

Mr. PALMER. Will the Senator allow me?

Mr. ALLEN. Certainly.

Mr. PALMER. I desire to interpose a most positive and respectful contradiction of that statement. There are no people in the world more comfortable than the people of the United States. The French people are in no sense as comfortable, as well fed, or as well clothed as the people of the United States.

Mr. TELLER. And they ought not to be.

Mr. GALLINGER. Nor do they consume, per capita, as much.

Mr. PALMER. Nor have they as many of the comforts of life.

Mr. TELLER. I say they ought not to have. We have a richer country.

Mr. PALMER. They ought not to be as comfortable, and they are not.

Mr. ALLEN. I supposed my friends from Illinois and New Hampshire understood me. I say that, considering the soil and considering all the surroundings that enter into the question of the prosperity or detract from the prosperity of a people, the French, comparatively speaking, are the most prosperous people, financially, upon the face of the earth. Is that plain enough?

Mr. GALLINGER. I will venture to answer it by saying that it is plain enough, but I do not believe it is true.

Mr. ALLEN. I do not care anything about what the Senator from New Hampshire believes.

Mr. GALLINGER. That is all right. It is the Senator's privilege.

Mr. ALLEN. The Senator the other day asserted that in the State which he has the honor to represent, the State of New Hampshire, there was something like $200 per capita, I think, in the savings banks, and I presume probably that is true. But, Mr. President, how many people own that money?

Mr. GALLINGER. I will answer the Senator.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from New Hampshire?

Mr. ALLEN. Certainly.

Mr. GALLINGER. I will answer the Senator by referring him to the report of the Comptroller of the Currency for the year 1892, from which he will discover the fact that New Hampshire has a per capita in her savings banks of $205.76, while the great State of Nebraska has not one single dollar according to that report.

I will say, furthermore, that about one-half of the entire population of the State of New Hampshire have deposits in our savings banks. We have a population of 382,000, and about 180,000 of our people have deposits.

I will go further and say to the Senator, because he evidently has not looked up this matter, that we have an aggregate of $78,000,000 in our savings institutions, 75 per cent of which is in sums of less than $300, showing that it is the poor men of my State, the laboring men and women, who have saved something for a rainy day.

I trust the Senator is satisfied so far as New Hampshire is concerned, and that he will not repeat the slanders on New England that I understand he did assert to-night, which I believe he has done for the second time in this debate.

Mr. ALLEN. It is most surprising that the Senator from New Hampshire should say that I have slandered New England. Will the Senator from New Hampshire be kind enough to point out what I have said that was of a slanderous character?

Mr. GALLINGER. I was not in the Senate Chamber when the Senator made his speech.

Mr. ALLEN. Very well. Then the Senator should be more careful of his language.

Mr. GALLINGER. I have undertaken to try to find out from the stenographers what the Senator said and have not succeeded in doing so. I have been informed, however, that the Senator said our farms were abandoned by Americans and occupied by French Canadians, which is not true to any great extent, and that he pictured a condition of desolation in New England which does not exist.

Mr. ALLEN. I said nothing about the desolation in New England, and it is somewhat singular that the Senator should come in here and make a charge when he does not know what I did say. I did say, and I say now to the Senator from New Hampshire, that there are abandoned farms in New England.

Mr. GALLINGER. So there are in Kansas and Nebraska.

Mr. ALLEN. I say that there are abandoned farms in New England with tenantable houses, which have been abandoned for years.

Mr. GALLINGER. So in every State of the American Union.

Mr. ALLEN. I beg pardon; that does not exist in every State of the Union.

The PRESIDING OFFICER. The Chair will call the attention of Senators to the rule which requires that before an interruption of the Senator having the floor, a Senator desiring to interrupt him will address the Chair, and the Chair will then ascertain whether the Senator on the floor is willing to yield.

Mr. ALLEN. The secretary of state of Massachusetts reported in 1889, 1,451 farms totally abandoned, one-half of them with good buildings, and the valuation was over $1,000,000. I say that the same thing in a greater or lesser degree applies to other portions of New England.

I do not say this for the purpose of reflecting upon New England or any person who lives there, and I suppose the Senator from New Hampshire will understand that the deduction I draw from that is that the volume of money in this country has become so small that under the conditions existing in New England the native farmer can not make money by cultivating the soil and is driven from it, and he is succeeded by a class of cheaper labor. That is every word I have said about New England, and I say it to the Senator from New Hampshire now. If that is a slander, let it stand. It is true. I also invite him to compare the amount of deposits in Nebraska banks with the deposits in the banks of New Hampshire.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from New Hampshire?

Mr. ALLEN. Certainly.

Mr. GALLINGER. I simply desire to say that when the Senator says that our farms are occupied by cheaper labor than American labor, it is not true to any considerable extent. Some of our farms are abandoned, it is true, as farms are abandoned in Kansas, in Nebraska, in Illinois, in Ohio, and in every other State of the American Union.

Again, it is true that perhaps our young men can make more money in our manufacturing villages than they can on the farms, and the natural thrift which distinguishes the people of New England leads them to go where they can make the most money.

Mr. ALLEN. I do not doubt it. That is all perfectly proper.

Mr. GALLINGER. That is all there is to it.

Mr. ALLEN. I return to the subject I was discussing when interrupted by the Senator from New Hampshire——

Mr. PALMER. Will the Senator from Nebraska allow me to make a single remark?

Mr. ALLEN. Certainly.

Mr. PALMER. I wish to say that there are no abandoned farms in Illinois.

Mr. ALLEN. I do not doubt it. Illinois is a magnificent State, well adapted to agriculture; but it necessarily must be that a State such as the State from which my friend from New Hampshire comes, where the soil is not productive, where farming is carried on under difficulties, the farmer can not compete with the farmers of the great West, and especially is this true when prices are falling and the volume of money is shrunken so that farmers can not produce with profit. Under such circumstances the people must necessarily resort to some other means of living. Is it wrong to say so? Yet the Senator from New Hampshire says I am slandering his State or slandering New England, when I am telling the simple truth, and doing it in the most kindly spirit.

The Senator from New Hampshire seems to gloat over the fact that there are $200 per capita in the savings banks of New Hampshire and none in savings banks, as he says, of the State of Nebraska.

Mr. President, the State of New Hampshire must be something like three hundred years old as a Colony and a State, and it would be singular if all the generations of thrifty people in that State who have accumulated, perhaps small sums—but nevertheless accumulated through ages and have transferred their wealth from generation to generation, until it has reached down perhaps to the twentieth generation—it would be singular, I say, if there were not some evidences of wealth in that State; and yet, Mr. President, the State from which I come, and which I have the honor in part to represent on this floor, which is comparatively a youth yet, when it becomes as old as the State of New Hampshire, under a just and humane system of legislation will exhibit a hundredfold more prosperity than the State of New Hampshire. It is even richer now.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from New Hampshire?

Mr. ALLEN. Certainly.

Mr. GALLINGER. In answer to the assertion just made by the Senator from Nebraska, I desire to put on record the fact that from the organization of the State of New Hampshire until the year 1860 her people had accumulated in the savings banks of the State just four and a half million dollars. Since 1860 to 1893 they have added to this four and a half million dollars the enormous sum of $73,500,000. In the last year the people of my State put in our savings banks 50 per cent more money than they had accumulated in banks of that description from the organization of the State until 1860.

Mr. ALLEN. Yes, and they will put more in, too. If the McKinley act is kept in force, it will be but a short time until they will have it all.

But the prosperity of that section of the country, let me say to the Senator in all kindness, is due more to tariff legislation and money made in that way, fourfold more than it is due to agriculture; and I think the Senator from New Hampshire will concede that.

Mr. GALLINGER. I have no objection to that statement, but it does not tally very well with the other statement of the Senator from Nebraska, that New England is in such dire distress.

Mr. ALLEN. I have not said, I repeat, to the Senator from New Hampshire, and he has no right to say I did, that New England is in dire distress. I did not say so. I did say, and I repeat the statement, that there are thousands of abandoned farms in New England with tenantable houses upon them, and much of the agricultural lands of that country are being bought up and controlled by a class of foreign farm laborers who are brought into this country and who take the place of the native population.

Mr. HIGGINS. Mr. President, with the permission of the Senator from Nebraska——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Delaware?

Mr. ALLEN. Certainly.

Mr. HIGGINS. I would ask the Senator from Nebraska if he is not only aware of, but if he is not familiar with the fact, that we poor people in the East have been driven down in our agriculture by the fact that the good people of Nebraska and Kansas and the Dakotas, to say nothing of some parts of Iowa and Minnesota, have so increased the products of the farms as to have swamped the markets both of the United States and the world, by the most enormous and unexampled increase of the per capita amount of acres devoted to cereals and other farm products, as compared with the progress of population. So that this very country and people whom my friend represents have broken down the agriculture and the price of agricultural products throughout the world, brought the superb agriculture of Great Britain to a condition that threatens to crumble that fabric of its aristocracy and its land-owning element, and yet the Senator turns around and says "Look at this picture in New England, and the whole of it is due to the want of more fiat money."

Mr. ALLEN. No; I did not say "fiat money."

Mr. HIGGINS. Then some sort of money.

Mr. ALLEN. The Senator from Delaware will stand corrected. I said "money."

Mr. HIGGINS. Well, if the Senator does not say "fiat money" I am glad to have the admission.

Mr. ALLEN. The Senator ought not to inject into my remarks something that I did not say.

Mr HIGGINS. I am glad to hear that the Senator from Nebraska does not favor fiat money.

Mr. ALLEN. That hardly tallies with what my friend from New Hampshire [Mr. GALLINGER] said. He said they had made wonderful progress and had been putting their deposits in the savings banks in the last twenty-five years, and yet my friend from Delaware says they are poor people.

Mr. HIGGINS. Will the Senator allow me?

Mr. ALLEN. Certainly.

Mr. HIGGINS. We have not an abandoned farm in my State; but we have much lower prices and the farms have gone down in value. I had a most remarkable statement the other day in a private letter from the best statistician in the United States on this question, Mr. Wood Davis.

I think I heard the Senator from Nebraska, in the course of his remarks, claim the credit of having been born in New England. Mr. Davis himself is a native of Massachusetts. He is a resident of Kansas. He wrote to me the other day that he fully expected by 1896, with the present growth of population and the production of agriculture, now that the Cherokee Strip opening marks the last public land to be appropriated in the United States for agricultural purposes from the treeless plains of the West, the price of grain would go up so high that—save the mark—the Democratic party is going into power for sixteen years!

Mr. ALLEN. Mr. President——

Mr. TELLER. Will the Senator from Nebraska allow me to correct the Senator from Delaware?

Mr. ALLEN. Certainly.

Mr. TELLER. The Senator from Delaware, while he seems to be engaged in correspondence with statisticians, does not seem to have studied the statistics. [Laughter.] The Senator says that the overproduction—he did not put it in that way, but that is what he means—of the vast crops of the United States has broken down the world's market. I wish to call the Senator's attention to the world's wheat crop, which, eleven years ago, was 2,270,982,485 bushels, or in round numbers, we will say 2,270,000,000 bushels. Last year it was 2,307,000,000 bushels, which is 37,000,000 more than it was ten years before. With an increased population it should have been considerably larger.

This year, 1893, it is 2,229,000,000 bushels, and this year, with the world's decreased crop, wheat is worth 23 cents a bushel less than it was worth last year in the markets of the world. That is an absolute answer to the Senator's statement that it is the overproduction of wheat which has caused the difficulty.

Mr. HIGGINS. Will the Senator from Nebraska allow me?

Mr. ALLEN. Certainly.

Mr. HIGGINS. I can hardly be expected at this time of the morning to have on hand, like the Senator from Colorado, special facts and statistics at my command, nor will I pretend to rival him in the position of a doctor on all these subjects.

The Senator from Colorado may select a particular year ten years ago, and compare it with last year; but that, I submit, is an unfair method of comparison. It is the average of the years that should be compared with one another; and while I have not the statistics at hand, I am very much mistaken if they do not show that the growth of farm products, as I have before stated, was enormously augmented in the period beginning just after the war, say about 1866 and 1867, when the settlement of the Indian troubles in the States of Kansas and Nebraska and beyond threw those lands open to settlement, and we spanned across them the railways that simply emptied out on those treeless plains the overplus and growth of the population of this great country and of all Western Europe. In the year before last and last year were produced two of the largest wheat crops that the United States has ever grown.

I well remember when our crop reached 400,000,000 bushels, and we did not know then how we could market our own crop. In the year 1891 it reached 610,000,000 bushels, and last year considerably over 500,000,000 bushels. We have carried over from last year on this side of the water a small crop of 100,000,000 bushels of surplus, and we are met by a very large crop on the other side; but let there be for the coming year a crop no larger than that of this year, and I shall be very much surprised if the farmers do not get much better prices.

Mr. TELLER. May I trespass on the indulgence of the Senator from Nebraska a moment more?

Mr. ALLEN. Certainly.

Mr. TELLER. I shall not deal unfairly with the Senator from Delaware. He complains that I took 1882. If the Senator from Delaware will follow me in round millions—I shall not read the entire figures, because it is not important that I should do so—I will commence with 1882, and run down. In that year the crop was 2,270,000,000; the next year 2,063,000,000; the next year 2,302,000,000; the next year 2,108,000,000; the next year 2,129,000,000; the next year 2,305,000,000; the next year 2,164,000,000; the next year 2,068,000,000; the next year 2,222,000,000; and the next year 2,295,000,000, that is in 1891. The next year, 1892, it was 2,307,000,000, and in 1893, 2,229,000,000.

Let me read for the Senator's benefit the prices of wheat in Liverpool. In 1890 the price ran up to $1.25 a bushel. The average for that year, however, was only $1.03; in 1891 it was $1.02; in 1892 it was 85 cents, and in 1893 it was 78 cents.

Mr. DAVIS. In Liverpool?

Mr. TELLER. Yes; in Liverpool.

Mr. DAVIS. Per bushel?

Mr. TELLER. Per bushel. That is correct. There is not any question about it. It is selling for less than it ever sold for, 268. a quarter.

Mr. SQUIRE. Will the Senator please explain the reason of that?

Mr. TELLER. If I shall ever have an opportunity to explain it on this floor, I shall explain it, but I shall not explain it in the time of the Senator from Nebraska.

The Senator from Delaware speaks of our great crops. In 1891 we had 611,000,000 bushels of wheat in round numbers; in 1892 we had 515,000,000 bushels, and this year we have 400,000,000 bushels, and the price is less now than it was when we had 611,000,000 bushels. Last year we had 495,000,000 bushels of corn less than we had the preceding year, and corn was worth less last year than it was the year before, showing conclusively that it is not the great production of the West which broke down the markets of the world, but that it is the currency system which has broken down the markets of the world.

Mr. PALMER. The Senator from Nebraska will allow me to say that I accept all the facts stated by the Senator from Colorado.

Mr. TELLER. They are facts.

Mr. PALMER. But I deny the conclusions. There is no possible connection between the currency and prices. The currency has not been reduced, has not been diminished in quantity or quality, and there is no foundation for that statement.

Mr. TELLER. I am not talking about the currency system of the United States. The price of wheat in the United States is fixed by the price of wheat in Liverpool, where we sell our surplus products. I am speaking of the currency system of the world.

Mr. PALMER. And yet I understand the Senator to favor the adoption of a single silver standard in this country, although all that we sell we sell in Europe.

Mr. TELLER. The Senator does not understand anything of the kind. He knows better. He knows that I have stated re-

peatedly that I was not in favor of a silver standard. I have said if we were compelled to have either gold or silver, I was for silver, and if I get the floor I shall give my reasons why the silver standard is better for this country than the gold standard.

Mr. PALMER. I shall wait with great patience to hear what the Senator from Colorado has to say: but I have understood him to express his preference for a silver standard.

Mr. TELLER. The Senator could not, for I never made a suggestion in my life that was not in favor of the double standard.

Mr. PALMER. I understood the Senator to say that, as between the two, he preferred the silver standard.

Mr. TELLER. As between gold and silver I have said that; but I prefer the double standard. I hope the Senator knows the difference between the single and the double standard.

Mr. PALMER. I beg to say that I am repeating what the Senator said, that as between the two he preferred the silver standard. Is that correct?

Mr. TELLER. What is the Senator talking about, the double standard or the gold standard?

Mr. PALMER. I am talking about what the Senator himself said.

Mr. TELLER. I have always advocated the double standard. I have said that if the United States were compelled to go to a single standard, we should be a great deal better off with a silver standard than with a gold standard: and that I repeat now.

Mr. PALMER, Then, I am correct in saying as between the two, the Senator prefers the silver standard. Is that correct?

Mr. TELLER. I have stated.

Mr. ALLEN. I think that is what the Senator from Colorado said.

Mr. PALMER. That is correct then. There is no occasion for dispute about it.

Mr. TELLER. The next time the Senator from Illinois gets the floor, he will insist that I said I was in favor of the silver standard against the double standard because I did not reply when I was asked whether I was in favor of one or the other.

Mr. PALMER. When I get the floor I will tell the truth.

Mr. TELLER. I hope so.

Mr. PALMER. There is no occasion for "hope." I understand the Senator to say that he prefers the silver standard to the gold standard.

Mr. TELLER. I do; yes, that is right. Now I hope the Senator understands me.

Mr. PALMER. Then, what difference is there between us on that point?

Mr. TELLER. I will state when I get the floor.

Mr. MANDERSON. Will my colleague yield to me for a few moments?

Mr. ALLEN. I yield to my colleague.

Mr. MANDERSON. I have the permission of my colleague to interrupt him, and if I may interrupt these threatened prophecies of truth-telling which have just been promised to us—and I hope we shall not tell all the truth or all we think we know upon this floor, but that there shall be some concealments—I should like to call attention to a statement made a few moments ago by the Senator from New Hampshire [Mr. GALLINGER]. I commend him in as strong terms as I can use for coming to the defense of his State. I should heartily condemn any man who did not resent attack upon his State. But when a Senator upon this floor, standing as the representative of his sovereign State, indulges in that which is in the nature of defamation of his State I should be inclined to apply to him that old Scotch proverb which is so expressive, "It is an ill bird that defiles its own nest."

The Senator from New Hampshire took proper pride in the splendid exhibit of the wealth of the State of New Hampshire. He drew a comparison between that ancient and honorable Commonwealth and the proud young State that my colleague and myself have the honor to represent upon this floor. I take great pride in the State of which I have been a citizen for a quarter of a century, and I know that my colleague should and does thrill with pride when he realizes that he represents upon this floor one of the chiefest of the States of this great nation.

We are told by the Senator from New Hampshire that by the report of the Comptroller of the Currency it appeared that there was not a dollar on deposit in savings banks in Nebraska. The population of that State by the last census was about 1,250,000. I glanced a moment since over the record to see what the deposits were in alleged impoverished Nebraska, and find that in the national banks, with a capital stock of $9,300,000 and a surplus of $2,400,000, by the last report which I can obtain of the Comptroller of the Currency, there were $20,000,000 of individual deposits, $700,000 of deposits in other national banks, $1,600,000 of deposits in the State or private banks, making $34,000,000 of wealth owned within the State of Nebraska in its 130 national banks or thereabouts.

I turn now to the State or private banks of that State, and I find that the capital stock of these banks, they numbering 525 by the last report of the Comptroller, was $14,000,000, and of surplus and profits $1,300,000, while the deposits were $15,000,000, and in other liabilities, presumably time certificates owed by the banks to depositors, $3,400,000, making, in national and State banks, about $68,000,000—enough, Mr. President, to pay off every living and subsisting mortgage upon the farm lands of that State.

Now, let us see as to the savings banks. In the State of Nebraska there are but few legitimate savings banks. They are limited to the larger towns. The farmers who bank—and I am glad to say that a great many of them in the State of Nebraska are able to have banking accounts—do not bank in the savings institutions, but use the local banks, State or national. They are in the habit of paying to depositors on time certificates, and frequently upon deposits, subject to draft or check, a fair interest, and in the few savings banks there are in my State I find by the report of 1890–'91 that there were 26,836 depositors, and the amount of their deposits was $3,500,000, being $130 per capita to each depositor.

When my friend from New Hampshire said there was no money on deposit in savings banks in the State of Nebraska, he took the report for 1891–'92, in which year there was no report made to the Comptroller of the Currency by any of the officials of that State, none being required to be made by law.

The fact is that in that wealthy State—for I at least, am not here *in forma pauperis* representing that Commonwealth—in that State, in the banks of deposit, there is ample and enough to pay every dollar of the mortgage indebtedness of the State.

Aye, more, Mr. President, during the last campaign I visited almost every county in the State, and my first duty when I went to the county town was to go to the assessor's books in the commisssioner's office and ascertain the assessment of the values for taxation, and explore the amount of the mortgage indebtedness; and in no county that I visited was it not agreed upon all hands that the increase in farm values in the last five years was in itself sufficient to pay every dollar of mortgage indebtedness.

I have seen that State grow in such wise that farm land worth, when I went to it twenty-five years ago, along the counties on its eastern border, but from $5 to $10 an acre can not be purchased to-day for less than $40 to $60 an acre, and I have seen lands in the western part of that State, aye, in the center of it, declared to be worthless within my recollection, under changed climatic conditions, under the hand of cultivation, under the development given to it by the farmer, advance from a condition which was valueless to perhaps an average of $10 to $12 an acre.

No, Mr. President, the State that my colleague and myself have the honor to represent here is not poor, but rich—rich not only in material wealth, but rich in a determination to pay every dollar that it owes honestly, squarely, and according to the letter of the bond, and richer in its honesty even than in its material wealth.

True it is there have been foreclosures. An incident of debt is that the day of payment must come. Who can condemn the man who, when the debt is owing him, proceeds under the forms of law for its collection? True, there are instances of misfortune where homes are lost and where, perhaps, caused by improvidence, sometimes caused by the misfortunes which come to all men, the home must go to satisfy perhaps a grasping and a greedy creditor; but be he ever so grasping and ever so greedy, it is his right to require the payment of the debt as it was contracted, even to the foreclosure of the mortgage and the selling of the rooftree over the head of the debtor.

I say for the State which I have the honor to represent in part here, that no citizen of that proud young Commonwealth will thank any man, be he representative here or elsewhere, to even insinuate that she proposes to repudiate one penny of her indebtedness. She will repudiate the man who makes the charge. Thank God she has the ability to pay, and thank Him still more that she has the honesty that prompts to payment.

Mr. GALLINGER. Mr. President, will the Senator from Nebraska yield to me for a moment?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from New Hampshire?

Mr. ALLEN. I yield to the Senator.

Mr. GALLINGER. Mr. President, I had no purpose of misrepresenting the State of Nebraska, nor of undertaking to bring reproach upon that magnificent Commonwealth in the suggestion I made a moment ago.

I quoted from the annual report of the Comptroller of the Currency made to the second session of the Fifty-second Congress, dated December 5, 1892. From that report I read the figures that I gave.

The Senator from Nebraska [Mr. MANDERSON] says that the

savings banks of his State at the time that this report was made had not made their reports. I am sorry I did not know that fact. I stand corrected to the extent of admitting, from the statement made by the Senator from Nebraska, that in that State there is a per capita in the savings banks of between two and three dollars. I am glad it is so. I wish it were $200, thus approximating to my own State.

Mr. President, that is all I care to say, except to ask permission to have inserted in the RECORD either this table or the table from the report of 1890-'91, if the distinguished Senator from Nebraska prefers that, which will show the deposits in the savings banks in the State of Nebraska at that date. I think it wise to ask permission to insert both tables, suggesting that they tell an instructive story, not at all to the discredit of New England.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New Hampshire? The Chair hears none.

The tables referred to are as follows:

TABLE No. 1.—*Showing, by States and Territories, the population of each on June 1, 1892, and the aggregate capital, surplus, undivided profits, and individual deposits of national and State banks, loan and trust companies, and savings and private banks in the United States on or about June 30, 1892; the average of these per capita of population, and the per capita averages of such resources in each class of banks and in all.*

States and Territories.	Population June 1, 1892.*	Capital, etc.	Average per capita.					
			All banks.	National banks.	State banks.	Loan and trust companies.	Savings banks.	Private banks.
Maine	664,000	$85,438,648	$128.68	$42.64	.....	$5.60	$80.44	.....

*Partially estimated.

Mr. MANDERSON. Let me call the attention of my friend from New Hampshire to a contrast between New Hampshire and Nebraska in another regard.

New Hampshire drew drafts upon all reporting banks in the year 1892 to the extent of $149,845,000, while Nebraska drew drafts on all reporting banks in 1892 to the extent of $445,304,000, showing that that young Commonwealth is doing, with a somewhat greater number of population, more than New Hampshire.

Mr. GALLINGER. About three times as much population, I will suggest to the Senator.

Mr. MANDERSON. Perhaps three times as much.

Nearly $500,000,000 of banking business in Nebraska in the way of drafts, as against $150,000,000 in the State of New Hampshire, which shows pretty well the volume of business in the two States.

[Mr. ALLEN resumed the floor, but yielded to Mr. DUBOIS, who suggested the absence of a quorum.]

Mr. ALLEN. Mr. President, I desire to be more just to the Senator from New Hampshire than he was to me. I desire to say that, in my judgment, when the Senator from New Hampshire called attention to what he thought to be the fact that the people of my State were entirely unrepresented in the savings banks, he believed that to be true. I will not say to the Senator from New Hampshire, as he said to me, that he was slandering the State which I in part represent here by making that statement. I believe that he was honestly misled. Now, I hope the Senator from New Hampshire, when he corrects me hereafter, will credit me with believing the statement I make without charging me with slandering his State.

Turning my attention now to the Senator from Delaware [Mr. HIGGINS], who put some questions to me as to the poverty of the people in his section of the country occasioned, as he says, by the development of the West and the ability of the Western country to produce grain and products of the field and the farm more profusely and in greater quantities than can be done in his State: when I remember the fact that the bonds and mortgages of this country are owned in the section of country in which the Senator lives, when I remember the fact that the railroad stocks and bonds, the corporate bonds of almost all classes, and municipal securities are owned in his section of the country, it occurs to me that the statement of the Senator from Delaware that the overproduction of the fields of the West has impoverished the people of that section of the country can scarcely be sustained.

No, Mr. President, that is not the case. The condition of the agricultural people of this country, East and West, North and South, in my judgment, is produced by means of a contracted volume of money; and I do not slander the State of New Hampshire or any other State when I say that is true.

Pursuing the question of overproduction a little further, I desire to introduce, without reading at length, some important tables bearing upon this subject, which fully illustrate the position I have assumed throughout this discussion, irregular as it has been, that there is no such thing as general overproduction in anything; that the doctrine of overproduction is a fallacy; and especially is this so with reference to the production of silver. That there is a legitimate demand throughout the civilized world for every ounce of silver produced by the mines of the world I do not doubt.

There are 80,000,000 people (India, China, etc., not counted) occupied in farming, and the annual products of agriculture amount to almost £4,000,000,000. Capital and product have more than doubled since 1840, but the number of hands engaged has not risen 50 per cent, viz:

Year.	Capital.	Product.	People engaged.
1840	£9,030,000,000	£1,824,000,000	55,080,000
1860	14,923,000,000	2,483,000,000	96,000,000
1887	23,006,000,000	3,948,000,000	80,950,000

The value of agricultural products in 1887 in the following countries is as follows:

United States	£776,000,000	United Kingdom	£251,000,000
Russia	563,000,000	Italy	204,000,000
France	460,000,000	Spain	173,000,000
Germany	424,000,000	Australia	62,000,000
Austria	331,000,000	Canada	56,000,000

The area under crops has risen from 492,000,000 acres, in 1840, to 807,000,000, in 1888, an increase of 315,000,000, viz:

	Acres.
In United States	151,000,000
In Europe	131,000,000
In Colonies, etc	33,000,000
Total	315,000,000

In forty-eight years the area of tillage and planting has risen 65 per cent, but the grain crops have risen 120 per cent, as follows:

Years.	Europe.	United States.	Colonies.	Total.
	Bushels.	*Bushels.*	*Bushels.*	*Bushels.*
1840	3,212,000,000	616,000,000	291,000,000	4,119,000,000
1860	4,046,000,000	1,240,000,000	464,000,000	5,750,000,000
1887	5,588,000,000	2,585,000,000	948,000,000	9,120,000,000

The value of grain products has diminished since 1860, while that of pastoral products has nearly doubled. The price of grain has declined notably, while that of meat and dairy products has risen some. The relative importance of the three great branches of agricultural industry at the said dates is shown as follows, judged by money values:

Products.	1840.	1860.	1887.
Grain	38.5	45.5	27.5
Other crops	29.8	23.2	36.8
Pastoral produce	31.7	31.3	35.7
Total	100.0	100.0	100.0

The production of grain (excluding rice) was approximately as follows:

Country.	Millions of bushels.				Bushels per inhabitant.		
	1831–'40.	1851–'60.	1874–'84.	1887.	1831–'40.	1851–'60.	1887.

Other countries	260	390	587	681			
Total	4,143	5,661	8,159	9,122			

The following tables show the distribution of grain grown in 1887:

Country.	Millions of acres in—				
	Wheat.	Oats.	Barley.	Various.	Total.
Europe	90	72	38	148	348
United States	38	26	3	75	142
Colonies	46	3	7	13	69
Total	174	101	48	236	559

Country.	Millions of bushels of—				
	Wheat.	Oats.	Barley.	Various.	Total.
Europe	1,336	1,628	694	1,930	5,588
United States	443	640	58	1,445	2,586
Colonies	465	97	82	304	948
Total	2,243	2,365	834	3,680	9,122

In the United States 9,000,000 people produce nearly half as much grain as 60,000,000 in Europe. Thus it appears that there is a waste of labor in Europe equal to 48,000,000 hands. In other words, one farm laborer in the United States is worth more than three in Europe.

Mr. Spallert's estimate of the crops of the world compares with the official returns and latest estimates for 1887 as follows:

Years.	Millions of bushels of—						
	Wheat.	Rye.	Barley.	Oats.	Maize.	Sundry.	Total.
1871–1880	1,944	1,256	774	1,870	1,528	312	7,684
1875–1884	1,982	1,165	768	1,936	1,829	293	7,973
1883–1884	2,115	1,196	803	2,169	2,035	324	8,662
1887	2,243	1,418	834	2,365	1,979	283	9,122

According to Baines and other authorities the production of raw cotton in the world was as follows in millions of pounds:

Years.	United States.	South America.	Egypt.	India.	Various.	Total.
1791	2	102	.....	130	256	490
1801	48	102	.....	160	210	520
1811	80	104	.....	170	201	555
1821	180	86	6	175	183	630
1831	385	82	18	180	155	820
1840	878	90	30	212	100	1,310
1850	890	90	45	310	100	1,435
1860	1,880	90	51	430	100	2,551
1870	1,540	270	240	625	100	2,775
1880	2,593	86	282	540	100	3,601
1888	3,420	85	290	888	100	4,783

It appears that the United States has produced two-thirds of the cotton which has been consumed by the factories of the world in the last sixty-seven years, and the cotton crop of the world shows a steady increase. The decade ending in 1890 shows 400,000 tons a year more than the preceding. Great Britain consumes one-third of all the cotton produced, the United States being the next largest consumer.

The value of the principal manufactures of the United States is as follows in millions of dollars:

Articles.	1810.	1840.	1850.	1860.	1870.	1880.
Flour	$21	$71	$136	$224	$356	$505
Iron	17	37	49	71	287	336
Leather	18	33	92	162	271	397
Lumber	6	15	59	96	202	233
Cottons	30	46	66	115	142	211
Machinery	.....	11	28	47	111	214
Clothing	.....	36	48	70	130	242
Sugar	.....	.....	10	38	96	155
Woolens	17	21	48	69	121	161
Liquor	16	15	22	43	75	144
Cabinet work	.....	18	18	24	55	83
Printing	.....	.....	12	42	46	91
Implements	.....	.....	7	18	42	69
Paper	.....	.....	10	18	39	55
Soap and candles	.....	.....	10	17	18	27
Sundries	27	155	404	832	1,395	2,447
Total	152	458	1,019	1,886	3,386	5,370

The following is the total value of manufactures in the United States since 1810:

Year.	Value.	Increase.	Year.	Value.	Increase.
		Per cent.			*Per cent.*
1810	$152,000,000	.....	1860	$1,886,000,000	85
1840	458,000,000	201	1870	3,386,000,000	80
1850	1,019,000,000	122	1880	5,370,000,000	58

The annual wheat production of the United States has averaged as follows:

Years.	Tons.	Increase or decrease.	Years.	Tons.	Increase or decrease.
		Per cent.			*Per cent.*
1831–1840	1,950,000	.....	1881–1887	11,000,000	Inc., 30
1851–1860	3,430,000	Inc., 76	1888	10,370,000	Dec., 5.7
1871–1880	8,450,000	Inc., 146			

The total annual grain production of the United States since 1830 has been approximately as follows:

Years.	Tons.	Increase.	Years.	Tons.	Increase.
		Per cent.			*Per cent.*
1831–1840	13,500,000	.....	1881–1887	67,500,000	16
1851–1860	28,350,000	90½	1888	79,080,000	17
1871–1880	57,950,000	116			

The annual wheat production of the United States was as follows:

Years.	Tons.	Increase.	Years.	Tons.	Increase.
		Per cent.			*Per cent.*
1831–1840	2,050,000	.....	1874–1884	4,120,000	55
1851–1860	2,650,000	19	1887	4,750,000	15

Production of the United States from 1840 to 1886.

Years.	Grain.	Meat.	Sugar.	Rice.	Potatoes.	Butter.	Cheese.
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*
1840	15,400,000	2,050,000	70,000	35,000	2,700,000	.....	.....
1850	20,700,000	2,390,000	110,000	95,000	2,600,000	140,000	74,000
1860	31,000,000	2,890,000	120,000	83,000	2,800,000	205,000	47,000
1870	34,700,000	2,480,000	74,000	33,000	3,600,000	230,000	68,000
1880	67,500,000	4,120,000	110,000	50,000	4,200,000	350,000	120,000
1886	71,100,000	4,750,000	110,000	50,000	4,200,000	430,000	170,000

The average per cent of increase of grain, cotton, and butter is greater than the average per cent of increase of population from 1850 to 1880.

The average per cent of increase of population is greater than the average per cent of increase of sugar, meat, rice, potatoes, and cheese from 1850 to 1880.

Average per cent of increase from 1850 to 1880 of—

Population	29
Grain	56
Cotton	59
Butter	36
Manufactures	74

The value of fiber consumed by the United States since 1840 is as follows in millions of pounds sterling:

Period.	Cotton.	Wool.	Silk.	Hemp, flax, etc.	Total.
1841–1850	£49	£30	£2	£7	£88
1851–1860	84	38	4	12	138
1861–1870	223	62	14	17	316
1871–1880	157	101	15	24	297
1881–1887	150	83	20	16	269
Forty-seven years	663	314	55	76	1,108

The value of fiber consumed in the world in millions of pounds sterling is as follows:

Period.	Cotton.	Wool.	Silk.	Hemp, flax, etc.	Total.
1841–1850	£267	£396	£188	£264	£1,115
1851–1860	500	473	240	251	1,464
1861–1870	987	564	291	317	2,159
1871–1880	915	663	254	381	2,213
1881–1887	742	434	175	239	1,590
Forty-seven years	3,411	2,530	1,148	1,452	8,541

The value of goods manufactured from the above fibers in forty-seven years was approximately as follows in millions of pounds sterling:

Period.	Cottons.	Woolens.	Linens.	Silks.	Hemp, etc.	Total.
1841–1850	£1,055	£1,064	£372	£311	£153	£2,955
1851–1860	1,440	1,243	431	406	186	3,706
1861–1870	1,810	1,061	544	522	245	4,782
1871–1880	2,234	1,921	575	559	321	5,610
1881–1887	1,782	1,366	397	475	219	4,239
Forty-seven years	8,321	7,255	2,319	2,273	1,124	21,292

The following table shows approximately the quantities of food annually produced and the population subsisting thereon:

Period.	Grain.	Meat.	Sugar.	Coffee and tea.	Population.
	Tons.	*Tons.*	*Tons.*	*Tons.*	
1831–1840	101,000,000	8,100,000	530,000	210,000	251,000,000
1851–1860	139,000,000	10,490,000	1,100,000	390,000	309,000,000
1875–1884	204,000,000	13,260,000	3,670,000	745,000	370,000,000
1888	241,000,000	14,430,000	5,260,000	920,000	404,000,000

In the above table grain includes what is used for both man and beast.

The averages per head of population were as follows:

Period.	Grain.	Meat.	Sugar.	Coffee and tea.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*
1831–1840	900	79	5	2
1851–1860	1,040	79	8	3
1875–1884	1,240	72	22	4½
1888	1,330	79	29	5

The annual production of wheat has averaged as follows:

Period.	Europe.	United States.	Colonies.	Total.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1831–1840	17,800,000	1,950,000	2,900,000	22,650,000
1851–1860	21,420,000	3,430,000	5,120,000	29,970,000
1871–1880	28,150,000	8,450,000	8,250,000	44,850,000
1881–1887	30,770,000	11,000,000	11,230,000	53,000,000
1888	32,400,000	10,370,000	14,050,000	56,820,000

In the period 1831–'40 Europe produced 80 per cent of the wheat of the world, as compared with 56 per cent at present. In the interval the production in the United States and in the colonies has quintupled.

The total annual grain production since 1830 has been approximately as follows:

Period.	Europe.	United States.	Colonies.	Total.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1831–1840	80,300,000	13,500,000	7,200,000	101,000,000
1851–1860	101,150,000	26,350,000	11,500,000	139,000,000
1871–1880	115,000,000	51,950,000	15,400,000	188,350,000
1881–1887	132,000,000	67,500,000	21,500,000	221,000,000
1888	138,200,000	79,080,000	23,500,000	240,780,000

Mr. President, it was only when the money power—and I shall take occasion to define what I mean by the money power before I get through—it was only when, by concerted action upon the part of the money power of this world, some of the leading nations were induced to demonetize silver and thus decrease the demand for it, that there was any disparity between gold and silver. It is not due to overproduction; it is due more particularly to the fact that nations have demonetized silver under the influence of this power and cut off one of the great demands for silver; and looking at silver then, under such circumstances, from the gold standpoint, there has been a depreciation or there is a disparity.

But I have no doubt if this nation takes hold of this question in good faith, with a determination to reinstate silver to its place in 1873, when it was demonetized, that it will have power enough with the nations of Europe, or perhaps power enough single-handed and alone, to rehabilitate and reinstate silver as money, not only in this nation, but in a sufficient number of nations to reëstablish it to its original position in 1873.

I believe the cry of overproduction of silver to be designed to mislead the masses of our people, so that they may be induced readily to accept a single gold standard. I think it is a heresy which has been sifted out through the press, which has been spoken from the stump, which has been uttered in legislative halls, for the express purpose of forming the popular mind long in advance of the period when the nation was brought to a single gold standard.

[At this point the honorable Senator yielded to Mr. DANIEL for a call of the Senate.]

Mr. ALLEN. Another of the fallacies taught, in my judgment, in this discussion is the fallacy of the balance of trade. I do not mean to say that the balance of trade is not desirable under certain circumstances, but I do mean to say that a balance of trade in and of itself, bought by a sacrifice of the property and labor of the people, is a curse rather than a blessing. Too long the people of this country have been told that a favorable balance of trade was *per se* evidence of prosperity. Suppose that every gold dollar upon the face of the earth was bought by this nation at the sacrifice of the price of our labor and our property, would that be any evidence that we were a prosperous nation under those circumstances? That is precisely what the Senator from Ohio, in a speech delivered in this Chamber on the 30th of August, I think it was, advised this country to do. I quote from the speech of the senior Senator from Ohio. Speaking of the contest for the possession of gold, the Senator says:

> If the fight must be for the possession of gold, we will use our cotton and our corn, our wheat and other productions, against all the productions of mankind. We, with our resources, can then enter into a financial competition.

A competition for what? A competition for gold. We will put everything that is produced in the field and the shop, in the contest with Europe for the possession of gold; we will wage an industrial warfare; we will wage it at the sacrifice of the prosperity of our people; we will bring our people to the condition of the working people of Europe in an industrial warfare for the possession of gold. That is the language of the Senator from Ohio.

> We do not want to do it now—

Says the Senator—

> we prefer to wait awhile until the skies are clear and see what will be the effect of the Indian policy, and what arrangements may be made for conducting another international conference. In the mean time let the United States stand upon its strength and credit, maintaining its money, different kinds of money, at a parity with each other. If we will do that I think soon all these clouds will be dissipated and we may go home to our families and friends with a consciousness that we have done good work for our country at large.

We have done good work for the country at large when we have mortgaged the industries of this nation in the form of gold bonds, when we have put a great blanket mortgage upon the farms and the labor of this country. When we throw the products of labor, the products of the field and farm into a great industrial war for the possession of the gold money of the world, then, in the estimation of the senior Senator from Ohio, this nation has entered upon the high road to prosperity. A most singular thing, that we should wage a contest which brings our labor and our property down to the condition of European labor and European property. That is evidence of prosperity! That is the means by which we will reach our highest prosperity! It occurs to me that this is simply in keeping with the purpose of the money power to industrially enslave the masses of the people of this country. An industrial slavery is the worst slavery upon the face of the earth. It is so insidious, so far-reaching, that it is even worse than chattel slavery.

It is only when a balance of trade represents some profit to a nation that it is a favorable balance of trade; it is only when it represents some profit to its people that it is desirable. If it is bought at too great a sacrifice, if civilization itself has to be impaired, if labor has to be debased, if we are to be brought down to the conditions prevailing in Europe, then we do not desire to pay the price for the balance of trade in gold dollars.

Then, there is another fallacy taught here. Ever since the organization of this extra session of Congress on the 7th of August, Senators have talked about maintaining the parity between the two metals, gold and silver. Some Senators have said it could be maintained and others have denied the proposition. It can not be denied that both the Democratic and the Republican parties are pledged to the maintenance of the parity, whatever that may be—a relation of equality, as I understand it. They are not only pledged to do that, but to-day they are undertaking to escape the responsibility, they are undertaking to make the people of this country believe that they are maintaining that parity by wiping out the last vestige we have of silver legislation. I ask any Senator in this Chamber when he talks about maintaining a natural parity between gold and silver, is it possible? Certainly not. If there was a natural law of equality between the two metals, would not one grain of the metal, silver, be worth as much as a grain of gold? If there was a natural parity existing, would not that be true?

The relation of gold and silver, like the relations of any other articles, must be controlled by the law of supply and demand.

As long as Senators talk about the commercial value in the money metal or the money thing, there can be no such thing as a parity between gold and silver, because to-day the demand puts the price of one up and the price of the other down, when to-morrow, next week, next month, or next year the conditions may be entirely different, and the metal that occupies one position to-day may be absolutely reversed then. That is simply following the supreme law of supply and demand. So it is mere nonsense to talk about maintaining the parity when a natural parity does not exist.

But you can establish and maintain a parity when you leave the fallacy of intrinsic value, when you come to the sensible basis, the basis which controls this matter; when you declare by statute that so many grains of silver shall have the force of money as compared with a grain of gold, when the power of the law behind that makes it perform the office of money, gives it full legal-tender and debt-paying power, and establishes a law of equality between the two metals while being used as money. That is the real parity, and the only parity that can either be created or maintained.

I regret, Mr. President, that time is so limited for discussion of this subject, but I desire to call attention to some things that have cropped out during this protracted debate that are a little singular to me as a Populist.

It has been charged here, and no more recently than yester-

day, that the Sherman act was responsible, in some measure, for the crisis through which we have passed; yet it is true that every dollar of gold that left these shores during the last few months has returned, except about $16,000,000, and that will return if these men who control the money market will permit it to return. So that if its departure was due in any measure to the Sherman act, then with equal propriety we may say that its return is due to the same act.

It is a singular spectacle to witness these two great parties, the Democratic and the Republican parties, that have fought each other for the last thirty years, marching almost in solid column, under the flag of the Administration, for the repeal of this act. It is a little singular that representative men of these parties are to be found to-day united under the flag of Mr. Cleveland in undertaking to secure the unconditional repeal of this act. Some strange fatality must have fallen upon the Republican party. Some strange spell must have taken possession of it. Mr. President, it reminds me of the Hymn of Faith, written by J. Whitcomb Riley, in which he describes the faith of the early Christians in the doctrines preached by the minister, when he says:

They was content to fall in ranks
With one who knowed the way,
From good old Jurdan's stormy banks
Clean up to Jedgment Day.

The Republican party and the Democratic party are content to "fall in ranks" with Mr. Cleveland, who is supposed to "know the way" from the very inception of this matter clear up to the repeal of the Sherman act and the complete demonetization of silver. There must be something strange about the cause that has produced this singular union upon the part of the leading Republicans and leading Democrats who have contested for the mastery of this country for so many years.

Mr. President, I hold in my hand a little volume called Cheap Money, published by the Century Magazine Company, being a reproduction of a series of articles appearing in that magazine. The author of this volume—whoever he may be, and he fails to give his name—undertakes to tell what the People's party of America, which he confuses with the Farmers' Alliance, not knowing enough about the different organizations to know that they have no kinship—undertakes to tell the people of this country what the People's party and the Farmers' Alliance believe in. Now, it takes some fellow that was never within a thousand miles of a Farmers' Alliance, or within a thousand miles of the soil where the People's party prospers, to tell exactly what they believe in. Let me call attention briefly to one of the assertions of this man. Speaking of the question of the supply of money and the belief of the people this man is describing, he says:

When they are asked how they are going to get possession of a share of the more plentiful supply—

Speaking of money—

and are held down to a specific answer, their ingenuity is greatly taxed—

I suppose this fellow believes a man who belongs to the People's party must necessarily be very ignorant and can not have ordinary sense, and therefore his intellect is severely taxed by a question of that character—

their ingenuity is greatly taxed, and they turn to their leaders for a solution of the difficulty. The different ways in which the leaders whose plans we have collected have met this demand furnish most instructive material for study.

Among other things, this fellow says that one of the remedies of the People's party for financial ills is the unlimited issue of inconvertible paper. Never was a People's party convention or caucus held upon the face of the earth that declared that doctrine; never. There never was a man of that party, however wild he may be, who has declared that doctrine. It was a sheer and willful misrepresentation of a great national party that is growing stronger and stronger every day. It is a false arraignment of a great body of loyal American citizens and an impeachment of their intelligence. There never was in any organization, there never has been in any convention any argument or resolution offered or made looking to an unlimited issue of irredeemable paper money. Yet this fellow, probably sitting in a closet in the city of New York, never having been beyond the city limits, undertakes to tell the people of this country, through a great magazine like the Century Magazine, that the members of this party believe in the unlimited issue of an irredeemable paper money!

Then he tells things that are even more ridiculous than that. Among other things, this man says:

We append the more striking of these, giving the plans of the People's party as a remedy for the evils—giving the exact language—

He says—

in each instance, numbering them, for convenience of reference, but withholding the names of the originators, in order that our subsequent remarks may be free from all appearances of personality.

Now, what do they propose, according to this man? The first man that he came across is reported to have said:

1. I am not stuck on silver and gold as circulating mediums, and even paper is my idea. Geologists have had things so fine that they can estimate the quantities of silver and gold in the mountains, and the Government should issue silver certificates to an amount equivalent to that estimate. It would be far safer, as it would be easy for a foreign nation to capture the coin in the Treasury vaults at Washington, but the mountains they could not remove even by all the faith they could muster.

The author of this series of articles calls upon the American people to believe that that is an authentic statement from some representative of this party. The man who penned those words was either a liar or an ignoramus. There never was a serious utterance of that kind from the wildest member of the organization. There never was a caucus or convention that gave utterance to such a thought. Its only purpose is to mislead the people of this country and create the impression that the members of the People's party are ignorant, wild and visionary. And yet men like this are permitted to write and palm off their stuff upon the people!

So it goes, Mr. President. I simply call the attention of the Senate to this book because I find it in the bookstores and in circulation, and I have no doubt that many an honest man has read that pamphlet, or this series of articles, and, without close investigation into the question, believed that this is a fair statement of the position of that party. It is evidently made for the purpose of putting the party in a ridiculous position, of balking its progress, of preventing it reaching an intelligent and honorable position before the people of the nation. Why? Because this party denies the right of this money power to control absolutely the destinies of the nation. This penny-a-liner must be hired for the purpose of falsifying its position upon this important question.

Now, what is the money power? The expression has been used here a great many times. It has been used by myself, and it has been used by others. I say to the Senators that the money power, in my judgment, is that class of persons who control the great debt, bonds, stocks, and mortgages of this country and of Europe—that body of men who are directly interested in a constantly appreciating money, whose fortunes are made out of bonds, mortgages, stocks, and evidences of indebtednesses of various kinds; that body of men, small though it may be, in this country and in Europe who are combined against the prosperity of the farmer and laborer throughout the civilized world—that is the money power.

It occurs to me that some people in this country have gone mad upon the subject of gold. This struggle for gold is an intense struggle. In many respects it is absolutely a senseless struggle, tending to sacrifice the prosperity of this nation. In my judgment—and I think I speak somewhat advisedly when I say it—the people who till the soil, the people who work in the shops and factories are the people who are vitally concerned in this matter, and they are the ones who demand bimetallism at the hands of this Congress. I see that that provokes a smile from my friend from Delaware [Mr. GRAY].

Mr. PALMER rose.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Illinois?

Mr. ALLEN. Certainly.

Mr. PALMER. What does the Senator mean by "bimetallism"?

Mr. ALLEN. I mean the use of two metals, gold and silver.

Mr. PALMER. I ask if the Senator means gold and silver of equal exchangeable value?

Mr. ALLEN. As money, yes; having the exchangeable or money value, or function, but not commercial value. I have discussed that proposition, and I do not propose to consume much more time in discussing it.

Mr. PALMER. I shall not ask it.

Mr. ALLEN. Now, Mr. President, what do we see here? We are threatened with another panic.

I am reminded of the fact that I was diverted from the thread of my discussion by the question of the Senator from Illinois, and I will proceed. I was about to say at that time that, in my judgment, a majority of the resolutions and petitions and memorials that have come into this Senate since its organization, upon the subject of the repeal of the Sherman act, have come from banks, corporations, boards of trade, commercial clubs, and organizations of that kind. While I do not dispute the right of these persons or corporations to petition the Senate of the United States for the repeal of this act, or the repeal of any other act that they may deem detrimental to their interests, yet I must remind the Senate that the repeal of the Sherman act is calculated to make their bonds, their securities, and their mortgages more valuable than they otherwise would be, and therefore they have a direct pecuniary interest in the repeal of this act.

But I was about to say, and I say now, that I think the great

masses of the common people of this country want this Sherman act retained on the statute book until the Democratic party or whoever controls the legislation of this nation, lays down some plain proposition looking to the continued coinage of silver. They do not want simply empty promises. Senators who have charge of this bill will not even promise us anything. We are to be treated like boys. We are to be kept in ignorance of what the Administration intends to do. We are told that the repeal of this act is to be made without any promise, without any advice of an official character, that anything will be done looking to the coinage of silver.

Mr. WHITE of Louisiana. Will the Senator allow me to ask a question?

Mr. ALLEN. Certainly.

Mr. WHITE of Louisiana. I dislike very much to disturb the Senator in the brief time he has at his disposal just now.

Mr. ALLEN. I appreciate the delicacy of the Senator from Louisiana.

Mr. WHITE of Louisiana. The Senator says that petitions have come for the repeal of the Sherman act from boards of trade and commercial bodies. It must be recollected that those bodies own stocks, bonds, and other evidences of valuable indebtedness in the country. I thought the whole drift of the argument of the Senator was that if the Sherman act were not repealed property would become more valuable. That was the gist of the Senator's argument during the whole night—that products would be more valuable, and that there would be a great rise in prices.

Mr. ALLEN. If the Sherman act were not repealed?

Mr. WHITE of Louisiana. Yes.

Mr. ALLEN. I beg the Senator's pardon. I did not say that.

Mr. WHITE of Louisiana. There may be a little doubt. I must confess I do not see it. Did I not understand the Senator to say that the repeal of the Sherman act would lessen the price of farm labor and the price of wheat, corn, and all the products of the laboring sons of toil in this land?

Mr. ALLEN. Yes, sir. The Senator from Louisiana understood me, if he understood me correctly, that it was going to depreciate property.

Mr. WHITE of Louisiana. I mean the non-repeal.

Mr. ALLEN. The repeal of the Sherman act will depreciate property, unless we pass an equally favorable silver law.

Mr. WHITE of Louisiana. Then, I want to ask the Senator this little conundrum, if he will be kind enough to answer it. How is it that the repeal of the Sherman act is going to raise the value of all the stocks and bonds in the country, and non-repeal is going to raise the value of all the farm products and all the products of toil? This is a sort of wind that "cuts gwine and cuts comin'." Everything is going to be depressed, according to the Senator, if his views are carried out, and then everything is going to be raised if his views are carried out; in other words, it is blowing hot and blowing cold.

Mr. ALLEN. The Senator from Louisiana is entirely mistaken. I am not blowing hot and blowing cold. I say now to the Senator from Louisiana, and I hope he will understand me, that the unconditional repeal of the Sherman act will have the effect to shrink the value of property and of labor——

Mr. WHITE of Louisiana. Why?

Mr. ALLEN. Please wait.

Mr. WHITE of Louisiana. I shall wait.

Mr. ALLEN. And the effect of it will be to increase the value of mortgages and notes and bonds and stocks. That ought to be plain enough. They will not shrink any; other property will depreciate. The purchasing power of money will be increased. These mortgages, notes, bonds, and stocks must be paid in money with increased purchasing power. The proceeds of these mortgages, etc., will be appreciated money, earned by the sale of depreciated products.

Mr. WHITE of Louisiana. I ask the Senator how it is possible that he is going to have it decreased on the one hand and raised on the other. If it is a general law, is it not to operate generally upon all property? How is the Senator going to say to the farmer, "if we do not pass this bill all your property will be raised in value," and then say to other people, "if we do pass it your property will be raised."

[At this point the honorable Senator yielded to Mr. WOLCOTT.]

Mr. ALLEN. Mr. President, I was about to say when I was interrupted by the calling of a quorum, that my friend from Oregon [Mr. DOLPH], who stated upon the floor of the Senate the other day that the wheat and cotton of India was estimated in gold prices in Liverpool must certainly be mistaken in that statement. I had occasion some days ago to call his attention to the fact that he was mistaken, and now, I believe, Mr. President—if I am not consuming too much time—that it is my duty to call attention a little more specifically to this question.

I will ask the Secretary to read, as bearing upon this subject, the article of Mr. R. H. Patterson, of Edinburgh, a statistical writer of Scotland of high repute, published in the Contemporary Review of April, 1879, and reproduced in a little volume which I have in my hand, written by Robert W. Hughes, entitled The American Dollar.

Mr. PALMER rose.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Illinois?

Mr. ALLEN. Certainly.

Mr. PALMER. I am not informed as to the rules of the Senate in regard to what papers or documents may be read by the Secretary.

Mr. ALLEN. I will relieve the Senator from Illinois by reading it myself.

Mr. WOLCOTT. I will read the paper for the Senator.

The PRESIDING OFFICER. There being objection on the part of a Senator to the reading of the paper called for, it may be read from the Secretary's desk on motion adopted by the Senate.

Mr. PALMER. I rise to a question of order, Mr. President. I have no desire to interfere with the rights or the feelings of the Senator from Nebraska, but I want to know what is the extent of the right of Senators to have read at the desk papers like the one produced.

Mr. ALLEN. I think I can take that question out of the case, Mr. President, by reading the article myself. I only wanted it read by the Secretary because the light where I am standing is a little dim and I do not see clearly.

The PRESIDING OFFICER. In answer to the suggestion made by the Senator from Illinois the Chair directs Rule XI to be read for the information of the Senate.

The Secretary read as follows:

RULE XI.

OBJECTION TO READING A PAPER.

When the reading of a paper is called for and objected to, it shall be determined by the vote of the Senate without debate.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nebraska?

Mr. PALMER. I have no objection, Mr. President. I only wanted to know the rule.

The PRESIDING OFFICER. There being no objection, the Secretary will read as indicated.

The Secretary read as follows:

The expansion of Indian trade must be considered with reference to two factors into which it is divided, viz. the trade balance, representing the excess of exports of merchandise from India over imports of merchandise into that country, and the financial balance representing the difference between the annual installments of British capital paid for the construction of railroads and other public works in India on one hand; and on the other the home charges for the support of the army of India, and expenses incident to civil and military operations there, collected by council drafts.

The trade balance was the larger factor during the eleven years between 1854 and 1865. We find from Mr. Waterfield's statistics (laid before Mr. Goschen's committee) that this trade balance in favor of India during that period was $1,035,000,000, or at the rate of $95,000,000 a year. The entire production of the precious metals in the world during the same eleven years was, according to Sir Hector Hay (as exhibited to the same committee), $1,830,000,000, of which sum the produce of the mines opened in the United States and Australia after 1848 amounted to $950,000,000. Accordingly, had it been necessary to pay the whole of the trade balance to India in specie (he speaks of both gold and silver, not of silver alone), the entire produce of the new mines during these eleven years would have proved inadequate to the purpose by a deficit of $85,000,000.

Turning now to the financial balance, the railway and like payments, due from this country to India in the earlier half of the period, 1854–1865, appear to have considerably exceeded the home charges represented by council drafts. Certainly, during the first five years, India received in specie the whole amount of the trade balance due to her, and upwards of $130,000,000 more—the trade balance during these years being $222,500,000, while the actual amount of specie received by India was $353,750,000. In the subsequent years of the period, however, the home charges due from India evidently exceeded the railway and like payments due from this country (England); and in striking the financial balance there has to be added to the home charges the private remittances of money made by Englishmen in India to their families and friends in Great Britain, the amount of which can not be determined. Judging by the result, the aggregate financial balances during the eleven years ending in March, 1865, appear to have been against India to the extent of $155,000,000; and thus, although the aggregate trade balances in her favor during the same years amounted, as already stated, to $1,035,000,000, the actual amount of specie received by India was but $880,000,000.

Now, as before stated, the total produce of the new mines of the world during the same period was $950,000,000; and it is seen that the amount of the precious metals absorbed by the Indian trade was so great that of all this stock of gold and silver only $70,000,000, or 8 per cent. were left available for the use of the rest of the world. A more remarkable fact can hardly be exhibited.

Further, let us take the whole period for which we have officially published statistics (Mr. Patterson was writing in 1879), viz., from 1855 to 1875. During these twenty-one years the aggregate exports of merchandise from India amounted to $4,669,065,000, and the imports of merchandise were $2,721,055,000, giving a trade balance in favor of India of $1,948,000,000, or $92,500,000 per annum.

How has this enormous sum of money been paid? During the latter years of the period, viz. 1865 to 1875, owing to the gradual cessation of the railway and like payments due to India from this country, and also to the increase in the amount of the home charges due to us from India, the financial balance turned heavily against India, so that the council drafts drawn by the Gov-

ernment in London upon that in India, which are equivalent to specie, amounted in the aggregate to $560,000,000 (averaging $26,666,666 per annum). Deducting this aggregate from that of the trade balance, there remains $1,338,000,000; but the total amount of specie received by India during these twenty-one years was $1,266,250,000, or 90 per cent of the trade balance, leaving $121,750,000 unaccounted for officially, but which was doubtless settled by bills upon India, drawn upon remittances from private persons in India to others in this country.

The total produce of the gold and silver mines of the world during the twenty-one years, 1855-'75, according to Sir Hector Hay, was $3,385,000,000. Deducting the produce of mines existing before 1849, during the period, about $1,830,000,000, there remains $1,700,000,000 as the additional supply of product of the new mines. Thus it appears that during this twenty-one years the Indian trade absorbed $1,266,250,000 out of $1,700,000,000, or 73½ per cent of the entire new supply of the precious metals, leaving only 26½ per cent, or $450,000,000 for general use to meet the great expansion of commerce and augmented rements for specie of the rest of the world.

In truth, but for the previous accumulation of specie in the Western world, it seems impossible that so vast a drain of specie as that which flowed to the East in the years immediately subsequent to 1854 could have been spared—the fact being, as already shown, that during the eleven years in question, the Indian trade required, and India actually received, no less than 92 per cent of the contemporaneous production of the new mines, leaving only $70,000,000 of their production for the increased wants of the world at large.

It has been the drain of the precious metals to the East, to meet the requirements of Indian trade and investments, which alone has falsified the confident predictions given before 1860 by all the highest authorities as to a stupendous fall in the value of money, especially of gold. The currency of the East is silver, and consequently it is in silver that the greater part of the enormous payments to the East in specie have been made. Between 1854 and 1865, the amount of silver (observe that Mr. P. now speaks of silver only) exported to India actually absorbed the entire contemporaneous yield of all the silver mines of the world, and $200,000,000 more. In other words, this drain of silver to the East was equivalent in its effects upon Europe and America to an actual stoppage of the silver mines, together with an actual drain and deduction of $200,000,000 from the existing currency of the Western world.

But, as already indicated, there has been since 1865 a restriction upon the flow of silver to the East in the natural course of trade, occasioned by the large increase in the payments which the Indian Governmant has to make to the home Government in London, represented by the council drafts issued by the latter against the former. These drafts, being equivalent to silver *pro tanto*, enable our traders to settle trade balances due to India without sending silver; and thus the requirement for silver for the purpose of shipment to India has been proportionately diminished. Another diminution of specie remittances to India resulted from larger remittances from Englishmen in India for the support of their families in this country; a change which has occurred partly in consequence of the increase of British troops kept in India since the mutiny of the Sepoys in 1857, and partly from the opening of the Suez Canal, whereby Englishmen in India can more readily send home their families for health and education, and also can visit them more frequently than was possible when our only communication with the East was by the long sea voyage around the Cape of Good Hope.

The diminution of specie payments to India from these causes was long obscured and overbalanced by the large investments of English money which were made in Indian railways; but after 1863 the railway payments from this country decreased, and they became wholly exhausted by 1870. Thereupon the home charges appeared at their real and full amount. For a quarter of a century previous to 1863 these charges had averaged only $11,250,000; but during the subsequent eight years they averaged $31,250,000, and during the six years ending with April, 1878, they averaged $61,250,000, which is $50,000,000 in excess of their annual amount down to 1863, and almost equal to the contemporaneous yield of the whole silver mines of the world. The council drafts, being equivalent to silver, have correspondingly diminished England's requirement of that metal for payments to India, and have prevented the large export and utilization of silver which would otherwise have occurred in connection with the Eastern trade.

This course of things is highly disadvantageous, not only to the Indian Empire, but to the world at large, by producing a fall in the value of silver, which not only lessens the value of labor of the silver miners, but of the entire amount of the vast stock of silver existing throughout the world—the accumulated result and legacy of many generations of past labor. (Mr. P. appends as a foot note the following sentences:) Whether there has been any real and absolute fall in the value of silver even in the countries of the West, or whether the fall is merely apparent and occasioned by a rise in the value of gold, the chief standard money of the West, is a question that lies beyond the scope of the present discussion.

Mr. ALLEN. I desire now to read a letter published in the San Francisco Examiner of November 7, 1885, by Mr. G. Pellew Paul, an Englishman, bearing upon the subject under discussion. He says:

In connection with the present annual depreciation of silver there are several matters to be borne steadfastly in mind, and are axiomatic:

First. The chief cause of the depreciation in price of American silver has been, and continues to be, the deluge of British council drafts issued by the Secretary of State for India in London for the purpose of patronage. The drafts are now sold for 1*s.* 6½*d.* per rupee in gold in London, whereas their proper price should be 2*s.*, as they were a few years ago.

Second. This discount on the drafts acts as an export bounty of 20 to 25 per cent in favor of the English importer of Indian produce, to the detriment of the American wheat and cotton exporter.

I desire to have the Senator from Oregon listen to this as disputing the position he has taken:

Third. The greater portion of the American silver dispatched to London is used to pay for Indian wheat, cotton, and other produce, and enters necessarily into competition with the council drafts that are used for the same purpose—one of them killing the other, the real offender being the council drafts.

So it seems that these English council drafts and American silver come into competition with one another and that produces the price over in India, instead of gold, as stated by my friend from Oregon.

Fourth. All silver sent from London to India for the purchase of wheat, cotton, and other produce produces competition with American wheat and cotton, and lowers their prices, so that, paradoxical as it may seem, American silver is used in England to lower the price of American wheat and cotton—at present as much as 20 per cent.

Mr. PALMER. Will the Senator from Nebraska please state the date of the paper he is reading?

Mr. ALLEN. This was published on the 7th of November, 1885, and I suppose substantially the same condition of affairs exists to day, as I think I shall be able to show before I get through.

Fifth. American silver should be withheld as much as possible from London, and diverted directly to its ultimate markets in Eastern Asia, if American wheat and cotton are to escape competition with the Indian articles.

Now, it occurs to me, Mr. President, that these letters from two prominent Englishmen upon this subject ought to put at rest this question, so far as my friend from Oregon is concerned.

Let us look at this matter briefly—and I do not desire to consume too much time on it:

The exports of cotton from India have increased from $33,570,000 in 1879 to $82,665,000 in 1891, while the export of cotton goods in the same period has increased from $4,658,500, to $33,135,725, and other manufacturers of cotton from $8,220,625 to $14,348,840, in 1891, and are increasing every year.

So, Mr. President, it is observable to the most ordinary mind that depreciated American silver has been used by the British Government and brought in contact with discounted council drafts to develop the industries of India to an enormous extent, until the wheat productions of India to-day come in contact with the wheat productions of the American farmer and fix the price for the American farmer in the Liverpool market. In other words, the United States have been engaged in the pleasing occupation of developing the interests of Great Britain in India, raising up a great wheat-producing and cotton-producing people to come in contact and in competition with their own farmers and laborers.

Mr. PALMER. Will the Senator allow me to interrupt him for a moment?

Mr. ALLEN. Certainly.

Mr. PALMER. Will he tell the Senate what are the wages of laborers in India?

Mr. ALLEN. I think something like 5 or 6 cents a day.

Mr. PALMER. I think so, where silver is the standard.

Mr. ALLEN. But the Senator from Illinois forgets that India has the lowest per capita circulation of any nation upon the earth. It has only about $3 a head. It is the lowest per capita nation upon the earth. I say to my distinguished friend from Illinois, whom I so highly admire, that wherever legislation touches a nation and develops anything like poverty upon the part of the people it will be where the policy of the controlling and governing power is to reduce the per capita circulation of money to a minimum.

Mr. PALMER. Will my friend from Nebraska allow me to make one statement?

Mr. ALLEN. Certainly.

Mr. PALMER. In Mexico, as I have a paper here to show, the wages of miners are 75 cents a day. In every country on the globe where silver is the standard wages are lower and labor is most degraded.

Mr. ALLEN. What has silver to do with the productiveness of the soil or the salubrity of the climate or the nourishing influences of the rains and the sun? The world is just as well off if industries are developed under a silver standard as under a gold or under a double standard. I think I have shown almost conclusively that the value of a contract does not reside in the medium of exchange which exchanges property for property or property for labor, but it resides in the articles exchanged. I have at least undertaken to show that, and I think I have done so.

Mr. PALMER. I think the Senator is mistaken in the opinion that he has succeeded in showing it.

Mr. ALLEN. Possibly I may be mistaken.

Mr. PALMER. I have given attention to the question of wages in India, Egypt, Mexico, China, Japan, and the South American States, and the wages are lower relatively in the silver states than anywhere else on the globe. In European states where the gold standard prevails wages are far in excess of the wages in the countries I have mentioned. Perhaps there is nothing in the history of nations more lamentable than the wages in India and Egypt where silver is the standard. Will the Senator tell me why, when that is the case, he insists that a silver standard means high wages?

Mr. ALLEN, Oh, no; I have not insisted that that was the case at all. The Senator is mistaken about that.

Mr. PALMER. I beg pardon, then.

Mr. ALLEN. I undertook to show that the question whether we had a silver or a gold standard or a bimetallic standard does not necessarily enter into the question of our prosperity.

Mr. PALMER. Not into the question of wages?

Mr. ALLEN. Not necessarily into the question of wages.

Mr. PALMER. What does necessarily enter into the discussion? If the contrast between silver and gold does not enter into

it, what does? I think, with the permission of my friend from Nebraska, I have stated what I believe to be true, that in every country on the globe where the silver standard exists wages are lower, labor is paid less, and the conditions of the people are worse than the European nations where the gold standard prevails. I am not defending the gold standard, but I am stating that fact for the information of my friend from Nebraska. Why is it the case, I ask?

Mr. ALLEN. I should like to ask the Senator from Illinois, if he has no objection to answering, whether he attributes the condition he speaks of to silver legislation or to the fact that silver is used as money in those countries?

Mr. PALMER. I do, because I consider the silver circulation of those countries as an evidence of impotency and feebleness. I believe those countries where we sell our wheat and our pork and beef, the active, energetic countries where the gold standard prevails, are those to which we should adapt our monetary standard.

Mr. ALLEN. Permit me to say in reply to the Senator from Illinois, that the real value is not the number of dollars a man gets for his wages or the number of cents he gets, but it is the purchasing power of the money which it commands over the necessaries or the luxuries of life if he is enabled to buy them. It is the amount of bread, the amount of food products, the amount of clothing, the amount of shelter that his wages will afford him and afford his family that makes the real value of the wages and not whether they are 75 cents in gold or $1 or $1.25 in silver. That is simply looking at the surface of the transaction.

Mr. PALMER. Mr. President——

The PRESIDING OFFICER (Mr. BLACKBURN in the chair). Does the Senator from Nebraska yield to the Senator from Illinois?

Mr. ALLEN. Certainly.

Mr. PALMER. I am not going to trespass on my friend from Nebraska for more than a minute. Our commercial intercourse with the United Kingdom and with Germany, France, and the countries where their peculiar monetary regulations exist, gold being the standard of value, is far beyond all our intercourse with other countries.

I maintain that it is the policy of our country to harmonize our monetary relations and regulations with those countries, and that in the countries where silver is the standard there exist degradation, ill-paid labor, ill-fed people, ill-clothed people. I believe that the European civilization to which we belong is a bold, manly, elevated civilization, while all the other is degraded; that wages are poor, that the people are ill-fed and ill-clothed, and that it is our interest to contest with the United Kingdom and with all creation and not adopt Asiatic monetary systems.

Mr. ALLEN. Then I understand the Senator from Illinois to mean that the true interest of this country is to put the gold of the world upon an auction block and have the United States enter the list as a competitor for that gold and bid for it.

Mr. PALMER. The Senator states me correctly.

Mr. ALLEN. I am glad the Senator from Illinois acknowledges that I state his position correctly. What does that mean? It simply means that the nation that gets that gold will be compelled to debase its labor the most, which gives the least remuneration to those who produce the corn and wheat and products the gold is purchased with. It is a direct blow at the prosperity of the laborer and farmer of this country. It chains him to the destiny of the farmer or laborer of England, so that it is impossible for him to rise above the condition of that class of people in Europe. Then, what becomes of the glory of living under a republican form of government?

Not only that, but I call the attention of the Senator from Illinois to a fact which certainly can not be disputed; that all marches of the British Empire and of the governments of continental Europe to grandeur and glory, and all the marches in civilization of this nation to grandeur and glory have been under a bimetallic standard.

Mr. PALMER. May I answer?

Mr. ALLEN. Certainly.

Mr. PALMER. I do not know what the Senator means by a bimetallic standard. If he means the bimetallic standard as defined by the Chicago platform, where the moneys of the two metals are coined of equally exchangeable value, I am with you. But it is a fact, and I wish to invite particular attention to the fact, that this great Republic is not seeking an alliance with the Asiatic countries. We are seeking not alliances of submission, but we are seeking competition with the civilized nations of Europe. We are their equal in every respect.

Mr. ALLEN. Oh, yes; we are superior to them if we will only suffer ourselves to be.

Mr. PALMER. Not superior, I think.

Mr. ALLEN. I think so.

Mr. PALMER. I am descended from the English race myself.

Mr. ALLEN. I have a little touch myself, and yet I think my country is superior.

Mr. PALMER. I will not shrink from competition with them anywhere, and I will not seek an alliance with the ill-fed, half-clothed people of the Orient.

Mr. ALLEN. I do not suppose anybody desires my honorable friend from Illinois to become a competitor of the Chinaman who lives upon a bowl of rice and a rat a day, but what I contend is that this country is of continental proportions. We are a continent, not simply a small empire. We are a continent of inexhaustible resources, containing a class of people who are capable of almost inconceivable advancement if we will permit them to advance. Under those circumstances are we to change the destinies of America to the destinies of England or any European power? Why not cut the strings that bind this nation to the powers of Europe and set all the forces of nature at work in this great continent of ours, giving every man, women, and child who desires labor an opportunity to labor and to earn an honest living? Why not do this and push our civilization away beyond the wildest dreams of continental Europe?

I am an American, Mr. President. I believe in the prosperity of my nation. The prosperity of America is dearer to my heart than the prosperity of England or any other nation on earth. I believe in the prosperity of every man, woman, and child who is an American citizen. The interest of the humblest man who can be found upon this continent is as sacred to me as the interest of the most exalted. The same law that protects the Carnegies of America must protect the humble laborer who works for him; and I am not willing, if my distinguished friend from Illinois please, to chain the prosperity and the destiny of the people of this country to the destiny of continental Europe.

Mr. PALMER. Will my friend allow me interrupt him?

Mr. ALLEN. Certainly.

Mr. PALMER. The Senator owes me an obligation for that magnificent burst of patriotic oratory. But the proposition is, shall we adopt a degraded currency, or shall we look to England, of which the Senator from Nevada [Mr. STEWART] speaks so earnestly, and invite a contest with them? We are their descendants; we are their equals. If gold is the most precious of all the moneys, we have a right to demand our share of it, and we have a right to contest with them our right to a share of it. I do not shrink from the encounter. Will my friend allow me one word more?

Mr. ALLEN. Certainly.

Mr. PALMER. The claim that the farmers of Nebraska, Kansas, or Illinois are a suffering, humiliated, degraded race that needs protection is a fallacy. The farmers of my State are the bone and sinew of Illinois, and we do not shrink from this encounter. We are not beggars, we are not poor people, we are not seeking cheap money; we are seeking a manly, open conflict with Great Britain, or any other people in God Almighty's creation, for a share of all the good things of this life. We are a free, independent, earnest, self-reliant people in Illinois; and so are the people of Nebraska. My friend is altogether mistaken in supposing they are in the sad condition he describes them to be.

Mr. ALLEN. I have certainly said nothing against the people whom I have the honor in part to represent in this Chamber, and it is a little strange to me, leaving the thread of my discourse for a moment, that every remark I have made about any State in this Union, which was clearly within the bounds of truth, has been the subject of constant misconception upon the part of certain Senators, every one of whom maintains the single gold standard theory. Several Senators have undertaken to make me assault my own State. Let me ask the Senator from Illinois, because it touches me upon a tender point, does he say that I have uttered one word against the State which sent me here?

Mr. PALMER. I think not.

Mr. ALLEN. I would not want the Senator from Illinois to make the statement that I have done so.

Mr. PALMER. I will not make the statement if it is at all disagreeable to the Senator from Nebraska.

Mr. ALLEN. It is not only disagreeable, but it is not true.

Mr. PALMER. I will admit it is not true, but I hope the Senator will admit that I have not made the statement. I will say nothing disagreeable to the Senator from Nebraska. He has my personal kindly regards. Still I have heard so much on this floor about the poverty of the farmers and the poverty of the West, will the Senator allow me to say, that I am profoundly disgusted with it? We have no such condition in Illinois. The price of our wheat is low, I suppose because nobody wants it. Some of our products are selling at prices that do not pay for their production, but we suppose it is because nobody wants them, or

people would pay a higher price for them if they needed them more. But we are not beggars. We do not want a depreciated currency to pay our debts in. We are an independent people.

Mr. ALLEN. I am glad to hear it.

Mr. PALMER. Yes, sir; we are perfectly able to compete with Great Britain. I have said that I am a British American, and we do not shrink from an encounter with Great Britain on any field. I must say that during the war, they made a little fight over Mason and Slidell, and I have been hungering and thirsting for an opportunity to pay them that debt. I would have given my life, after we had submitted to that humiliation, to have fought them anywhere. Still we are their equals. If they desire gold, so do we. If they struggle for gold, so do we. If they command gold, so can we. We are not their inferiors. We are not the poor, beggarly people we are described to be.

Mr. ALLEN. Oh, Mr. President——

Mr. PALMER. I ask pardon of the Senator for taking so much time.

Mr. ALLEN. The Senator from Illinois certainly misconceives me in what I have said. I am perfectly willing that the Senator from Illinois shall fight Great Britain if he desires to do so. I have no objection to it whatever; but I have no desire to engage myself in any unnecessary war with Great Britain or any other country. If the higher prosperity of the people of my nation can be assured without entering into an unnecessary competition with Great Britain, I am perfectly willing that Great Britain should go her way and the American Union should go hers. I am not seeking an opportunity to quarrel with somebody. I do not want this nation to engage in either an armed contest with any other nation or an industrial contest unless that armed or industrial contest may be essential for the preservation of our institutions. I am seeking nothing of that kind.

Now, let me call the attention of the Senator from Illinois to the fact that the prosperity of the nations of Europe and especially of England, which the Senator from Illinois seems now to desire to have a contest with, all the great civilization of that country was produced at a time when silver was money in that Empire and the greater portion of it when silver was the exclusive money. That is true of Germany or the Prussian Empire.

Mr. KYLE. Or the United States.

Mr. ALLEN. It is true of France; it is true of the United States; it is true of every nation that stands to-day at the head of civilization upon the face of the earth, that its primary development and its first impetus to civilization were produced at a time when silver was—I was about to say the principal money, but it is hardly correct; certainly, however, at a time when silver was recognized throughout the world as money as sacred and as precious as gold. So there is nothing in the statement of the Senator from Illinois.

Let me call the attention of the Senator from Illinois to another proposition. Gold will shift from America to England, back and forth, according to the demand for gold itself, wherever the rate of interest is the highest. If there is a greater demand for it in England than there is here, it will go there. Like anything else, whenever the demand is greater for it here than it is in Great Britain, when it is worth more here, it will come here. So we are engaged in the enterprise of putting the gold of the world upon an auction block and entering upon a wild, nay, a senseless, bidding for the possession of gold, sacrificing our property and sacrificing the prosperity of our people in a senseless race of that kind.

I do not believe, Mr. President, that I am unfriendly to my country and my countrymen when I say I do not desire to see an unseemly and sacrificing contest of this kind go on. The American home, the American laborer, the American farmer, his wife, his child, the prosperity of the family, the prosperity of the people of this country, are too sacred to me to see a useless sacrifice and a useless contest of this character; and when I say I desire to see my country preserved from a contest of this kind I do not believe that I am an enemy of my country or that I am speaking disrespectfully of my country or my countrymen.

When the Senator from Illinois interrupted me I was undertaking to show that the development of India was made by American silver that was depreciated by consent of this Government, and which was brought, depreciated as it was, in contact with silver council drafts, drawn upon the Indian government and discounted at from 20 to 25 per cent. Through that means and through the demonetization of silver we have been suffering the British Empire to build up and develop the industries of India, until the product of India is to-day a constant menace to the price of the wheat and cotton of this country.

Mr. PALMER. Unquestionably. England constructed the Suez Canal, which vastly increased the introduction of the products of India into Europe.

Mr. ALLEN. And England built railroads in India.

Mr. PALMER. Unquestionably extensive developments were made in India; and the construction of the canal brought in one year—I forget the year—23,000,000 bushels of wheat in competition with our wheat.

Mr. ALLEN. Oh, yes; more than that quantity.

Mr. PALMER. I mean in one year, and that was several years ago; I happen to have the figures in my mind. It is perhaps more now. What is the quantity now?

Mr. ALLEN. I thought I had the data here; I have them on the subject of cotton.

Mr. PALMER. It is undoubtedly larger now than it was.

Mr. ALLEN. Oh, yes; I think it has increased more than 100 per cent.

Mr. PALMER. The construction of the canal and of internal lines of communication have brought immense quantities of wheat to the English market; but still it must be remembered that we have there a market much larger than in any other country in the world for beef, pork, and all our surplus agricultural products. I made a calculation last night and found that our sales of agricultural products in Great Britain, in the United Kingdom, as the phrase is used in the Treasury returns, are probably greater than that of all the world besides. It is there that we find the market for our surplus agricultural products, according to the Treasury returns.

Mr. ALLEN. It occurs to me that a man acts very queerly if he seeks a competitive market when he can get a non-competitive market. It occurs to me that if a man has anything to sell he should avoid a market where competition is strong.

Mr. PALMER. I should like to ask the Senator one question, which will be of very great interest to me. Where is that market to be found?

Mr. ALLEN. Let me call the Senator's attention to the fact that a few years ago we had a Pan-American Congress here for the purpose of developing the western hemisphere and producing closer relations between the different North and South American governments. Let me ask the Senator if it would not be wiser for this country to develop its trade with the countries of South America and adjoining countries where it can be developed efficiently and effectually rather than to go into competition with Great Britain or some other nation of that character?

Mr. PALMER. Will the Senator allow me to interrupt him?

Mr. ALLEN. Certainly.

Mr. PALMER. The South American States produce more beef than we do. They are not consumers of pork, I judge, by the Treasury returns. They do not buy our wheat or our corn to any extent. They buy small quantities of these products from us. If the Senator will take the trouble to look at the Treasury returns—I have them on my table—he will find that our sales of agricultural products to the United Kingdom and the British possessions in America and to Germany and France are enormously greater than any sales of products in the South American Republics.

Mr. KYLE. I should like to ask how long that is liable to continue so?

Mr. PALMER. I am not able to say.

Mr. KYLE. Is it not a fact proved by the statistics that before 1900 we shall be importers of breadstuffs instead of exporters?

Mr. PALMER. I do not care what the statistics show, I do not believe it. It is impossible for it to be so. Why? But I mention the fact to the Senator from Nebraska that much more than half of our commerce in agricultural products is with the United Kingdom and continental Europe, and that our commerce in agricultural products with South America, China, and Japan is a very small matter. I have the statistics right here. If we were deprived of our market for our wheat, and our pork, and our beef in Europe, there would be a condition of things in this country that would be most lamentable.

Mr. ALLEN. The Senator does not seem to comprehend my position. I am not seeking, as far as I am concerned, a competitive market. I am not seeking a competitive market for American products. I do not regard it as business at all to do so.

Mr. PALMER. Will the Senator allow me to say that we must send our products to a market where they are needed and where they will be purchased? We can not send them to the Asiatic countries. We can not sell them there. We must sell our beef, and wheat, and flour, and all our great agricultural products to somebody who will eat them. Those people do not eat them. They do not eat pork or beef. They do not buy flour. I refer my friend to the report from the Treasury to show that our commerce in agricultural products with the states to which he has referred is a mere bagatelle.

Mr. ALLEN. I do not doubt the Senator's position, so far as his statement of fact is concerned, is correct, but that is not the question. Why not make an attempt to develop trade in other

directions? Why not make an attempt to avoid that competitive market? Why go, like the night moth, constantly against the light where you are to be destroyed?

Mr. PALMER. They do not eat what we have to sell. They do not eat our pork, nor our beef, nor our flour. They buy nothing substantially from us.

Mr. KYLE. I should like to ask the Senator from Illinois whether it would not pay the United States to become a manufacturing nation?

The PRESIDING OFFICER. To whom does the Senator from Nebraska yield?

Mr. ALLEN. Certainly; I yield.

Mr. PALMER. It would undoubtedly pay us to become a manufacturing people.

Mr. KYLE. Is it not a fact that Mexico and many South American States are to-day dealing in United States manufactures by——

Mr. MANDERSON. We are unable on this side to hear the interesting triangular talk that is going on.

The PRESIDING OFFICER. Senators complain that the colloquy which is going on after such an irregular fashion can not be heard. The Senator from Nebraska will indicate to the Chair to which Senator he yields.

Mr. KYLE. I believe he yielded to me.

Mr. ALLEN. I have yielded to both Senators.

The PRESIDING OFFICER. The Chair can not recognize two Senators at one time.

Mr. PALMER. I certainly yield to the Senator from South Dakota.

The PRESIDING OFFICER. The Senator from South Dakota will proceed.

Mr. KYLE. The plan I think would be a wise one ordinarily not to maintain an attitude of hostility toward England, but if England's interest is not our interest to let England alone. We can deal with South America, Mexico, and the Central American States and provide them with our manufactured goods. The time will come very soon when all the agricultural products raised in the United States will be needed to supply the laboring men who will be employed by the manufactories that will exist then in New England——

Mr. GRAY. May I be allowed to interrupt my friend to say a word?

Mr. KYLE. Certainly.

Mr. GRAY. I should like to suggest to the Senator from South Dakota whether it would not be better to let the people who do the trading trade where they can make their profits and use their own judgment and not attempt the governmental coercion or leading strings that he proposes to put upon a free people. All profitable trading has sought the channels directed by those who carried it on, where profit could be made. We trade not as a nation; we trade as individuals in the nation; there is no national trade. The Senator from South Dakota traffics where he in his judgment finds that he can do so to his own advantage. What is the use, then, of talking about coercing trade here and there? Our great prosperity has grown just in proportion as we have had the liberty of individual choice free from coercive measures and leading strings.

Mr. KYLE. But is it not a fact that we have had a Pan-American council——

Mr. GRAY. Yes; a great humbug.

Mr. KYLE. For the purpose of developing trade with South American countries?

Mr. GRAY. A great humbug.

Mr. KYLE. If that can be secured it would be a grand thing for the United States, and at the same time perhaps be the means of bringing forward all the South American States to a higher grade of civilization.

Mr. WOLCOTT. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator from Colorado will state his point of order.

Mr. WOLCOTT. My point of order is that if the Senator from Delaware is to denounce an association of other nations which has met in the capital here, in Washington, upon invitation of the United States Government, such denunciation should come in executive session at least, and not in open session. He has denounced it as a humbug.

Mr. GRAY. Will the Senator from Nebraska yield to me?

Mr. ALLEN. Certainly.

Mr. GRAY. I understand perfectly the motive that lies back of all this suggestion. We are to sacrifice the trade that has proved profitable with the great populous European nations in order that we may build up with the less civilized countries of South America which use silver, a trade that shall inure to the benefit of those who are seeking to increase the use of silver.

Mr. KYLE. At the same time England and Europe are bound to be purchasers of our breadstuffs for many years to come, as far as I can see.

Mr. ALLEN. It appears to me that this discussion is drifting a little from the subject under consideration, and getting dangerously near at least to a protective tariff, and I think I will recall the discussion to the subject of the pending measure.

It occurs to me that there has been a purpose in this country on the part of the money power as I have defined it to bring about another panic or to revive the panic through which the country has now happily passed. I take the New York papers as indicating the sentiment of the New York bankers and brokers. In the New York World of September 11 of the present year it was announced that there was a "Turn of the tide:"

THE TURN OF THE TIDE—CONFIDENCE AND PROSPERITY STARTING IN TOWARD FULL FLOOD—EVERY GREAT CHANNEL OF INDUSTRY CLEARED FOR A PROFITABLE BUSINESS SEASON—THE DARK DAYS OF FINANCIAL DOUBT GIVE WAY TO BRIGHT PROMISE AND CHEERFUL PROSPECTS—PROMINENT TRADESMEN ALL ECHO THE SAME REFRAIN OF GOOD TIMES AHEAD—EVERYWHERE THE SOUND OF INDUSTRY IS HEARD IN THE LAND.

At that time, Mr. President——

[At this point Mr. DUBOIS raised a question as to the presence of a quorum.]

Mr. ALLEN. When taken from the floor I was speaking upon the subject of the return of the tide of prosperity, as announced in the New York World of September 11 of the present year. It seems that the mysterious something called confidence we have heard so much about in the last few months, which has a particular hiding place known to no man, was on the 11th of September returning to this country; business was beginning to be stimulated among the banks and moneyed institutions of New York, and everything indicated a return of confidence and prosperity, and the relief of the stringency of the money market. Nothing has occurred since that time to change that condition.

It may be said that the money centers had a right to suppose that the Senate of the United States, following the example of the House of Representatives, would unconditionally and promptly repeal the purchasing clause of the Sherman act; but it occurs to me that the bankers and brokers of the cities of New York, Boston, and the other money centers ought to understand that the Senate of the United States has an equal voice in this matter and is a coördinate branch of the law-making power. They had no right to suppose that the Senate would promptly obey the lash of the President, the lash of the press, or the combined lash of the press and President, and respond with undue haste in the repeal of the act of 1890. If it be true that the President of the United States is to dictate the action of Congress then it were fully as well if not better for the prosperity of the country that this branch of the Government be entirely dissolved and the President be invested with both legislative and executive power.

It soon became apparent to the money center which had overestimated the action of the Senate that it was necessary to frighten the people of this country again. I do hope Senators will maintain a quorum. They thought it was necessary to frighten the people of this country a little more to make them call upon this branch of Congress to join in the crusade against silver. I am happy to state that the very first paper in the United States which announced that purpose on the part of the money power in this country was a paper advocating the cause of the People's party, the American Non-Conformist, published at Indianapolis, Ind. I think for the edification of the Senate I will read an extract taken from that paper of September 28, 1893:

From reliable sources we are informed that the bankers are preparing to give the country another squeeze. They are determined to force the fight against silver which they can not control. When silver is relegated to the position of old junk we'll have another panic. At a certain stage the plutocrats will discover that more money is needed. In a few weeks the press can convince the people that there is a scarcity. Then the banks will be in shape to furnish a currency which they can control. They can't control the output of silver, nor can they draw interest on the greenbacks, hence they hate them worse than a tramp does work. Thomas H. Benton, in his great work, Thirty Years in the Senate, shows conclusively that the bankers deliberately planned the panics of 1811 and of 1832. Panics that cost the country millions of dollars, paralyzed business, and ruined thousands. They are alone responsible for this one.

With just as much wealth in the country as there was last year, with every element of prosperity in abundance, except money, these merciless bloodsuckers in the great Eastern cities deliberately went to work to perfect their diabolical plans, which should end in destroying silver, enriching themselves, impoverishing the people, and bringing millions to the verge of destruction. What cared they if all the little banks, which are a necessity, as business is now conducted, went down? It simply made more business for them. The pages of history do not record more atrocious acts than can be laid at the door of the organized bankers of the world. That the President of the United States should be their most valuable ally is sad beyond description.

So a return of the panic was predicted. Now, let me call the attention of the Senate to a little advice given to this class of persons by the New York Tribune September 29, 1893, a day

later than the publication I have just read. The editorial is not long, and I will read it:

The Tribune trusts that bankers of this city will permit a suggestion which is for their own as well as the public interest. Several of them are reported as having made particularly alarming statements regarding the disasters which, they venture to predict, will follow a failure of the Senate to pass the pending silver-purchase repeal bill. Such statements are not likely to do any good whatever, but are eminently calculated to do much harm. It is not to be supposed that these influential bankers are deliberately trying to get up another panic, with all its distressing consequences.

No, of course not. Here is one of the leading journals published in the city of New York, right in the midst of these fellows, and of course there must be some apology offered; it was not supposed they were undertaking to get up another panic to squeeze and scare the people and induce them to call for a repeal of the purchasing clause of the Sherman act, but that is exactly what they were doing. They were meditating another panic, and this great metropolitan journal advised the bankers and brokers (who know a good deal about the mechanism of finance and nothing about its science, and who know nothing about the country outside of the gambling shops and gambling rooms) that the temper of the country was such that it would not stand a reproduction of the panic. So it advised them against its reproduction.

What was the threatened panic for? It was for the purpose of making the people of this country believe that there was a real cause for the repeal of the purchasing clause of the Sherman act. It was for the purpose of sowing broadcast the thought that the purchasing clause of the Sherman act was responsible for the panic through which we have just passed, and that the purchasing clause of the Sherman act was the thing that precipitated the new panic they were talking about. In other words, it was to be an object lesson to the people. It was for the purpose of educating the people, to formulate a sentiment upon this subject. The Tribune proceeds:

They might well remember, however, that the remarks they are reported as having made might, in a certain contingency, prove extremely costly to the banks and to the business men of this city.

It is not as if there were any important end to be gained by such alarming utterances. On the contrary, it is highly probable that the urgency of New York bankers may go far to prejudice the very cause they desire to aid, particularly with some members of the Senate from the West and South whose support of the repeal bill is essential. Senators of the United States ought to be far above mere prejudice against a measure because any worthy body of citizens advocates it with peculiar zeal. That some Senators are not is the unfortunate fact. The idea that a measure is passionately desired by New York bankers, in the judgment of those who know the Senate best, is apt to damage that measure more than it will help it. If bankers of this city wish to do their utmost to assist the passage of the repeal bill, they may find it wise not to talk vehemently for publication.

It is a less important fact that sound business men are not by any means agreed about the necessity of action on the silver question at this time.

It seems that even the New York papers are changing their mind upon the subject.

There was such agreement some time ago, before the widespread disasters which it was hoped to avert had come. But it is not so clear now as it was then supposed to be that a single act of legislation would unlock countless hoards, and bring untold millions hither from England, and restore confidence, and set all the mills at work. Whether all these things would have resulted at once is not the question. There have been many thousand failures. More than seven hundred banks have failed with liabilities amounting to more than $170,000,000. A considerable part of the manufacturing force of the whole country has stopped operations. In many ways the conditions have changed.

One of the ablest bankers in this city, having charge of a very important bank, recently remarked that it was no longer clear to him that repeal of the silver act would accomplish what he had expected. Its anticipated effect, he said, would have been largely sentimental, but it was no longer possible to restore confidence entirely and instantly, as he had thought it might be restored some months ago. What this banker thinks many other sound business men are thinking. It does not seem to them wise any longer to hold out the idea that all our fortunes in this great country must turn upon an event which is not certain to take place. The repeal bill is, as we believe, a wise and highly desirable measure. But it is hardly wise or desirable to stake the future of all business upon the action or inaction of the Senate of the United States.

Mr. KYLE. From what paper is that article?

Mr. ALLEN. From the New York Tribune of September 29, 1893. The same thing is in substance foreshadowed in an article in the New York Journal of Commerce and Commercial Bulletin of the same date.

DANGER OF A RELAPSE.

I will not detain the Senate to read this editorial—it is quite lengthy—but I will ask my friend from South Dakota to read it.

Mr. KYLE read as follows:

Were there reasons for supposing that the Senate minority on silver repeal have any earnest care about the business interests of the country, it might possibly serve a useful purpose to ask their attention to the renewed dangers which their persistent obstruction is creating. As, however, it is beyond hope to produce any impression upon such callous material, it may not be entirely out of place to bring the facts to the attention of the leaders of the majority, who, the public begins to think, might very properly show more concern for imperilled public interests than for misplaced amenities towards grossly factious debate.

The emphatic vote of the House for unconditional repeal so strongly encouraged the country to expect like action from the Senate that the revival of confidence in all branches of business was immediate. Considering the extraordinary severity of the depression, the recovery was also rapid and promised to be soon complete. The attitude taken by the Senate, however, has checked these hopes, and the process of repair is arrested by the suggestion of a fear lest repeal may either totally fail or be substituted by a compromise worse than the present law.

Mr. TURPIE. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator from Indiana will state his point of order.

Mr. TURPIE. I ask the Senator from South Dakota to read again in the sentence he has just read which referred to the action of the other House.

Mr. ALLEN. It is an article from the New York Journal of Commerce.

Mr. TURPIE. And it is part of the speech of the Senator from Nebraska. It is not read here except as a part of his speech. Read the sentence, sir.

Mr. KYLE read as follows:

The emphatic vote of the House for unconditional repeal so strongly encouraged the country to expect like action from the Senate that the revival of confidence in all branches of business was immediate.

Mr. TURPIE. I not only make the point upon this passage, but two other articles have been read before. The following is the rule:

It is a breach of order in debate to notice what has been said on the same subject in the other House, or the particular votes or majorities on it there; because the opinion of each House should be left to its own independency, not to be influenced by the proceedings of the other; and the quoting them might beget reflections leading to the misunderstanding between the two Houses.

* * * * * * *

Therefore it is the duty of the House, and more particularly of the Speaker, to interfere immediately, and not to permit expressions to go unnoticed which may give a ground of complaint to the other House, and introduce proceedings and mutual accusations between the two Houses, which can hardly be terminated without difficulty and disorder.

The PRESIDING OFFICER. From what does the Senator read?

Mr. TURPIE. I read from Jefferson's Manual.

The PRESIDING OFFICER. Not from the rule of the Senate?

Mr. TURPIE. No, sir; not from the enacted rules of the Senate, but it is part of the common parliamentary law of the world.

Mr. ALLEN. It occurs to me that the rule laid down in Jefferson's Manual of which the Senator from Indiana speaks applies where a Senator is himself referring to some member of the other branch or some action of the other branch. I was not referring to the action of the other branch of Congress at all. I was simply reading an extract from a public newspaper, if the Senator please.

Mr. TURPIE. I merely wish to say that I read from Jefferson's Manual, which is included in the manual of the rules of the Senate.

The PRESIDING OFFICER. The Chair has no doubt that the rule prohibits comment in the one House upon any action or proceeding had in the other. The Chair does not see that the reading by the Senator from Nebraska of an editorial article in a newspaper referring to current events is amenable to the point of order made by the Senator from Indiana.

Mr. HAWLEY. I beg leave to submit a doubt as to the decision or intimation of a decision.

The PRESIDING OFFICER. The Chair will only add that, in the opinion of the Chair, it is the right of the Senator to read as part of his speech the article to which he has referred.

Mr. HAWLEY. I did not pay attention to what was being read at this particular time and care nothing about it, but it seems to me that if a member should so far forget himself as to desire to insult the President or the other House it would be only necessary to borrow something from some reckless and violent paper which would answer the same purpose. I hardly think what he could not say himself he might read at second hand.

Mr. ALLEN. The Senator's remark is entirely gratuitous.

The PRESIDING OFFICER. The Chair does not see that the Senator from Nebraska is violating any rule of the Senate.

Mr. TURPIE. If the Chair will allow me, I wish to state that I do not think a violation of the rule can be made indirectly any more than it can be made directly. Many arguments in newspapers are based upon the action of the other House, and several might be selected just as these, principally based upon the action of the other House. The only right which a Senator has to read newspaper articles is as part of his argument.

The PRESIDING OFFICER. So the Chair understands.

Mr. TURPIE. I wish to say that reading an article referring to the action of the other House is simply doing indirectly what a Senator could not do directly, and I think it is a gross violation of the highest privilege of the other House, and of the rules of decorum and propriety of this body.

The PRESIDING OFFICER. The Chair is not aware of any instance that would warrant such a decision as is suggested.

Mr. ALLEN. Then, on the ruling of the Chair, I ask the Senator from South Dakota to continue the reading of the article.

Mr. KYLE read as follows:

This apprehension has caused a dead halt in the recuperative process, and unless something is speedily done to stay the discouragement, there is reason to fear an early relapse toward the late condition of utter prostration. The larger operations of finance, whose results extend into the future, are now held in absolute abeyance; long-date commercial notes as well as time loans on collateral are discriminated against; and merchants are returning to the late policy of rigid hand-to-mouth buying. This arrest of demand has checked the recovering tendency in prices, which acts as another motive for deferring operations. The resumption of work at factories and mines is diminishing, and the mills that have already resumed begin to find that they are producing for a market which may again fail them.

Not the least dangerous effect of the Senate's trifling falls upon our foreign credit, which throughout the past depression has been the most sensitive point in the situation. The assuring action of the House enabled us to procure, in the way of indirect loans, the large amount of foreign gold which has been the chief means of restoring confidence in financial circles and strengthening the reserves of the banks. It was hoped, when these loans were made, that the completion of repeal by the Senate would enable us to settle the indebtedness through the export of securities—an operation which would have proved entirely feasible had the Senate done its duty. Now, these debts are beginning to mature, and as the uncertain attitude of the Senate is shaking European confidence in the future of our silver policy, the lenders begin to hesitate about renewing the loans.

The advance of foreign exchange to rates close upon the gold-export figure is largely due to this special cause rather than to the trade balance; and the longer the Senate encourages distrust as to its final action the stronger will be the motive for our foreign creditors to demand gold in these settlements. A greater danger could scarcely befall the situation. The crisis has been primarily and essentially a monetary one; and therefore a movement that would drain the banks of the very gold that has just saved them might easily run into a most serious form of relapse. It is to be kept in mind, too, that we do not face these revived dangers with the courage inspired by generally healthy conditions. Everybody and every interest is feverishly timid after our recent experiences, more cautious and more yielding than under the first attack of the disease, and any cause of disturbance will now produce worse effects than it would then. Distrust feeds not only upon external sources but equally from its own effects, and is far more difficult to heal when it comes in the form of a second attack.

Is it possible to get the serious attention of the United States Senate to these threatening facts? Is it possible that Senators really understand the significance of a crisis that has prostrated over five hundred of our banks and closed a large proportion of our factories? Do they really think that crisis such a trifle that they may regard with equanimity the near possibility of the ruinous experience being repeated? The people are seriously and angrily asking these questions, and if Senators wonder at not hearing more on this matter from their constituents, let them know that the silence is due to their own contemptuous disregard of the loudest protest that has ever thundered at the door of the Capitol. Of course, this insult to public opinion comes in its worst form from the Senate minority. But the repealers, who claim an unquestioned majority, have wholly failed to convince the public that they have effectively used the power which that majority gives them. Timid fears of retaliation, respect for Senatorial friendships, supersensitiveness about rules of debate, and temporizing regard for party interests or for secondary measures—these are not the sort of excuses the suffering people are in a mood to accept in lieu of the prompt action they have so unanimously demanded.

We owe it to this Senate that the most urgent appeal ever presented to Congress has been treated with the most trifling disregard; and, with all respect to many highly honorable Senators, we owe it to the majority that this affront has been permitted. The ever-reiterated excuse that the majority "has not the power to force action" is not to be credited. If that excuse means anything, it is that repeal is a parliamentary impossibility; and if such really be the case, of course it is certain that the minority will defeat it. In that view, the position is as bad as it possibly can be, and it therefore can not be made worse by forcing a revision of the rules of debate forthwith. That is what the country now demands. If, with a two-thirds majority and the Vice-President on the side of the popular will, that will can not be put into execution at pleasure, everybody wants to know the reason why without further delay. The country before tolerance to factious obstruction. The salvation of trade before amenity to its enemies. An end to parley. War to the knife against factious obstruction. These are the demands of the outraged public sentiment.

Mr. ALLEN. It would seem from these excerpts that there is a purpose upon the part of the organized banks, the moneyed interests of the country, probably backed by the moneyed interests of Europe, to precipitate another panic. But fortunately for the country it has not yet been precipitated, and we have happily emerged from the great panic which threatened us, and which materially affected our prosperity thirty or forty days ago.

Passing, then, from that question, I desire as briefly as I can consistently with the full discussion of this question, to consider the failures in this country produced, as I believe, by a contracted volume of money. I have here prepared a table, running from 1857 to 1892 and embracing the first nine months of 1893, showing a constant increase in the number of business failures and a constant increase in the total amount of those failures in dollars. I have no desire to be wearisome in this discussion, but it occurs to me that this table is of so much importance that it ought to be read and I will take the pains to read it.

[At this point the honorable Senator yielded to Mr. WOLCOTT.]

Mr. ALLEN. When I was interrupted for a roll call I was about to read a table showing the number and amount of the business failures in this country from 1857 to the present time. Although the table may seem somewhat dry to Senators, I think it is of sufficient importance to be read, and I think it bears directly upon the proposition that business failures have increased with the decrease of the volume of money in this country.

Failures in the United States.

Year.	No. of failures.	Amount of liabilities.	Year.	No. of failures.	Amount of liabilities.
1857	4,932	$291,750,000	1876	9,092	$191,117,000
1858	4,225	95,749,000	1877	8,872	190,669,936
1859	3,913	64,394,000	1878	10,478	234,383,132
1860	3,676	79,807,000	1879	6,658	98,149,053
1861	6,993	207,210,000	1880	4,735	65,752,000
1862	1,652	23,049,000	1881	5,582	81,955,932
1863	495	7,899,900	1882	6,738	101,547,564
1864	520	8,579,000	1883	9,184	172,847,172
1865	530	17,625,000	1884	10,968	226,343,427
1866	1,505	53,782,000	1885	10,637	124,220,321
1867	2,780	96,666,000	1886	9,834	114,644,119
1868	2,608	63,694,000	1887	9,634	167,560,944
1869	2,799	75,054,054	1888	10,679	123,829,973
1870	3,546	88,242,000	1889	10,882	148,784,337
1871	2,915	85,252,000	1890	10,907	189,856,364
1872	4,069	121,056,000	1891	12,273	189,868,638
1873	5,183	228,499,900	1892	10,344	114,044,167
1874	5,830	155,239,000	1893 (9 months)	11,174	
1875	7,740	201,000,000			

Number in business in 1892, 1,172,545.

So it occurs to me, with all due respect to Senators who entertain a different view of this question, that there is some relation between the number of failures and the amount of liabilities, and the amount per capita of circulating medium in this country. There is a close relation between the two, and I think I am perfectly warranted in drawing the conclusion that the constant shrinkage of the volume of money has had a very large effect in producing the condition of business failures contained in the table I have read. It occurs to me that not only is that condition produced in some measure and probably in an important measure in consequence of the shrinking volume of money, but I believe the people of this country are thoroughly convinced that there is a very close relation between these two important facts, and so important is it that it seems to me I ought to call the attention of the Senate to it.

It appears to me that there is another thing which ought not to be lost sight of in the discussion of this question. We all understand that last year the peace of this country was almost constantly broken in consequence of riots and strikes. I remember the occurrences upon the North Pacific Railroad, at Cœur d'Alene, where the laboring people of that country were engaged in a lawful protest against the reduction of wages and the introduction of certain rules in the management of the shops. We witnessed the spectacle of Federal troops called out to shoot down honest workingmen because they protested against the wrong.

No protest went up from any responsible authority in the country. The people deprecated it; the people knew it was wrong; and yet the military arm of the Government was resorted to for the purpose of shooting down honest men who protested against a system which was the natural outgrowth of vicious legislation, and vicious legislation upon this subject. We all understand how it shocked the country. Not only that, but there was an invasion of Wyoming by a body of armed men. These things ought not to be encouraged by this country, all exhibiting constant disintegration, all exhibiting a spirit of defiance to our laws, all evincing a purpose on the part of certain moneyed interests in this country to rule it and its people regardless of the right.

The "rustler" out in Wyoming, who was the actual settler, who went out there and occupied the Government lands lawfully, and was there met by an armed band of lawless marauders, whose chief occupation was to unlawfully occupy the public domain and drive off every actual settler; and the military forces of the United States were appealed to again in behalf of a lawless band threatening the peace of the nation. Let us take a view of the condition of affairs in the State of New York. A great organization, the Knights of Labor, numbering hundreds of thousands of men in its membership, were denied the right to work for the New York Central and some other railroads because they belonged to a labor organization. I do not now recall the names. The Pennsylvania Central was one of the roads, if I am not mistaken; but at least by the New York Central; they were denied the privilege of working for that corporation.

For what reason? Because they had violated the laws of this country? No, but because they belonged to an organization designed to protect their lawful interests as citizens of this country. The same law that the corporation invoked for its own preservation was invoked by its humble employés, and yet those corporations were permitted to voluntarily throw out of employment thousands of men for no other reason than resorting to lawful combination to protect themselves, their wages, and their families. Then, when a railroad strike occurred in the city of

Buffalo, what did we witness in the State of New York? A tin soldier, Peter Doyle, at the head of the military force of the State of New York, and at the same time, I think, the superintendent, or at least one of the important officers, of the corporation whose property it was pretended the military force was to protect.

Remember this man was an officer of the corporation, and at the same time he stood at the head of the military force of that State, and as a military officer, as a brigadier-general, or whatever he may have been, he led the tin soldiers of the State of New York against the honest workingmen of the rail road which he superintended. It was a brutal and uncalled-for assault upon the organized and honest laborers of this country. I do not pretend to say that any person has a right to interfere with the property of another. I would not encourage that, but what I do say is that the laboring people of this country have a right to convene in a respectful manner and enter a protest against the existing order of things if they think it ought to be done. They have a right to combine together for the protection of their interests, just as much as capitalists have a right to combine together for the protection of their interests.

But you may take a few of the money sharks who get together in a back room in the city of New York, band together for the ruin of the great interests of the country and plan a blow at the prosperity of the nation that costs millions of dollars; yet that is called a consultation of financiers; but when the honest laboring men of this country, who are driven to desperation sometimes, and who meet in the streets because they have no other place to meet, enter their protest against wrongs inflicted upon them, the moment they do this they are declared to be a mob, and are set upon by the police forces and by the military arm of the Government.

Then let us look at the disgraceful affair in the State of Pennsylvania. I hope the Senator from Pennsylvania [Mr. QUAY] will not charge me with saying anything against his State. There was the disgraceful affair which occurred in the State of Pennsylvania when the mills of Carnegie were evidently fortified, a great fence around them, with port-holes and everything indicating a purpose to defend the place against the honest workingmen who were engaged in work there. The men who were engaged at work at Homestead were induced to go there, to locate, and to invest in property in consequence of the promise of Carnegie and his officers and managers that they should have employment in those mills, and it was not only a moral obligation but it was a legal obligation which, in my judgment, could be enforced.

If a man says to me "if you will come to a certain place, invest your money in property there, in consideration of that you shall receive employment by me," it is a legal contract which I can enforce, or at least for which I can recover damage if he violates it. It is not only a moral obligation, but it is a legal contract that may be the subject of litigation and recovery in a court of justice. Yet here were thousands of honest people who had constructed their homes that would be worthless to them as soon as they were out of employment in the mills. The moment they refused to have their wages cut down, the moment they began to murmur, as such people will murmur and must murmur, because it affects vitally the interests of their families, the moment they began to protest, the great Carnegie who lives in Clunie Castle, Scotland, most of the time, procured through his agents an unlawful force of marauders and banditti to come upon the shores of Pennsylvania under the false pretense of protecting his property. What ensued? One of the most disgraceful scenes that has occurred in this country for many a day.

Then, Mr. President, witness the great State of Pennsylvania calling out its entire military force, amounting to some thousands of men at least. I do not pretend to recall the number, but I think eight or ten thousand. All of this military force was called out for what purpose? For the purpose of stifling the cry of hunger and the cry of distress; for the purpose of overawing American citizens who were clamoring for the protection of their rights; for the purpose of overawing one portion of the people of this country who were unfortunate enough to be compelled to labor for a living in the interest of aggregated capital. There for a month or more stood the carpet knight Snowden with his forces overawing the honest citizens of Homestead. Not only that, but similar scenes have occurred all over this country, manifesting a disposition to ignore the rights of the common people. Those rights have been ignored; and the disposition is manifested to ignore them in the legislation which has caused a constant decrease in the volume of money.

But that is not all, Mr. President. In the New York World of September 11, 1893, from which I have just quoted showing the turn of the tide, I find a singular contradiction. Here is the turn of the tide of prosperity, confidence being restored. Here is an article headed:

EVERY LOAF A LIFE—THAT IS JUST WHAT YOUR GIFTS TO THE PEOPLE REALLY MEAN—COME DOWN TO THE FREE BREAD HEADQUARTERS AND SEE FOR YOURSELF—YESTERDAY 5,382 LOAVES WERE GIVEN AWAY OUT OF YOUR FUND—SOME OF THE POOR WHO COME FOR BREAD—ALWAYS A PATIENT, WAITING CROWD, TOO TIRED AND TOO EXHAUSTED TO MAKE NOISE—CHILDREN WHO HAVE FORGOTTEN WHAT CHILDHOOD MEANS—LENA SHANDER COMES FOR A LOAF AND TELLS HER STORY—MRS. ANNIE MALZ HAS A HARD TIME KEEPING HERSELF ALIVE—BREAD IS ALL SHE WANTS, BUT IT HURTS WHEN THE BABY CRIES FOR MILK OR MEAT—LOUIS JACOBS DOING A WOMAN'S WORK AT HOME, THOUGH THERE IS NOTHING TO COOK.

The article shows the condition of thousands of people in the city of New York. It does not seem to occur to many Senators that that class of people are entitled to any consideration. It does not seem to occur to Senators that their condition is probably the result of vicious legislation.

Mr. President, I have not selected merely isolated cases of this kind. No later than September 29, a very few days ago, the New York World contained a short editorial on the subject of the poor of New York.

There is still a cry for bread in New York.

Is it not strange that in a country like this, teeming with wealth, there should be any class of people who are compelled by force of circumstances, outside of the mere accident of sickness or something of that kind, to beg for bread?

There is still a cry for bread in New York. Hungry crowds daily besiege the World's bread-distribution depot. Sometimes there is not enough to feed the hungry. Is not this a shame to the citizens who "have enough and to spare"?

This paper had been scolding the richer class of New York for a failure to come forward promptly and furnish the means for temporary relief for these honest starving people; yet the spectacle of thousands of men and women, boys and girls, going hungry and starving in New York, not in consequence of any fault of their own, of a refusal to work, of dissipation, or anything of that nature, but honest people going hungry; yet the papers of that city were compelled to criticise the action of those who were able to afford relief for not extending it. It speaks volumes for the charity and for the humanity of that class of people.

We know of no one who has looked upon the throng of those who come for bread who doubts the fact of great destitution. Want and suffering are apparent enough. There is no question of the keenness of the hunger.

There is no question about that. They were hungry.

The revival of business is not yet so general that all willing workers have an opportunity to earn food for themselves and their families. This class of unfortunates must be fed or starve while present conditions last. Have you done anything to keep them alive?

The article admits that they were honest citizens, admits that they were unfortunate citizens, and yet the same paper which publishes those items and calls for contributions of bread for the relief of the hunger of these people in New York, was at the same time clamoring for passage of an act which would aggravate the condition of that class of people and augment their number.

So in the New York Press of October 1, 1893, I find an article covering several columns, which I shall not undertake to read, excepting the head lines:

OPPRESSIVE TENEMENT HOUSE RENTS—WARD M'ALLISTER RECEIVES ANNUALLY $1,926 FOR DWELLING PLACES FOR THE POOR ASSESSED AT $28,500—WHAT THE PRESS INVESTIGATIONS SHOW—A MIXED GROUP OF LODGING HOUSES, STABLES, AND FRONT AND REAR TENEMENTS OWNED BY THE SOCIETY LEADER—GRIM HUNGER IN THE HEART OF THE BLOCK—THE SAD STORY OF MRS. HEWSON AND HER FOUR CHILDREN—THREE LITTLE ROOMS' COST—SMALL AND DIRTY AND FILLED WITH FOUL ODORS—HOW HIGH RENTS BEAR DOWN—DESCRIPTIONS AND INSTANTANEOUS PHOTOGRAPHS OF A FIRST-WARD HIVE WHERE THE BEES CAN NOT GET WORK, BUT PAY WELL FOR THEIR LITTLE CRANNIES IN THE COMB.

Here follow pictures which are horrible to look at, taken upon the spot. [Exhibiting.] There is the condition of a certain portion of the people who are admitted to be honest and worthy people, but unfortunate, and yet I have not heard one word here in the Senate in behalf of that class of people.

Mr. PALMER. Will the Senator allow me?

Mr. ALLEN. Certainly.

Mr. PALMER. Words are the cheapest possible contribution to the poor. I have not spoken for the poor, because I have felt that words were valueless. The Senator from Nebraska has given words, but so far as I know, nothing else.

Mr. ALLEN. The Senator from Nebraska always gives, as far as he is able, to the support of the unfortunate, and it has kept him poor; but, Mr. President, it is not a question of the administration of charity. Let me ask my friend from Illinois, however, why he is not willing to join me in the passage of some wholesome legislation——

Mr. PALMER rose.

Mr. ALLEN. Wait a moment. I ask why he is not willing to join me in some wholesome legislation, which will stimulate the industries of this country, give these very people the op-

portunity to earn an honest living and not compel them to eat the bread of charity?

Mr. PALMER. Within the limits of the Constitution, I absolutely will.

Mr. ALLEN. Certainly! starve according to the Constitution.

Mr. PALMER. I will give $100 out of my pocket to relieve those very suffering people.

Mr. ALLEN. The Senator from Illinois is worth, I presume, four times as much as I am, but I will give a like amount.

Mr. PALMER. But I have no words to give. Words do not satisfy hunger. I get pretty tired in hearing gentlemen affect to have all the charity and all the sensibility because they favor giving to the poor from the property of other people, the property of the people of this country. I will give of my own, but I have nothing to give from the public Treasury, except in pursuance of very well-established constitutional principles. I do not know what I can do to give these people bread; but if the Senator has any scheme he can suggest, which is constitutional, by which these poor people can be provided for, he will have my earnest coöperation and my warmest sympathy.

But, Mr. President, the gentlemen who favor free coinage claim to be the friends of the poor. They propose to give the poor cheap money; they affect to be the champions of the farmers. May I be allowed to say, without giving offense to my friend, whom I will not offend if I can help it, that there is an enormous affectation of sympathy for the poor, and a very small amount of performance.

Mr. ALLEN. Mr. President, with all due deference to the Senator from Illinois, I know of no man upon the face of the earth who has any right to judge of my motives. I am responsible to a different authority than the Senator from Illinois for the motives which actuate me in what I do and say.

I am not like the Senator from Illinois—probably fortunately for him—I am not only willing to give of my means for the immediate relief of these people, but I am willing to indulge in some wholesome legislation for them. I am willing to indulge in some legislation which will give these people an opportunity to earn an honest living, and not be the recipients of the bread of charity.

Mr. PALMER. If the Senator will allow me, will he suggest the method?

Mr. ALLEN. I will suggest the method. Let the Senator join with me, and join with other Senators, in increasing the volume of money in this country until the money which is now being hoarded is driven into manufacturing, farming, and productive enterprises of different kinds, so that there will be a demand for honest labor, so that every honest man, woman, and child, under the flag of this country, shall have an opportunity to labor and earn a livelihood.

Mr. PALMER. Mr. President, if the Senator will allow me, I have lived fifty years in active life; I have observed the effect of these expansions of the currency, based upon fancy or fallacy, and I have never known them to produce any substantial or permanent results. My life was commenced under the Commonwealth-bank system of Kentucky; I saw afterwards the State-bank system of Illinois; I saw and I lived under stay laws and various legislation intended to give temporary relief, but they produced disaster, poverty, and distress. I have never known any other method by which prosperity can be assured except by giving to the people a stable, fixed currency, as uniform and as constant as it is in the power of human skill to devise, and giving to each man the equal, uniform compensation for his honest labor. If there is any other mode than this of promoting prosperity, I do not know of it.

Mr. ALLEN. Neither do I.

Mr. PALMER. I believe in giving to the country a uniform, stable currency.

Mr. ALLEN. Certainly, I agree with the Senator from Illinois as to that.

Mr. PALMER. And that currency should be as abundant as is consistent with the laws of the country; but I have never known public or private prosperity to be advanced by mere fictitious advancements of mere currency, of currency baseless and worthless in the hour of trial.

Mr. ALLEN. I object to the implication of the Senator from Illinois, that anybody is in favor of a fictitious valuation or a worthless currency. Certainly I am not in favor of it and I have said nothing to indicate that I was in favor of anything of that kind. I am in favor of every dollar in this country—to use the language of an ex-President—being as good as every other dollar.

Mr. PALMER. We agree there.

Mr. ALLEN. I am glad we do agree.

Mr. KYLE. Will the Senator from Nebraska yield to me that I may put a question?

Mr. ALLEN. Certainly.

Mr. KYLE. I should like to ask the Senator from Illinois if he thinks the interest of the poor people of this country was advanced by the demonetization of silver in 1873?

Mr. PALMER. I do not.

Mr. KYLE. Is it not true, upon the other hand, that by the demonetization of silver in 1873 gold was appreciated, and that the price of products was correspondingly decreased?

Mr. PALMER. It is not.

Mr. KYLE. Is not that the testimony of the best gold experts of Europe to-day?

Mr. PALMER. It may be testimony which satisfies any man who chooses to believe it, but I do not.

Mr. KYLE. Mr. Robert Gibbon, secretary of the Board of Trade of London, and many of his distinguished colleagues take that ground to-day.

Mr. PALMER. Mr. Robert Gibbon has the right to his own opinion, and I have the right to mine. I have known of no insufficient currency in this country.

Mr. ALLEN. I suppose the Senator from Illinois will accord to the balance of us the right to have our own opinions.

Mr. PALMER. I have spent my life in endeavoring to secure for myself and others the right of free thought and free speech.

Mr. ALLEN. I know that is true.

[At this point Mr. ALLEN yielded to Mr. SHOUP for a call of the Senate.]

Mr. ALLEN. Mr. President, there are many other interesting features of this question which I have failed to discuss, yet I think a sense of duty to other Senators, who have not yet had an opportunity to speak upon this question, requires that I should give way this morning to Senators who are prepared and who are desirous of being heard. I shall take occasion hereafter, if the opportunity offers itself, to submit some observations upon some important branches of this very important question, which I have not yet discussed.

England has no silver mines of any great significance. If she had she would look after her interests. She has immense interests in her gold-producing colonies, her Australian mines alone up to the year 1875 had produced gold to the enormous amount of $1,250,000,000. From 1881 to 1888 Australia produced gold to the amount of $180,000,000. From 1860 to 1888 the United States produced 1,703 tons of gold, worth $1,190,200,000. From 1860 to 1888 Australia produced 1,706 tons of gold, worth $1,038,200,000. Saying nothing of her large interests in the African gold fields.

Is it any wonder that England wants to strike down silver, one of our greatest interests? Knowing these facts, is it not peculiar that England should receive any assistance from the United States? If England had owned the silver interests of the United States, silver would not have declined as it has since 1873.

This is a Trojan horse; but underneath and behind this whole scheme I see two monster Shylocks, like Argus, hundred-eyed, and, like Briareus, hundred-handed. One of these is England, the other the Shylocks of Wall street and the East, both alike reaching out their long, bony, and merciless hands for their pounds of flesh, regardless of the welfare of the laboring classes and producers of this country, regardless of the prosperity of this country, but interested solely and alone in their own selfish aggrandizement.

Shall we, the representatives of the people, stand idle and see them crushed beneath the wheels of this modern Juggernaut, or shall we strangle the Laocoon before it strikes our people and our homes? Let those who answer yes go read the Declaration of Independence and answer to the people. What has been the conduct of England toward this country that it should call for such efforts from us to advance her interests by increasing the value of her gold, of the bonds that she holds? What has she done for us that we should strengthen the sinews of the harpy hands of this colossal Shylock that has the debtors of the world by the throat?

Let us see what she has done for us.

On the 6th of September, 1620, the Pilgrims, driven forth from England by religious persecution, looked from the decks of the Mayflower upon the shores of their native land for the last time. For sixty-three days they were buffeted by the storms of the Atlantic. Then they landed upon a barren and hostile shore in the dead of winter, many of them weakened by their sufferings and dying from hunger, cold, and exposure; strong men were struck down by fever and consumption until but a handful was left of that brave band to carve the way of civilization in the Western hemisphere. By their iron energy they slowly prospered, warring with savage tribes and living under the charter (the first seed of the Constitution) which they made for themselves, and in which they covenanted together to live in peace and harmony, with equal rights to all, obedient to just laws made for the common good.

God alone knows the privation and suffering endured by these

people and the people of Virginia while planting the first milestones along the highways of this great Western Empire. England did not object to the Puritans leaving their native land, but she did object to their taking money out of the realm. The common dictates of humanity would suggest that a people should have been treated kindly who had established themselves in a foreign land under such adverse circumstances, but as soon as the colonies began to prosper we find England, in 1651, passing the Navigation Act requiring the foreign commerce of Virginia to be carried on wholly in English vessels and directed exclusively to English ports, and a war vessel sent over to compel submission. In 1686 the royal governor of New England visited Hartford, invaded the provincial assembly while in session, seized the book of minutes and wrote "finis" at the bottom of the page. The royal governor of New England demanded the surrender of the charter of Rhode Island, and his demand not being complied with, he repaired to Newport, dissolved the government, and broke the seal of the colony.

The English governor exacted immense revenue from the people. The people complained, and the order went forth as follows:

If there is any more murmuring against the taxes, make them so heavy that the people can do nothing but think how to pay them.

The taxes continued to be levied upon the colonies without authority, and the protests of the people were treated with contempt. The people asked that they be granted the right of electing a colonial legislature; the answer was:

That popular assemblages were seditious and dangerous; that they fostered discontent and disturbed the peace of the Government.

Where in the history of civilized nations do we find a parallel to the ruin of Acadia by the English? Three thousand human beings, wives and mothers, old men and children, driven from their peaceful homes at the point of the bayonet on board of British ships, their homes burned before their eyes, and the people carried away and scattered among the English colonies!

Early in the eighteenth century, in 1733, England treated the colonies to the Importation Act, then to the Writs of Assistance, or general search warrants, then came the Stamp Act and the Boston port bill; and the colonies, unable to stand further tyranny and persecution, shouldered their flintlocks and went forth to battle for freedom, death being preferable to further submission to the greed and selfishness of England.

No American will ever forget that long and terrible struggle from Lexington to Yorktown, in which the yeomanry, raw recruits, inspired by the love of liberty, often half fed and poorly clad, contended against the trained veterans and hired Hessians of England. Lexington and Bunker Hill, Trenton and Concord, Saratoga and Yorktown; Washington and Greene, Allen and Lee, Sumter and Marion will never be forgotten while a stone stands in the temple of American liberty.

In 1812 the domineering spirit of England having been asserted against our Navy, we went forth to do battle for free trade and and sailors' rights, upon the seas and upon the land, we fought the English and their allies, the Indians. The hired Hessian was hurled against us in the Revolutionary war, but a more savage agent was used against us in the war of 1812. The atrocities of the River Raisen stand without a parallel in the history of warfare amongst civilized nations; there the wounded American soldiers and the prisoners were left to the mercy of the savages who did their work of slaughter well, with torch, tomahawk, and scalping-knife. Failing to subdue us in war, they resorted to other means.

In 1811, when the charter of the United States Bank expired, the stock of which had been paying an annual dividend of from 8 to 10 per cent, it was discovered that the English had gotten control of nearly all the stock. Since then she has gradually gotten control of our carrying trade, bleeding us of millions of dollars every year. She has gotten control of large areas of our public lands, of immense tracts of our coal, timber, and mineral lands, which she has bought for a song, and from which she will reap immense profits. She has bought large interests in our most profitable flour mills, our breweries, stockyards, and manufactories. She holds our bonds and has made millions speculating in them. She draws annually from the United States over $100,000,000 in the shape of interest and profits alone. Notwithstanding all these things the agent of the Rothschilds now comes in the year 1893, in the year the Columbian Exposition, and the one hundred and seventeenth year of our Independence, and demands that our Secretary of the Treasury in these United States of America issue $150,000,000 worth of bonds.

The rule of England is that rule of tyrants—coercion. This rule of coercion was used with iron hand against the colonies until they, with almost superhuman exertions, broke the bonds that made them slaves. In 1812 we again fought against coercion, and now, in the year 1893, in this month of October, we find ourselves facing the same question. Horatius Cocles, single-handed, held at bay the army of Porsena while his companions cut the bridge and saved Rome, and then leaped into the raging Tiber with his armor on. There are, here in the United States Senate, many Horatius Cocles who will battle to the last gasp, like Cæsar's tenth legion, in solid column with shield overlapping shield for the rights of the people who eat their breakfast by the candlelight, and work from sun to sun, who swing the ax and the hoe, the pick and the shovel, the cradle and the hammer, and whose hands bear the marks of honest toil; and against the Shylocks and bonded aristocracy of England and the East.

When the gallant Montgomery fell in charging the batteries at Quebec, his last word was, "Forward!"

When brave young Lawrence fell wounded upon the bloody deck of the Chesapeake, he raised himself upon his arm and in feeble breath gave his dying orders to the gallant seamen, "Don't give up the ship."

Thank God that their spirit still lives and breathes and walks abroad.

When Mardonius, chief of Xerxes's generals, desiring to get control of Greece, made seductive offers to the Athenians, the Athenians would not answer until they sent for the Spartans, and this their answer was:

We are not ignorant of the power of the Mede, but for the sake of freedom we will resist that power as we can. Bear back to Mardonius this our answer: So long as yonder sun continues his course, so long do we foreswear all friendship with Xerxes; so long confiding in the aid of our gods and heroes, whose shrines and altars he has burnt, we will struggle against him for revenge. As for you, Spartans, knowing our spirit, you should be ashamed to fear our alliance with the barbarian. Send your forces into the field without delay. The enemy will be upon us when he knows our answer. Let us meet him in Bœotia before he proceed to Attica.

So far as I am concerned, I ask no favors and wear the collar of no man; and when the Shylocks of England, Wall street, and the East, and their coadjutors, ask that the rights of the people be surrendered, my answer, so far as I am concerned, will be that not one jot or tittle of these rights shall be surrendered while life lasts, if I can prevent it; we will meet them in Bœotia before they proceed to Attica, and we will not permit them to put their shirt of Nessus upon the back of American labor. We bid the Shylocks and money lords, here and hereafter, open and bitter defiance.

The Financial Situation.

SPEECH
OF
HON. HENRY M. TELLER,
OF COLORADO,
IN THE SENATE OF THE UNITED STATES,

September 27, and October 6, 11, and 23, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. TELLER said:

Mr. PRESIDENT: On the 11th day of September I was diverted from some remarks I was making by an adjournment of the Senate. Since that time I have had no opportunity to conclude what I was then saying. Notwithstanding the oft-repeated declaration that there has been unnecessary delay in this Chamber in the discussion of this subject, I assert here that I have come here every day prepared to take the floor if an opportunity should be presented, and no such opportunity has been presented.

Mr. President, this debate has taken within a few days a somewhat singular direction; and to-day we have been treated to a lecture as to the improprieties of debate. It is complained that in the course of this discussion certain members of the Senate have seen fit to criticise the action of the Executive Department of the Government. We have been told, in substance, that criticisms of the Executive are out of place. For the first time in my life I have heard the suggestion—not made on the floor in a public manner, but by a Senator—that it was contrary to good taste and the rules of the Senate for a member of this body to criticise the President of the United States in his official action. I have also heard what I considered a fair criticism denominated in this Senate as a personal assault upon the President.

I should regard a personal assault upon the President in this Chamber as out of order; that is to say, I should regret to hear any Senator attack the President of the United States concerning matters not of public importance or of a public character. But whether the criticisms that have been made upon the Executive have been made in proper manner and spirit may be another question, about which I shall not now speak, although I have no fault to find with the spirit or manner of those who have spoken on this question. It is an official criticism of the President's official act, which I say is proper in this place and at all times.

If the doctrine is to prevail in this Senate that because the President of the United States or the executive department is a coördinate branch of the Government then this body is not allowed to criticise his official conduct, there will be an end in this country of free government. I trust Senators will distinguish the difference between criticising the House of Representatives, which is a part of the same branch of government that the Senate is, on the one hand, and on the other the criticism of the executive department of the Government, which is but a coordinate branch.

The Senator from Illinois [Mr. PALMER] who sits on my left last night seemed to be very impatient over the criticism made by the Senator from Nevada [Mr. STEWART]. I know the Senator from Illinois will not deny the right of any Senator on this floor to criticise the Executive whenever in his judgment criticism is necessary. If he does, then I have been very much mistaken in the Senator's views concerning public affairs, and I have been somewhat familiar with his public life and services for nearly forty years.

Mr. President, I regard the right of a Senator to stand on this floor and call in question the acts of the executive department, a right guaranteed to him by the Constitution, guaranteed to him by the very genius of our Government, and I am astonished, and almost dismayed, when any Senator tells me that it is not in good taste and does not indicate a proper spirit. I have served under Democratic Administrations and under Republican Administrations. I have claimed the right on this floor to criticise the official acts of a President whom I had helped to elect. I shall claim the same right with reference to a President whom I did not help to elect, and whose election I regarded as unfortunate for the welfare of the country. I shall extend to him the same fair criticism that I have attempted to extend to a President that I had helped to elect. If I criticise him here in a proper spirit and in a proper manner, and he takes offense at it, so as to disturb the personal relations that ought to exist between the Executive and Senators, that will be his fault and not mine.

Now, I do not intend to go into any discussion of the question whether the present Executive has laid himself open to just and proper criticism at this time, but at some time during this discussion I may do so. I only want to put in my protest against the suggestion practically made here by the Senator from Illinois [Mr. PALMER], and in private conversations by Senators to me, that the right to criticise the Executive does not exist, and that the same courtesy must be extended to him and to all branches of the executive department that we are required to extend to the other House of Congress, a part of the law-making power with us. I can see the distinction between a criticism of the House of Representatives and a criticism of the executive department of the Government.

The Senator from Nevada [Mr. STEWART] yesterday read from the public press of the country a purported criticism of the President of the United States upon this body. I am not now saying whether that was a correct version of what he said or not. A leading Democratic paper in the country announced that the President of the United States had taken the Senate to task for its lack of patriotism and its failure to discharge its duty to the public in a proper manner. If it be conceded that the interpretation given to his words by the press—not by one Democratic paper only, but by a number—is true, then every Senator in this body ought to resent it. By that I do not mean that they have not stated the language exactly as the President uttered it. But did he refer to the Senate? I do not insist that the President intended his remarks as a rebuke to this body, for if he did he would show that he had no idea of the relations that ought and by the Constitution does exist between the executive department and the legislative department of the Government.

But, Mr. President, without saying whether or not the Executive has been guilty of speaking disrespectfully of the Senate, the fact can not be overlooked and it can not be denied that on this floor—in private conversation at least—we have been told day after day that the President of the United States had determined on a policy for us concerning the repeal of the Sherman act. We have been told that by the public press everywhere; we have been treated *ad nauseam* to the declaration that the President had determined that no compromise should be made; that unconditional repeal, and unconditional repeal only, was the course for this body. I am not charging that the Executive is responsible for that. I am not asserting that the President has ever said to anybody that there should be no compromise, that he demanded unconditional repeal, and that he demanded it in the haste in which it is asserted he has.

If I had the proof that the President had issued his orders to this body I should speak of his conduct in just such language as I think it deserves. I will not assume that the President has declared that no compromise shall be made. I will not assume that he has said that it was unconditional repeal or nothing. If the friends of the Executive are willing to assert that he has given utterance to such expressions as are accredited to him I shall be greatly surprised and alarmed.

There is no question, however, that we are drifting very rapidly away from the doctrines of the fathers as to the independence of each branch of the Government. There can be no question that since the great political upheaval growing out of the war of the rebellion we have been imperceptibly, but certainly, departing from the well-established rules which before that time had been insisted upon with reference to the entire independence of the legislative department from the executive department of the Government. It grew out of the war, and it is possible that it was one of those things which could not be avoided. It is possible that that great contest may have imperceptibly destroyed that principle which is essential to the freedom of the people; that the legislative department must act independently of the Executive, and can neither be coerced nor forced in any manner by Executive favor or Executive displeasure. The tendency is beyond question in that direction, and I know that there are Senators on this floor who have seen it, as I have seen it, with alarm.

It has been one of the complaints I have made against the political party to which I have been attached. I had believed for years that the Republican party as a party were not on that question in full accord with the old doctrine of the fathers of the Republic. I believe that in our desire to have a strong government to deal with national questions we are losing sight of the fact that the Government of the United States is not a centralized government, but is a government of States. We have been losing sight of the fact that the Congress was not organized for the purpose of doing all the legislative duty that is put upon legislatures in this country.

I think the Democratic party during the last twenty-five or thirty years has been entering its protest, mainly because it has been in the minority, and not because it has been or was likely to be, any more in sympathy with the old original ideas than the party to which I belong. It is to be hoped that the party in the minority will always resist the aggressions of the party in the majority whether from the legislative and executive department. Now the Democratic party is in power. It remains to be seen whether this imperceptible drifting away from the very foundations of the Government in this particular is to be continued under this Administration, and under the next, if it shall be Democratic, until there shall be a centralization of power in the General Government and a domination by the President that shall be entirely contrary to the genius of our Government and entirely contrary to the plain provisions of our Constitution.

Mr. President, in view of this great threat of centralization and Presidential domination is it to be said that we have now reached a point where no man in this body can criticise the President of the United States? If I believed that the American people had wandered so far from the old, original, and sound doctrine of a free government that they denied to their representatives here the right of a fair criticism of the Executive (of his official acts I am speaking) I should dispair of the preservation of a free government in this country.

I do not pretend to say that the statements made by the newspapers and the charges made by the newspapers, although they are his supporters, are true. But I do say that it is no answer to charges of Presidential interference for the Senator from Indiana [Mr. VOORHEES] to rise in his place and tell his party that they can afford to let all these charges go; that they need not defend against them; that the President of the United States is so strong in the affection of the people, so strong in their confidence, that any attack made upon him will go for naught. If that is true, the very fact that he is so strong in the confidence of the people, the very fact that he is so strong in their affection, makes it more important for the representatives of the people to stand here, as they ought, under the Constitution asserting the independence of this body against any encroachments that he shall make. If he were an unpopular President, if he were a President not having the confidence and support of the people as it is claimed he has, he could do but little harm. Harm comes in this case from the fact that the people are willing to trust him.

I repeat, that to say he is strong with the people is no answer to criticism of him. Is the President of the United States guilty of encroachment upon the legislative department, of a deliberate assault on the members of the Senate, who do not on some questions agree with him? If he is, then Senators on the other side representing the Administration ought to see to it that fair criticism is allowed and should not complain.

Mr. President, seldom have the liberties of any people ever been taken away from them except by imperceptible encroachments. The Republic can not be destroyed by force. All the combined powers of the world brought against it could not destroy this Government, and yet by imperceptible encroachment

by the Executive not warranted by the Constitution it will be very easy to change the entire form of government.

I have said this with reference to criticisms of the present Administration of Mr. Cleveland as I said of his former. When I criticised Mr. Cleveland's conduct when he was President before I was met with the same rebuke that the Senator from Nevada [Mr. STEWART] is, that it was not in good taste. I replied then that I would criticise him exactly as I would criticise him if he were a Republican President. I would not criticise him with any more temper than I would a Republican President who should do the same thing.

Mr. President, if all the statements made in the newspapers are true, if a tithe of them are true, the President of the United States scarcely understands his relations to this body. How am I to know whether they are true? I can not conceive it possible, and I will not assume that on the hundredth anniversary of the laying of the corner stone of this Capitol, the President of the United States intended to insult the Senate of the United States. I will assume, as the Senator from Alabama [Mr. MORGAN] did last night, that it is not true: because if I believed it to be true, I certainly should not pass it over in silence.

Mr. President, this is all I care to say upon that subject, to which I may return again at sometime, and I may not.

I wish to say one word more before I commence on another subject, with reference to what occurred here this morning. We were told in substance that we are a minority in this Chamber who oppose repeal and that we are resisting the public will. We were told by the Senator from Rhode Island [Mr. ALDRICH] that he would cooperate with any Senator to prevent continued and further humiliation of the American Senate by our conduct.

I submit that there has been no conduct on the part of any Senator representing the views I entertain that justifies any Senator in making that statement. I suggest that if it is to come to this, that the keeping of the honor of the American Senate is in the hands of the Senator from Rhode Island, we have reached a sorry pass, and the sooner the American Senate disbands and ceases to be a body the better it will be. Who made the Senator from Rhode Island the keeper of the honor of the Senate? Has he at home or has he abroad a character better than the men who stand here and resist repeal? Does he represent more people than we represent? Has he any commission to speak for anybody with reference to preserving the American Senate from humiliation and disgrace?

Mr. President, the Senators who represent the great Northwest are quite able to take care of their honor, and in doing so they will take care of the honor of the Senate. We need no assistance from the Senator from Rhode Island, or anybody else. In all respects we claim to be the equals of Senators on this floor, and in moral worth and excellency we claim to be their equals anywhere. We may live in a section of country not as full of riches as Rhode Island, with not as much hoarded wealth as Rhode Island, but we represent a people who are brave, enterprising, and intelligent, and who will stand up and be counted by Rhode Island's side at any time and on any day. The State that I represent will not take off its hat to Rhode Island, either for the decency of its people or their intelligence and general worth. Remarks of the kind made by the Senator from Rhode Island are uncalled for in this Chamber. They are undeserving this place, and they are undeserving an American Senator.

The question before the American people now is, as I said in the beginning of the present session, an important question. I think it is one of the most important questions that has ever been presented to the American people. I think it touches more interests than any other question that has been presented since the issue was made whether the Government of the United States should be preserved or destroyed. I want to say here for myself that I am not to be deterred in my opposition to this repeal bill by any newspaper attacks nor by any attacks that shall be made on this floor. Believing that the repeal of the law will bring great disaster to the people of the United States, I intend to resist it by every legitimate means in my power. What those means may be I will determine for myself on my oath, responsible only to the people of the United States and my constituents in the State of Colorado.

I shall not be deterred from debating this subject to the fullest extent by any cry that there has been enough debate. It is inconsequential to me what may be said or what may be done outside of the Chamber, or what influences may be brought here or brought there. I think I speak the sentiment of a great number of Senators on this floor who feel that they have not only a local interest in this question, but that they have a general interest in it, and that other sections of the country are as much interested in it as we are. As my colleague said this morning, if anybody thinks we will debate it without considerable heat and zeal he does not appreciate the situation in which we believe the repeal of the act will put the whole country.

We believe that it will not only do what my colleague said it would do in one-third of the United States in area, but we believe it will bring disaster and distress to more than four-fifths of all the homes in this land. We believe it is an effort by the great capitalist classes of this country to get control of all of the productive agencies of the country and to dominate it to such an extent that the people will become practically the serfs of those who hold the money of the country.

Since I have been in public life, Mr. President, I have endeavored to direct every act of legislation in which I have been engaged with reference not to the classes, but to the masses. I formed my opinion upon this question years ago. I was here in 1878, when the silver question was before Congress. I was a new member in this body, and I thought it becoming in me as a new member to wait to hear others on the subject. I voted on every occasion in the interest of silver money, and from that time to this upon every occasion I have, in voting for silver money, voted for that which I believed was conducive to the interests of the great mass of the American people. We believe that the legislation now proposed is inimical to their interests, and is it to be supposed that we are now to lie down and yield and be trodden underfoot and humiliated rather than to stand here and do what the minority has done repeatedly—resist, with all the parliamentary tactics known to parliamentarians efforts, that we believe to be hostile to the people's interests?

I have not said what I regard as legitimate opposition and legitimate obstruction. I leave that until it becomes necessary, if it should become so, to resort to these. I have seen the American Senate sit here night after night filibustering over the question of who should be seated in this body and who should not. I saw the last Republican Senate filibustering to prevent the Senator from New York [Mr. HILL] from getting up a bill to bridge the Hudson River in his State. Yet we are told that if we should insist upon reasonable debate it is improper obstruction, and that we must make haste to get rid of the Sherman act. Who has a right to demand when debate shall close in this body? Every Senator for himself on his oath and nobody else.

I repeat what I said the other day: we are not here speaking to-day by courtesy of the Senate or by courtesy of anybody. We are here because the Constitution gives us the right to be here, and debating the question because the Constitution gives us the right to discuss it until we shall say upon our responsibility as Senators we have concluded: and when we have concluded, I repeat, then, and then only, will the Senate vote upon this question.

Mr. President, I have said this substantially before and I say it again, because I find that this statement of mine has been treated in certain quarters as an insolent threat. I am told that it is a piece of impudence for an American Senator who has served a good many years in this body to insist upon the right to be heard upon a subject that he upon his oath says he regards of more importance to the American people than any question which has been before the Senate for a quarter of a century. I propose before the debate is over to show why I think this is a great question, and I propose to attempt to show why I think that you can make a mistake by legislation here that will bring irretrievable disaster and distress upon the great mass of the people of the United States, and that you may take a step which it will be impossible to redress. So believing and so feeling, I approach this question with no apologies, with no explanation why I take the time of an apparently unwilling Senate, or why I abuse, as they say we do, a clamoring public, whether it be in New York or elsewhere.

When I was on the floor last I was addressing myself to the question whether the Sherman law is responsible for the financial condition that has existed in this country since the 1st of July. I should have been glad to continue my remarks, because I did not present all that I desired to present at that time. I shall not go over that question again. I shall not attempt now to repeat what I then said. I then challenged anyone in this body to stand here before the American people and declare that in his judgment the financial condition existing on the 11th day of September was the result of the Sherman law. Up to this hour nobody has accepted that challenge, unless it may be the Senator from Delaware [Mr. HIGGINS], who sits on this side of the Chamber, and the Senator from Delaware [Mr. GRAY], who sits on the other side. Both of them did say that they thought the law had much to do with it, and yet the Senator who sits on this side made haste to say before he concluded his speech that he did not pretend that it was the great cause of the so-called panic.

I said more. I said that the newspapers of the country, if they were truthful in their statements, had made it morally certain that the panic was prearranged and brought on. I said I did not mean to charge that the authors of this trouble intended to bring on just such a panic as now exists or did exist, but that they intended to bring on a pressure by getting up a fright among the masses upon the Senate and the other House to compel the repealing of the act I think is morally certain.

When I addressed the Senate on the 11th instant, I did not have time to present some things that I should like to bring before the Senate, and I will present them now. I do not care to present any more evidence as to the condition of the country or with reference to what had been done before the 11th of September when I concluded my remarks.

I asserted on this floor the other night, night before last perhaps, that if the same agencies which brought about the recent panic were not intended to bring on another, at least they intended that the public should believe there was another coming. So, for the last week or more the public press of the city of New York and other great cities that had been crying for the repeal of the Sherman act appear to have entered into an arrangement with one another to sound the alarm and to declare that we are now about to enter upon an era of exporting gold, and we are told in the public press that Mr. So and So is about to export gold, or the rates of exchange are rapidly approaching a gold-exporting point.

I have here an extract from the New York Daily Indicator, a financial paper published in the city of New York, dated September 22, 1893. It says:

ARE GOLD EXPORTS IMMINENT?

The alarm has already been sounded, "Look out for gold exports," but why there should be any fears on that score we are unable to discover. Some wild theorists have suggested that our recent imports of gold were only loans by foreigners who had kindly come to our rescue when they thought that the silver law would be repealed, and who would at once take it back if they should become convinced that the law would not be repealed at all. It is such stuff as this which has crammed the financial literature of the day, and has apparently muddled those who write it as much as those who read it. But we need not worry about the good or the evil will of foreign investors for some time to come. If the silver law has exerted a bad influence, all the ill effects have been accomplished, as far as the exchange of our securities for gold is concerned. There is not much left on the other side that is for sale.

It may be of interest to note the gold movements, however, in past years, and perhaps gain an idea as to the possible future of the precious metal. Experience has demonstrated that this is the gold-importing season, which ordinarily extends from September 1 to February 1, or about five months. This year we began to import gold about two months earlier than is the rule, and so on September 1 we had some $46,000,000 of gold that had come into the country since July 1.

About $10,000,000 more, I believe, has come in since the 1st of July.

It might well be that so large imports prior to the beginning of the regular importing period would moderate the future movement of gold, but it is a question whether the exceptional condition which preceded the gold imports of July and August will not prevent further exceptional experiences hereafter. The ordinary course of gold movements between September 1 and February 1 is shown in the following table, covering the past seven years:

I will skip the table and ask to put it in without reading.

Five months ended February 1—	Exports.	Imports.	Net imports.
1887	$1,861,957	$34,909,946	$33,047,989
1888	1,868,832	31,132,268	29,263,436
1889	15,308,590	6,013,898	*9,294,692
1890	3,872,674	7,345,133	3,472,459
1891	2,634,614	13,404,602	10,769,988
1892	2,037,801	39,791,957	37,754,156
1893	30,714,683	8,910,459	*21,804,224

*Net exports.

The Daily Indicator proceeds:

Only twice in seven years have we lost gold in the five months ended February 1. That was in 1892 and 1893. The experience during the period ended February 1 this year was so exceptional that it does not seem possible that any one could expect it to occur again in the succeeding year. On the contrary, we are strongly of the opinion that the exceptional occurrences for some time to come will be on the line of correcting previous exceptional happenings. What the latter were may be best shown by a statement of the net movements of gold in each six months of each calendar year since 1875, as follows:

I will not read the remainder of the article, but will ask to be allowed to put it in. It is a table of the imports and exports of gold from 1876 to 1893, with some further remarks of the editor.

Years.	January to June.		July to December.	
	Exports.	Imports.	Exports.	Imports.
1876	$19,561,586			$12,005,943
1877	12,350,063			4,907,100
1878	871,340			2,693,251
1879	1,655,917			76,308,412
1880		$810,959		69,771,240
1881		27,604,847		30,100,230
1882	28,311,056			2,992,505
1883		3,140,756		12,866,435
1884	31,117,075			18,123,486
1885		87,318		12,140,786
1886	34,349,628			34,375,587
1887	1,168,173			35,911,046
1888	11,352,963		$12,212,711	
1889	37,454,716		1,474,112	
1890	2,857,037		961,970	
1891	67,154,140			33,037,669
1892	33,533,542		25,547,568	
1893	61,968,895			

The Daily Indicator proceeds:

For twelve years, from 1876 to 1887, inclusive, we gained gold in the last half of the year, while in the five years since we have lost gold four times, the exception being 1891, when we imported net $33,000,000 of gold between July 1 and December 31. That we are to add another year to the list of importing years may fairly be assumed from the fact that we have some $18,000,000 to our credit for the first two months of the half year, with something over $3,000,000 more for September to date, making close upon $50,000,000 altogether. That we shall keep all this and gain more between now and the close of the year is quite certain unless there be a serious falling off in our merchandise exports, and there is no reason to anticipate that.

I have here a report of the stock market taken from the Daily Indicator of September 22, the same date from which I have just read, and which I desire to read:

THE GENERAL STOCK MARKET.

WALL STREET, *Thursday, September 21, 1893.*

The market is wholly in the hands of the traders at the present time, and little interest is taken by anybody else in the fluctuations in quotations. The general opinion seems to be that now is as good a time to take things easy as there will be; and while there is nothing in the shape of news to stir things up the dullness is likely to continue. The indifference as to what Congress may or may not do with silver is growing apace, and people are coming to realize how badly they have been fooled by quick-witted politicians and political writers, who attempted to win a political trick by playing silver. No progress appears to be making with the repeal bill in the Senate, and as the papers which are now shouting the loudest about the disaster to follow failure to pass it are the same which a few months ago were telling how dead sure a thing the repeal was, it is not suprising that nobody is worrying about the matter. Reports concerning the revival of business are all encouraging, and the pouring in of money into the city banks assures an easy money market for the remainder of the year.

I do not care to read further. I read the other day briefly when the Senator from Nevada [Mr. STEWART] was speaking, an extract from the financial statement published in the Philadelphia Press of September 22, 1893. I want to read it again because it is still asserted that the present condition of the stock market, which is not as satisfactory as the speculators in Wall street would desire, is the result of the failure on the part of the Senate to repeal the Sherman law. I read it to show two things. First, that it has no influence whatever upon the stock market; that the intelligence in that part of the country is so great that they know very well it never had anything to do with the disturbance: and, secondly, that it is entirely inconsequential so far as they are concerned whether it shall be repealed or not.

The stock market opened somewhat lower, but the volume of business was small. London did nothing. In the early part of the day the Industrials were advanced and in the afternoon Reading spurted a little. The traders are doing about all the business that is done. No news has any effect on prices, not even the street gossip that the silver repeal bill would fail in the Senate. This is a remarkable fact considering the importance which was attached to this matter only a short time ago. The market is simply stagnant and it awaits an impetus. The people dealing in stocks now have not the power to make any important fluctuations and the leaders are waiting for daylight on the tariff revision, the mercantile situation, the future of the money market, and the outcome of the silver debate and the political legislation in the House. There was no news of importance except routine reports.

I ask that I may put the remainder of this article in the RECORD without reading:

The Bank of England rate of discount was reduced from 4 to 3½ per cent. The proportion of reserve to liability rose to 53.82 per cent as compared with 52.56 per cent last week and 49.54 per cent in the corresponding week last year. The bullion increased £486,000 and the reserve increased £746,000. The net result of the day in stocks was a fractional decline in many of the actives. A number advanced. Big Four was exceptionally weak and lost 2 per cent on rumors of a strike on that system. The total sales in New York were 92,471 listed and 21,192 unlisted shares. Money was easy on call in New York at 2 and 3 per cent, and it is reported that the city banks are still receiving large shipments from country institutions. Clearing-house certificates to the amount of $350,000 were retired in New York, leaving about $41,000,000 outstanding. Sterling exchange is stiffer. Mr. James R. Keene, who has been the street leader in New York for many years, expects to take a short vacation next week.

The action of the stock market proves conclusively that silver repeal is a matter of small influence, except when it is manipulated. In the present uncertain state of the repeal bill we would have a great bear market if the whole business were dependent on repeal. Instead of this the bull traders have been able for two weeks to hold prices almost steady in the face of bad news from Washington. The situation there is more uncertain than is thought in financial quarters, and it has been further complicated by the arbitrary action of Speaker CRISP in the matter of the elections bill. The orders of the Administration which were so patent in the House are so far disregarded in the Senate, and Mr. VOORHEES has but little authority in the Senate. The silver Senators are not the only people who are consuming and apostrophizing time. A great question in that body is: "How can it be arranged so that the Southern free-coinage Senators who are too great to accept orders from the Administration can vote for repeal without appearing to be inconsistent?" The solution of this question is one of the problems on which time is being used at Washington.

I skip part of it and read the following, to which I desire to call the attention of the Senate:

There are ominous rumors in the street that New York will again put the screws on the Senate. Whether this is street talk or not remains to be seen, but the hardening of the rate of sterling exchange at a time of large merchandise exports and in the middle of our exporting season, looks as if gold exports would be made to influence the silver lunatics. There is no question but that the banks of New York are still withholding money from merchants while possessing millions of idle cash because of a tacit arrangement not to unloose it until the Senate votes for repeal. Now, if gold exporting movement began, that would be another striking occurrence on which to impinge public thought and on which popular argument could be based. There is one point lacking in any programme of this kind. The public have learned that the influence of the silver bill on business has been overestimated. The predictions of those who have urged that everything depended on repeal have not been verified. Indeed, much that was said has been disproved by

recent occurrences, and the feeling that the influence of the law was wildly exaggerated for political effect has spread at Washington and elsewhere. Exports of gold at this time might emphasize this feeling and, rightly or wrongly, it would be said that the gold went out at the behest of Wall street. Not an hour would be gained in the Senate for the repeal cause by any such movement.

I believe that a very large number of intelligent people in the city of New York who favor the repeal of the Sherman law are agreed that its effect upon the business of the country has been practically nothing. I have the circular of Henry Clews & Co. of the date of September 9. It came to me after my remarks of the 11th, or if I had it at the time I did not use it. The circular says:

"The winter of our discontent has been made glorious summer" by the death knell of the panic, and now it is over, it can be reviewed, and of all the panics that this country has ever had, it has been the silliest, as there was less cause for it than any previous one. It is not unlike the "Bull-Run" panic during the war period. From the day that memorable event occurred up to this date, I have never yet been able to find anybody who could give a reason for its occurrence, whether on the battlefield or off at the time. The same can be said of the recent financial panic. I venture to say that no one can now give a good and justifiable reason for it having occurred; for that reason it has been a "Bull-Run" panic. The whole country, in consequence, has had to go through a general liquidation of credits. In fact, it started as a gold panic; then came a silver panic, which was followed by a credit panic, and the climax was reached by a money panic.

I have here a large number of such articles that I might read, but I do not care to do so.

Now, I come to the question. I think it must be substantially admitted by everybody that this panic was not brought about by the Sherman law. I know to-day when the Senator from Nebraska [Mr. ALLEN] was holding a little colloquy with the Senator from Delaware [Mr. GRAY] and the Senator from New York [Mr. HILL], both the Senator from Delaware and the Senator from New York asserted that if the law was repealed the panic would be over, but neither of those distinguished Senators has spent a moment in the Senate in endeavoring to show in what way the Sherman law brought on the panic.

They assert with a great deal of vehemence that it did bring it on, or that it had something to do with bringing it on, but the *modus operandi*, as to the way the issue of $3,000,000 and more a month of money that is just as good as the gold in the Treasury, because it commands the gold could have any tendency to alarm and disturb the public they have never seen fit to enlighten the Senate, and I venture the assertion that they will never try. I know they may say in a general way the public thought we were going to come to a silver basis. How could the public be alarmed and believe that we were coming to a silver basis when the paper that was being issued was, by the policy of the Government, payable in gold, and while the bullion that was being bought was not being put into money, but picked away in the Treasury?

Now, it would be interesting if either the Senator from Delaware or the Senator from New York would enlighten us as to the method by which the law of 1890 frightens and disturbs the capitalists not only in this country, but all over the world. I should be greatly obliged if some Senator would now, in the time that I will be glad to yield him, give one reason why that happened. It is not enough to say that people are frightened. I repeat, there has been no evidence before the Senate that the Sherman law has been a potent agency in bringing about this disturbance at all.

Mr. STEWART. May I interrupt the Senator from Colorado?

Mr. TELLER. Certainly.

Mr. STEWART. Is it not possible that the threat which has been hanging over the country that the law would be repealed has alarmed persons for fear we would go to a gold basis and make money much more valuable, and for that reason keep it out of property? I have heard many business men talk in that way, and I think there is a general sentiment in the country that they will keep their money because it will become more valuable when we go to a gold basis.

Mr. TELLER. Very likely.

Mr. STEWART. I think that is the case.

Mr. TELLER. Very likely in that way it may have had some influence upon business. It is not the act itself which has had the effect, but it is the threat against the act, the attempt to get rid of the act. I stated the other day, and I repeat it now, that from the hour when the President called the extra session business grew worse. An attempt was made in New York the day that they got the news to bolster up stocks and the next day the stocks were lower than they had been before. When the repeal bill passed the other House an attempt was made then to sustain stocks. They went up the day they got the news, and went down the next day; and they have been going down ever since until with a few days.

When this question was up some weeks ago, and the Senator from Georgia [Mr. GORDON] was making some remarks, the Senator from Louisiana [Mr. WHITE] made haste to tell him that the passage of the repeal bill in the other House had put cotton 14 points above what it had been the day before. The Senator from Louisiana has never risen in the Senate to tell us that on the next day it went 19 points below, which is a fact, as he can find by reference to the Financial Chronicle on my desk.

Mr. WHITE of Louisiana. I simply called the attention of the Senator from Georgia to the rise in the price of cotton as reported by the daily telegraphic dispatches at the time the statement was made. As to the fluctuations of cotton since and the causes of those fluctuations, I think I shall be abundantly able to answer the Senator when I take the floor to speak on this question, as I propose to do before the debate is closed. I think I shall be able to show beyond the peradventure of a doubt that the delay which has taken place in the Senate in giving the country the relief which I think it is entitled to receive and for which it is clamoring has cost the cotton-planters of the South millions of dollars up to this time and will cost them millions more if the delay is prolonged much further.

Mr. TELLER. I hope while the Senator is upon the floor on that occasion he will tell the Senate further how much the demonetization of silver in 1873 has cost the cotton-planters.

Mr. WHITE of Louisiana. I can answer the Senator that we are considering now the repeal of the Sherman act, and my opinion is that the decline in the price of cotton since the passage of the Bland-Allison act and the Sherman act has been a great deal larger than it was before that date. With the Bland-Allison act and the Sherman act upon the statute book, look at your figures and see when the decline has taken place. If we are to attribute the decline to the fiscal legislation, why will you go back to 1873, and attribute the decline to 1873 and not attribute the decline to the condition of the fiscal legislation at the time the greatest decline took place?

Mr. TELLER. I hope while the Senator is on the floor—not now, but when he takes the floor in his own right—he will also tell the Senate what will be the price of cotton when he has succeeded in demonetizing silver completely in this country. Let him prophesy a little as to what will happen in the future.

Mr. WHITE of Louisiana. I have not been engaged in prophecy. I have been engaged in a retrospect, looking at the actual facts. I consider that the Senator is engaged in prophecy. I am engaged in casting my vote here. I endeavor to deal with facts, not with prophecy.

Mr. STEWART. Why could you not look as far back as 1873?

Mr. TELLER. If the Senator will cast his eye back to 1873 he will find that cotton was worth 16 cents in gold; that in 1874 it was worth less, and it kept gradually dropping until it came to a point where nearly all the cotton-raisers in the South declared if it went much below they would have to cease to raise cotton. It may be that the Senator is correct that the Bland-Allison act, which was not a silver measure, and that the Sherman act, which is not a silver measure, have not sustained cotton as free coinage would have sustained it; but it can not be said that those acts destroyed the price of cotton or changed it for the worse a particle. Before I get through I shall call attention to the conditions which have brought a low price to the cotton-planter and to the wheat-grower of this country; and there can be no mistake about it. The Senator from Louisiana will be ingenious indeed if he can find any reason why cotton has fallen more than one-half in price since 1873.

Mr. STEWART. It has all the time borne the same price as silver.

Mr. MCPHERSON. And yet production has increased year after year.

Mr. TELLER. I know production has increased, and so has consumption increased with production. If the Senator from Louisiana will take the market reports from 1873 down to this time he will find that as gold appreciated, as compared with the commodities, just so cotton went down; or, in other words, that cotton has fallen because it has been measured in gold. An ounce of bar silver to-day will buy twice as much cotton as an ounce of bar silver would buy in 1873, when silver was selling in this country for $1.32 an ounce and cotton at 16 cents per pound in gold.

I do not mean to say that the entire fall in cotton is to be attributed to the financial policy of the United States, but I do say that a great portion, more than 50 per cent of its fall can be attributed entirely to our financial policy and to nothing else. What I have said of cotton may be said of wheat. But of that I shall speak at another time. I did not intend to speak of the operation of the act of 1873 upon prices at this point in my remarks. Later on I shall come to that.

Mr. MCPHERSON. Would it interfere with the Senator if I should ask him a question?

Mr. TELLER. No, if the Senator does not make a speech.

Mr. MCPHERSON. I am hardly able to make a speech.

Mr. TELLER. I am sorry.

Mr. MCPHERSON. I have been prohibited from making such an effort for the past three weeks.

Mr. TELLER. I sympathize with the Senator. I have been in the same condition myself.

Mr. McPHERSON. I now ask the Senator, what was it that has produced the great depression in values, the prostration in business and in industries, if it has not been the Sherman law? The Senator states that it was not the export of gold. He states it was not for want of prosperity among the business industries of the country.

Mr. TELLER. I answered that question the other day, but I have no objection to answering it again for the benefit of the Senator from New Jersey.

In the first place, I should like to ask the Senator to qualify his question a little. How long does he mean the great depression has existed?

Mr. McPHERSON. The Senator, in the remarks he made a few days ago, read some newspaper statements, some editorials, and he also asserted, upon his own authority, that there had been greater prosperity in this country up to December, 1892——

Mr. TELLER. I beg pardon; I brought it up to May, 1893.

Mr. McPHERSON. Very well, up to May, so much the better for my contention; there had been a longer and a greater era of prosperity than had been known in this country for a great number of years. Immediately and almost without notice, in spite of the great prosperity of which the Senator speaks, the country was suddenly convulsed. What was it that produced the great convulsion? The Senator tells us that it was not the export of gold, for we could have paid away more gold if we had owed it than we did pay.

It was not for the want of prosperity among the business enterprises up to that time. But suddenly, as a thief in the night, confidence was lost, banks closed one after another, business enterprises went into the hands of receivers, and it was found in most of the cases, when you came to investigate business affairs, that the assets were in excess of the liabilities, showing that it was no recklessness on the part of banks, no profligacy on the part of the people. But still the panic appeared. Now, the Senator says that the Sherman law has nothing to do with it. Then, in God's name, what has had something to do with it?

Mr. TELLER. The Senator as usual makes a speech. I do not object to that, but that he must adopt it as his own, for I can not accept it as mine. I will answer the question when I come to it in a moment. The Senator says I said we had prosperity for a greater length of time than we ever had it, or words to that effect. I made no such statement. I said that in 1889, when Congress met here in December, there was a very disturbed financial condition in the country, and that it grew worse all winter.

I believe everybody will admit that to be true and that when we reached the spring of the year it was exceedingly threatening, so much so that the Secretary of the Treasury, under the authority that he might exercise, and of which I have never found any fault, took the surplus money of the Treasury and put it in New York for the purchase of bonds in order to give the New York market currency—a very proper measure, beneficial to the Government of the United States, and to the mercantile and general interests of that great city. That action averted for the time the trouble that was threatened. Then we passed the Sherman act, and by means of the Sherman act at one single movement, the moment it became a law, we took $62,000,000 out of the Treasury and put it into the arteries of trade. It went over to New York immediately to purchase bonds—$62,000,000 that without that law could not have been touched.

We followed that then by the purchase of silver bullion and the issue of Treasury notes, which the people gladly took in New York as quickly as they would gold; and by that movement we prevented a panic that was inevitable in 1890. Soon after the passage of the act, which became effective on the 14th of August, or in the following month, there arose in Great Britain a great financial disturbance. The great house of Baring Brothers failed, the greatest private banking concern in the world, I think, unless the Rothschilds. Certainly it was the greatest private banking house in Great Britain, and it had been for two generations in the estimation of the public as sound as the Bank of England. I do not believe that there was a man in this country or in England who doubted the solvency of the Baring Brothers until the crisis came.

That came in September, 1890. Then a gentleman who had been governor of the Bank of England learned that this house was in distress, and knowing what its failure meant to British interests and, more than that, what it meant to the whole world—because if the Baring Brothers had failed it is the opinion of the best financiers in Europe the Bank of England would have been compelled to suspend specie payments, and if it had done that there would have been a toppling all over the world, and there would have been a panic in this country such as compared with what this panic has been a mere *émeute*—induced the Bank of England to come to the relief of the failing house, and thus averted a panic throughout the world. I have said that the act of 1890 then carried us through that crisis.

The next spring we sent over to Great Britain and to France and to Germany, where this disturbed condition existed, $73,000,000 of gold in four months. In the month of May, 1891, we sent out every day, including Sundays, a million dollars of gold. This exportation did not bring any panic. The Sherman law was in full force and effect, and the people knew that it was in full force and effect. I said the seventy-odd million dollars of gold that we sent to Europe brought prosperity in a limited degree to Europe, and it did not in the slightest disturb affairs in this country, because the men who have been making the raid upon the Sherman law had not then determined that it was necessary that they should secure the repeal of that act.

It had not occurred to them that they could make the export of gold in 1891 an excuse for an attack upon the Sherman law, and they did not attempt to do it. The newspapers did do some talking about it, but there was no general alarm. The consequence was that in proper time, in a few months, a little more than one-half of it came back to this country. From July down to November, if I am not mistaken in the dates, $38,000,000 and more returned.

Mr. McPHERSON. Now, may I ask——

Mr. TELLER. Wait a minute. I said then that the act brought prosperity from that time up to May, 1893. Then there was a change in the condition of affairs. Gold had been going abroad all winter. As I told the Senate, on the former occasion, it went abroad simply because we were buying more than we were selling. We were simply paying our debts, and the Senator from New Jersey knows as well as I do that as the imports increased the exports of gold increased also. As the imports of merchandise exceeded our exports of merchandise so in proportion the gold went.

I told the Senate then that the people in New York who had determined that the act should be repealed got together and announced that they intended to withhold from the borrowing classes of the great West the money that they had been in the habit of borrowing. The Senator does not deny that that conference was held at Mr. Williams's house, and there was present at that conference the Secretary of the Treasury, who, no matter what he did say, there is no proof here or anywhere that he dissented from the policy announced, that they intended to pinch the West and compel the Western Senators, because of the disturbance in the finances of the Western country, to consent to the repeal of the act. I have said that is what brought the panic about in part. I did not claim that it was the only cause. I did not attempt to give all the reasons. I will give them before I get through. I will give what I think are the real reasons why this disaster has occurred. Now I will hear the Senator from New Jersey if he wishes to question me.

Mr. McPHERSON. Will the Senator from Colorado yield to me?

Mr. TELLER. Certainly.

Mr. McPHERSON. I would not ask the Senator to yield to me in the middle of his speech were it not for the fact that he broadly challenged any Senator upon this floor to give some reason why the Sherman law was adjudged guilty and could be proved guilty of the evil of which we complain.

Mr. TELLER. The Senator is perfectly right.

Mr. McPHERSON. The Senator now undertakes to say, if I correctly understand him, that it is because of an export of gold, that we were indebted to foreign nations in our trade relations with them of imports and exports.

Mr. TELLER. How is that?

Mr. McPHERSON. The Senator lays it to our trade relations of exports and imports.

Mr. TELLER. What? The financial difficulty?

Mr. McPHERSON. I so understand; the exports of gold.

Mr. TELLER. Oh, not at all. I said that was the reason why gold went abroad, not that it was the cause of the panic.

Mr. McPHERSON. I assure the Senator it could not have been the reason, because we did not owe any country in Europe a great amount of money above our exports; but it was because there was a difference against us in the balance of indebtedness. The balance of indebtedness was made up by a return of our securities, which were poured in upon us here in a perfect flood, and for the past two years we have been purchasing our securities from English and European holders at high prices.

Now, the gold is returning to us: and why? It comes in payment of 60-cent wheat. It comes back again in payment of securities which they sold to us eight or ten months ago at par, and they are buying them back to-day at 50 cents upon the dollar.

That is the reason, Mr. President, why gold left us and why gold is returning to us. Want of confidence among the people that the financial policy of the Government could not be main-

tained was the cause of the panic. When the Sherman law was passed, it was declared that it was not a law that was satisfactory to either the silver advocate or the opponent of silver. It found not one single advocate or vote upon this side of the Chamber. It was not a bill which was acceptable to anybody.

Now, why? It did not grant to silver all that the silver men wanted the bill to do. It granted to silver a larger place in our circulation than was thought safe by the banking interests, the financial interests, the capital of the country, and by all prudent business men in the country. It was a departure from all known rules of finance in this country. It was said by the people of this country and by foreigners as well that it was abhorrent to every principle of sound finance.

And why? It abandoned the policy as we had it under the Bland-Allison act, which provided for the coinage of $2,000,000 a month, and it injected instead four and a half million ounces a month of additional silver into our circulation. What else did it provide for? It provided for the redemption of the Treasury notes issued upon the deposit of that silver bullion in gold. It was declared to be the policy of the Government that all coins, "the two metals," I believe were the words of the law, should be maintained on a parity.

Sir, there was no actual discretion left in the hands of the Secretary of the Treasury to redeem those Treasury notes in silver.

Mr. TELLER. Why not?

Mr. McPHERSON. Not the least bit. He was commanded by the terms of the law to maintain the parity, and how could he maintain the parity between a stronger metal and a weaker metal by redeeming the notes in the weaker metal itself?

Not a particle of discretion, free from other demands in the law, is left in the hands of the Secretary of the Treasury as to the redemption of these notes, because if he did not redeem them in gold, then the notes would be made payable in silver coin, which would be worse even than the notes themselves. The notes have behind them a security in silver, placed there upon terms of gold. Every one of those notes has behind it, in the Treasury of the United States, a gold dollar's worth of silver. The law provided that the Secretary of the Treasury should coin the silver for the purpose of redeeming the notes, which he might do either in gold or silver coin. Following that is a declaration of policy. The Secretary was not commanded to pay the notes in gold, but he was commanded to maintain the parity, and there was nothing either in the Treasury or within the power of the Treasury to obtain which would make the parity secure except gold coin.

As I have said, the people became alarmed, they became suspicious that it would not be possible for the Government to redeem its promises and to maintain its policy of continuing gold payments, and the fear was that we were going to the silver basis. There was but $100,000,000 of gold in the Treasury to redeem $1,100,000,000 of silver and paper circulation: and that $100,000,000 was pledged to a special purpose. That special purpose was the redemption of the greenbacks. But, aside from the greenbacks stood six or seven hundred millions of silver and paper together, behind which there was no free gold in the Treasury with which to redeem it. Therefore the people became alarmed and feared that we were going from the gold plane to the silver plane with our money, and finally the money began to be drawn out of the banks, and the people became alarmed also, fearing that even the financial institutions of our country were not to be trusted.

There was $200,000,000 of circulation taken out of the national banks alone within two or three months by frightened depositors, to say nothing of the vast amount which was taken out of the State banks, the savings banks, the private banks, and trust companies. Nobody can estimate correctly the amount of money withdrawn from circulation, which had been taken out of all these institutions by frightened depositors. The banks were unable to meet their obligations, for, as is always the case, when one man becomes frightened with respect to his money all his neighbors become frightened at the same time, and they made their drafts upon the Treasury. The Treasury was unable to meet them. The Treasury had no gold except the $100,000,000 reserve, and for every dollar that the Treasury was depleted of the amount of security behind the greenbacks for their redemption just so much was the confidence of the people lessened in the greenbacks.

Mr. TELLER. Does the Senator mean to say that any drafts were made upon the Treasury which were not responded to?

Mr. McPHERSON. I say that drafts were coming upon a depleted Treasury.

Mr. TELLER. Ah!

Mr. McPHERSON. Day after day the demand was made for the redemption of Treasury notes issued in exchange for silver bullion, and that demand was met in gold. The Secretary thought he had no right to pay these obligations in anything but gold. What was the result? The $100,000,000 reserve of gold was brought down to about $90,000,000, and there was no one who could say how much further it would be depleted if this process should be continued.

Mr. TELLER. Mr. President, it would be a little difficult to answer that "question," but I shall have to challenge the assumption of the Senator that the Secretary of the Treasury was obliged to pay gold on the Treasury notes. There is no declaration of that kind in the law.

The Treasury note is payable in coin. Of course I need not say to the Senator from New Jersey, who is familiar with these things, that that means either silver or gold. "Coin" does not mean gold, it means either silver or gold.

Mr. McPHERSON. The law requires that the parity shall be maintained.

Mr. TELLER. No; the law does not say that the Secretary of the Treasury shall maintain the parity. It says it is the established policy of the United States to maintain the parity. That might mean one thing, and it might mean another. It might mean that the Government of the United States intended by some subsequent legislation to provide that these notes should be paid in gold only; it might mean that the Government of the United States intended at some time to provide that silver and gold should be alike paid out on a debt, as was done at one time in France, for the purpose of maintaining the parity; it might mean that the Government should simply limit the amount of silver which was to be in use; or it might mean that the Government should limit the amount of paper money which was to be put in use, for that would maintain the parity, as everybody knows. So there was no obligation on the part of the Secretary of the Treasury to pay gold. The Government was to coin silver to redeem these notes. If they were not to be paid in silver at all, why coin silver?

Mr. McPHERSON. If the Senator will allow me——

Mr. TELLER. I hope the Senator will wait until I get through. I will give him a chance in a few moments on that point. If the silver placed in the Treasury was there as security for the Treasury notes, pray tell us how it could be any security whatever, if it was there not for coining purposes, but to be left there simply as a commodity?

There was nothing in the act which required the Treasury to pay gold at all; and if Secretary Foster had said when the first Treasury note was presented, "I will pay it in silver," what would have been the result? Those notes would have stood exactly like the silver certificates, and they would have been in public estimation the same as if we had put in the act "payable in silver." Secretary Foster did not choose to do that. His successor came in. I will admit that he had a different task. I submit that Mr. Carlisle, when he became Secretary of the Treasury, was placed in a very different position from what Secretary Foster occupied. Secretary Foster was absolutely at liberty to pay either silver or gold. It is somewhat doubtful whether Secretary Carlisle was at liberty to do that without creating some disturbance and some distrust. He did not do it, however. He paid gold, and everybody who went to the Treasury for gold got it. The Senator can not show that anybody who ever went there and put his Treasury note down did not get gold for it.

One of the first things announced by the new Secretary of the Treasury, or rather by the President for him, I believe, when there was some question as to what he was going to do, was that the intention was to pay gold. When it was said the Secretary had some doubt whether we ought to pay silver or gold on these certificates, the President of the United States had himself interviewed, and he is reported to have said, "I propose to have gold paid." Did the people distrust the President? Did they distrust our ability because we had only ninety-eight or ninety-nine million dollars of gold then in the Treasury? Does the Senator think that the people distrust a country which receives a million dollars every day in its revenues?

The Senator goes back and reasons in a circle, just as he did before. He says it is the Sherman law that is responsible. I ask why? He says the people became distrustful. That is the same statement which has been made before. What I complain of is that nobody shows why the Government was distrusted. It is not enough to say that the people were afraid that they could not get gold. That is the opinion of the Senator; but nobody in this country ever offered a Treasury note who did not get gold for it; and there have been only $40,000,000 of these Treasury notes taken out during this excitement. I think $40,000,000 went to Europe; and so in the course of a year we sent to Europe $87,000,000 of gold, of which we have got considerably more than half back in two months, with the same law in existence.

The Senator from Oregon [Mr. MITCHELL], who sits beside me, says that we have recovered all but eighteen millions of the amount which went abroad; and the same law is still on the statute books. Can it be said that gold went out because of the Sherman law

when it began to come back with the Sherman law still in existence a month before we even assembled here?

I say again, as I said the other day, that there was no statement in the public journals that the Government was not able to meet its obligations in gold. I challenge the Senator from New Jersey to show any public utterances in Europe in respectable economic and financial papers that there was danger that we could not meet our obligations in gold.

Mr. PALMER. I should like to ask the Senator a question, because I know his knowledge is very much superior to mine on this question.

Mr. TELLER. I will hear the Senator.

Mr. PALMER. I ask whether the Senator does not think that the return of gold was largely influenced by the declaration of the President that payments would be continued in gold?

Mr. TELLER. Oh, Mr. President, the declaration of the President may be very potent around here, but it is not potent enough to bring one ounce of gold from Great Britain, nor from France, nor Germany. Gold does not come at the bidding of politicians. Gold comes at the bidding of commerce.

Mr. PALMER. But I beg to say that I had supposed that gold might be moved or influenced by the declarations of the financial policy of the Government, and that the declarations of the President and the Secretary of the Treasury amounted to the fixing of the policy of the Government until it should be changed by legislation.

Mr. TELLER. The policy of the Government was announced in March, when Mr. Carlisle was hesitating whether he would redeem in silver or in gold the one hundred and forty-odd millions of Treasury notes, if presented; and the President of the United States announced the policy then that every Treasury note, greenback, and Government bond should be paid in gold; and, as suggested here, the panic began then, or nearly then; certainly soon after. If the Senator from Illinois can show that the Sherman law drove gold out, and that then it came back simply seeking its former habitat, like some wild animal which had traveled abroad when frightened and had come back when the fright was over, then the Senator might possibly show that the Sherman law had brought gold back.

I assert that a careful examination of the exports of this country will do much more to convince the Senator that gold came back because the exports were going out in large quantities, as stated by the Senator from New Jersey, on account of Europe buying our 60-cent wheat, our meat, our cotton, our corn. That is what brought gold back. It was no edict of the President or of anybody else.

Mr. PALMER. The point which I wanted to suggest does not involve the question of what drove gold out. I was not discussing the question of what drove gold out.

Mr. TELLER. I will tell the Senator.

Mr. PALMER. I am simply suggesting that it may be possible that it was largely effected, though not altogether, by a declaration of a policy on the part of the President and the Secretary of the Treasury, which would remain the fixed policy until legislation would alter it.

Mr. CHANDLER. Will the Senator from Colorado allow me to ask the Senator from Illinois a question?

Mr. TELLER. Yes.

Mr. CHANDLER. Do I understand the Senator from Illinois to say that there were such declarations made on the part of the President and the Secretary of the Treasury?

Mr. PALMER. I have just given the information which everybody else has on this subject. I understood there was such a declaration.

Mr. CHANDLER. Then, I will ask the Senator whether he remembers what caused these declarations? What created the alarm? Was it the fact that gold was going out, or was it the previous declaration of the Secretary of the Treasury which threw doubt upon the question whether or not he would redeem the Treasury notes issued under the act of 1890 in gold or in silver? What was the occasion of the declaration which the Senator from Illinois cites here as showing that the Administration did something to keep gold from going abroad?

Mr. PALMER. I have an indistinct impression that there was some expression used by the Secretary of the Treasury, which was supposed to put in doubt the question as to what the policy of the Government would be.

Mr. CHANDLER. Is it not perfectly well understood that that was the fact?

Mr. PALMER. The Senator may so understand it, but I understand the policy of the Government became settled by means the Senator understands as well as I, that the obligations of the Government should be paid in gold.

Mr. MCPHERSON. Did that statement ever appear over the signature of the Secretary of the Treasury?

Mr. CHANDLER. I do not understand that anything appeared over the signature of the Secretary of the Treasury. Certainly nothing appeared over the signature of the President of the United States, but the Senator from Illinois [Mr. PALMER], it seemed to me, was claiming credit for the Administration for having done something which checked the outflow of gold, and it seemed to me he omitted to state a fact which should go along with it, which he now candidly and frankly states, as becomes the Senator, that it was the declaration by the Secretary of the Treasury of a doubt as to whether the Treasury notes under the act of 1890 should be paid in gold or silver which caused the panic; which, as the Senator now says, it was meritorious on the part of the President and the Secretary of the Treasury to check by their utterances. If I am wrong in my theory of what took place I should be very glad to be set right either by the Senator from Illinois or the Senator from Colorado.

Mr. PALMER. If the Senator will allow me a moment, I will say that I asked the question of the Senator from Colorado for the single purpose of getting information. I answer the Senator from New Hampshire by saying that I had no idea of claiming credit for anybody or throwing discredit upon anybody. I was simply seeking light upon this interesting question.

Mr. CHANDLER. The Senator will excuse me. There seemed to me to be a feeling on his part that he was bringing in a very meritorious fact here, that the President and the Secretary of the Treasury had done these things; and it seemed to me very proper, if the facts were so—I do not know whether it was so or not—that there should go along with the Senator's statement the fact that the panic had been caused in a large degree by this expression of doubt on the part of the Secretary of the Treasury as to whether he would keep the Treasury notes of 1890 upon a parity with gold.

Mr. STEWART. Will the Senator from Colorado allow me to ask the Senator from Illinois a question?

Mr. TELLER. Certainly.

Mr. STEWART. The Senator from Illinois stated that there was a declaration by the President of an intention to pay out gold.

Mr. PALMER. Substantially.

Mr. STEWART. That is the declaration the Senator referred to, which was made in March last, to redeem these notes in gold as a reason why gold was retained. Does that have anything to do with it?

Mr. PALMER. I merely asked the Senator from Colorado——

Mr. STEWART. I ask the Senator from Illinois if, in his opinion, that policy, declared by the President in March last, had a tendency to retain gold in the Treasury?

Mr. PALMER. Yes, that is my opinion.

Mr. STEWART. Now, I would remind the Senator of the fact that France and Germany pursued exactly a different policy. They paid out silver and held their gold. We let our gold go, and it did go. I had always supposed our gold went because the Secretary of the Treasury wanted it to go.

Mr. PALMER. I may be allowed to say that I suppose the statesmen of Germany and France acted wisely with reference to their own condition, and that the President and Secretary of the Treasury acted wisely with reference to our condition, and I had supposed when it became certain as to what the policy of this Government was to be, that that tended to supplement the restoration of confidence and to influence the movement of gold.

Mr. STEWART. This was a mere question as to the movement of gold, but the fact is that our Government exercised its option and paid out gold.

Mr. PALMER. I think so.

Mr. STEWART. The other governments exercised the option differently, and retained their gold, and our gold went and theirs did not.

Mr. PALMER. I have no doubt that those governments pursued the policy which they deemed wisest.

Mr. STEWART. They kept their gold and we paid ours out. That is the difference.

Mr. TELLER. I thought the Senator from New Jersey rose awhile ago to ask me a question, but I could not yield to him until the Senator from Illinois had finished. I now yield to him.

Mr. MCPHERSON. I do not wish to occupy time at all; but only to make a response to the suggestion made by the Senator from New Hampshire [Mr. CHANDLER]. I wish only to say that if the fact that the public were notified in some way, whether by idle rumor, common report, or whether it was by something which the Secretary of the Treasury was alleged to have said—for certainly it did not appear over his signature—that that of itself was sufficient to produce a panic in connection with other things which were then working to produce such result.

I do not say that the so-called interview with the Secretary had much to do with the financial trouble. I do not think it had, because the President, a few days after the time referred to, de-

clared it to be the unalterable policy of this Government to maintain the parity, to maintain gold payments, and to continue the financial policy of this Government.

How could the financial policy of this Government be maintained if the Secretary of the Treasury should pay in silver coin the Treasury notes, amounting to $150,000,000, when the law declared that it was the policy of this Government to maintain the two metals on a parity? There is no way that the parity could be maintained between the two metals, confessedly unequal, except by paying the certificates representing one in the better coin? Therefore the Secretary of the Treasury, obeying the law and the injunction here found, has redeemed these notes in gold.

I will admit all the Senator from Colorado says, that the Secretary had paid in gold all the notes which had been presented; but there was at one time a very serious period in the history of the Treasury of the United States with respect to this question. It was thought that the Treasury could go no further in the direction of the redemption of these notes. The banks, having $200,000,000 of gold in their reserves, were not treating the paper issues of the Government as the Government was obliged to treat them. The people outside of the Treasury and outside of the banks, who held $300,000,000 of gold coin, were not exchanging their gold for Treasury notes. Nobody was obliged to do that except the Treasury of the United States, and the Treasury had only $100,000,000 of gold out of $600,000,000 of the stock of gold said to be in the country. How could the Treasury maintain these gold payments or maintain the financial policy of this Government unless it could obtain gold with which to do it?

Mr. CHANDLER. Will the Senator from Colorado allow me a suggestion?

Mr. TELLER. Certainly.

Mr. CHANDLER. The period of time about which the Senator from Illinois wishes light (and as to which I am an humble follower of his also seeking light) when these declarations were made or supposed to be made first by the Secretary of the Treasury, which led to doubt as to how the Treasury notes of 1890 were to be redeemed, and the declarations of the President at a later period, was in April, and the panic, if I remember right, which led to the large exports of gold, was afterwards. So the declarations to which the Senator from Illinois refers as having prevented the outflow of gold were made before the outflow took place. If I am wrong, Senators will correct me.

But I have understood—and I ask the Senator from New Jersey whether it is not a fact—that at one time the Secretary of the Treasury wrote to the Assistant Treasurer at New York, directing him to stop redeeming the Treasury notes of 1890 in gold, and that the fact that such a letter had been written became known in banking circles in New York City. I am so informed, and if the fact is not so, I should be very glad to know it; if it is so, I think the fact ought to be known, and perhaps the Senator from New Jersey or some other Senator can tell me whether it is true or not.

Mr. McPHERSON. I think the Secretary of the Treasury, in an interview with some newspaper correspondent, was alleged to have said, in effect, that it might be necessary to pay the Treasury notes in silver coin; in other words, if the Treasury could not obtain the gold, and having it not, if it could not be obtained from the banks, which held about $200,000,000, if it could not be taken out of the hoards of the people in this country who had hoarded every remaining dollar of gold against the day of disaster, then how could the Treasury get it, except by the issue of bonds and the purchase of gold?

Let us see what that would have accomplished. There has been here a very grave doubt expressed as to the power of the Secretary of the Treasury. I wish to say for myself that if the responsibility were placed upon me as Secretary of the Treasury under existing law to issue bonds with which to purchase gold to continue the purchase of silver, I should say that the authority to do it was not found in the law; but, as it will be remembered by every Senator, bills were introduced in the last Congress giving the Secretary of the Treasury the power to issue 3 per cent bonds for the purpose of replenishing the gold in the Treasury to meet this ever-increasing obligation, which was daily coming upon us by reason of the purchase of silver, and the bills failed of passage.

I repeat that I think there was at one time an interview alleged to have occurred—whether truthfully or otherwise I do not know—in which the Secretary of the Treasury expressed in effect a fear that it might become necessary to resort to a silver redemption of the notes. This would amount to putting us at once upon a silver basis, and when we had reached the silver basis it would be a step which we could never retrace. The evidence of it is found in this panic itself, for almost every dollar of gold, save that controlled by the Treasury, had gone out of circulation, and even the paper issues of the Government, which had the promise of redemption in gold, like the greenbacks, were also hoarded.

The other issues of the Government, like the Treasury notes, which had a chance of redemption in gold, had also gone into their hiding places. Therefore, if we had reached the point where the Treasury would have been obliged to proceed with this condition of things staring it in the face; in short, if there had been no extra session of Congress and no pronounced judgment of the House of Representatives, and if there had not been a reasonable and just expectation on the part of the people of this country that the Senate itself was to follow the lead of the House of Representatives and repeal the Sherman law, we would to-day be in a condition little short of being upon a silver basis.

Mr. TELLER. Mr. President——

Mr. CHANDLER. Will the Senator allow me a remark? I do not wish to interrupt him.

Mr. HARRIS. Will the Senator from New Hampshire and the Senator from Colorado yield to me, in order that I may move that the Senate proceed to the consideration of executive business?

Mr. TELLER. Certainly.

Mr. CHANDLER. If the Senator from Tennessee will wait a moment I will simply state an idea that is in my mind, and then I shall yield with pleasure.

Mr. HARRIS. Very well.

Mr. CHANDLER. The Senator from New Jersey, like the Senator from Illinois, has admitted that the Secretary of the Treasury did make certain expressions which threw a doubt about the intent of the Government to redeem the Treasury notes of 1890 in gold, and the Senator from New Jersey——

Mr. McPHERSON. The Senator will not do me the injustice to say that I attributed to the Secretary of the Treasury any such statement. I said it was an alleged statement appearing somewhere in an interview.

Mr. CHANDLER. The Senator is right that the newspapers stated it, but the statement was uncontradicted so far as I can recall the fact, that the Treasury might find it necessary not to redeem those notes in gold; and, as I have said, I am informed that the Secretary wrote a letter in April to the assistant treasurer in New York to stop redeeming those notes in gold, which was afterward recalled.

Mr. President, if that was true of the Secretary of the Treasury, it was also true, as the Senator from New Jersey now states, that the effect of that refusal to pay out gold by the Secretary of the Treasury would have put the country upon a silver basis. Did not the Secretary of the Treasury know that fact; and was not the action of the Secretary of the Treasury, if he made the declarations which the newspaper said he did, the starting point of the distrust in commercial and financial circles which began the panic of June? I think it was.

The Senator from New Jersey has recalled another fact which deserves to have a brief notice from me, and then I shall yield to the Senator from Tennessee. That is the fact that there was a proposition pending here during the winter to reinforce the authority of the Secretary of the Treasury to sell bonds for the purpose of maintaining the reserve. That bill was pending, and it was advocated by the Senator from Ohio [Mr. SHERMAN], then the chairman of the Finance Committee; it was adhered to by the Republicans of the Senate and passed the Senate; and had been adopted at the request of Mr. Carlisle, who expected to be Secretary of the Treasury, with the assumed approval of the President-elect. Now, this contest to secure that reinforced authority to issue bonds was abandoned in the committee of conference at the express request of Senator Carlisle. Does not the Senator from New Jersey know that fact?

Mr. McPHERSON. The Senator from New Jersey does not know that fact, and I doubt very much if the Senator from New Hampshire knows that fact sufficiently well to state it in that form.

Mr. CHANDLER. I was informed that the attempt to secure the bond clause was abandoned as the direct result of telegrams sent to this city by Senator Carlisle from New York.

[At this point the Senate proceeded to the consideration of executive business.]

Friday, October 6, 1893.

Mr. TELLER. Mr. President, last week I addressed the Senate in the latter part of the day and was taken off the floor by an adjournment. Since then other Senators have desired to occupy the floor, and I have had no opportunity to conclude my remarks. The last half hour of the time I occupied the floor I only occupied it by the courtesy of the Senator from New Jersey [Mr. McPHERSON], whom I do not see here now, the Senator from Illinois on my left [Mr. PALMER], and the Senator from New Hampshire [Mr. CHANDLER], who seems to be absent; and in looking over the report, it did not seem to me that I had taken very much part in the discussion in that half hour.

I desire to address myself now to some of the questions presented by the Senator from New Jersey and the Senator from Illinois, particularly with reference to some remarks I was making as to the cause of the export of gold. I charged that, in my judgment, the export of gold was a normal export unless, as has been charged, that some portion of that export was sent out of the country for the express purpose of creating fright and panic. I stated then, and I state now, that in my judgment a reason can be found for the export of $61,000,000 of gold between the 1st day of January and the 1st day of July.

The Senator from New Jersey said that it could not have been; that it went out simply to pay our obligations, because we were not indebted to Europe to an extent to justify such an export. He also stated that in his opinion the export of gold was caused by the sale of American securities in this country. I am sorry the Senator is not here. I have not the notes of his remarks before me, but I think that is a fair statement of his position. He attributed the panic in this country to the exportation of gold, and attributed the exportation of gold to the fright which Europe had sustained with reference to our credit.

Then came the junior Senator from Illinois, who sits on my left, who seems to think he found the answer to my statement that if the Sherman law had sent the gold out of the country, it was as fair to assume it had brought it back, for nearly an equal amount had come back in about one-third of the time that it was going out. He said he thought he found the answer to that in the fact that at about that time the President of the United States had by his declaration of the Democratic policy on finance in this country given such assurances to Europe and the world that confidence had been restored to the extent that it brought back gold. That I questioned. I was not prepared to state at that time exactly what the date of the President's declaration was. I knew, though, it must have been pretty early in the season. I find, by an examination of the files of the public press, that the declaration was made somewhere in the neighborhood of the 26th or 27th of April, and that during the month of May the export continued to a large extent, that it dropped off in June to practically nothing, or a little less than $2,000,000, and in July the balance turned in our favor and has been in our favor ever since, with the Sherman law still in force in all particulars and not near so much certainty of its repeal as the Senator from New Jersey and the Senator from Illinois seem to think the public entertained.

I desire to go into the action of the executive department of the Government with reference to the financial question, because I have been challenged to do so by the Senator from New Jersey and the Senator from Illinois. I do not, in criticising the Secretary of the Treasury, bring any charge against him of misconduct in the way of the venality or wickedness. I assume that not only the Secretary of the Treasury, but the President of the United States, with whom I differ as radically as it is possible for two men to differ, is not actuated by any desire to injure the country, to destroy the industries, or disturb property interests or the financial peace of the country.

I did say, and I repeat, that I believe the evidence can be and has been produced here to justify that statement, that neither the President nor the Secretary intended to interfere in the slightest degree to prevent in any manner by any action of theirs a disturbance, which was somewhat apparent as early as the last of April or the 1st of May.

I will say more than that—that so far as I am concerned, I am satisfied that that excitement and distrust was created to a large extent by the attitude of the executive department of this Government on the financial question; that if the banks of New York City and the financial corporations all over this country were disturbed and had doubts as to what was to be the policy of the Government of the United States with reference to the payment of gold, it was created not by anything which the preceding Administration had done or failed to do, but grew out of the conduct of the present Administration touching that subject. I believe, and I am sure that every man in my presence believes the same thing, that last winter there was an organized effort to compel the President of the United States to issue bonds.

The great banking concerns of the country saw that under existing conditions in a few years, at least, the banks would cease to be Government agencies unless some new system were adopted. They saw that the present national indebtedness was apparently about to be paid, and that in the next fourteen years, at least as early as that, the banking system of the United States would assume an entirely different shape and be reorganized upon an entirely different basis or they would cease to be banks of issue and Government agencies in the manner they had been since their organization. I believe that everybody expects that, unless some system of revenue collection shall be adopted to change that policy, the Government of the United States intends, when the unpaid bonds mature, that they shall be paid.

That has been the policy of this Government from the beginning; that is the policy of the people of the United States everywhere to pay the interest-bearing debt, and get rid of it. These financial agencies in New York recognizing that fact, thought to impress upon the Government of the United States the necessity of a new issue of bonds for the purposes, I say, of making it the basis of banking issues. I charged that in February on this floor. I remember with what heat the distinguished Senator from New York—Mr. Hiscock, not now here—replied that these banks did not want to be continued as banks of issue; that the charge that this was a demand on their part to secure bonds for banking purposes was not supported by the facts; and, if he did not, some Senators did go into an argument here to show that there was no profit in a bank issue, a statement which some days ago I showed to be fallacious, at least.

I did charge, and I repeat it, that I believe the President of the United States did not intend to take such steps as had theretofore been taken when disturbance existed in New York to bring quietude and peace to that financial center, because in the interviews published as having been had with the Chief Executive and the Secretary of the Treasury, heretofore read in the Senate, there is not anywhere an intimation that the great power of this Government, through its Treasury Department, would be exercised in the interest of peace and quiet in financial circles.

If we are not misinformed, the President has upon more than one occasion declared that the people of the United States were to be treated to an object lesson, and that the only way the people would be brought to sound financial views would be to feel the effect of the disturbance, which he attributed, of course, to the Sherman law.

In the interview which took place in Mr. Williams's house last April in New York, in which the Secretary of the Treasury was present (which I have read once here, and will not now read again), the statement was made, and it has never been contradicted by anybody to this hour, so far as I know, that the Secretary had declared that no bonds would be issued and nothing would be done which would retard or hinder the securing of the repeal of the Sherman act.

I know it was said while I was on the floor discussing this question before, that this was an accidental meeting of the Secretary with the bank presidents. I had not then looked up the public press reports, but I see now that it appears in the public press that Mr. Jordan, the former Treasurer of the United States, and now assistant treasurer, as I understand, in New York city, arranged the very interview of which I have spoken at the house of Mr. Williams. So it was not one of those accidental meetings at a lunch or something of that kind. It was a preconcerted movement, if the papers are correct, and the meeting occurred about the hour the Secretary himself had arranged that it should take place, or soon after, he having fixed 4 o'clock and the meeting having been a little later.

Mr. President, if the Secretary of the Treasury on the change of Administration had announced in an authoritative manner that the policy pursued by his predecessor would be pursued by him, there would have been no uneasiness in financial circles, save and except that which had been created by the banks in their effort to secure the issue of national bonds. I do not pretend that there would not have been still the same demand, but the class of men who are not interested in the issue of national bonds, who do not desire to see the public debt increased for any purpose, would have been content and all the world would have been entirely satisfied not only with our ability to maintain our promises according to the letter and spirit of them, but according to the policy which we had adopted, that is, to pay in gold.

On the 14th of November, 1891, the Secretary was confronted with the question whether he would redeem Treasury notes in gold or in silver; and that, I am informed on what I regard as good authority, is the first time that any Treasury notes had been presented to the Government for redemption. It is possible there may have been a few presented, but I think not. I think I state it correctly when I say this was the first time. A firm in New York City of gold exporters went to the treasurer at New York with $1,000,000 of those Treasury notes and demanded gold for them.

The officers in New York submitted the question to the Secretary of the Treasury, and after a conference, I think, with the President of the United States—I have always understood that to be the fact—determined while these notes were payable in silver or gold at the option of the Government that they would pay them in gold. Thereupon this firm took out of the Treasury for their notes 1,000,000 of gold dollars and sent it abroad for, I presume, perfectly legitimate and proper purposes. Had Mr. Foster, the then Secretary of the Treasury, said, "We hold our-

selves ready to redeem these notes in gold whenever any citizen or any holder thereof wants to exchange a reasonable amount of Treasury notes for gold; but we do not intend to make the Treasury of the United States the agency through which gold exporters can, without the payment of any premium, or what the French call "agio," or any expense whatever, come and take our gold and ship it abroad. Therefore we decline to meet that kind of payment in gold." Had he said that, he would have performed a meritorious and deserving act, and one which it was absolutely within his discretion to have performed.

Mr. GRAY. If he had.

Mr. TELLER. If he had, but he did not.

Mr. GRAY. Who was that?

Mr. TELLER. Mr. Foster.

If there is blame for the payment of the Treasury notes in gold, I am frank to admit that there is where the blame lies. I am not here to complain that the succeeding Secretary paid in gold, just as his predecessor had done.

If these exporters of gold had found that they could not go to the Treasury and take out a million, or two million, or three million, or four million in a day, as they did—if they had found that they could not do that, if there was a demand for gold sufficiently imperative, they would have gone to the banks of New York City and bought gold, and paid whatever the bank would have required them to pay for the transaction; and to that extent, at least, the export of gold would have been discouraged.

The chances are two to one that if they had gone to the Treasury and been denied they would have gone into the market and bought wheat or cotton and shipped that to Europe to make good the balances they were seeking to make good. If the Government of the United States could and would put upon the export of gold a burden of some character, it would discourage such export and encourage the export of commodities. Everybody understands that, and I need not waste any time on that subject.

That, however, was not done. So we entered upon a policy of paying these Treasury notes in gold, just as we had paid the greenbacks in gold for the profit of the exporters of gold. Every greenback is redeemable in gold or silver at the option of the Government.

Then came the change of Administration, and Mr. Carlisle, as Secretary of the Treasury, was confronted with this very question. Where there had been an inconsiderable amount of gold in the aggregate taken out of the Treasury of the United States, there came to be a great amount taken out during the early months of his administration. I say here now, believing, as I do, that the Government of the United States should never have paid a dollar of gold upon these certificates, and certainly not a dollar under the circumstances under which they were paid, that if I had been Secretary of the Treasury I should not have changed the policy of the Government at that time, and paid silver on them in the condition in which the market was during the early days of this Administration. It was no more than proper and right.

I am not going to criticise an officer for doing that which I think, under the custom which had been established, he was in duty bound to do, which was to continue a policy which his predecessor had established, in order that there might be no disturbance in financial affairs at a time when financial disturbances were threatened; for while I think the payment of these Treasury notes by Mr. Foster, in the first instance, would not have created a ripple in financial circles, I am free to say that I believe if Mr. Carlisle had paid them in April, May, or June, there would have been a considerable disturbance in financial affairs; not that we should have gone, as the Senator from New Jersey said, to a silver basis or anything of that kind, but it would have added to the excitement; and there was no reason why, the policy having been adopted, the Secretary of the Treasury should not have continued it, because we were able to pay in gold.

So I make no criticism of that. My criticism of the Secretary of the Treasury is that he did not say promptly, with that firmness which should have characterized a public officer charged with so great a duty as that of maintaining, as the Secretary of the Treasury is to some extent, the financial security of this country, on the 4th day of March, or immediately after, "I propose to follow just in the line of my predecessor in this matter." I repeat, if he had said that, there would have been no disquietude anywhere under the sun with reference to the question whether we were able or willing to continue to redeem the Treasury notes and the greenbacks in gold.

What did the Secretary do? I shall not read all the interviews which the Secretary seems to have submitted to; but I think the unfortunate part of the whole affair was that the Secretary did not himself seem to know what he was to do. He seemed to have hesitated whether he was going to redeem in gold or whether he was going to redeem in silver. When the inquiry was being put to him, he said, "I shall wait until I see whether the $100,000,000 reserve is impaired"—which he had not reached—"when we reach the hundred millions reserve, then I shall determine whether I shall pay in gold or pay in silver." If he had said that the Government would pay in silver, I doubt very much whether he would have created any more disturbance in the financial affairs of the country than he did when he said, "I do not know whether I shall pay in gold or whether I shall pay in silver."

I am bound to say that I do not attribute all of the trouble which arose to that act, but I do believe that very much of the disturbance in the public mind arose from the very uncertain character of the statements of the Secretary. I have here, but it is probably not worth while to read them, reports of various interviews with the Secretary of the Treasury. Senators can find them all on the files if they desire to examine them. I shall merely call attention to what was said by one or two gentlemen. Take the Post of this city of the 21st of April, 1893. It states in a financial article that the statement of the Secretary of the Treasury was not satisfactory to bankers. J. H. Parker, of the United States National Bank of New York, was interviewed, and said that it was impossible to see what the intention of the Secretary was. George F. Barker, of the First National Bank, refused to venture an opinion as to what the Secretary meant to do. Mr. Simmons, of the Fourth National Bank, said the Secretary had announced no policy.

[At this point the honorable Senator yielded for an executive session.]

Wednesday, October 11, 1893.

Mr. TELLER. Mr. President, some days since I addressed the Senate on the pending question, and was cut off by an adjournment, or an executive session. Since that time I have not had an opportunity to continue. At the time I was interrupted I was discussing the effect of the vacillating action of the executive department of the Government with reference to the payment of Government obligations in gold.

On a former occasion I had been challenged by the Senator from New Jersey [Mr. MCPHERSON], whom I do not now see in his seat, and the Senator from Illinois [Mr. PALMER], who also is not in his seat. The question put to me then was whether the declaration made by the President in the latter part of April had been the cause of bringing to this country a large amount of gold. I find that, as I stated on a former occasion, the Secretary of the Treasury had had various interviews, as printed in the public press, with reference to the obligations of the Government as to the payment of the greenbacks and Treasury notes in gold. As I stated then, it had been the policy of the predecessor of the present Secretary to pay those obligations in gold. The question was presented to the Treasury Department whether that practice should be continued.

It is said, though I do not know whether truly or not, that the Secretary of the Treasury telegraphed to the treasurer at New York City to withhold the payment of Treasury notes in gold until the Department should give him further directions. I find in the public press, but will not stop to read them, though I should like to do so—I have a large number of extracts from the New York press and the press in Washington, of different dates, expressive of the methods or the manner in which these assertions of the Secretary were received in financial circles, especially in the city of New York—

The statement that the Secretary would reserve his decision as to whether the payment should be made in gold until he had reached the limit of $100,000,000 in gold appears to have been by the bankers and public of New York City recognized as a declaration on his part that he would pay in silver when that point was reached. That point was reached sometime in April of this year. The Secretary did not pay in silver. But it is said that there was a Cabinet consultation on this point, and that after that meeting the Secretary telegraphed to the treasurer at New York to continue the payment of gold on Treasury notes as theretofore.

The President on the same day or the next day submitted to an interview, in which he declared that all the Government obligations should be paid in gold. I do not understand that that declaration of the President means what it was asserted on the floor of the Senate it did mean, that all the Government obligations of all kinds were to be paid in gold. I do not understand that silver certificates were included, which I think are Government obligations, although the Senator from New Jersey [Mr. MCPHERSON] stated that they were not.

Mr. MCPHERSON. Mr. President, do I understand——

The PRESIDING OFFICER (Mr. GRAY in the chair). Does the Senator from Colorado yield to the Senator from New Jersey?

Mr. TELLER. I do.

Mr. MCPHERSON. Do I understand that the Secretary of the Treasury does not consider a silver certificate an obligation

of the Government payable in gold, just as he redeems the Treasury notes issued for the purchase of silver bullion? As a matter of course, by the practice of the redemption of silver certificates every day in the custom-house for customs dues and other taxes, the Government is pursuing a process of redemption, and in that way it is supporting the silver certificates upon a parity with the other money of the country.

I have also heard it said, whether it be true or not I do not know, that occasionally there had been gold paid, at the pleasure of the holder, for silver certificates, but not under this administration of the Treasury, because I think the present administration of the Treasury has never had gold enough, since it came into power, to do that. I think the present Secretary has never had gold enough with which to pay the obligations that he felt bound to pay, to wit, the Treasury notes.

Mr. TELLER. Mr. President, I do not know what the Secretary may consider the silver certificates, but how he can consider them anything but obligations of the Government is beyond my comprehension.

Mr. McPHERSON. If the Senator will bear with me again he will see, from the wording of the certificate itself, how it stands. Let me read what it says; I have one here.

Mr. TELLER. It is very important.

Mr. McPHERSON. Yes, I think it is very important for us to know exactly what the silver certificate says. It says:

Silver certificate. This certifies that there have been deposited in the Treasury of the United States two silver dollars, payable to bearer on demand.

I do not say that that is an obligation resting upon the Secretary of the Treasury to redeem it in gold, even if an attempt were being made to maintain the parity between gold and silver dollars, for it simply calls for "two silver dollars." That is the redemption, and all the redemption, that the Government makes of this certificate. It proposes nothing more, it promises nothing more, and it is obligated to do nothing more. It is nothing but a warehouse receipt for two silver dollars.

Mr. TELLER. It is more than that, Mr. President. It is more than a warehouse receipt. It is a promise on the part of the Government to pay two silver dollars. It is more than that. It is money, according to the modern definition of political economists and scientists. It is money; it is receivable for taxes and public dues, and for all obligations of the Government; it is paid out and received. The Government holds in trust, you may say, two silver dollars for the redemption of that silver certificate, or $100 for a hundred-dollar certificate. But it is an obligation of the Government that the Government ought to respond to, as much as the greenback is an obligation of the Government, and that is simply an obligation that the Government will redeem every five-dollar greenback with $5 in coin. I assert here now that the Secretary of the Treasury has neither now nor heretofore ever redeemed silver certificates with gold, nor with paper that commanded gold.

Now, I want to bring the attention of the Senate a moment to the statement made by the Senator from New Jersey that there is a redemption of the silver certificate because it is received for public dues and because it is taken by the Government at its agencies for the collection of its import duties, or for any other obligation due to the Government, the idea being that that is redemption in gold.

Why, Mr. President, gold is received at the Treasury Department for dues. It is received for all kinds of taxes, and it would be just as fair to say that the gold is redeemed in silver, because it is received just exactly as silver is, as to say that silver is redeemed in gold or that silver certificates are redeemed in gold, for they all perform exactly the same money function, one with the other.

Mr. McPHERSON. The Senator should not forget to remember——

The PRESIDING OFFICER (Mr. PASCO in the chair). Does the Senator from Colorado yield?

Mr. TELLER. I yield.

Mr. McPHERSON. That gold is the standard, and that everything the Government receives by way of revenue of all sorts in any money of the United States it receives at its par value (of course it receives all the other money at its par value) and that is a payment really in gold. The Government as I understand never redeems its coin, but redeems its certificates through the custom-house, to any amount that the customs duties may come to every day.

Mr. TELLER. I think I understand that. It is another way for the Senator to say that the silver certificate is redeemed because it performs money functions in dealings with the Government. It is no more redeemed in gold than the greenback is redeemed in silver, because silver is redeemed also at the Treasury for import duties.

That is aside, however, from what I intended to speak about. I want to go back to the colloquy between the Senator from New Jersey and myself, that occurred the last time I was on the floor, touching this subject.

The Senator not only then said, but in a second speech repeated and took great pains to show, that the present financial difficulties of this country were—I will not say entirely in that statement, because in the second speech he did not go quite so far as in his first—due to the pernicious effects of the Sherman law. Because I had said that the export of gold did not create the difficulty, that the export of gold was not the occasion of the distress that he complains of in this country, therefore he assumes that it must be something else; that there was no other agency—using his own language—and therefore it must be the Sherman act.

Mr. President, what I said was this: I said the $61,000,000 of gold that went out between the 1st day of January and the 1st day of July went out, in my judgment, the most of it if not all of it, in a perfectly normal manner. I do not know but that I should be inclined to say that all of it had gone out in that way, were it not for the information given us by the senior Senator from Kentucky [Mr. BLACKBURN], in a powerful speech recently delivered, I do not know that he made the statement on his personal knowledge, but he certainly made his statement as a Senator, that some portion of that gold was sent abroad for the purpose of creating distrust in financial circles of the United States. I know that had been charged. I had no proof of it, and I did not make that charge. I believe that that export of gold may have been perfectly legitimate, except, perhaps, it be a very small part of it, that went out in the latter part of the season. I believe that nearly that amount has been imported into the United States since the 1st of July last. I say that that was a legitimate importation because of the demand in New York for money.

In the first place, the demand in Europe for gold was so great that the $61,000,000 that went out from this country to Europe during the early months of the year 1893 went out, I think, every dollar of it, at a premium. Every dollar went out, I believe, when the rates of exchange did not justify the export of gold, and went out not because of any condition (I repeat) in this country, but because of the condition existing in Europe, a condition that has existed in every nation of Europe for the last three years.

It came back when conditions were reversed. It is immaterial what brought about that condition, but when conditions were reversed in the United States there was a grand scramble for money. International money (gold) always goes to the country willing to pay the most for it. For a season, at least, the cities of New York, Chicago, and other American cities, happened to be willing to pay the most for gold. Whether it came to settle the balance of trade, or whether it was a gold loan, is absolutely immaterial. The same law that took the gold to Europe in the early part of the year brought it back in July, August, and September.

The Senator from New Jersey said that it could not have gone in a normal and natural way because we did not owe so much money to justify it. It might have gone if we did not owe a dollar. Whenever a country gets more than its distributive share of international money, it will find a place to go, and it will go to some country that has less than its distributive share. With international money, with money that is good in every country in the world—which the Senator from New Jersey insists is the only good money there is—no nation in the world can take more than its distributive share. That distributive share must depend, first, upon the wealth of the country; second, upon the business of the country. If you have a large, wealthy country, with diversified industries and great business, it can keep more of the world's money than a poor country with little commerce. In other words, the distributive share is more than it would be if a country had only one-half as much business. That, I suppose, is not to be questioned.

We had last year more than our share, more than belonged to us. When a balance was struck between the nations of the earth we were too rich in gold, and they had a right to call upon us for it, as they did call upon us for it, in accordance with the universal law of trade. It went from us because there was a vacuum of money where it went and a plethora in the place from which it went.

Mr. McPHERSON. The Senator from Colorado will note, I think, in the few remarks I had the honor to make the other day, that I drew quite a wide distinction between what is known as the balance of trade and the balance of indebtedness. The statistics give information of how much money we owe to a foreign nation in dealing with it, and of how much they are indebted to us. The balance of indebtedness is quite a different thing, because it may represent something that does not appear upon any record whatever.

In this case the balance of indebtedness is against us by reason

of the return of our securities which were poured back upon us by foreign people.

Mr. TELLER. So said the Senator on the former occasion; so said he when he was addressing the Senate while I was on the floor; so he said in the speech that he recently delivered, in which, I believe, he did not allow anybody to interrupt him. I am not finding any fault now with his interruption.

Mr. McPHERSON. The Senator knows very well the reason why I did not want to be interrupted. It was because I was unable to deliver myself properly of what I desired to say if I should be interrupted.

Mr. TELLER. Very well, I am not complaining.

[At this point the honorable Senator yielded to Mr. WOLCOTT.]

Mr. TELLER. The Senator from New Jersey reiterates what he has repeated on two occasions, that the disturbance in this country grew out of the fact that our securities were sent here because of the distrust of our ability to redeem in gold. The controversy between the Senator from New Jersey and myself is this: I assert that causes existed other than distrust. If distrust existed (and to some extent I admit it did, but not to the extent claimed by the Senator from New Jersey) it was brought about by the vacillating and uncertain conduct of the Treasury Department. That is capable of proof.

I think if I should spend the time of the Senate, as I do not care to do, in reading half a dozen interviews with the Secretary of the Treasury that have appeared in the press between the 6th day of April and the 25th of April, it would be very apparent to everybody that the policy of the Department had not then been settled and that neither the business men of the country nor the Department itself understood what the policy of the Government was to be with reference to the redemption of these Treasury notes. I have a letter from the Secretary of the Treasury, addressed to a gentleman in Boston on the 25th of April, 1893, which, of itself, undoubtedly, while well meant and well intended, I think had a tendency, and ought to have a great tendency, to bring about distrust in that section of the country to which the letter went. It was published in the public press of the country at the time, and now I will read it:

TREASURY DEPARTMENT, *April* [illegible], 1893.

MY DEAR SIR: I desire you to convey to the associated banks of Boston my sincere thanks for their generous and patriotic action in tendering gold to the Treasury. If all the banks in the country which now hold gold would imitate the example set at Boston, the present financial situation would soon be changed, and there could be no doubt hereafter as to the ability of the Government, with the patriotic assistance of the people, to maintain its credit even under the most unfavorable circumstances.

Very truly yours,

J. G. CARLISLE.

Mr. PHINEAS PIERCE,
Chairman Clearing House Committee, Boston, Mass.

Let me read a portion of it again:

If all the banks in the country which now hold gold would imitate the example set at Boston, the present financial situation would soon be changed, and there could be no doubt hereafter as to the ability of the Government, with the patriotic assistance of the people, to maintain its credit even under the most unfavorable circumstances.

If that is not a declaration by the Secretary of the Treasury that there was doubt of the ability of the Government, even "with the patriotic assistance of the people," to maintain its credit unless the banks came to its relief, I do not know what it means. The Treasury has been for twenty years the great steadying machine of this country.

From Black Friday, when Gen. Grant ordered $15,000,000 of gold sold in the city of New York, to the very last panic that has been in this country, the Treasury of the United States has done for this country what the great banks of other countries do for those countries when there are financial disturbances. Our great Treasury Department is the greatest money treasury in the world, I want the Senator from New Jersey to remember. There is no other treasury in the world that has ever accumulated such money. There was no other Treasury in the world where the Government could put its hand on $100,000,000 of gold at such a time, saying nothing about the great resources of the Government that always stands behind the treasury. Here was the greatest depository of gold in the world, and the chief agent who had it in charge, the Secretary, and who ought to have known more about it than anybody else and everybody else, declaring in substance that it was not sufficient for our wants, and that unless the banks came to the relief of the Government there was danger that the Government could not meet the demands for gold that would be made on it. It can not and it does not mean anything else.

I do not mean to say now that the Secretary of the Treasury intended to create financial distrust, but I do say, in view of the circumstance that occurred some four days later, that it does look very much as if at least it was not the intention of the Treasury Department to quiet the distrust that was growing up. But I say there is abundance of evidence that the distrust in the country largely originated from—I will use no harsher term—the vacillating course of the Treasury Department.

Now, the Senator from New Jersey says that securities were coming over here. Yet the Senator has not offered a particle of evidence to show that the securities came to this country, at any time during the year 1893, in any abnormal quantities. I stated to him when I was on the floor before, and I state to him now—and he may verify that at the Treasury Department if he chooses—that $20,000,000 of American securities were sold in the foreign markets in the month of January, 1893. I have read from the report of Dun & Co., dated the 17th of February, 1893, declaring that large amounts of American securities were then going to Europe.

I assert here, Mr. President, that there has never been any evidence adduced by anybody that there has been any return of the amount of American securities that the Senator says came to this country in the year 1893. I do not say that they have not come in considerable quantities, because they are coming and going at all times of the year. When the people in Europe want money, and want it quick—and when they want money they do want it quick—they sell American securities, which are the gilt-edged securities of the world, and nobody doubts that, I believe. Practically in England, for many months previous to the 1st of January, 1893, American securities were the only foreign securities that would fetch gold. Therefore they did send some of them here.

Whenever the money market eases up in Great Britain, then immediately they begin to buy American securities, and if the papers do not make a mistake the great Jewish banker, Baron Hirsch, recently invested $5,000,000, or £1,000,000, in American securities. Their financial agents in New York will tell the Senator, and he knows it, that there has not been a month this year that a great many American securities have not found their way across the water to Great Britain.

Mr. President, it is not fear of our nonability to pay that has ever brought our securities back, any more than it is the same fear that has sent them out. It was the law of trade that sent $61,000,000 of gold to Europe in the first part of the year and brought back $55,000,000 in the last part. The true course of trade and commerce settles these questions. There was no distrust then by anybody of American securities, nor of the credit of the American Government.

Mr. McPHERSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield?

Mr. TELLER. Certainly.

Mr. McPHERSON. I wish to note one particular fact, which it seems to me the Senator seems to slip over without paying very much regard to, that is, as to whether the Government of the United States was attempting to maintain all its money on a parity when the Secretary of the Treasury was found, on the particular occasion to which the Senator refers in the letter which he read from the Secretary of the Treasury, complimenting the associated banks of the city of Boston for their patriotism.

Now, the Senator knows that whenever the Treasury of the United States is unable to maintain the financial policy of this Government, then the people outside the Treasury begin to look out for themselves. If the banks of the country, who held nearly $200,000,000 of gold on the 1st day of July, had not treated the note issues of the Government as the Secretary of the Treasury was treating them, I should like the Senator to tell me why it was that the Secretary of the Treasury felt obligated, so to speak, to compliment the bankers for assisting him to maintain the policy of this Government. If there was nothing prior to that which made the bankers afraid, if there was a bank that felt cowardly about loaning gold to the Government, what was it that produced that cowardice? Was it the Sherman law?

Mr. TELLER. The banks did not loan any gold at all.

Mr. McPHERSON. What was the letter that the Senator read?

Mr. TELLER. It does not say a word about a loan.

Mr. McPHERSON. I understood that he had got gold from Boston.

Mr. TELLER. It simply says that they assisted the Government. The banks were all banks of Boston, and Boston, like several other sections of the country, furnished the Government gold in exchange for other Government money.

Mr. McPHERSON. If the Senator will allow me another word right there as to that particular point, I shall have said all I want to say about it.

Mr. TELLER. Certainly.

Mr. McPHERSON. Between the time of the passage of the Sherman law in 1890 and the 1st day of July, 1893, we had lost in gold $156,000,000; we had gained in silver $147,000,000 or $148,000,000. My contention is that during that whole period of time

the foreign investors had discovered that we could not long maintain the policy of purchasing silver and redeeming it in gold, and they had been sending us back our certificates. As a result we lost $156,000,000 of our gold. Only a small part of this $156,000,000 was returned. We knew all the time that the balance of trade was against us. But the balance of indebtedness was shown by the returns, of which, as I said before, there was no record made. This return of our securities has been going on for nearly three years. Of course the gold has gone abroad, that some has come this way, since the 1st day of August, for the purpose of investing in 60-cent wheat and in securities which had fallen in value more than 50 per cent.

Mr. TELLER. I have not stated, and do not intend to be understood to say, that no American securities came back, because I stated when I was on the floor before, or last night, or on some occasion, that I had been informed that the failure of the Barings in London caused in a very short time several millions to come upon our markets. But that was before the Sherman act had any influence upon public affairs.

The Senator wants to know why the Government was short of gold. Early last spring, immediately after we had voted in this body that there would be no bond issue, or rather, after it had been determined in another place that Congress could not authorize an issue of $50,000,000 of bonds (which was a clause of an appropriation act, as I recollect), there was a great clamor made about the fact that the Government was short of gold. The Government then had $100,000,000 of gold that it had accumulated, almost all of it, about $95,000,000, if I recollect rightly, by the sale of bonds. The Senator from Iowa [Mr. ALLISON] says the amount was $95,500,000, as disclosed by the tables. That was accumulated for the purpose of redeeming the greenbacks. That has been kept intact. At no time had what we call the free gold in the Treasury ever got down to $100,000,000. Of course the gold in the Treasury pledged for the payment of gold certificates was not considered in returning the amount the Government had, which was from $125,000,000 upwards.

In the fore part of the winter of 1893 this sum began to grow less, and as the Treasury approached the $100,000,000 limit there was a great howl set up in all the financial circles of the country, and the statement was made over and over again—and I think there was nobody much more distressed about that than the Senator from New Jersey—that when the Government reached that $100,000,000 limit, if it should put its hand on a single dollar of it, it would commit an act of degradation. Exactly what was said to be going to happen I have no means of knowing, but it was something dire and dreadful. We were told again and again that if the Government interfered with its reserve, that moment distrust would come.

It always occurred to me that if I had a large amount of money in a bank, it could not add to my credit if the public understood that I could not use any portion of it. So it seemed to me that to say that the Government had relegated $100,000,000 to absolute idleness—for that was the claim—was the height of financial folly, if not financial wickedness. If the $100,000,000 was put there to sustain the credit of the Government, for the redemption of greenbacks, and was subsequently applied by the Treasury to the payment or redemption of the Treasury notes, I want to inquire of these great financiers in New York, who claim to instruct us upon finance, what they supposed that money was there for? Was it there to look at? Was it there, like the miser's hoard, or was it there for the purpose of being used when the Government had necessity for it, the necessity being indicated by the statute?

We were told by the public press, and we have heard it on this floor, that if the Government should trench upon that $100,000,000 there would be great trouble in this country. We did trench upon it. The Secretary of the Treasury, who had more sense than his advisers in New York, found it necessary to trench upon it. But before he did trench upon it the banks of New York City proposed to aid him in maintaining the reserve of $100,000,000, and they furnished him $6,000,000 of gold, for which they took currency, which was every bit as good as gold, and better, because the people of the United States much prefer it.

Having attracted the attention of the whole country to the wants of the Treasury Department, having furnished this mere trifle of $6,000,000, they turned around and said to the Secretary of the Treasury, "You can have no more gold from us unless you adopt the policy we have outlined for this new Administration—that is, you must sell bonds to strengthen your reserve—if you are not going to do that, we decline to furnish you any more money."

The national banks in a city away out on the plains, a city that has grown up since the most of us arrived at manhood, that twenty-five years ago was on the very frontier of civilization, a city that to-day possesses as many elegant buildings and as much culture and refinement and learning as any other city on the continent, in proportion to its population, the city of Denver, sent word to the Treasury by telegraph, saying: "If you want $1,000,000 of gold from us you can have it." The Secretary of the Treasury accepted it, and then from every portion of the country, from Chicago, from Pittsburg, from Boston, and from all over the country came offers and proffers of gold.

The people did not believe the Government of the United States was in distress. They knew very well what was attempted by the great bank agencies of New York City. They knew it was for the purpose of compelling the Government of the United States to accede to their wishes and to adapt its financial policy in accordance with their theory, or else it was to discredit the Government of the United States. Little towns the Senator never heard of in his study of geography made their gold proffers of $50,000 and $100,000 to the Secretary of the Treasury. I said to him myself in person before I left this city last spring, "If you want $20,000,000 gold from the West I will show you how to get it. You have only to say to the great West that you want gold, that you will exchange paper money for it, and it will come to you. You can get $20,000,000 in Denver, Kansas City, Omaha, San Francisco, Helena, and the States of Washington and Oregon." It was there ready to come. Boston came to the aid of the Government in the same way. The Secretary, as he ought, recognized their patriotic conduct; and he said, "If everybody would do as well as you have done, then there would be no fear of disaster." I need not say that Boston, of course, was frightened; because they knew nobody would do as well as Boston, of course. That is the way Boston came to furnish money to the Treasury of the United States.

Mr. MCPHERSON. If the Senator will yield to me a moment, I wish to call his attention to the fact that perhaps the city of Denver and other cities in Colorado were in a better condition to loan gold to the Treasury than any other part of the United States. I notice from the reports made by the Comptroller of the Currency in the past two years that the Denver banks particularly, which I believe are very strong institutions, have held a very small portion of anything in their reserves but gold. It always seemed to me very strange that in the heart of the silver industry of this country, according to the statement, I think, if I remember right, in March or May of last year, the banks held only about 3 per cent of any items in their reserve except gold, and therefore the Denver banks were in a stronger condition.

I notice further, if the Senator will permit me, that in Nevada, Arizona, Montana, and other silver States the same condition of things seem to exist; there was nothing but gold held in the reserves of those banks for the past two years. Perhaps the Senator can explain it. I can not explain it except on the idea that the methods of doing business out there are a little different from what they are in the East, and their currency may be different. I know it is the case in California, and I presume it may be so in Colorado.

Mr. TELLER. I can explain to the Senator why the banks of Denver have gold. There are no mints in Denver. The Government does not coin any money in that section of the country. The nearest mint is Carson City, 1,500 miles away, or something like that distance.

Mr. MCPHERSON. You have no mint in Denver.

Mr. TELLER. We have no coinage mints in Denver. Consequently if we get silver we have to get it from Philadelphia, New York, or somewhere. The Colorado bankers are just like other national banks. They did not know exactly what the Senator from New Jersey would be able to do in the very severe attack he has made on the silver dollar here in the last fifteen years I have been here. I remember he used to introduce pretty nearly every session a bill for the repeal of the Bland act or touching the silver question. We are told by all the Government agencies that the silver dollar, although a good dollar to-day, to-morrow would not purchase as much as a gold dollar. So the Denver banks, with that proper precaution that they would take at such time, loaded themselves up with gold.

I think, as the Senator says, the banks in Denver have been especially strong, and yet—I did not intend to speak of this but I will—notwithstanding they were so strong in gold, in July no less than six of the banks in the city of Denver suspended. They did not all suspend. There were some of the banks that had a sufficiency of money to pay all the depositors. I walked into one bank the day that it suspended, after banking hours, and I was told by the cashier and the president that they had actual cash enough to pay every depositor in full. At least two banks were in that condition. The Denver banks were especially strong and well managed.

Since the Senator has attracted the attention of the Senate to the Denver banks, let me state why they failed. It is not a matter that I have felt very much like talking about, because I have

had very little patience with certain Government officials, and I do not desire in this place to bring severe accusations against any of the public officials if I can avoid it.

Mr. President, those banks failed because of the misconduct of the Treasury Department. There were in the month of July about twenty days when no owner of silver bullion in the United States could get a dollar for it at any price whatever. No broker in New York dared to buy; and the Government of the United States, that was authorized in those twenty days to take 4,500,000 ounces at a price that no living man ever expected to see it sold at between 62 cents and 70 cents, absolutely declined to consider any proposition whatever for the purchase of silver bullion. The banks that had advanced money to the silver miner and to the smelter were compelled to go without the money that would have been realized on the bullion which was offered to the Government and which was in New York and offered to the brokers there and could not be sold.

Thus banks absolutely as sound as any banks in the State of Connecticut or New Jersey or anywhere else, were compelled to close their doors because they did not have currency to pay their debts. If they had reached the high state of financiering of the New York banks they would have simply said when a man went with his check, "We will give you credit on our bank books." That is the New York system. "We can not pay you money, but we will give you credit on our books." If an attorney had gone with his client to the bank so refusing to honor his check and said, "That is an act of bankruptcy and I will put you into bankruptcy," or "I will call on the Comptroller of the Treasury to close you up," they would have said, "We are above the law." That is what they said in New York. They had not yet reached that high state of banking, and they thought that being a bank of deposit, when a check came, in the man who had money there was entitled to have it paid, and when they could not pay it it was their business to close their doors and declare that they had committed a breach of the banking act that rendered them liable to lose their charter unless through the wisdom and discretion of the Treasury officials extension might be granted.

I want to say to the Senator from New Jersey that every one of the six banks which failed in one afternoon in the city of Denver has resumed. Every one of them is solvent; and I repeat, if the Secretary of the Treasury had purchased the silver that was offered, as he ought to have purchased it, the banks would not have closed their doors.

In July only about one-half of the amount required by law was purchased, and that in the latter part of the month. The Secretary of the Treasury has pursued that policy from that day to this, buying each month just about one-half, or a trifle over one-half of the requirement of the statute, upon the theory that it is not offered to him at the market price.

The Senator from Nevada [Mr. STEWART] has spoken of this, and I do not desire to spend any further time on that point. The Senator further said, not in his last speech, but in the former speech:

> The people became frightened and made their drafts on the Treasury, and the Treasury could not meet them.

I do not suppose the Senator meant to assert that any drafts went to the Treasury that were not promptly met, because at no time was the reserve intrenched on more than $8,000,000 or $9,000,000. At no time, as I recollect, did it ever get below $90,000,000. So there were at all times $90,000,000 of gold for any citizen who held the obligations of the Government in the shape of greenbacks or Treasury notes.

Mr. McPHERSON. Is the Senator quite sure that he quotes me correctly? If I said that drafts were made upon the Treasury which could not be met and were not met I certainly had not said what I intended to say. Inasmuch as all the reserve gold in the Treasury was pledged to a special purpose, and as there was no free gold, there was a fear in the public mind that the Government would not long continue to maintain the policy it had outlined.

Mr. TELLER. That is what the Senator said. Of course, I understood that he did not mean that a draft was actually tendered and refused.

Mr. McPHERSON. I sometimes speak carelessly.

Mr. TELLER. He meant the fright the people were in.

Mr. McPHERSON. Yes.

Mr. TELLER. Is it not worth while, when we come to debate this question, to debate it upon facts that must be apparent to everybody? Is there any evidence anywhere to indicate that the people did not believe the Government, with ninety-odd million dollars of gold, could redeem its $140,000,000, or less than $140,000,000 of Treasury notes, and its $300,000,000 of greenbacks, if they should be presented?

As I said on a former occasion, I repeat now, the demand which has been made upon the Treasury Department by the people who hold these two kinds of paper, greenbacks, and Treasury notes who want gold for ordinary uses is absolutely inconsequential. The demand for gold is always made by the exporter. It was not a cause of fright; and to the exporter of gold, who did not then hold or own this paper, who only expected to go to the bank and get it and then go to the subtreasury in New York and draw it out, and it would have made no difference if the Government of the United States had declared that it would not pay a dollar of the Treasury notes in gold. Then the holder of the greenbacks would have gone to the Treasury, and if the Treasury Department had declared that as they were payable in silver instead of gold, the export of gold would have still gone on until the banks of New York City had charged such a rate for furnishing the gold that it became unprofitable to export it, and then it would have ceased.

There are a good many other things that the Senator said in reply to me that I will not have time to go over. The burden of the Senator's complaint was that the people lacked confidence; and that is the burden of the complaint of those who demand the repeal of the Sherman act, and that the lack of confidence was brought about by the fact that the Sherman law was in force. I aver that a careful examination of the condition of the national banks in this country ought to convince any person who is at all familiar with financial affairs that it was not distrust of the Government that brought about this difficulty, and there has been at no time any distrust of the Government whatever among the people.

The distrust was of the banks and by bankers of themselves. As a Senator who sits near me said the other day in speaking of this matter, the first distrust was when the banks distrusted their ability to pay their deposits; and that is true, with the immense deposits that the national banks and the State banks had of more than three times as much as all the money in the country, with the savings banks in this country with deposits that could not be paid by the holders of every dollar of money that is in circulation in this country. If one man had had it he could not have made good the debts of the savings banks alone. The fact was there had been piled up in those banks immense deposits which meant nothing more nor less than credits. Who supposes that the $2,000,000,000 of bank deposits in the national banks, and the more than $2,000,000,000 more in private banks and trust companies was money ever put into the banks or that it represented money at all?

These great banks say to a gentleman who wants to borrow money, "Very good, we will lend you $10,000." The way they do it is to take his note and give him credit. Not a dollar passes from the bank to him. They put it on their books and say, "Now you are entitled to draw from us $10,000." Then they put on $10,000 for another; and so a bank with a capital of $100,000 will have $1,000,000 of deposits, which means that on its $100,000 it has given $1,000,000 of credit and has taken the chances that all the depositors will not come for their money at once, and that out of the money that shall come in from actual depositors they may pay the parties to whom they made the loan or that checks drawn on them may be put to the credit of the drawee. When the banks were met face to face with a financial stringency and shrinking of every security that they had, which had been going on for three years, it is not strange, as a Senator said to me, that they began to distrust their ability to pay their deposits; and then in a little while the people began to distrust their ability to pay their deposits.

It was then that the people drew out of the banks the $200,000,000 that we hear so much of. And they took any kind of paper; they took any kind of money metal; they took anything that they could get. In addition, in New York City they were compelled to take nearly $40,000,000 of clearing-house certificates, which were simply the notes of a committee of banks in which they promise to pay and put up to whoever should be the holder of their securities or rediscounted their securities.

Mr. HIGGINS. Will the Senator yield for a question?

Mr. TELLER. Certainly.

Mr. HIGGINS. I ask the Senator from Colorado if the condition of the banks and the bankers in respect to their deposits and loans which he has just described, and to which he attributes the causes of the panic; that is, that the people got afraid of the banks——

Mr. TELLER. I do not attribute the distrust entirely to expansion by the banks.

Mr. HIGGINS. I ask whether that was a novel or exceptional condition, or one which had been in existence for a long time?

Mr. TELLER. The method of the banks in making loans was not a novel condition.

Mr. HIGGINS. If it was not a novel condition how was that the cause of the trouble?

Mr. TELLER. That is not a novel condition. It is the usual method of banking. But if the Senator will look he will see that the difference between the loans made by these banks now

and ten years before, the loans made, say, in 1883, and the loans made in 1893, he will be convinced that there had been an inflation, not of money, but of bank credit unparalled in this or any other country. It was not that the system is not perfectly proper, and perfectly natural; but if a bank with $100,000 can put upon its books the credits of various business men in the community for three or four million dollars, the Senator must see that is a condition which must ultimately break down.

The other day when the Senator from New Jersey was on the floor he was very emphatic, not only that the law of 1890 was the cause of all the present disasters in the country, but that there was a universal demand of the people of the United States for its repeal. I think he said that at least forty million of the people of the United States had demanded its repeal. How they demanded it, through whom they demanded it, he did not see fit to enlighten us. I have heard a great deal about the demands of the people of the United States for the repeal of this law. The boards of trade, the chambers of commerce, the associated banks, and all sorts of corporations everywhere have been in accord in demanding the repeal of the law, and even, I believe, in some instances political organizations have demanded its repeal, and we are told because it is the universal cry from those sources that therefore the American people demand its repeal.

I said the other day, and I repeat it, that the American people have not demanded its repeal nor have they been heard on it. I want to read to the Senate some of the means that are being used to bring about and to create an opinion that there is a great demand for a repeal. We were told recently that the Democratic State convention of the State of Nebraska had demanded the unconditional repeal of the Sherman act. It was supposed by everybody that the State of Nebraska was rather a liberal State upon the question of silver coinage. Two years ago last fall a Democratic campaign was made upon a free-silver plank and the Democrats for the first time I think in that State elected a Democratic governor. Last fall, in 1892, a campaign was made upon the gold basis; and whereas in the campaign before the Democratic governor had received seventy-odd thousand votes, in 1892 he received I think about 40,000, or a little more than one-half.

Now, I want to read the method, because in the Senator's speech the other day he speaks of the whirlwind of indignation that is about to sweep the Senate out of existence because of our inattention to this public demand, and because we have not repealed the law the people are about to change the form of government and do away with the Senate. We will see how they get up these whirlwinds of indignation. I read from the Atlanta Constitution:

NEBRASKA'S STATE CONVENTION WAS PACKED WITH CANDIDATES—MR. MORTON'S SCHEME WAS SMART—APPLICANTS FOR FEDERAL OFFICES WERE CLUBBED INTO SUBMISSION—EACH MAN RECEIVED WARNING—HE HAD TO GIVE HIS VOTE OR GET NO OFFICE—DELEGATES BULLDOZED BY PATRONAGE—THE PEOPLE FOR SILVER.

LINCOLN, NEBR., *October 9.*

Naturally, the Democracy of the West and South was surprised last week when the Nebraska State Democratic convention declared against the free coinage of silver, and for unconditional repeal. The sentiment of the State is overwhelmingly in favor of silver, but the convention was packed through the manipulation of Secretary Morton, who pulled the wires from Washington, whence came the word that BRYAN must be downed.

BRYAN is a member of Congress.

In order that you may know what influences were brought to bear upon the convention I copy some letters sent out by the secretary of the State central committee:

"OMAHA, NEBR., *September 1, 1893.*

"DEAR SIR: You were some time ago indorsed by the State central committee for the post-office at ——. Circumstances may arise which may cause a revision of that action. You are earnestly urged to be at the Democratic State convention October 4, as a delegate. Be sure and have your delegation composed of Democrats whom you know can be relied upon.

"Yours, truly,

"J. B. SHEEAN, *Secretary.*"

Shortly after that the following letter was sent to each one of the 2,000 candidates who had applications before the State central committee:

"OMAHA, NEBR., *September 14, 1893.*

"DEAR SIR: The officers of the State committee desire to communicate with you respecting the indorsement which they gave for postmaster. The delay in making the desired changes in this State necessitates vigorous action on the part of the committee and applicant, and you are requested to meet the officers of the committee at Lincoln on the 3d or 4th of October. The State convention will be held there at that time, and you are urged to be present as a delegate from your county.

"In order that there may be a full representation, you are especially requested to be present in person. It is important that you be present representing the best interests of Democracy and coöperating with the committee for the welfare of the party. Trusting that this may receive your serious consideration.

"I am yours, respectfully,

"J. B. SHEEAN, *Secretary.*"

The above letters are samples of the way the Democratic convention was packed and the sentiment of nine-tenths of the Democratic voters of this State was smothered by the votes of three hundred applicants for post-offices, who were delegates to the State convention and whose instructions were to see to it that the Administration was indorsed, that its financial policy was indorsed, and that the executive branch of the Government should use Nebraska as a club to aid it in coercing a coördinate branch of the Government into submission to its wishes. Of these applicants who were delegates, nearly all were free-silver men, but they had a club held over their heads and were compelled to vote as they did or lose the indorsement of the State committee, which meant the loss of the post-offices.

I write this in order that you may know what the Administration and its representative, the State central committee, are doing in the way of buying and bulldozing with patronage the voters of the State. I know what I am talking about when I say that nine-tenths of the Democratic voters of Nebraska are in favor of the free coinage of silver, and the expression in the Democratic platform recently adopted in this State does not represent the views held by Democrats here.

W. D. TIFFANY,
Vice-President Democratic State League of Clubs.

This is all I care to say about the whirlwind of indignation that the Senator from New Jeasey spoke of in his recent speech.

Mr. President, I do not intend to review the Senator's last speech in detail. There is too much of it and there is not time. I do not care to do it. There is one thing the Senator said in his recent speech that I do not quite understand, and I will venture to read it; and if the Senator has any explanation to offer I should not object to hearing it:

Let not the silver-producing States, or the manufacturing States, hug to their breasts the delusive phantom of hope that our sympathy for the one, or our charity for the other, will longer suffice to degrade the currency, as open mints would do, or oppress the masses, as our tariff laws now do. Let not my democratic friends on this side of the Chamber longer indulge the vain hope that the Democratic people of this great country will continue in the future to support that party and its candidates notwithstanding the fact that it trifles with issues before which all other issues must perish and sink.

I do not know, after the extensive speech the Senator had made to show how wicked the Sherman law is, whether the Senator really believes that the Sherman law is worse than the tariff law, or the tariff law worse than the Sherman law.

Mr. MCPHERSON. In what respect?

Mr. TELLER. I do not know.

Mr. MCPHERSON. What I wanted to get at is the Senator's application? Does he mean whether it has been influential in bringing about the disaster of which the country complains?

Mr. TELLER. Yes; that is what I mean.

Mr. MCPHERSON. If that be so, it seems to me as though the Sherman law was entirely responsible for it all, because Mr. Cleveland was elected last year in November, and it was pretty well known after Mr. Cleveland was elected and a Democratic House and a Senate that we would have a radical revision of the tariff. There was no panic started in the country. The country was not convulsed until some time in the month of May of this year, when it was discovered that the Treasury could no longer take care of the financial policy of the Government.

Mr. TELLER. Then I suppose according to that the tariff is not so bad a thing as the Senator seems to have supposed. I am pleased to have that admission.

Sometime since when I addressed the Senate in a very brief manner, the Senator from Oregon who sits in front of me [Mr. DOLPH] took me to task for what he seemed to consider an inconsistency. He said I had berated (or words to that effect) people who did not agree with me as to the free coinage of silver; and yet that I had declared that if I did not believe the free coinage of silver and the parity between gold and silver could be maintained with free coinage of silver, I would not be in favor of the free coinage of silver.

I did make that statement exactly as the Senator stated it, and I did not go any further then. But I was not then attempting to discuss the silver question or present it in a very logical manner; I was replying rather hastily to something that had been said by the Senator who sits on my right [Mr. HAWLEY]. I have repeated over and over again in the Senate that if I did not believe we could maintain the parity of the two metals with the double standard I should be opposed to the double standard. I could not reconcile my ideas of the proper financial policy to having one dollar worth 90 cents and the other worth 100 cents, or having one dollar worth 110 cents and the other worth a hundred.

If I believed that the divergency that the Senator himself fears would exist I should not be in favor of the double standard; but I say now, as I said to the Senator from Illinois [Mr. PALMER] last night, that if the United States is driven to one metal alone it is infinitely better that we should take the silver standard and not the gold. I believe that is the opinion of some of the best financiers in this country and in Europe. I believe there was a strong sentiment in the last Brusse s conference, amongst intelligent and learned men on this subject, that the silver standard is the most stable standard of the two.

The Senator from Oregon, in the same speech to which I now refer, declared that gold is the stable money of the world, and that sliver is the unstable money.

Mr. President, you can only determine what is stable money by comparing it not with itself, because no comparison can be made with itself, but by comparing it with the commodities that it measures or commands. If the law of supply and demand is the same to-day that it is to-morrow, and to-day it commands twice as much as it will to-morrow, that is an unstable standard.

The Senator assumes that gold is immovable, that gold does not change; and neither does it, if you measure it by itself. Neither does silver. Measure silver by itself and it is as unchangeable as gold. Measure it with gold, and it is as changeable as gold, and not a bit more so. Measure silver with commodities. That is the proper measure to determine the stability of money, the things that it commands and controls; and if it has controlled them all along for a series of years exactly in equal or nearly equal quantities, making proper allowance for change in supply and demand, then that is a stable money; but if it fluctuates as gold prices have fluctuated up and down, then it is evident that it is not stable money.

I find a great many people believe that gold is a stable money, because it is the only money that has been in practical use in this country as the standard money. Silver has been in use as a depreciated and degraded money, although it has always been able to buy and pay just as much as gold; but it has been always been under the ban of the displeasure of the capitalists of this country.

Up to 1871, there was but one single gold standard country in the world, and that was Great Britain. Prior to 1816 there was not a country on the face of the green earth that had exclusively a gold money. The old philosophers, and the learned students like Locke, declared that silver is the stable money. Locke was a single-standard man, and not a double-standard man, as my friend from Delaware [Mr. HIGGINS] seemed to think when he referred to him in his speech. Locke was never a double-standard man, never a bimetallist, but a monometallist; a silver-money metallist, declaring that there could be but one standard, and that silver was the only metal fit for that standard; and it was so declared by a committee of the House of Representatives in this country as late as 1829 or 1830.

All the world prior to 1816 regarded silver as the chief money metal of the world. It was everywhere the favorite money, and it practically remained so outside of Great Britain until 1871, when Germany took the first step towards the demonetization of silver. In 1847 the government of the Netherlands, a country that I suppose has more men learned in political finance than any other country in the world in proportion to its population, appointed a commission to determine which was the best money metal for the standard. Now, this was before there was any influx of gold from California. It was before there was any depreciation of gold by the large output from Australia, California, and Russia. That wise financial country adopted silver, and the committee reported to the government that they took silver because it was the stable money of the word, and because up to that hour, as up to 1871, it had been everywhere when compared with commodities more stable than gold.

Mr. MCPHERSON. Why did it change?

Mr. TELLER. It changed because the Government of Germany in the first instance, the United States in the second, the Latin Union in the third, withdrew from silver the protection of law.

The Senator from Oregon [Mr. DOLPH] the other day said the stamp of the Government can not make good money; that it is the intrinsic worth that makes good money. Now, I want to ask the Senator from Oregon what has become of the intrinsic worth of silver that in 1873 was worth $1.29 an ounce, and is worth today 73 or 74 cents. Intrinsic value ought to be the same always. I think the Senator from Oregon confounds the commercial value with the intrinsic value. I think he is right according to the dictionary definition to say that silver and gold have intrinsic value, but I think with the Senator from Nevada that if he were to write a treatise on political economy he would hardly speak of gold as having intrinsic value.

Mr. DOLPH. I am satisfied to use the word as defined in the dictionary for two hundred years to express what I want to express by it; and I do not expect to write a treatise on the subject. That is good enough for my purpose.

Mr. TELLER. I do not propose to waste any time upon the question whether it has intrinsic value or whether it has not, because the term we always understand, and I make no criticism of the Senators use of the word "intrinsic." What is meant by it is that it has a metal value, that somebody wants it because he can make use of it somewhere. Now, gold and silver have qualities that commend themselves to the whole world. There is no history so old that it can not be found that silver and gold preceded it, and I say there is no history so old that the law touching silver and gold had not preceded that history. I assert here now that there is no natural money. Aristotle declared that ages ago, and nobody has ever improved on his definition of money from that day to this. Money is just what the law makes it.

Now, it does not follow because money is what the law makes it that the Government can make money out of everything, out of potatoes and out of wheat and out of corn, and make it good money. The government of some countries could say that a bushel of wheat should discharge a debt of one dollar, and it would discharge that debt, I suppose. I do not say the Government of the United States does that; but I have no doubt it could be done by some governments that have more ample powers touching those things than ours.

The relation between gold and silver and its use as money is one of absolute law, and I challenge any historian or reader of history to show anywhere in history, profane or sacred, modern or ancient, where gold and silver have circulated as money, that the law had not fixed the amount and the relation that existed between the two metals.

Mr. PLATT. May I ask the Senator a question?

Mr. TELLER. Certainly.

Mr. PLATT. Does the Senator think that if the United States should provide a dollar coin of silver at a ratio of 5 to 1 it would have the same debt-paying power as a gold dollar of 25.8 grains?

Mr. TELLER. That would depend on a great many questions, and would necessitate my entering into a discussion of very intricate and difficult features of finance. That I do not care to do. Suppose the Government of the United States cleared the country of every dollar of money, wiped it all out. You would have nothing but barter. The Government of the United States says now we will have $500,000,000 of gold; we will have $500,000,000 of paper; and we will have $500,000,000 of silver; and the ratio between the silver and gold shall be 5 to 1, or any other ratio the Senator from Connecticut may suggest.

If we needed three times as much money as we had, it is barely possible that we could float it at that very different ratio from everybody else in the world. It has been done. It was circulated in the Indies in the early times at 12 to 1, when the ratio was 14 and 15 in Europe; it circulated in Japan at 4 to 1; in China at 6 to 1. That was at a time when the means of intercourse were very limited, and it was not easy for anybody to get to China or Japan to exchange silver for gold. In the United States it might not be that you could thus maintain that relation, but if every nation in the world using money should declare that the ratio should be 5 to 1, that would be its ratio, and it would be its commercial ratio from that minute on, or any other ratio that they might choose to adopt. Does the Senator from Connecticut doubt that proposition? Then, if that is true, is not the relation that exists between the two metals one of absolute creation of law? Is there any commercial or natural relation between the two metals? The Senator from Oregon said the other day that an instance could not be found anywhere where the legal relation did not conform to the commercial relation.

Mr. DOLPH. No; but that you could not find a civilized nation where gold and silver coin circulated with the free coinage of both at a legal ratio different from the commercial ratio. That was the proposition. It was free coinage.

Mr. TELLER. At one time Spain had a ratio of 16 to 1. Portugal had a ratio right side by side of 14 to 1; France had a ratio of 15½ to 1. France had a ratio from 1726 to 1785 of 14.62 to 1, and England had a ratio at the same time of 15 to 1; and the silver and gold circulated in France, and silver and gold circulated in England, and all had free coinage of silver. The Spanish Government at one time added one-fifth of the value to their gold coin.

Now, I will admit that it is much more difficult to do that now than it was in those days, because the means of intercourse are so much greater, because the trade is so much more active, and because we have got so much like one commercial community. I started out to say in answer to the Senator from Oregon, who said Government could not make good money, tnat nobody else can make money but the Government, and nobody else ever did make money but the Government; I did not say, I repeat, that you could make money out of everything that exists. Under certain restrictions you can take copper and make it into money.

Now, I will go back to my first illustration of $500,000,000 of gold and $500,000,000 of silver and $500,000,000 of paper, and we will say the relation between the gold and silver is one of universal relation, and therefore there is no question as to its ratio. One billion five hundred million dollars of gold, silver, and paper doing the money business of this country. If there is any more money than is needed, the gold and silver will leave the country; the paper will not leave; it is not international money. There is nobody anywhere outside of the United States holding out their hands for paper money, and everywhere in the world all the goods of the world are being held out in front of the gold and silver when the relation exists between them as it did before 1873.

Now, if there is more, as I said before, than our distributive share of money, either gold or silver will go, and that will go which is the most sought after. Prior to 1873 it was silver all over the world that was the favorite money. That money

brought 3 per cent premium in this country over gold. Now it is gold. The fashion has changed, or, as one man said in the monetary conference of 1878, a craze for gold has taken possession of the people, and they want gold; so gold would go first, and then the silver; but neither will go unless the country has more than its distributive share of money.

[At this point Mr. POWER called for a quorum.]

Mr. TELLER. I was supposing the United States have three kinds of money, paper, gold, silver, in equal quantities, say $500,000,000 each. If, as I have before said, that was no more than the business of the country required there would be no difficulty to maintain the parity between the gold and the silver, between the paper and the gold and the silver, because each one has its duty to do, and full duty to do. But if the paper money should be increased beyond the amount demanded by the business of the country, beyond what it would absorb, then the paper will depreciate or commodities measured in that kind of money will rise. I am assuming now that neither one is redeemable in the other. Each one's value consists in the fact that it is performing money functions. Suppose with these $1,500,000,000 of money the Government adds to it all at once $500,000,000 more of paper and that the country does not need $500,000,000 of additional paper. If it does not need $500,000,000 more money, it has more money now than belongs to it.

What is going to become of it? By the rule that I laid down before, when one country gets more than its distributive share of the world's money, then it goes to some other place. Now, the paper would not go out of the country and the gold and silver would, when it could be put into the coin of the country to which it would go. But suppose, on the other hand, instead of increasing the paper they increase the gold and then there is a surplus of gold, the country not needing this additional gold, there is a surplus and it will seek some country where the surplus does not exist. When it can not be profitably used in the country where it is it will seek a country where it can have better treatment.

Mr. MCPHERSON. May I ask the Senator a question?

Mr. TELLER. Certainly.

Mr. MCPHERSON. Suppose, then, as I fear would be the result of the Senator's policy, it would give us too much silver, where could the silver go without a mint in Christendom open to its reception?

Mr. TELLER. I will get to that, if the Senator will wait. I am making an illustration now that I do not care about going away from.

Suppose some morning the holders of gold in this country with $500,000,000 wake up and find, when they take up their morning paper, that the day before the Government of the United States had demonetized gold; that is, the Government had said it will no longer take gold for taxes, it will no longer pay debts between individuals, what would the Senator from New Jersey, if he had his pocket full of that gold, do with it? He would say at once, "Well, this is not legal-tender money here; it is legal-tender money in Great Britain; it is good somewhere else; it is valuable still to me." But suppose the next morning when he took up his paper he found that every country on the face of the earth had demonetized gold, that every country had declared that gold was no longer a legal tender and should not be received for public dues, does the Senator suppose that he would have a place then to send his gold?

Mr. MCPHERSON. But is not the Senator illustrating his argument by practical impossibilities?

Mr. TELLER. No; I am not. I am going to make the application before I get through.

Mr. MCPHERSON. The Senator will please remember that gold is worth just as much to the holder without the Government stamp.

Mr. TELLER. It is not. Now, there is where the Senator from New Jersey is wrong. It is worth very little without the Government stamp, as I shall show him. Suppose all the world had declared that gold was no longer money. What use can you put it to? It is good for bangles and spangles, and rings and cases of watches; but there is more gold in the world than the world could use for such purposes in fifty years. Over forty-nine-fiftieths of it would be hunting a market, and what would become of it? Nobody would want it. It would be outlawed. It is not money. The day before the law interfered it was worth just as much in the melting-pot as it was in the coin, because it could be taken to the mint and put into coin, but you may have withdrawn that privilege from the holder, and then you destroy it.

Mr. MCPHERSON. What would the world do without it?

Mr. TELLER. Oh, that is another question. I am illustrating what use it has as money. That would be the result, and everybody knows it. I need not go into an argument to show that if every mint in the world was closed to gold, if every country denied its legal-tender quality, it would be remitted at once as a commodity, and a commodity with less demand for it than for silver under like conditions. It is now sought after by beauty and fashion and wealth. It would not be then. It would be despised and degraded. That is what has been done with silver.

All the world has outlawed it and put a ban upon it. Yet the Senator tells us that silver is unfit for money; that gold is the only stable money in the world; and that we must have a gold standard, and can not have a silver standard because nobody wants silver. Suppose we should then wake up to-morrow morning and find the mints of every country in the world open to silver and it was a legal-tender money in every portion of the world, does he suppose there would be any silver bought at 73 cents an ounce if the ratio was 15½ or 16 to 1? Then, is it not a creature of law? Is it not a fact, then, that the stamp of the Government is what gives money value to it after all?

Mr. President, I do not want to be misunderstood. I do not want anybody to say that I am advocating that the Government of the United States can make paper just as good as silver; and yet I assert here that under certain conditions it can be done, and it has been done. Irredeemable paper has been made as good as gold, and it can be done again, but the conditions must be all favorable. It is very doubtful whether there ever was a country so wisely governed that sometimes they would not overstep the bounds of prudence and take off the limitations which are absolutely essential to the maintenance of good paper money, because it can go nowhere when there is too much of it in the country in which it is made.

But if the United States, wiping out all its money, should declare that it would have $1,500,000,000 of paper money, and that was a scanty supply for the people of this country, and although not to be redeemed in silver or gold, it should be taken for public dues and should be legal tender between all citizens of this great country, the demand for it would be so great that it would be as good as gold, and it would be maintained exactly as Brazil has maintained her money without any metallic redemption so long as the Government should keep it within the wants of the people. The moment it went beyond that, that moment it would be depreciated, because it depends upon the demand and supply, no more so than gold but precisely alike. However, the demand for gold is a universal demand and the demand for paper is a local demand, and the two stand exactly alike, both created by law, the one a general law and the other local law. It is easier to make gold and silver good money than it is to make paper good money; it is safer, because if you overissue at your mint it seeks some other country; it overflows, it goes abroad, and does money duty in every part of the world where the paper can not.

I assert, then, you may make paper money exactly as Lycurgus made iron money, as the Ionian cities made iron money, exactly as Rome made for years the representative money that was issued by the Senate; but they were careful to limit the amount and never to get more than the wants of the community, because the moment they did, it having no place to go to do money duty and there being no demand for it to do money duty, it depreciated.

Mr. PLATT. To test the theory which the Senator from Colorado is propounding, that the law gives value to money, I wish to ask him a question. Suppose we keep on purchasing silver bullion and the price keeps on declining, would there not, in his judgment, come some place in the downward course where it might not have the same value.

Mr. TELLER. That is the logic of the proposition I have laid down and I will not depart from it. The time will come, if you put 412½ grains in silver dollars and continue to coin them, when the world will only pay you 50 cents, we will say for illustration, for the money when melted. The time will come if you continue when your silver will depreciate, that is, when you have it in superabundance. When the money demand has been reached there is no place for it to go; and that is why I have said the purchase under the Bland act and under the Sherman act, while lawful, was contrary to the correct monetary principles. Open your mints to free coinage of silver. Why do you open your mints? Because it is supposed that it is to give value to your silver. If you open your mints and it does not raise the price of silver, then you are in the same difficulty where you were with buying it precisely. The law is the same.

Mr. MCPHERSON. Will the Senator permit me to apply the theory he has advanced to the present conditions, and I should like to have his answer?

Mr. TELLER. I will answer.

Mr. MCPHERSON. Suppose we continue the Sherman law as it is to-day, without fixing some period of time when the purchase of silver is to cease and we are to stop buying silver with gold. I believe none of the gold which is now out of circulation will return. Now, there are $4,000,000,000 of silver in the world, and I assume the Senator from Colorado would not think from

our past experience that we would absorb in our circulation certainly more than two thousand million of money and use it properly without producing a glut?

Now, there is no demand for silver anywhere upon the earth. Our gold is out of circulation. It stays out. There is no reason in the world why it should come in. Then we must begin to build up our currency in some way to take the place of the departed gold. Now, where do you get it? You get it from the stock of $4,000,000,000 that is in the world. You get it from the stock of nearly $200,000,000 coinage value that you took from the mines last year.

I want to ask the Senator how long it would be before we would have no coin currency but silver? When we reach the point of $2,000,000,000, assuming that to be an estimate of the amount of money we might use, what use are we to make of the other $2,000,000,000 of annual product of the mines? Our currency would not absorb it. We can not absorb it in our circulation. We have then reached a point where we alone of all the nations of the world are standing under this great load of silver. We have lost our gold and we have got silver.

Now, I have heard the Senator in some of the speeches that he has made here upon the floor ridicule the idea that France would part with her silver, that Germany would part with her silver, or that there was any country in Europe that would part with silver. Let me ask the Senator, in this exchange of gold for silver, because our gold has left us, it has gone into the arts or has gone abroad where it is more appreciated, what is to hinder France from taking the $2,000,000,000 of silver which she has in her Treasury and bringing it here to exchange for our gold, we taking her $250,000,000 of silver?

Mr. TELLER. I have said repeatedly that there is only one way to treat silver, and that is to treat it as money metal, and to treat it on an equality with gold upon some ratio to be established by law. Then I am met by the Senator from New Jersey and other Senators who do not agree with me by saying, in the first place you can not fix the relation between the two; nobody can give value to silver in gold. If money is merchandise that is true; but if it stands by itself as independent to some extent of the laws that govern commodities, and I assert that it does, then it is not true.

You may fix the value of it just as France fixed it, at 15½ to 1, and Spain and Portugal had it at a different ratio. In 1726 France fixed the ratio, as I stated before, at 14.62—to be accurate, at 14.625—to 1. Then France, at a later period, jumped up to 15½ to 1, arbitrarily, and the commercial market immediately assimilated itself to it. As I have frequently said, the market for silver is the mint and the market for gold is the mint.

Mr. McPHERSON. One mint might take it all.

Mr. TELLER. One mint might take it all and a hundred mints might be required to take it all, but as long as the mints are open there is a market.

The Senator from Oregon said the other day that it is utterly impossible to fix the value of silver. He said the Government of the United States might just as well try to fix the value of wheat. I submit to the Senator from Oregon or any other Senator, if the Government of the United States would establish an agency in the city of New York and buy all the wheat in the United States at a price fixed at a dollar a bushel when it was 75 cents all through the country, every farmer would put his price at the Government price less what it costs him to get it to New York.

If the Government established agencies all through the country the Government would buy and every farmer would ask for his wheat exactly what the Government was going to pay, less what it costs to get it to the agency. Does anybody doubt that? If the Government did not do it, suppose there is a great milling company like the one the Senator from Minnesota [Mr. WASHBURN], who sits before me, is connected with, big enough and strong enough, we will suppose, to take all the wheat in the country. They announce that in Minneapolis they will pay $1.50 a bushel. They would get all the surplus wheat in the country at $1.50 if their money lasted; and everybody in the United States would ask $1.50 a bushel for wheat less what it cost to get it to that point. It would not all go to Minneapolis, but its price everywhere would be governed by that market. That is what the mint does for silver and what it does for gold. It makes a demand at a fixed price, and so regulates its price throughout the world.

When the Bank of England in 1844 fixed the price of gold at £3 17*s.* 10½*d.* that became the price of gold everywhere else. Why? Because Great Britain is the great commercial center of the world, and anybody who had gold was glad to get it in money that bought anything and everything in Great Britain and anywhere else. If, when the Government fixed the price or the Bank of England fixed it, they had said it should be £4 instead of £3 17*s.* 10½*d.*, that would have been the price of gold the world over, because England was big enough, and strong enough, and rich enough to command the whole world in that line.

Mr. ALDRICH. I am disposed to agree very largely with the Senator from Colorado in the line of argument he is now pursuing; and I think he will agree with me simply as to the question of volume to be offered.

Mr. TELLER. That is it exactly.

Mr. ALDRICH. The resources practically.

Mr. TELLER. That is right.

Mr. ALDRICH. The only disagreement there can possibly be between the Senator from Colorado and myself on this question is whether the United States of itself——

Mr. TELLER. Alone.

Mr. ALDRICH. Has resources sufficient to fix the value.

Mr. TELLER. That is the point exactly. The whole question lies in the ability of the milling company to take all the wheat and pay for it. It can fix any price that it sees fit, from 50 cents to $2 a bushel, if it has the money to buy all the wheat of the country or the world; and so the Government of the United States can buy all the silver of the world if it is sufficiently rich and strong.

[At this point the honorable Senator yielded the floor.]

Monday, October 23, 1893.

Mr. TELLER. Mr. President, some days since I was discussing the question before the Senate, and I had reached a point where I was asked whether I thought the Government of the United States could with the free coinage of silver maintain the parity between gold and silver dollars. Before I proceed to give my reasons in detail I wish to lay down one general proposition, which seems to me to be necessary to the conclusions I have reached.

While money is not merchandise, its value is determined by the law of supply and demand as much as the value or price of commodities. I think it is an important point to be kept in view that the value of money is determined entirely by its supply as compared with its demand, and that whenever the supply of money, no matter whether it is gold, silver, or paper, exceeds the demand, then there is a depreciation of the money or a rise in prices.

The Senator from Nevada [Mr. JONES] who has occupied the floor to-day dwelt at some length both to-day and on a former occasion upon that proposition. It seems to me it is a proposition which does not need any illustration or proof, and in the argument which I shall make I shall assume that it is an admitted economic fact.

Now, if that is the true, the question arises, will the free coinage of silver give us more silver money than the country can use. If it will, then the question becomes a serious one as to what its relation may be to commodities.

On a former occasion when discussing this question I laid down what I thought and believed to be a sound economic principle, one that is supported by all modern writers on political economy as well as by the experience of the world, that all the money of the world is the result of positive law; that there is no such thing as natural money, and never was.

I want now, before I go further, to insist that the relation between the two metals, gold and silver, is one of absolute law; that there is no such thing and there never has been any such thing in any part of the world at any time as a commercial value of gold or silver except as it grew out of statutory enactments. I do not mean to say that in every country where that relation exists there has been a positive legal enactment to establish it, but I mean to say that the relation which exists arises from the fact that somewhere in the world there was such a relation established by law, which has been accepted in that country and in other countries as to the exact relation between the two metals.

I assert here that no student of history can point me to a single instance where these relations have existed that it can not be determined that such relation was the result of law. As I said on a former occasion, I repeat now, written history does not go back far enough to give us the first date when this relation between both gold and silver was established by law.

More than two thousand and two hundred years before the Christian era there was in China a ratio established by law. How long before that period it had been established it is impossible to say. A coin still extant with words on it equivalent to "good for gold" was in circulation in China more than two thousand and two hundred years before the Christian era. "Good for gold" meant, of course, that it was exchangeable for a certain amount of gold. That amount must have been established either by custom or by law. Taking the history of all the countries that have been examined on this subject where positive enactments are found, I think I am justified in saying that it must have been one established by law there. If it was any other than the positive enactment of law there would have been, of course, a fluctuation in the amount of gold that was to be received for the coin, which was composed of other metal than

gold, and at one time it would have called for more gold than at other times.

We find that in India, at least one thousand and five hundred years before the Christian era, there were positive statutes, so old that there is no history showing when they were enacted, providing what the relation should be between silver and gold. The Roman law provided what the relation should be. In all the countries of the world, both before the Christian era and since, where the two metals were used contemporaneously there was legislation as to what that relation should be. So I repeat, there has been no such thing as the commercial relation, in my judgment, uninfluenced by law.

When France in 1726 established a ratio between gold and silver that existed up to 1785, there was a different ratio in Spain, a different ratio in Portugal, a different ratio in England, and a different ratio in other parts of the world. While it was 14.62 in France it was about 10 to 1 in India, 4 to 1 in Japan, and 8 or 10 to 1 in some other portions of Asia. But the French ratio existing until 1785 was very nearly if not quite the European ratio; and when in 1785 France went from 14.62 to a ratio of 15½ instead of 14.62 the whole world went to that ratio practically, as the result of French law.

When Great Britain abandoned the double standard in 1816 the ratio still existed between gold and silver in Great Britain as it existed between gold and silver in France, with the single exception that if a man had silver in Great Britain he could not go to the British mint and convert it into coin, but he could go to the French mint, and therefore the difference in the French price of silver and the English price was simply the difference between what it would cost the holder to take it to the French mint, which was a trifle; or when, as in some portions of the period since 1816, there was an unusual demand for silver in India, then there was a premium in England on silver even over that which could be had by taking it to the French mint. But the French mint substantially maintained the ratio of silver throughout the world at 15½ to 1.

That was determined by the English commission of 1888. I am not going to spend very much time in discussing this proposition, but I wish to read from the report of that commission. They determined that question in 1888. They determined that the stability of silver with reference to gold was the result of French law. I read from the final report of the Royal Commission on gold and silver in 1888, signed by all the members of the commission:

The remedy which has been put before us most prominently, and as most likely to remedy the evils complained of to the fullest extent possible, is that known as bimetallism.

* * * * * * *

186. It must be borne in mind that in the case of other commodities the effect of changes in the supply and demand is both more marked and more immediate. These commodities are generally produced for the purpose of consumption at an early date, or within a comparatively short period. The supply at any time available for the market, or capable of being placed on it at short notice, is therefore a very important element in the process by which its value is fixed.

The precious metals, on the other hand, are but to a slight extent consumed, and the available supply consists of the accumulations of previous years.

It follows, therefore, that in their case a diminution or an increase in the new supply is of less importance than in the case of consumable articles, and that an increase or diminution in demand has also a smaller effect. The important consideration with regard to them at any one moment is rather the relation between the total stock then in existence and the then existing demands upon it.

* * * * * * *

189. Looking, then, to the vast changes which occurred prior to 1873 in the relative production of the two metals without any corresponding disturbance in their market value, it appears to us difficult to resist the conclusion that some influence was then at work tending to steady the price of silver and to keep the ratio which it bore to gold approximately stable.

* * * Prior to 1873 the fluctuations in the price of silver were gradual in their character, and ranged within very narrow limits.

* * * * * * *

The maximum variation in the former year was ½*d.* and the average not quite ¼*d.*, while in the latter year the maximum was 2⅞*d.* and the average nearly 1½*d.* It has not been, and indeed hardly could be, suggested that this difference can be accounted for by changes in the relative production or actual use of the two metals.

191. The explanation commonly offered of these constant variations in the silver market is that the rise or depression of the price of silver depends upon the briskness or slackness of the demand for the purpose of remittance to silver-using countries, and that the price is largely affected by the amount of the bills sold from time to time by the secretary of state for India in council.

But these causes were, as far as can be seen, operating prior to 1873 as well as subsequent to that date, and yet the silver market did not display the sensitiveness to these influences from day to day and month to month which it now does.

192. These considerations seem to suggest the existence of some steadying influence in former periods, which has now been removed, and which has left the silver market subject to the free influence of causes, the full effect of which was previously kept in check.

The question therefore forces itself upon us: Is there any other circumstance calculated to affect the relation of silver to gold which distinguishes the later period from the earlier?

Now, undoubtedly the date which forms the dividing line between an epoch of approximate fixity in the relative value of gold and silver and one of marked instability is the year when the bimetallic system which had previously been in force in the Latin Union ceased to be in full operation; and we are irresistibly led to the conclusion that the operation of that system, established as it was in countries the population and commerce of which were considerable, exerted a material influence upon the relative value of the two metals.

So long as that system was in force we think that, notwithstanding the changes in the production and use of the precious metals, it kept the market price of silver approximately steady at the ratio fixed by law between them, namely, 15½ to 1.

193. Nor does it appear to us *a priori* unreasonable to suppose that the existence in the Latin Union of a bimetallic system with a ratio of 15½ to 1 fixed between the two metals should have been capable of keeping the market price of silver steady at approximately that ratio.

The view that it could only affect the market price to the extent to which there was a demand for it for currency purposes in the Latin Union, or to which it was actually taken to the mints of those countries is, we think, fallacious.

The fact that the owner of silver could, in the last resort, take it to those mints and have it converted into coin, which would purchase commodities at the ratio of 15½ of silver to 1 of gold, would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio, and would tend to keep the market steady at about that point.

That is signed by the entire commission, consisting of twelve members. I wish to read in connection with that a short extract from the report of the minority of the commission, composed of one-half of the members, but which may be now considered, I think, the opinion of even more than one-half of the members. I will first read further from the report signed by Lord Herschell and others who were considered the gold people of that commission, and then I will read from the minority report to which I have referred. The commission say:

9. However much opinions may differ as to the extent of the evil arising from the increased difficulty which a fluctuating exchange interposes, we do not think its reality is open to question.

* * * * * * *

101. There can not be two opinions as to the very serious effect which the continued fall in the gold price of silver has had on the finances of the government of India.

* * * * * * *

102. We are fully impressed with a sense of the difficulties which surround the Indian government, and of the serious questions to which any proposed additional tax must give rise.

It is not only the embarrassment which has already been caused to the government of India that has to be borne in mind, but the impossibility of foreseeing to what extent those embarrassments may be increased and their difficulty augmented, by a further depression in the value of silver.

* * * * * * *

We think that in any conditions fairly to be contemplated in the future, so far as we can forecast them from the experience of the past, a stable ratio might be maintained if the nations we have alluded to were to accept and strictly adhere to bimetallism, at the suggested ratio. We think that if in all these countries gold and silver could be freely coined, and thus become exchangeable against commodities at the fixed ratio, the market value of silver as measured by gold would conform to that ratio, and not vary to any material extent.

* * * * * * *

119. Apprehensions have been expressed that if a bimetallic system were adopted gold would gradually disappear from circulation. If, however, the arrangement included all the principal commercial nations, we do not think there would be any serious danger of such a result.

Such a danger, if it existed at all, must be remote. It is said, indeed, by some that if it were to happen, and all nations were to be driven to a system of silver monometallism, the result might be regarded without dissatisfaction.

We are not prepared to go this length, but, at the same time, we are fully sensible of the benefits which would accrue from the adoption of a common monetary standard by all the commercial nations of the world, and we are quite alive to the advantage of the adoption by these nations of an uniform bimetallic standard as a step in that direction.

This was signed by Lord Herschell and Mr. Courtney, a member of Parliament, the latter of whom, in an article in the Nineteenth Century for April, 1893, said:

Five years ago I joined with my friends in deprecating any attempt to establish an international agreement for the free coinage of both gold and silver as standard money. I have advanced with further experience and reflection to the belief that such agreement is to be desired, and that it could be accomplished with the minimum of change and with great advantage to the Empire and the world on the conditions I have suggested.

He was then in favor of other countries joining in it, but at that time he was opposed to Great Britain joining in it, and now he says he is in favor of Great Britain also taking part in that kind of an alliance.

I now read what I referred to from the report of the other members, consisting of Louis Mallet, Arthur James Balfour, Henry Chaplin, D. Barbour, W. H. Houldsworth, Samuel Montagu, six members of the commission.

28. We think that the above remarks upon the evils affecting both the United Kingdom and India, if taken in connection with the more detailed statement in Part I of the report, will sufficiently indicate our view as to their nature and gravity, and that they are largely due to the currency changes which have taken place in the years immediately preceding and following 1873.

We think that too much stress can not be laid upon the novelty of the experiment which has been attempted as the result of the above changes. That experiment consists in the independent and unregulated use of both gold and silver as standards of value by the different nations of the world.

We are strongly of opinion that both metals must continue to be used as standard money; the results of using them separately and independently since 1873 have been most unsatisfactory, and may be positively disastrous in the future.

It can not be questioned that until 1873 gold and silver were always effectively linked by a legal ratio in one or more countries.

It is equally indisputable that the relative value of the two metals has been subject to greater divergence since 1874 than during the whole of the

two hundred years preceding that date, notwithstanding the occurrence of variations in their relative production more intense and more prolonged than those which have been experienced in recent years.

29. In 1873 and 1874 the connecting link disappeared, and for the first time the system of rating the two metals ceased to form a subject of legislation in any country in the world.

The law of supply and demand was for the first time left to operate independently upon the value of each metal; and simultaneously the ratio which had been maintained, with scarcely any perceptible variation, for two hundred years gave place to a marked and rapid divergence in the relative value of gold and silver, which has culminated in a change from 15½ to 1 to 22 to 1.

And there has been a much greater divergence since that time, as everybody knows.

PROPOSED REMEDY.

30. It appears to us impossible to attribute the concurrence of these two events to a merely fortuitous coincidence. They must, in our opinion, be regarded as standing to each other in the relation of cause and effect.

We can not, therefore, doubt that if the system which prevailed before 1873 were replaced in its integrity most of the evils which we have above described would be removed; and the remedy which we have to suggest is simply the reversion to a system which existed before the changes above referred to were brought about—a system, namely, under which both metals were freely coined into legal-tender money at a fixed ratio over a sufficiently large area.

The effects of that system, though it was nominally in force only within a limited area, were felt in all commercial countries, whatever their individual systems of currency might be, and the relative value of the two metals in all the markets of the world was practically identical with that fixed by the legislation of the countries forming the Latin Union.

As regards the possibility of maintaining such a system in the future, we need only refer to the conclusion at which our colleagues have arrived in section 107 of Part II, and with which we entirely agree.

That is what I have read.

34. No settlement of the difficulty is, however, in our opinion, possible without international action.

The remedy which we suggest is essentially international in its character, and its details must be settled in concert with the other powers concerned.

It will be sufficient for us to indicate the essential features of the agreement to be arrived at, namely, (1) free coinage of both metals into legal-tender money; and (2) the fixing of a ratio at which the coins of either metal shall be available for the payment of all debts at the option of the debtor.

35. The particular ratio to be adopted is not, in our opinion, a necessary preliminary to the opening of negotiations for the establishment of such an agreement, and can, with other matters of detail, be left for further discussion and settlement between the parties interested.

We therefore submit that the chief commercial nations of the world, such as the United States, Germany, and the States forming the Latin Union, should in the first place be consulted as to their readiness to join with the United Kingdom in a conference, at which India and any of the British colonies which may desire to attend should be represented, with a view to arrive, if possible, at a common agreement on the basis above indicated.

36. We have indicated what appears to us to be the only permanent solution of the difficulties arising from the recent changes in the relative value of the precious metals, and the only solution which will protect this and other countries against the risks of the future.

Mr. President, I have read this to establish the fact that the relation between gold and silver, according to the opinion of the English commission, both the majority and the minority, is one to be established by law.

I have not lost sight of the fact that this commission declared it should be done by an international agreement, nor have I lost sight of the fact that they said its success depended upon the area over which it extended. The Senator from Rhode Island [Mr. ALDRICH], when I was last on the floor, put a question which it seems to me covers the whole ground; and that was whether it was not to be determined by the resources of the country that should attempt it. That is all there is of it.

I do not say that Rhode Island, if it was an independent nationality, could maintain free coinage and open its mints to all the silver of the world. I should think it would be a very doubtful experiment for Rhode Island to try it alone, or Colorado. A witness before the English commission when asked whether he thought that England could do it declared that it could, and when asked if he thought the Isle of Wight could do it alone he said that the Isle of Wight could not do it alone, because if you keep in mind the proposition I laid down that the value of money depends upon its demand, there would not be a demand for all the money that might under such circumstances come out of the mint of Rhode Island or the Isle of Wight.

The question is whether, if we open our mints, there will be a demand sufficient to absorb all the silver that will come to the mint to be coined. That is the gist of the whole question. If that is found in the affirmative, then there is an end of the controversy. If it is found in the negative, then, practically, there is an end of the controversy also.

We come then to the question whether, if the United States should open her mints to the free coinage of silver, there would be such a surplus of silver brought to the mints that the demand for money would not be equal to the supply. Of course if that were the case the money would depreciate, the silver would depreciate, the paper money would depreciate, and gold, to some extent, would depreciate also.

Mr. GEORGE. What does the Senator say about gold?

Mr. TELLER. The gold to some extent would also depreciate, not to the extent perhaps that the other kinds of money I have mentioned, inasmuch as the gold would find access to all the mints of the world, but it would fall to such an extent that it would be more valuable to be exported than to remain in domestic commerce and trade; and that is what the opponents of the free coinage of silver allege would take place.

There we take issue with them. We say there is no reason to suppose that would be the fact. We say there is no such surplus of silver in the world as would come to our mints and overwhelm them, and thus depreciate our stock of money.

Mr. GEORGE. How about the annual supply?

Mr. TELLER. The Senator from Mississippi asks me how about the annual supply. I remember that the Senator from New York, Mr. Evarts, a few years ago addressed the Senate on this subject. He was, I think, very thoroughly informed on the subject, and I remember he said, "There is no difficulty whatever in my judgment in taking care of the annual supply of silver; all I am disturbed about"—or words to that effect—"is that we might get the surplus silver now in coin in other parts of the world."

So far as the annual supply of silver is concerned I do not know how much it amounts to. I know what the statistics of the mint state on that subject. I do not believe the statistics are correct; but assuming that the amount is in the neighborhood of $175,000,000 of new silver coming into the world every year—I am speaking now of its mint value—this amount has disappeared. It has either been used in the arts, or it has gone into the coinage of the countries that still coin silver in a subsidiary way, or it has gone into the great sink of silver, Asia. I do not believe that anybody in this country who is at all familiar with the condition of the markets of the world will claim that there is any surplus silver bullion anywhere.

The Senator from Missouri [Mr. COCKRELL], in a very exhaustive speech recently on this subject, gave us the statistics as to the coinage of silver throughout the world for a number of years past, and showed that the coinage had absorbed all the silver; that there was no surplus silver. The Senator from Nevada [Mr. STEWART] more than once has told the Senate, after careful researches in this direction, that the world contains no surplus silver bullion anywhere. In 1890 when the proposition was before the Senate for the free coinage of silver and when another proposition came for the purchase of a large amount of silver there was an accumulation in the city of New York of about $9,000,000 or $10,000,000 of silver bullion. That I understand has practically disappeared. The last time that I looked at that question it had got down in the neighborhood of a million, and I assume that it has practically gone, if not entirely.

Now, how much silver is used in the arts it is somewhat difficult to say, but every year the amount that is used in the arts is increasing, as all will admit. Suppose that in 1894, if we went to the free coinage on the first of January, all the new silver in the world should come to our mints over and above what is taken in the arts. We would not under any conditions get to exceed from $100,000,000 to $125,000,000 of silver. Does anybody say that the Unites States could not absorb that amount of silver for 1894 without detriment to its financial condition? On the contrary, would it not be a beneficent thing if the Government of the United States could secure $100,000,000 of money of that kind.

There is no country in the world where there is a surplus of silver to-day, whether it be coin or whether it be bullion; and the demand in Asia is an increasing demand, or had been up to the time when the India mints were closed. Nobody who is at all familiar with affairs in India believes that the British Government can close the mints of India and cease to coin rupees. The commission did not assume that that was to be the condition. On the contrary, they assumed that there would be a coinage by the government equal to what there had been by individuals. The trade of India had demanded that a certain amount of rupees should be coined every year, and they asserted that the government would undoubtedly be required to coin the same amount, the distinction being that the government would make the difference between the mint value and the market value of the bullion instead of having it made by individuals.

China has called for more silver within the last two or three years than heretofore. She has now a mint of her own. How much will be coined there nobody can tell. Notwithstanding the India mints are closed, silver still goes, as I said a few days ago, to India, and how long it will continue nobody can tell, but a considerable quantity of the world's production must go to India beyond all question.

Mexico, the greatest producer of silver in the world except this country, coins on an average from 24,000,000 to 26,000,000 silver dollars every year, that disappear as absolutely from the commerce of Europe and America as if they were dumped into the sea. Mexican dollars go to China, they go to the Straits Settlements, they go to different sections of Asia, and there they disappear; they never return.

So no man has any reason to suppose that the Government of the United States would get a tithe of the amount of silver I have mentioned. I doubt very much whether the Government

of the United States would get any more silver in its Mint if it was open than it receives now. When I make that statement I expect some Senator who is opposed to free coinage to rise and ask me—I have heard it so frequently—what benefit, then, do you get from free coinage that you do not get from the purchase of bullion by the Government?

There are $4,000,000,000 of silver money in the world. Prior to 1873 that money was international money. It was the money that could go to every portion of the world and find somebody wanting it for money. There were millions and hundreds of millions of the human race who would not take gold as money; and if there had been a great surplus of gold, if there had been four or five times as much gold as there was in the world, the European and the American demand and the demand from some portions of Asia would have been too small to have taken up this great amount of gold. Silver always found somebody ready to take it, and it was maintained at a premium on gold over the ratio established in this country, and in fact a portion of the time over the ratio established in France.

Asia will continue to use silver. Europe will continue to use silver. But while Asia will use it as international money among Asiatics, Europe is using it as domestic or national money. Silver in Europe has ceased to be an international money, and it has ceased to be an international money in this country.

In other words, then, silver has ceased to perform the entire function of money. If you have more than your distributive share of silver it has no place to go. If you have more than your distributive share of gold the mints of the world are open to it, or at least enough of them are open to it that it will go there, and there it will be coined into money.

Now, if you can open the mints of the world to the free coinage of silver you restore silver to its original state as an international money, and thus you give it a power to regulate prices that it does not now have.

One of the axioms of monetary science is that prices are determined by the volume of money. If you have in this country $1,500,000,000 of money, and you reduce it to $1,000,000,000, what is the result. Prices fall. In other words, the $1,000,000,000 of money measures all the commodities of the country exactly as $1,500,000,000 had measured them. If you add the $100,000,000 of money you have raised prices.

I do not mean to say that if there was $1,000,000,000 of money in this country and you added $500,000,000 more, making it $1,500,000,000, that immediately prices would be in proportion to the addition which had been made to the money, because other circumstances might control that. Your money would not depreciate so rapidly as might at first be supposed. Why? Because the very fact that you had added a large amount of money to the existing stock of money would stimulate enterprises, would start new businesses, and thus increase the demand for money, and maintain its purchasing power. If the amount that is added is comparatively small in proportion to the whole it will simply have a tendency to excite greater activity, and may not change prices. With the increased supply may come a demand equal to the supply, and so prices remain stable.

It may be laid down as an established and settled principle of monetary law that prices are determined by the amount of money in circulation. I do not mean by the amount of money that may be in a country. The Government of the United States may have half the money of the United States locked up in its Treasury. That would have no effect. The banks of the country might lock up a great portion of the money, as they have recently locked it up; and individuals might lock it up. That would do no good. It is the money in circulation which determines the price of commodities.

If we open our mints to free coinage, we increase the price of all the silver bullion in the world. When France opened her mints to silver, she said in substance, as one of her delegates to the monetary conference of 1881 said—France said to all the world, "Bring your silver and gold to our mints. For every kilogram of gold you bring we will give you 3,100 francs; for your silver we will give you 200 francs," good money, one equal to the other. Then who would sell their silver for less than that? If the Government of the United States should open its mints, and say for every ounce of silver in the world brought to us we will pay $1.29, who would sell their silver anywhere in the world for less than that, unless it shall be asserted here and proved that all the world would cease to desire silver the minute that we made it more valuable than it now is? Who can believe that? There is no reason to suppose that the silver of the world would find its way to our mints, whether new silver or old. The moment there was a place where silver could be sold for $1.29, that would be the price of silver all over the world to any man who wanted it. The man who wants to make it into wares, into teaspoons, into cake baskets, pitchers, and trays, and things of that kind, must pay for it $1.29 an ounce, because the holder knows there is a market where he can sell it for $1.29; and the Government which desires to add to its subsidiary coinage must pay $1.29 an ounce for it, because there is a great purchaser ready and willing to take it and convert it into money at $1.29.

Suppose there should come a great quantity of silver to this country, suppose $200,000,000 of silver should come, what would be the result? The first thing that would happen would be the elevation of prices; immediately everything would advance in price. That is but another way of stating that there would be a depreciation of money. The man who comes from abroad to coin his silver would have to exchange his silver dollars, when he got them coined, for American products of some kind, and if the price of those products was too high he would simply say, "I can not exchange my silver for American products at a profit which enables me to transport them to other countries, and, therefore, I prefer to keep my silver until such time as I can get products cheaper."

That is the beauty of the automatic system. Whenever a country obtained more gold or silver than it needed for its currency everybody would be discouraged from going to the mint with his gold or silver, because the money received in return for his bullion carried to the mint is only valuable to him as he can exchange it for products in the country; and if products kept rising in value, kept going up, then he would take his gold and silver alike to some other country, and put it into the mint where there was a less supply of money and a greater demand. Thus free coinage regulates not only the country which has it, but all the world; and if a country no greater than France regulated the relation of silver to gold throughout the world, why can not we?

When the great output of gold from California, Australia, and Russia came into the commerce of the world to such an extent that in ten years there was more gold produced than had been produced in the three hundred and fifty-six years preceding, everybody was alarmed about gold.

I have in my possession now a contract made in the State of Massachusetts in 1859, where a great water-power company proposed to sell its water, making long contracts for water power. So afraid were they that gold would depreciate that they made their contracts payable in silver bullion. That was done in France; that was done in Germany, and that was done even in gold-standard England. The contracts were made payable in silver, because those who made them believed that gold would depreciate; and it did depreciate.

Mr. HOAR. I can inform the Senator that there were at one time in existence in Boston contracts providing for payment in a certain kind of Russia iron.

Mr. TELLER. Very likely. I do not know anything about that, for I have not examined into it; but I know, because I have a copy of the contract, that the Holyoke Water Company provided in their contracts that they should have their pay in silver, because they thought gold would depreciate. They had read Chevalier, I suppose, or else they had read some of the articles in the European press on that subject.

What was the result? The mints of England were open to gold and ours were open to gold. So Spain, Portugal, and France had their mints open to gold, and so gold found no difficulty in being converted into money wherever people wanted it, and France, which has been the great regulator of finance in this world for a hundred years or more—or at least was so up to 1873—took a great deal of the gold and converted it into coin. France coined more gold in a short time than she had coined in ages, and as that gave her more money than she wanted, she disposed of her silver. She sent her silver to India; she sent out the money that the people of India wanted in preference to gold. Thus was the relation between silver and gold practically maintained; but the great amount of gold produced depreciated not only the gold but the silver of the world, and prices steadily rose for several years.

Where are we to get silver aside from the yearly production of bullion? I know it is said that Germany has some fifty or sixty millions of silver to sell, but whether Germany will sell it or not is a question. If, however, Germany should sell it, and if she sent it here, it would not disturb our finances if we coined it all.

It is said that France will dispose of her silver. Whoever makes that statement can have given but little attention to the financial condition of France. France has locked up in her great bank over $250,000,000 of silver, upon which she has issued, at its mint value, paper money. Is the Bank of France going to call in that two hundred and fifty and odd millions, about one-third of the whole silver of France, and put gold behind her notes? If she does she must put behind every one of them just as many 5-franc pieces in gold as she heretofore had of 5-franc pieces of silver. Does anybody believe that the Bank of France would be willing to lose such a large sum of money as she must

lose on her $250,000,000, for it would amount to at least seventy-five or eighty million dollars?

The French Government have not any silver, and never had any silver. It is the people of France who have it. Will the people of France send here their 5-franc pieces, which are doing money duty right by the side of gold at the ratio of 15½ to 1 and exchange them at the ratio of 16 to 1? Is there any danger of individuals doing that, or is there any danger of banks doing it? Nobody will pretend that that will be done.

But it is said that the government of France might conclude to retire silver and adopt the single gold standard. I do not believe there are five men of influence in France who are in favor of the single gold standard. The great mass of Frenchmen, who are in public life, and in private life also, for that matter, are opposed to the single standard, whether it be gold or silver. They are for the double standard. When you dispose of France, you dispose of the only country in the world which can send any amount of silver to this country to disturb our finances.

France, as has been said on this floor, holds some of the money of Italy, some of the money of Switzerland, some of the money of Belgium, to the extent of at least $130,000,000 of silver, which she could present to these countries and demand that they should give to her in exchange her silver money; and if those countries should not have it they would be compelled to pay the difference in gold.

France has resisted all the efforts of the moneyed men of England to compel her to demand this $130,000,000 or more of silver in gold because she has not desired to create a greater scarcity of gold; because, as one of the French commissioners said at the Paris conference, France has an abundance of gold and France has an abundance of silver. He said further that France finds no difficulty in maintaining the two metals at proper relations to each other. Gold and silver are alike in France; the one is as good as the other; and the bank of France, unlike the Treasury of the United States, when paper obligations are presented to it, exercises its choice of paying to the holder of the paper either silver or gold, as best suits the bank.

The mints of India were open to the coinage of silver, at a ratio of 15 to 1, until the 26th day of last June, and yet there was never any flood of silver going to India. The mints of Mexico are open to the free coinage of silver to-day, and yet no amount of silver has gone into their mint, except such as goes there for the purpose of being coined and sent abroad.

I know it will be said that India is not a country like the United States; but there is gold in India, and in my judgment there is as much gold in India as there is in the United States.

Mexico is not a rich country like ours, and yet there are a great many things which we could buy by taking our silver there; for the truth is that the prices in Mexico are silver prices, and they are the silver prices of thirty years ago, while ours are the gold prices of to-day, which are much less than the prices of thirty years ago.

Silver has remained stable in India and stable in Mexico and in China, while gold, which was made the standard in this country, has been appreciating and prices have been falling. Should the mints of the United States, as I have stated, receive more silver than we wanted, the price of commodities would immediately advance. That would have a tendency to check the bringing of silver to the mints. Thus the whole matter is regulated by the demands of a country for money.

We are now told that we can not maintain the free coinage of silver because the country is not big enough. The English commission, from whose proceedings I have read, said that an international agreement was necessary to do it; that to carry out such a policy it must be extended over a great area. That was the English view of it, or rather that was the view of the monometallistic branch of the commission. They admit that the parity between gold and silver could be maintained if there were people enough using the silver and people enough taking it when it came out of the mint.

The countries of the Latin Union, with a population but little more than ours, had no difficulty at all in keeping their mints open and taking care of the silver of the world, and they could have taken care of the silver of Germany if they had seen fit to do so. There is no doubt of it. If France had kept her mints open three or four years longer the surplus silver of Germany would have been absorbed by the French people, exactly as they absorbed the world's gold, which poured into them in the early history of gold-mining in California, Australia, and Russia. But France did not propose to do it. France had come out of a great war with Germany, and there was a hostile feeling in existence, and France said "we will not take your silver," which Germany was pouring in upon her to such an extent that her mints could not coin it as fast as it came in.

I have stated before on the floor of the Senate, and I will state again, that the man who took silver bullion to the French mint was entitled within ten days to receive silver coin for his bullion, subject only to a trifling charge for seigniorage or for coinage. France found her mints so full of bullion that she could not comply with that provision of the statute, and she closed her mints. But, I repeat again, that if France had kept her mints open, and silver had continued to fall, when it had fallen 3 per cent or thereabouts—a little more than 3 per cent—then silver bullion would have been brought to our mints for coinage, if our mints had been open at that time. That would have raised the price of silver again in Europe, and thus there would have been but a slight fall in the price of silver as measured by gold.

The countries composing the Latin Union have but little more population than ours and not a tithe of the business; and I will venture to say that the sixty-five or seventy millions of people in this country—there being in the countries of the Latin Union seventy-two millions—this country can absorb and needs more money than all the countries of the Latin Union. Our people have more commerce and more trade, and the demand is greater for money in the United States than it is in the entire Latin Union. We have not as much as we could use. If we had it we could maintain the stability of prices which we have not been able to maintain.

I do not believe any student of this question is afraid that we shall be overwhelmed with the world's silver, whether new or old. I will not say that such a claim is a pretense, because I know some people are afraid of it, but I do not believe they would be afraid if they would take the pains to study the history and the conditions of the world with reference to the use of the metals, gold and silver. The silver coin coined at a ratio of 15½ to 1 or 15 to 1, would not be brought to our mints to be coined at a ratio of 16 to 1. The loss would be from 3 to 7 per cent on new coins and much more on old, besides loss of interest, cost of transportation, and exchange.

But suppose we could not; suppose we opened our mints and we could not maintain the two metals at a parity, which I regard as so exceedingly desirable. I do not myself believe that there is silver enough in the world with which to do the business of the world on a metallic basis. I believe that the use of the two metals is essential to the true prosperity of this country; but suppose that gold should leave this country and go abroad, we have been told—and we were told by the Senator from New Jersey [Mr. MCPHERSON] the other day when discussing that question—that we should be on a silver basis, and then be stopped. What will happen when we get on a silver basis? What great catastrophe would take place then? We should be infinitely better off if we were on a silver basis to-day than we have been for the last fifteen years, when we have been on a gold basis.

If we were on a silver basis we should have more metallic money back of us as a basis for our system upon which to maintain our paper money; we should have more metallic money to maintain what the Senator from Nevada [Mr. JONES] calls the equity of contracts; and, what is of equal importance, we should have more to maintain the stability of prices. What we have been suffering from in this country for the past fifteen years is that we have not had stable prices. We never shall have stable prices so long as we are tied to the single standard of gold. With silver we should be in a condition to trade with more people than we can trade with to-day on a gold basis. More than twice as many people in the world are holding out their hands for silver as their chief and desirable money metal than are holding out their hands for gold. The countries to which we send our great exports are the countries which are using gold, and the countries from which we buy, and where the balance of trade is against us, are the countries which are using silver. We could trade with South America, to whom we owe every year a large debt; we could trade with the Asiatic countries, to whom we every year owe money, and we could pay it in silver if we should go to a silver basis.

What do we care as to the character of the money England pays us. If she has silver to pay us and pays us in silver at the world's value of silver, all right. We send to England three times as much every year as England sends to us. She must either pay us the money, or she must send back our securities.

The only country with which we trade in Europe—I believe I may say the only country—where we did not last year have the balance of trade in our favor, was Italy, and that was a trifling balance in favor of Italy.

Mr. ALDRICH. May I ask the Senator a question?

Mr. TELLER. Certainly.

Mr. ALDRICH. Does the Senator from Colorado think that the decline of prices in the last twenty years has been greater relatively in the United States than it has been in other countries?

Mr. TELLER. No, I do not think it has been so great.

Mr. ALDRICH. Does the Senator, then, think that we could by the currency arrangements of the United States maintain a

higher level of prices relatively than could be maintained in any other country without disjointing our currency from the currency of the world?

Mr. TELLER. We can not. We shall not do that, and that is what I am contending. The Senator asked me whether I thought the prices had been less in this country than anywhere else. I answer they have not, except, of course, we are the great producers of wheat, and wheat will be cheaper where produced than where consumed. The fall in the price of wheat in England has been as great as here; the fall of all things in Great Britain has been as great as here; and the fall in the price of labor there has been greater.

What I complain of is that the monetary condition of the world is out of order; and it is out of order because of the treatment of silver. My theory is that the United States is big enough and rich enough to control the whole currency question throughout the world. When Mr. Gibbs, the former president of the Bank of England, was before the British commission, and was asked "Can Great Britain settle this silver question alone?" he said, "Unquestionably; any great country can settle it." So I say that all we have to do is to adopt some system here which recognizes silver as money in the true and proper sense of the term, and the whole world will eventually and immediately, in my judgment, come to the same position. If that defect is removed prices all over the world will rise in proportion exactly as they have fallen because of a defect in the currency system.

Mr. ALDRICH. The Senator having answered my first proposition, I put another, which is, does he suppose that the United States would not only be able through its currency arrangements to maintain but to increase the general range of prices of commodities everywhere in the world?

Mr. TELLER. The best people of the world, including the members of the English commission, admitted that in a large degree the fall in prices was the result of a disturbed monetary condition. The doctrine of overproduction has been abandoned, except by a very few.

The Senator from Delaware, who sits on my right [Mr. HIGGINS], asserted the other day in the course of the speech of the Senator from Nebraska [Mr. ALLEN], that the great West had destroyed the price of wheat by its overproduction. I showed him from a statement which I then gave, and which I could repeat now if it were necessary, that the world's product of wheat had remained practically the same for eleven years, and yet prices had fallen immeasureably; the world's demand for wheat had increased, while its product remained the same. It ought to have increased in value per bushel, but, on the contrary, it had fallen. It had kept pace with all other commodities.

If the Senator from Rhode Island should take one hundred different commodities and start with 1873, he would find that without exception they have fallen; probably some have not fallen as much as others, but all of them have fallen. He would find further, if he would go outside of the great cities, where their growth has influenced the price of real estate, that everywhere in this country and in Europe the soil on which men toil and make their living is to-day worth very much less than it was worth thirty years ago, with an increased demand for its use by an increased and growing population.

What can make this difference between prices now and prices thirty years ago of houses and farms? The products of men's hands, nay, of such things as are not the products of men's hands, diamonds and precious stones, are worth less to-day by 40 per cent than they were thirty years ago. It has not been caused by overproduction either; it is because there has been a fall in everything or an increase in the purchasing power of money.

I shall be met by the Senator from Rhode Island and the Senator from Delaware with the statement that labor has not fallen. Mr. President, labor has fallen. The Senator from Nevada said the other day that the price of labor had reached the climax and is on the downward road. Labor has fallen in every country in the world in the last few years, unless it may be in Asia; there I believe it has not fallen; but in all the European countries it has fallen. It is falling here; it has fallen more than 20 per cent in less than six months in the United States, and, as the Senator from Nevada said, it is not altogether a question whether labor is high or not, but the question is what are the opportunities for labor.

The number of unemployed, as is suggested to me by the Senator from Kansas [Mr. PEFFER], is increasing every day to an alarming degree, not only here but throughout the world. Production has not been profitable for years to the men who produce in any part of the world. No wheat-grower in this country has made any money growing wheat for years. It used to be a saying, and I believe it to be a correct one, that unless wheat is worth a dollar a bushel at the ports of export the farmer gets practically no profit; and yet in the city of New York wheat has been selling at 66 cents a bushel within the last week, and that, too, with a crop of 200,000,000 bushels less than we had two years ago, 100,000,000 bushels less than we had last year, and with the world's crop 200,000,000 bushels less than it was the year before, and yet it is worth but 66 cents against 83 cents last year and $1 the year before. Wheat is selling in Great Britain for 78 cents a bushel, and a few years ago it sold for $1.50.

Mr. ALDRICH. Will the Senator allow me to interrupt him?

Mr. TELLER. I will.

Mr. ALDRICH. To what influence does the Senator attribute the recent fall in prices here and elsewhere compared with those of twenty years ago?

Mr. TELLER. Mr. President, I attribute the recent fall in prices throughout the world as the result of the disorganized and deranged financial condition of the world, owing to its treatment of one of the money metals. The Senator from Rhode Island should keep in view the fact that monetary disturbances are rarely followed by a fall in prices immediately. It takes time. Gradually, little by little, the prices drop. I have before me—and I am going to read it, because there has been some question about it—an article written by Prof. Foxwell, of England, in the Contemporary Review of last December, as to falling prices in Great Britain.

I wish to repeat again, that a fall in prices is nothing but another method of stating the appreciation of money. I was very much surprised the other day to hear the Senator from Delaware, whom I do not see here, say that he was uncertain as to whether there had been an appreciation of gold. Mr. President, I did not suppose that anybody in this country or anywhere on the face of the earth would deny the appreciation of gold. The British commission unanimously admitted it in 1888. Some of its members said they did not think that the fall in prices was entirely due to the appreciation of gold; they thought other considerations came in. Undoubtedly, with some other articles that may be true; but it has been admitted by everybody that since 1873 there has been an appreciation of gold anywhere from 35 to 45 per cent. Where a pound of English money would buy a hundred pounds of a given article, it will buy one hundred and fifty now. It will buy more than that, because that is only a fall of 33 per cent in prices.

I want to say before I read the statement of Prof. Foxwell that in this country we have had two things which have kept up the price of labor; one is the protective system of the United States, a system professedly adopted for the purpose of keeping up the price of labor; and it has been our boast on this side of the Chamber for many years that we had been successful in that effort. Another great agency in keeping up the price of labor here is the labor organizations of this country, in which all the laborers of the country are aggregated.

These two things have kept up the price of labor in this country beyond the price of commodities; and the man who produces and who hires his labor has seen day by day his product falling more rapidly than the price of the labor which created the product. Capital engaged in enterprises of that kind has ceased to be remunerative; and to-day there is no field for American capital in productive enterprises. To-day the use of money is to loan it, and not invest it for business purposes. Matthew Marshall, the financial writer of the Sun—and I think he is a reasonably accurate gentleman in his statements—stated not long ago that one-half of all the money loaned by the associated banks of New York was loaned to stock speculators, the men who are putting up and down the prices of American securities, railroad bonds and stocks.

What inducement has a man to borrow in this country now? None whatever. He can not buy a farm and make it pay. He can not build a factory and make it pay. He can conduct no business whatever at a profit when prices are falling all the time, steadily, year after year. If he wanted to farm where the price of wheat was high last year, and he were at all careful to look into the future, knowing the conditions, he must have foreseen that the price of wheat would have been less this year than it was last. And I say now, with the smallest crops that we have had for years, with the relative demand for wheat greater than heretofore and the relative supply less, I have not any doubt that in a year from now, if this bill shall be passed and we continue in this policy of contraction of the currency, wheat will sell for less in the American market than it is selling for to-day.

The last thing to fall in price is labor, and it is the last thing to rise.

Prof. Foxwell says:

It is easy to see the results of this unfortunate policy—

He is speaking of the silver question—

It could, indeed, only have produced the effects which we have actually seen to follow it. Since 1873 gold has greatly appreciated in value, some 35 per cent; silver, remaining steadier, has nevertheless depreciated in value some 10 per cent; and the relation between the two metals, which for two centuries has oscillated pretty closely about the ratio of 15½ to 1, or 10 rupees to

£1, has shown the most violent and serious fluctuations, standing as low as 24 to 1.

These are mere matters of fact, which can not be denied by those who understand the terms in which they are expressed. But it is the fashion with a small but active set of writers in London, who unfortunately control the access to the most important section of the daily press, to assert that these facts are not of sufficient importance to public interest to warrant us in seriously reconsidering the policy to which they are due. Let us inquire, then, what the appreciation of gold and the rupture of the par between gold and silver really mean.

The increase in the value of gold, known technically as its appreciation, is usually measured by reference to the average price of wholesale commodities; and when our object is to ascertain the retarding or stimulating effect of currency chances on trade, this method, however inadequate for other objects, is the only proper one. When we say that gold has appreciated 35 per cent, then it is only another way of saying that wholesale prices have fallen in a corresponding degree.

As business men will easily understand, such a change is, when serious and long continued, profoundly depressing to trade. It operates like a friction brake upon the wheels of industry and commerce. All property and stocks are depreciated; hence the numerous failures of building societies and ruinous foreclosures of mortgages. The burden of fixed charges is increased, and the producer finds the margin of profit disappear, and thus employment becomes restricted and wages fall. The weight of taxation increases automatically, and the burden of all debts, including the national debt, in which every taxpayer is concerned, is steadily aggravated. It will be said that some one must gain—that at all events the owners of gold debts and mortgages, and England as a creditor country, must benefit by an increase in the value of the metal in which payment is due. This view seems singularly shortsighted, and is contradicted by facts. The depression caused by the fall of prices checks investment and brings down interest. The sense of injustice felt by debtors at the unfair increase of the value of their debts leads to a natural tendency to repudiate or to cut down interest, and to a weakening of the obligation of contracts, of which we have had notable examples in the case of rents and tithes. In short, creditors, like every class, find their real interest in the long run in what promotes the national prosperity.

This is equally true in the case of wages, which is so important as to require separate notice. It is sometimes said that wages fall more slowly than prices, and therefore wage-receivers benefit by a continued fall of price. The prosperity of the working class is so incomparably the most important interest in the country, that if this were so, any other ill effects of the appreciation of gold would, in comparison, be of no moment. But it is not so. Those who say it is assume that the demand for labor is unaffected by the change. But experience and reason alike show that a fall of prices, by destroying profits, destroys enterprise, and seriously contracts employment. Thus, as in the case of every other great national loss, though the employer and the trader may serve as buffers for a time and bear the first brunt of the shock, the burden ultimately falls on the shoulders of labor. We seem to have reached the point at which the buffers have been thoroughly squeezed, and the strain is now falling on wages. It would be easy to fill pages with the reductions in wages in the present year alone.

This was written in December last.

Seven and one-half per cent reductions have been common with miners and quarrymen. The South Wales miners have been reduced 17½ per cent under the sliding scale, and a recent notice increases this to 28½ per cent. Cumberland, Durham, and Northumberland miners have accepted 10 per cent reductions. Ten per cent is a common reduction in the metal trades. Tailors in Leeds were reduced 25 per cent in June. Agricultural laborers are suffering worst of all. In October the farmers of Northwest Norfolk reduced wages to 11*s.* a week; and the general opinion seems to be that laborer's wages in the eastern counties will be generally at 10*s.* this winter. It is well known that a strike of huge proportions, already affecting 60,000 hands, has commenced in the textile trades. Everywhere, in short, the outlook for labor is gloomy. The direct mischief of this fall of wages is grave enough; but there is the indirect effect also to be taken into account. In these days of high tariffs the home market is more than ever important to us; perhaps the only one on which we can certainly reckon. What will be the effect on our trade if the wage-receivers, the great body of our home consumers, lose even 10 per cent of their purchasing power?

The injury inflicted on British agriculture by the appreciation of gold is too obvious to require much notice here. The price of wheat stands lower this year than at any time for a century before. Rents and wages are everywhere falling, and yet unprecedented distress prevails amongst farmers. There are some, indeed, who attribute these troubles to free trade. But wheat prices remained at about their old level long after the abolition of the corn laws; and neither free trade nor cheap freights (which have had infinitely greater effect) will account for similar depression in the Western States of America. The agricultural depression has, on the average, followed the downward course of general prices. If farming has suffered more than other industries, the reasons are not far to seek. Its fixed charges are larger in proportion, and more difficult to adjust to the change, especially in the case of wages, where the margin for reduction is so small; and secondly, unlike most other industries, it has a formidable rival in silver-using India, whose producers, while they have largely profited by cheaper freights, have been enjoying under a silver currency an almost perfectly steady standard of value.

I call the attention of Senators who are so much alarmed at the idea of a silver standard to this statement of Prof. Foxwell, that in India they have been enjoying a silver currency of almost perfect steadiness and value.

The root evil, in short, of the present monetary situation is the continued appreciation of gold, depressing, as it does, the enterprise of the industrial class, the great borrowers, without really improving the position of the comparatively inactive class, the lenders of capital. This is so constantly ignored, or slurred over, by the city press, that it might be desirable to say still more on the point; but we can fortunately refer the reader to an article in the Statist for November 5, 1892, in which he will find the imperfections of our appreciating gold standard exposed with great vigor.

Mr. President, there is very much more in this article of the same general character which I do not care to read.

I suppose no one will deny the statement that I have made as to the great fall in the price of labor in this country within the last few months. I believe nearly all of the New England factories have made a reduction in the price of labor. I have seen it stated all the way from 10 to 25 per cent. I know that very many of these manufacturers have closed their doors because they have felt that they could not afford, under existing conditions, and conditions in their judgment soon to follow, to continue to pay the wages that they have been paying. I know also that in a great portion of the Western country the price of labor has fallen. It is so inevitably. Why should it not? With wheat selling in some of the wheat States at 30 cents a bushel, how can it be expected that farm laborers, who are hired by farmers, will receive the pay that they were receiving when wheat sold in those sections for 70 cents a bushel.

Mr. President, I was diverted somewhat from what I was saying as to our ability to maintain silver and the benefits that we would derive if a single silver standard had been maintained in this country. I do not desire to spend a great deal of time on that particular question, except to say that money is more valuable for its stability than for anything else. When money is not stable then there is a condition in any country that is not to be desired. If gold is the stable money metal of the world, then gold is the most valuable for the standard. If, on the contrary, silver is the most stable money metal of the world, then silver is the most valuable standard.

I have heard it said here that gold was the stable money of the world; that gold never varied. I remember to have heard the Senator from Ohio once say here on this floor that gold never changes. Why, gold has been the most unstable of money metals, infinitely more unstable than silver. It has never been regarded until of very late years as a stable metal. John Locke declared that it was too unstable for a standard. As I said the other day, a committee of the House of Representatives so declared in 1829 or 1830, I forget which. All the world has so declared at different times that it was not the stable money, that it fluctuated. How do you determine whether it is the stable money?

Money is the measure of the value of commodities. If to-day an ounce of gold measures 100 bushels of wheat, and to-morrow 200 bushels, who will say that gold is stable? Of course, whether gold or silver measures the value of commodities there is some consideration to be given to the question of supply and demand, but I am speaking now of things being equal. If to-day a certain amount of gold will buy 2 bushels of wheat, and to-morrow or next year it will take more, when there is no reason why wheat should not have remained at the same price, when the demand and supply for wheat are practically the same, everybody must admit that the variation is in gold, and not in wheat.

We have practically gone to a gold standard in this country. France is bimetallic, and yet to a certain extent prices in that country are determined by gold; Germany and all other countries in Europe the same. As suggested by the Senator from Rhode Island [Mr. ALDRICH], if the price in one nation of the world will practically be the price in others, you can not maintain high prices in this country unless it is because you have depreciated money and have low prices where you propose to sell your surplus products.

In all the gold countries there has been a steady fall in prices during the last twenty years. What has been the condition in the silver-using countries? As I read from Prof. Foxwell a moment ago, in India there has been a stable currency and prices have remained and are practically in the condition to-day that they were twenty years ago. The same may be said of China.

I have before me a table prepared by a gentleman in China, contained in a letter that he wrote the North China Herald, in which he states that he has in his employ a laborer whose business it was to take care of a horse that he had. It was this laborer's business out of his wages to have the horse shod, to buy grain for the horse, to hire an assistant to take care of the horse; he had had this man for twenty years, and he said he was paying him exactly the same price that he paid him twenty years ago. While the price of this man's wages included the purchase of all these different articles, yet the man had never during that time come to him for an increase of wages, because the $20 a month that he paid him, he said, would buy just as much of these things he had to buy and would employ just as much labor as it would twenty years ago.

Mr. ALDRICH. Will the Senator allow me to ask him a question?

Mr. TELLER. Yes, sir.

Mr. ALDRICH. Does the Senator say that this state of affairs would have been true in a nation of the civilization and activity of Great Britain?

Mr. TELLER. I think it would be the same thing if there had been a silver standard. I believe if we had gone to a silver standard the prices would have remained the same in this country. I believe that for two reasons:

First, I believe that if we had a silver standard there would not have been such a diversity between gold and silver as now exists. I believe if we had gone to a silver standard in this country we would have absorbed the surplus silver, and the mints of the world would not have been closed to silver.

I believe that we could maintain now in this country the sta-

bility of prices. I am not talking about what the prices should be, but I believe we could have maintained the stability of the price of silver better than we can with gold.

I will ask leave at this point to put in a table of index numbers for twenty commodities in China, to show the stability of prices in that country, without spending time to read them.

Table of index numbers for twenty Chinese staple commodities.

[Compiled by W. S. Wetmore from the returns of trade of the imperial maritime customs of China.]

*Assumed, returns of the article referred to not having been made.

SHANGHAI, *May 11, 1893.*

If that be true, if prices have been stable in silver-using countries and unstable in gold-using countries, that is a demonstration that silver is a better money metal than gold. It is barely possible that if all the world had been rushing for silver as it was for gold there might not have been that stability in prices in the silver-using countries that there has been in gold-using countries. But Europe having practically ceased to use silver as new money, the countries that were using it, like China and Japan—and I will say the same thing applies exactly to prices in Japan—were not disturbed by this everlasting scramble for gold, and have not had the difficulty in appreciating and disappearing money metals as they have had in Great Britain and the United States.

If anybody will take the financial papers of Great Britain he will never find one, whether it be the Economist, the Statist, or the Financial Review—whatever it is called—that is not talking about the disappearance of gold, a loss of gold from banks; and he may do the same thing with the French Economist, with the great German financial papers. Every one of them is talking about the danger of losing their gold. And that is the fright we have been in for the last year or two, that we are going to lose our gold.

Now, it does seem to me in making a metal the standard of measure for all our values it can not be a good measure of value if there is so much trouble to maintain it in every part of the earth. What does it mean? It means simply that there is not enough. It means simply that there is a scarcity of gold.

Mr. President, I have said we could maintain the two metals if we opened our mints alike to them, because I do not believe any more silver would come here than the business of the country would absorb. In other words, I believe the demand would be equal to the supply, and when the demand is equal to the supply of all of the money in the country there is not any difference in the money; there is not any such thing then as one money being cheaper than the other. They are all good money because they all perform the functions of money alike.

But we are told if we get silver and treat it as we treat gold and make it the cheap money of the country, the gold will leave the country. We were told here one night by one Senator that it would go in hiding, and by another that it would be exported.

Our attention is called to the Gresham law. Now, what is the Gresham law? I think most people who talk about the Gresham law have never read the law. It was not a statute. It was a declaration by Sir Thomas Gresham of a monetary principle hundreds of years older than he, that had been declared repeatedly by early writers on the subject of money. Writers before the Christian era had announced practically the same thing. It is based upon the ordinary selfish principle that a man having two things that will perform the same function exactly concludes that he will keep that which may perform more of the one function than the other at some time in the future; or, in other words, that to-day it will perform exactly the same duty, but he thinks to-morrow one of them will do more than the other, and he keeps the possibly best one until to-morrow.

Where bullion has been put into coin, when the silversmith (and there have been silversmiths in all times, I think; they preceded coinage; they were the first coiners) wanted to melt up a piece of gold or silver, he would melt the one that weighed the most. Why should he not? He takes them by tale. He does not take them by weight, and if he found a silver dollar that was four or five grains short and another silver dollar that was full weight, he would melt which one? Certainly he would not melt the light-weight one, because the light-weight one would buy just as much. He would melt the big one, or the one with most silver in it, and the same is true of gold coin.

Now, to say that when a man goes to the market ordinarily with two pieces of money, one being a gold piece fresh from the mint and another one that had been worn, he selects the light-weight one to pay out, is simply nonsense. That is not done. But if he is going to export gold and silver, then he looks over his hoard of gold and silver and picks out the full-weight ones, of course. The law of Gresham never prevails until there is a demand for money to go out of the country, or a demand for the melting pot, one or the other. So the influence of that law is absolutely infinitesimal and inconsequential in the ordinary affairs of life.

If we had gold and silver performing exactly the same functions in this country, why should a man put in his closet and lock up one more than the other, unless there was somewhere in the world a demand for the gold that did not exist for the silver? Open mints make the demand equal for the two metals everywhere. When that is accomplished there will be no inferior money nor superior money; the law that applies to abraded gold will apply to abraded silver, and *vice versa*. The Gresham law will never come into play until you have too much money or there is a demand for export and you have to send your money out of the country. Then, of course, money goes not by tale, but it goes by weight, and the heavier the money is the more likely it is to go. That is all there is in the Gresham law.

Senators talk—some of them at least—as if gold had a will of its own, and they say that gold will leave the country, or as one Senator said, it will go into hiding. When asked what are you going to give for the gold to induce it to travel to foreign countries, he says it will go into hiding. If somebody wants gold abroad and is willing to pay more for it there than they will pay for it here, or if some man here who owes a debt abroad and can not pay it in any other way he is obliged to send his gold, and that is the way gold will leave us and that is the only way, and it will go under those circumstances whether we have silver or not. A nation like ours is rich enough to have a policy of its own; and by opening its mint the silver will flow to it just as long as the business of the country requires it, and when the business will no longer absorb it, the mint classes itself, because the holder of silver no longer desires to have it put into a coin that is becoming depreciated, or, in other words, prices are rising too high and he does not want to exchange his coin for products at less prices, which he must sell here or somewhere else at a loss.

The Senator from Iowa [Mr. ALLISON], who is not here, who

addressed us sometime ago, insisted that we could not have free coinage alone; that while he thought free coinage desirable we must wait for an international conference, and when we had an international conference that allowed us to do so we could go to free coinage. In other words, the position of the Senator from Iowa [Mr. ALLISON] was that we could not do this alone, but we could do it with some other country. He did not tell us how many countries we must have to join us; and I understand from his remarks then and since and at other times that he thinks until England shall come to free coinage, or that England shall agree that we open our mints we can not open our mints.

Mr. President, we might wait forever, in my judgment, if we wait for Great Britain. Every utterance of Great Britain in the last twenty years touching this subject has been against using silver in her system of money. She stood in the way of an international agreement in 1878; she stood in the way of an international agreement in 1881; she stood in the way admittedly in the last conference, in 1892. Her delegates declared in language not to be misunderstood that has been repeated on the floor, and therefore I need not read it, that under no conditions would England go the the bimetallic system, and they wanted it understood, so that people should not be misled, that Great Britain did not intend to have in her system anything but gold, except to use silver as subsidiary money only.

Now, is there any reason to suppose that Great Britain will change her policy in reference to this question? I know, of course, that the industrial classes of Great Britain have been in arms and are insisting that there must be a change, but England has paid no attention to it and closed the mint of India against the protest of the best men who were consulted upon that subject and knew the most about Indian affairs. She closed it arbitrarily and closed it in haste; closed it, as one member of Parliament said, "by telegraph," and another member of the Parliament said the 287,000,000 Indians who were affected by it were not consulted nor their interests considered. It destroyed the Indian securities payable in silver. It reduced in value these securities (so said Mr. Chaplain in the House of Commons) more than a thousand million dollars. For the purpose of securing and establishing the gold standard throughout the world England was willing to sacrifice the holders of rupee securities to that extent, and yet the Senator from Iowa tells us that there are hopes and expectations that some day England may consent that we shall open our mints to silver.

The Senator from Iowa told us another thing, and that was that the governing classes of Great Britain were anxious that we should not cease buying silver. Mr. President, I challenged the statement then; I challenge it now. The great London press without exception are demanding that we shall cease to buy silver. The great banks of Great Britain and all her moneyed influence are demanding of us that we shall cease to buy silver and that we shall cease to use it in this country as money. I challenge the Senator from Iowa or any other Senator to show me a respectable paper that is not a bimetallic paper in England that has favored the continued purchase of silver in this country. I have before me here the latest utterance of the London Times on the subject, in which they are predicting dire disaster to the country if we do not cease the purchase of silver.

The gold monometallists of the world are in favor of the cessation by the United States of the use of silver, and they are in favor of it because they desire to put the whole world upon the gold standard. Mr. Gladstone told us why Great Britain wants the gold standard. He told us they are the creditor nation of the earth, and because of that fact they do not want to have silver used as money in Great Britain or anywhere else. He said they want low prices; they want more products to be paid to them when the balances are settled between them and their debtors. Mr. Rothschild, their representative in the Brussels conference, said in so many words that it was better to have wheat at 30s. than at 45s. I think that was the price, but anyway the lower the price of wheat the better. Other English monometallists in that conference said that low prices are what they want and not high, and they complained that bimetallism meant a rise of prices.

Well, Mr. President, a rise of prices might under some circumstances not be desirable, but under others it is. When we consider that not only in this country, but throughout the world, this is an era of debt; that the debts of the world have increased in the last twenty years to an extent never before reached in much longer periods; that we have more than doubled our debts in this country in ten years, and that low prices mean so much more to pay by the debtor, it is desirable that prices should rise.

Does anybody deny here that a dollar a bushel for wheat in Kansas, Nebraska, Colorado, the Dakotas, and Minnesota would be a blessing? Does not everyone know that every industry in the country would be benefited by having wheat in the States I have mentioned go to a dollar a bushel at the farmer's barn? It is true it would cost the laborer in the cities more to get his bread, but he will get it easier when wheat is a dollar a bushel in the Dakotas than when it is 50 cents, because then the great farming class will become consumers to a degree that they can not consume at the low price. How much does the low price of wheat and the low price of cotton decrease the consumptive power of the American people? The men who raise cotton and raise wheat are the consumers of other products; and when the prices go below a profitable production they become unable to consume of other men's products.

There is not a man working in a mill in New England who had not better pay $1.25 a bushel for wheat for his bread than to pay 50 cents, because then the farmer will be, as he has been heretofore, the great consumer of all kinds of manufactured products. It was said in Great Britain that the expendible income of the British farmer in a single year had fallen $200,000,000. What it has fallen to in this country I beg somebody to tell me, when our 400,000,000 bushels of wheat that ought to bring to the farmer at least 80 cents at his home, to be profitable, are selling at from 35 to 40 cents a bushel.

Not only is his expendible income destroyed, but his ability to pay his debts is destroyed. With a great mortgage debt upon a great majority of the farms of this country, with twenty-odd million adult laborers, men and women, boys and girls, who are producers on farms (I do not mean the men who work by the day; I mean the men who work on their farms, and produce and sell their products), to what has their expendible income depreciated or fallen? What shall we say of their ability to pay their debts, to get rid of the mortgages on their homes with such low prices? That is what we are concerned about at this time, or at least we ought to be.

Mr. PALMER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Illinois?

Mr. TELLER. I will hear the Senator.

Mr. PALMER. With the consent of the Senator from Colorado, I will ask him if he believes the free coinage of silver would change those conditions?

Mr. TELLER. If the Senator had listened to me he would have known that I had already stated that, and given the reason why.

Mr. PALMER. If so, it is quite satisfactory. I asked why. I did not hear the Senator on that point.

Mr. TELLER. I said that I believe the free coinage of silver in this country would have its effect upon the monetary systems of the whole world, and that the low prices of the world to-day are due to the present monetary condition of the world.

Mr. PALMER. Will the Senator allow me to say that that is not quite the answer I desire? Would the free coinage of silver by the United States relieve the world of the condition he describes it to be in?

Mr. TELLER. I believe it would. I have been trying to show for an hour or two hours why I believe it would. I believe that if the whole world would return to the bimetallic condition existing prior to 1873 there would be a return to the prices of that period, save and except as to those things where discoveries have lessened the cost of production, and in that case, of course, nobody desires to raise the price.

Mr PALMER. I understand the Senator to say that he believes the whole world would return to the former conditions; that the conditions now have changed; and I ask him the naked question, would the free coinage of silver by the United States alone produce the favorable condition he describes?

Mr. TELLER. I will not answer it in that way. The free coinage of silver by the United States alone, if no other followed, might not do it. The position I have been trying to argue, is that if the United States would proceed to recognize silver as money on equal terms with gold it would be followed by other countries, and then the monetary system of the world would be returned to the old system prior to the demonetization by Germany, the United States, the Latin Union, etc.

Everybody must admit that when there is a condition all over the world alike there must be the same cause for it. It will not do to say that we are raising wheat so much cheaper now than we did twenty years ago, that we can afford to sell it for 40 or 35 cents a bushel when we were then selling it for $1.50 or $1.25 a bushel. Nobody can pretend that there have been such improvements in the methods of raising wheat that the price now corresponds to the efforts to raise it compared with the effort required at that time. Everybody must admit that there is some reason why wheat is lower, independent of the fact that farmers have got better binders and better plows, because they are practically the same that they were twenty years ago, with very little improvement.

Mr. PALMER. I ask pardon of the Senator. I should be glad, if he will allow me, to say that within five years the

changes in the mere cost of wheat raising have been wonderful. When harvesters that sold five years ago for $254 are sold to-day for $125 it is very different.

Mr. TELLER. I will admit that the price of farm implements is less than it was some years ago, but not enough to make the decrease that the farmer sustains in the price of his wheat. There are a great many things that go to make up the cost of wheat raising besides the use of machinery. The machinery is good. It has been good for years. It is a little cheaper now.

But when the farmer buys a reaper or a mower he does not use it up the first year or the second year; if he is a good farmer it lasts him many years. While the farmer has had less to pay for the machinery with which he did his work he has had more to pay for taxes; he has had more to pay for a variety of what we call fixed charges than he did before; and he has had more to pay for his hired labor. Everybody knows that there has not been any money in farming for some years, except to the men who have lived by the side of a city and have followed truck farming, or something of the kind. Men in the great farming States of the Northwest have not been growing rich at farming in the last ten years. The man who put his own labor on his own farm, and that of his boys and girls, has possibly made a living, and it may be, in some instances, more; but it is his labor that has done it. If he has hired, there is not a farmer anywhere in the country who has been able to hire labor and make a living.

Mr. President, I know something about the farming business. There have been very few years in my life when I did not have something to do with farming. I was brought up in that class. I have been connected with farming all my life. I have been an observer of and sympathizer with that class of people; and it must be admitted by everybody that their condition is not satisfactory anywhere, whether it be in New England or on the great fertile prairies of the West.

Now, there are some other points that I want to speak of briefly. The Senator from Connecticut [Mr. HAWLEY] who sits on my right, and who I do not see here now, one day said that he did not think we could afford to overlook the experience of centuries and years, or words to that effect, in dealing with this question. That is what I complain of now, Mr. President, that the advocates of the single standard are endeavoring to try an experiment on the world.

Up to 1873 there was but one country in the world that had a single gold standard, and that was Great Britain. Then other countries went to the gold standard, and we have been put, so far as prices are concerned, practically on a gold standard; because, if not in law in fact, all the money we have in this country, whether it be gold, or whether it be silver, or paper, has been bottomed, to use the term, upon the gold of the country; and it does not make much difference if you have much money or little, after all you go back and measure your prices by the gold of the country. Your silver, notwithstanding it will buy as much as gold, has been treated as subordinate money, and so prices have been regulated very largely by the amount of gold in the country as they have been regulated by the amount of gold in the world, and silver, as a regulator of value throughout the world, has to a great extent lost its power. So we have been practically on a gold standard, on gold prices, and with continued falling prices every year.

Now, what is proposed here by the repeal of the law? It is that silver shall cease hereafter, not to be money in this country, but it shall cease to be a metal that will add to our money. I fear there is no prospect if this law is repealed that in my day or in yours, silver will be again recognized as a metal to be put into the money of this country. It does not make much difference to me what may be the promises of our friends who have heretofore been zealous in supporting silver; I can see obstacles that they can not overcome. So I think that if you repeal the law with no provisions attached to the repeal for the further use of silver we shall continue for a time to use the silver we have as money; but very soon, as I said the other day, it will be subordinated entirely to gold and will be redeemable in gold, and then, if not now, the gold in the country will fix the values, which will be lower then than they are now.

It is impossible to suppose that the people of the United States are going to continue to use silver as standard money if it is degraded, as it will be on the passage of this bill, by the fall in silver bullion. So we are coming to the single gold standard with all that that means; and that is what the world claims we are coming to; that is what the English newspapers declare we are coming to; that is what our own newspapers declare we are coming to. The English Statist the other day declared that if this law was repealed there would not be in the world a single new standard dollar of silver made for a generation.

Now, Mr. President, that is not an outlook that is to me at all encouraging. I know that with the destruction of silver in this country, when we shall cease to receive it at our mints and to coin it, there will come falling prices, stagnation in business. And all of this is under the pretense that the people of the United States want honest money, and that silver is dishonest.

Mr. President, for myself I resent the charge that I want dishonest money. I want honest money. I want stable money. I want money that to-day will buy to-morrow what it buys to-day. When any citizen makes a contract I want him to know how much labor, how much sacrifice it will require on his part to secure the money to pay what he agrees in that contract to pay.

I assert here that the gold standard is not a stable standard. I have here before me now an article on the appreciation of gold which I will on another occasion present to the Senate. Having spent so much time now, I will leave that and present it to-morrow or some other day, when I can get the opportunity. I shall do it to show the appreciation in gold throughout the world, and to show that silver has not depreciated, that silver has maintained in its bar form its purchasing power since 1873 up to the present time with a very slight variation. I intended to present that to-day, but I find my throat a little troublesome. I will present it at some other time. I understand the Senator from Nevada [Mr. STEWART] desires to take the floor, and I will present that feature of the case some other day, and yield to him.

Exposure of the Financial Fallacies of the President of the United States.

SPEECH

OF

HON. WILLIAM M. STEWART,

OF NEVADA.

IN THE SENATE OF THE UNITED STATES,

Wednesday and Friday, October 11 and 13, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. STEWART said:

Mr. PRESIDENT: There has been some criticism of the delays in coming to a vote on this question. I think those criticisms are unjust. I have no doubt that in one year from this time, if not sooner, everybody will agree that it was fortunate that there was some power in this Government to call a halt, to secure sufficient delay for the people to be heard upon the most important question that has ever been submitted to any legislative assembly.

The Senate of the United States, during its long history, has been the only body which has reserved questions

FOR THE DETERMINATION OF THE PEOPLE,

questions upon which the people have not been called upon to pass. I know, in my short experience, several important questions have been reserved here, which, if they had been decided hastily under the previous question, would have brought misery upon the country For example, on the 3d of July, 1870, the Senate had agreed, by unanimous consent, to vote upon a bill modifying and amending the naturalization laws. The discussion, by the way, had lasted for several weeks. When the hour of voting arrived, Mr. Sumner, then a Senator from Massachusetts, offered an amendment to strike out the word "white," the effect of which would have been to extend the right of suffrage not only to alien Africans, but alien Asiatics. The Senate was not advised as to the danger of extending the right of suffrage to Asiatics. The country did not know, then, that if those people had the right of suffrage they would come here by the millions and tens of millions, and that it would probably

SUBVERT OUR INSTITUTIONS.

At all events they would have taken complete possession of the Pacific coast.

When that amendment was offered I rose in my place and said that it was not within the terms of the agreement. Senators all about me said it was the first time that an agreement to take a vote upon a question to terminate debate had been violated. It was then suggested that we take a vote in Committee of the Whole, and after it was voted on it was suggested by several Senators that we would be absolved from our agreement. The vote was taken and the amendment prevailed. A contest then commenced. The majority in favor of the amendment was immense in the start. The sentiment here was almost universal that suffrage should be extended to Asiatics. We had already passed the fifteenth amendment, and the colored people in this country were entitled to vote; and it seemed a very little matter

to extend the right of suffrage to the few who might be naturalized.

THE GREAT MAJORITY OF THE SENATE

thought it was a trifling matter. The Senate refused to adjourn over the 4th of July, and on the 4th of July, 1870, there was a very fierce struggle. It commenced on Saturday, the 3d, and on the 4th of July there was a fierce struggle. Finally, on the night of the 4th, about 11 o'clock, a compromise was reached, which extended suffrage to persons of African descent and excluded the Asiatic race.

I do not suppose that there are now five men in the United States who would be in favor of extending suffrage to the Asiatics. Still, if the previous question had been enforced we would not have been heard for a moment, for there were only two or three of us who opposed the amendment, and the majority were very indignant with us for protesting. It almost seemed as if we would be driven out of the Senate Chamber for making the suggestion.

THE INDIGNATION WAS HIGHER

than I ever saw it that such a suggestion should be made. But the power of the minority to call a halt, have a reconsideration, and have the measure understood was valuable in that instance.

Here only two years ago, when there was a bill pending which many Senators believed would change our form of government and lodge the power and control of local elections in the hands of the Executive, the minority resisted for months and months by various devices, and when it comes to be submitted to the people it is believed that the great majority of the American people are against it. By that means a continuance was secured whereby

THE VOICE OF THE PEOPLE COULD BE HEARD.

I could mention many other instances where the Senate secured a continuance until the people could be heard on great questions. If there ever was a case when a continuance ought to be had until the people can be heard this is the one. The questions I have mentioned as compared with this were trifling. This, in my judgment, involves the fate of humanity. In this question the whole destiny of the human race is bound up, because it is impossible at this age of the world to leave both gold and silver and adopt any other measure of value. They may not be scientific; they may not be the best measure of value.

I am aware that as a scientific proposition it would be better if there was no commercial value in the money we use and if the value of each unit of money should depend upon the volume. If the volume of legal-tender money can be regulated there is no necessity for using either gold or silver, if governments and men could be trusted, if there was any limit to be put upon it, but during all the ages failures have taken place in making that effort. The truth is there has been no rule whereby the volume of money can be limited except one, and that is to limit it by

THE OUTPUT OF GOLD AND SILVER,

by the aggregate of the two metals and then leave rude nature to limit the amount. She has always limited it low enough. She has doled it out savingly enough. There never has been too much money when both metals were used, but whenever the mines were productive we have had prosperity.

When the mines gave out we have had adversity and finally barbarism. History is dotted with illustrations of the rise and fall of nations with the yield of the mines and with their decline. It marks the ups and downs of humanity. On a falling market and with falling prices you have stagnation, hard times, feudalism, barbarism, and slavery.

This age was especially blessed with discoveries of gold and silver. There was a prospect of continuous prosperity. There had been

A MONEY FAMINE PREVIOUS TO 1850,

but the gold and silver from California from 1850 to 1873 had set the wheels of commerce in motion, had inspired enterprise, had created a desire to acquire property, because money was not appreciated, but property was appreciated. Money was applied to its legitimate use, to exchange property; it was not hoarded. It was more valuable to invest in property. The energies of man were at their highest. When gold commenced declining the other metal came, and there was a prospect of an indefinite period of prosperity.

But in an evil hour the owners of fixed capital, the dealers in money, determined to set back the tide of prosperity, to reverse the wheels of enterprise that were moving forward, and to turn them back. They had calls for a large amount of money. They wished to enhance their bonds. To do that they must cut off the supply of money, so that it would be worth more, because the value of money depends on the number of units. They understood it perfectly. It was a simple proposition.

I shall not, at present, go through with the history of the devices by which this end was accomplished. I have done that on a former occasion. I may allude to it further on in my remarks. But by various devices

THEY STRUCK DOWN ONE OF THE METALS

and the principal metal, the one that had been the most reliable. They struck that down in order that the supply should be reduced to the minimum. The arts are absorbing all the output of gold, so that they inaugurated a money famine. They had a call for all the money that was in existence. Their bonds called for all that could be produced; and having a mortgage upon the world they destroyed one-half the basis, and thereby made it impossible for any more prosperity.

If they can keep silver destroyed there can be no more gold money, and they have a call for all that there is. You may go a little while on credit, but you will have to break. You may have little bubbles on credit, but as the basis can not be enlarged while population and business are increasing there must be a continuous fall; and there must be a rapid fall now, because silver is still money, and while it performs some of the money functions, it sustains prices. When it is entirely destroyed misery will result.

GOLD HAS ALREADY GONE UP 50 PER CENT.

and it has only commenced its career of advancement as compared with property. Unless this can be checked, unless the money volume can be enlarged there is no hope for humanity whatever.

Senators talk about the double standard and bimetallism, and in this Chamber I hear a great deal said about it with very little apparent appreciation of what is meant. What is meant by bimetallism? I thought that expression ought to be understood, but it appears that it is not.

BIMETALLISM IS SIMPLY THIS.

that you can make standard money out of either of the two metals; that is all. You can make standard money out of either of the metals at your pleasure. That is all there is in bimetallism.

Mr. PALMER. Does the Senator mean to say that we can not make standard money of both?

Mr. STEWART. Yes, either or both.

Mr. PALMER. I beg pardon.

Mr. STEWART. Yes, either, as you please. You can have the privilege of doing it with either. You can make it out of either.

Mr. PALMER. Or both.

Mr. STEWART. You can not very well make it out of both at the same time, because they have to be coined in different pots. That is all there is in bimetallism.

Senators talk about parity as if there was something peculiar and strange about parity. They do not appear to understand what is meant by that. When one dollar is made it is of the same value as the other; it has the stamp of the Government on it if you make it out of either metal. Of course, the dollars are all of the same value.

IT DOES NOT MAKE ANY DIFFERENCE

what they are made of. There you have a parity between the dollars. That of course you will have if you can make them out of either. If the law allows you to make the standard dollar out of either, one dollar will be just as good as the other. So far as that is concerned there is no trouble about it.

Senators talk about there being a difference in the commercial value of the metals before they are coined. This is the case in bimetallism. You will always use the most convenient metal, but where one is most abundant for the time being the cheaper metal will always be used.

That is the way it has worked through all ages. If you make a large discovery of gold, gold is more easy to get and is perhaps cheaper than silver at the ratio fixed, and everybody would use gold. They take that gold to the mint because they get just as much money for it as they could get for silver, and they would use that because it is most convenient; and the demand would all fall upon that metal and then it would go up equal to the other. As long as it was the slightest shade dearer than the other the cheapest would be used, because they have a right to use either.

That is bimetallism; and that is as it has been for twenty-seven hundred years, but I need not go back as far as that. For twenty-seven hundred years

THE TWO METALS HAVE KEPT ALONG AT A SUBSTANTIAL PARITY.

Sometimes there was a large production of one and sometimes of the other. The one most convenient to be had was always used; the demand fell on that metal. The man who loaned would loan the metal most convenient to get, and the man who had to pay for it would take that metal, so that was used entirely until it kept up to the other.

During the three hundred and fifty years previous to 1850 the relative production of the two metals at a ratio of 15½ to 1 was more than 2 of silver to 1 of gold at that ratio. Almost twice

as much silver as gold was produced. Von Humboldt says that between the discovery of America and 1803 there were 44 ounces of silver produced to 1 of gold, and taking the whole time no statistician pretends that there were less than from 31 to 35 ounces of silver produced to 1 of gold. Still, the commercial ratio during all that time never rose above 15½ to 1. We put a little more silver in our coin in 1834 than the balance of the world did. Our silver dollar went to a premium immediately. So the relative production did not have anything to do with their relative coinage value or their commercial value or nothing very materially, because, as I said, the slightest difference in their commercial value would throw all the demand upon the cheaper metal.

Then, again, between 1850 and 1860 there were only 4½ ounces, I believe, of silver produced to 1 ounce of gold. Still, their relative value was 15½ to 1. But within the last twenty years the relative production of the two metals has been more nearly equal than at any time during the history of the world.

THERE HAS BEEN NO PERIOD

when the relative production of the two metals at a ratio of 15½ to 1 has been so nearly equal as in the last twenty years. Then there can be nothing except legislation to make the market value of the two metals part company.

We are told that we can not have an independent policy of our own; that we must consult England; that we must do as England says. Is that true? Is the United States so helpless now that we are entirely subject to the will of Great Britain? Are we not strong enough to have an independent financial policy of our own? How many American citizens are willing to trust Great Britain to dictate our financial policy? She is doing it. She has done it for the last twenty years. She has shaped our policy absolutely for the last twenty years on this question.

In 1867

A MONETARY CONFERENCE WAS HELD IN PARIS.

Mr. Rivers Wilson represented Great Britain and Samuel B. Ruggles represented the United States. That conference was held with a view of extending the Latin Union, which had been formed two years previous, and which provided for a common coin and a common standard of weights and measures for five nations—France, Italy, Greece, Belgium, and Switzerland. That conference was held in 1867. We sent a delegate there. The chairman of the Committee on Finance, the Senator from Ohio [Mr. SHERMAN], appeared on the scene and wrote a letter recommending the single gold standard. Mr. Rivers Wilson, who appeared for England, said that under his instructions he could not participate in discussing the principles of the Latin Union, because that recognized bimetallism; that England in 1816 had adopted the gold standard and would not depart from it, but if they were there for the purpose of recommending the single gold standard he could vote on all their propositions; and he said he was happy to say he had been able to vote on all propositions and coincide with the conference. Mr. Ruggles informed his government that

BY THE AID OF A LETTER

from the chairman of the Committee on Finance, Mr. SHERMAN, they were able to induce nineteen nations to come into line and recommend the gold standard.

Afterwards the way it got through Congress I have already described in my speech giving the true history of the demonetization of silver. If anybody feels disposed to go through that history I invite him to read the speech which I made on the 5th of September last, in which I gave the true history of the demonetization of silver. I say that international bimetallism is impossible. England and the United States made it impossible. We coöperated with England to destroy silver.

After it was ascertained that silver had been demonetized in the United States

THE PEOPLE BECAME VERY INDIGNANT,

and they tried to pass a free-coinage bill. They did pass it through the House of Representatives, but the Senate put an amendment on it, and made it the Bland-Allison bill, and that had to be passed over a Presidential veto. Then it was said that we must appeal to Europe to join us We went there, and in 1878 and in 1881 petitioned them to allow us to live. England was there each time, saying that she would not participate if the conference was going to discuss bimetallism. President Cleveland in 1885 sent Mr. Atkinson over to Europe to ascertain if they would consent to bimetallism. Mr. Atkinson came back and reported that they would not have anything to do with it, and the Executive so reported in his message in the fall of 1885.

Still we were not satisfied. The last Administration sent a commission to petition Great Britain for

THE RIGHT TO LEGISLATE FOR OUR COUNTRY.

They sent able delegates, full of American blood and energy over there, to get the right of Great Britain to legislate for America. Great Britain said, "We will not discuss the question of bimetallism; we did not come here for that purpose. We made you modify your invitation so that it would not commit us to any such policy. We are here as a polite thing; and now, what have you to say?" Then the conference had a lingering idea, some of them, that they would go back and continue the farce. I suppose our delegates felt a little badly, and the English delegates saw it and sympathized with them, and they said, "We will adjourn; we will not kill you outright; we will give you a chance by adjourning." They did adjourn.

But there are bimetallists in Great Britain whose voice can not be heard, because that country is governed the same as this by a moneyed aristocracy, by a bondholding oligarchy. The people have very little to say about it. The same environments and the same influences operate in London as in New York.

THE VOICE OF THE GOLD RING

is strong enough there to trample down the rights of man, as is the case here. There was a motion made in Parliament recommending the reconvening of the conference, whereupon Mr. Gladstone made the most sarcastic speech, the most contemptuous speech concerning the American people and all the outside world that was ever uttered by mortal man For arrogance and contempt it has no parallel.

I think I will regale the Senate by reading a short portion of that remarkable speech. It is interesting to know how that Government regards us. How any American can read that speech and have any respect for the rulers of his country who submit to such arrogant assumption I can not conceive. Mr. Gladstone said:

I suppose there is not a year which passes over our heads which does not largely add to the mass of British investments abroad. I am almost afraid to estimate the total amount of the property which the United Kingdom holds beyond the limits of the United Kingdom, but of this I am well convinced, that it is not to be counted by tens or hundreds of millions.

He is speaking of pounds.

One thousand millions ($5,000,000,000) probably would be an extremely low and inadequate estimate. Two thousand millions ($10,000,000,000), or something even more than that, is very likely to be nearer the mark. ["Hear!" "Hear!"]

Two thousand million pounds; ten thousand million dollars. I suppose that is vastly below the amount, but by saying "Hear!" "Hear!" the members present approved of the amount stated. Ten thousand million dollars the outside world owes the Kingdom of Great Britain. Outside of the Kingdom they owe to the Kingdom $10,000,000,000!

At 5 per cent per annum that is a good little income—$500,000,000. I do not suppose that is half of the income of the bondholders who congregate in London. I suppose their income is more than a thousand million dollars each year, because they have all the British obligations beside the $10,000,000,000 that they hold against the outside world, and $10,000,000,000 is undoubtedly a very low estimate.

I think under these circumstances—

Mr. Gladstone continues—

I think under these circumstances it is rather a serious matter to ask this country to consider whether we are going to perform this supreme act of self-sacrifice.

A supreme act of sacrifice to allow the Americans to coin their own money! Are we going to allow it? Are we going to allow this sacrifice? Is not that haughty? Is not that English?

I have a profound admiration for cosmopolitan principles. I can go a great length in moderation [laughter], in recommending their recognition and establishment, but if there are these two thousand millions ($10,000,000,000) or fifteen hundred millions ($7,500,000,000) of money which we have got abroad, it is a very serious matter as between this country and other countries.

If the outside world owes this vast amount of $10,000,000,000 of money to Great Britain, it is a very serious matter, as Mr. Gladstone said, between that country and other countries.

THAT IS THE SITUATION OF GREAT BRITAIN.

That is the country we must supplicate before we can have the right to legislate. Mr. Gladstone continues:

We have nothing to pay them; we are not debtors at all; we should get no comfort, no consolation out of the substitution of an inferior material, of a cheaper money, which we could obtain for less and part with for more. We should get no consolation, but the consolation throughout the world would be great.

Mr. Gladstone says the consolation of the American people would be great. Provided Great Britain would let us rehabilitate silver, no doubt the consolation would be great, the effect would be great, and yet we are denied that consolation, and our President and Cabinet join also in denying that consolation to our people.

We should get no consolation, but the consolation throughout the world would be great. [Loud laughter.]

Loud laughter! How can any American with one spark of patriotism in his heart endure the loud laughter and the sneers

of the British Parliament, when it is said in their presence that the consolation of the American people would be great if Great Britain were to allow us to coin our own money; but Great Britain does not propose to do it.

As the consolation would be too great to us if England yielded to our desires, so the despair and the misery is great to our people because they can not obtain what they desire. The trouble in this country is because we are denied the right to mine and coin our own money. There is no other trouble in America.

THE REASON FOR THE PRESENT PANIC

and for all the trouble existing and for the throwing out of employment of hundreds of thousands of American citizens is because we submit to the dictation of Great Britain, and she will not allow us to mine and coin our own money. Mr. Gladstone goes on ridiculing the idea of extending any consideration whatever to us. He says:

This splendid spirit of philanthropy, which we can not too highly praise—because I have no doubt all this is foreseen—would result in our making a present of fifty or a hundred millions ($500,000,000) to the world. It would be thankfully accepted, but I think the gratitude for your benevolence would be mixed with very grave misgivings as to your wisdom.

It is benevolence to let the American people coin and mine their own money. Who ever heard of such arrogant language as that? How would that have been received by our ancestors? How would that have been received by the patriot fathers, who were willing to sacrifice their lives to gain the independence of this country? Sneers like that would have enraged our ancestors and have aroused the American people at any period prior to the degenerate age which has come upon us. But twenty years of contraction, twenty years of hard times have taken much of the pluck and independence from the American people. Our farmers twenty years ago were the bone and sinew and the reliance of our Government; they were regarded

AS THE BULWARK OF CIVIL LIBERTY,

but most of them are now too poor to attend conventions; their farms are mortgaged, and this insidious process of enslavement has greatly weakened them. We hear of nothing now but the creditor classes, and the organs of the creditor classes. No petition has been sent here from any man or any set of men for the passage of this bill, except those who are creditors, or debtors in the grasp of the creditors, who have been forced to appeal to Congress in behalf of their masters.

Mr. Gladstone continues:

I have shown why we should pause and consider for ourselves once, twice, and thrice before departing from the solid ground on which you have within the last half century erected a commercial fabric unknown in the whole history of the world—before departing from the solid ground you should well consult and well consider and take no step except such as you can well justify to your own understanding, to your fellow-countrymen, and to those who come after us. [Cheers.]—*The Times*, London, March 1, 1893.

Yes, they have built up a commercial fabric unknown in the world's history, a fabric which threatens the world's liberty. When the Rothschilds, in 1815, got the first report from Waterloo they spread a false report, bought up a vast amount of securities then in England, which had accumulated during twenty-two years' suspension of specie payment, and which amounted during the twenty-two years of the Napoleonic wars to over $4,000,000,000. That all fell into the hands of the few. That has been the nucleus around which this grand fabric of which Mr. Gladstone speaks has grown up. He is a city man. He represents that accumulated capital. When one nation after another was crippled England has taken their obligations, and the British lion has enforced payment.

Take, for example, Egypt. An extravagant and foolish Khedive involved Egypt in a debt of $500,000,000. The bonds were bought by the Rothschilds at about 60 cents on the dollar, and the money was used by the Khedive to build twelve palaces and to decorate a few soldiers; no good was done to the country with it, and in the building of palaces foreign contractors made large sums of money. When the Egyptian Government failed to pay,

ENGLAND TOOK MILITARY POSSESSION

of that country, and holds it to this day. She exacts from those people the whole "pound of flesh," and a debt contracted at 60 cents on the dollar, payable at the time in either gold or silver, they have required to be made payable in gold alone; and in order to exact it they are to-day under the necessity of applying the lash to the backs of the laborers. It is only about two years since the philanthropists of Great Britain protested against the use of the lash in Egypt; but, on investigation, it was reported that it was necessary to use the lash to collect the interest, and, as this accumulation of interest was a holy thing, the complaints were silenced.

Just imagine the condition of that country, with only about six or seven million acres of land which are under any circumstances susceptible of cultivation, compelled to raise from fifty-two to fifty-three millions per annum—just imagine those people being compelled to pay $25,000,000 interest on a foreign debt and to pay from twenty-seven to twenty-eight millions to support the English army of occupation and to carry on their local government.

IMAGINE THEIR CONDITION

when they are compelled to raise from seven to eight dollars an acre by taxation every year by the sale of sugar, cotton, and wheat at the present low prices—imagine the starving condition of that country. That is English policy; that is one of the things England has done.

See what England has recently done to Austria. Austria owed a debt held in Great Britain of $2,400,000,000, evidenced by bonds drawing 5 per cent, payable in silver, because Austria was on the silver basis when she contracted the debt. She has been compelled by the English bondholders, who control the matter, to fund that debt in 4 per cent nontaxable gold bonds; and according to the accounts I have seen in the newspapers—I have not seen the Austrian reports—the debt is increased four hundred millions, and it is now $2,800,000,000. I know the old debt was to be taken in at par and the new debt put out at a discount, but the English papers now say that Austria owes a debt of $2,800,000,000, payable in gold 4 per cent nontaxable perpetual bonds. Imagine the condition of poor Austria!

ITALY IS IN THE SAME CONDITION.

Further on I shall show the condition of the people of Italy.

That is the character of this grasping, this consolidated power which governs England, and England is groaning under it, the same as is all the world; the English people are now subjugated and suffering the same as all other people. It is this colossal power, this fabric, of which Gladstone speaks, which is governing the world and levying tribute everywhere upon all men.

It is ridiculous to suppose that this power will yield to us an international conference. This is the power to which we must bow; this is the power whose consent we must get before we can legislate for our own people!

The bimetallists of England, still insisting that something should be done, recently appealed to the chancellor of the exchequer, and since this debate commenced, the next day after the able Senator from Iowa [Mr. ALLISON] made his speech, this reply came across the water. It is from the London Economist, and headed "Great Britain and the Brussels conference:"

ENGLAND OPPOSED TO INTERNATIONAL AGREEMENT.

Great Britain and the Brussels Conference.

[From the London Economist.]

There has been published this week a correspondence between Mr. R. C. Everett, M. P., and the chancellor of the exchequer, which is calculated to extinguish any hope the bimetallists may still entertain of a reassembling of the Brussels conference. Mr. Everett, in his letter, complains that Sir William Harcourt has "several times in the course of the present session referred to the majority of 81, which on February 28 rejected Sir R. Meysey-Thompson's motion in favor of renewing international efforts for the settlement, if possible, of the silver question, as having been a mandate from Parliament forbidding her Majesty's Government from taking any steps to forward such settlement;" and he goes on to contend that in reality the majority had small significance. Many Liberal members, he says, voted in the division against their convictions, being influenced by the representations of the whips that if they went into the lobby with the Opposition, and so put the government in a minority, that would be "an event of ill-omen, and very unfortunate for the Liberal party." To this Sir William Harcourt replies that the government used no more than their proper influence to defeat what they considered a vicious motion, and points out that "as the majority embraced a considerable number of members of the Opposition, so the minority contained not a few Liberal members; and no party pressure could have been secured for the government a majority more than double their normal strength."

And having thus dwelt with Mr. Everett's complaint, the chancellor of the exchequer proceeds to make a statement, in which the real interest of the correspondence lies. After declaring that the government are always ready to give a fair, careful, and courteous consideration to any proposals made to them on the responsibility of other states, he adds: "But it is of the highest importance, in the interest both of this country and of other governments, that we should not encourage expectations which we are not likely to fulfill. * * * Her Majesty's Government entirely adheres to the declaration made in the House of Commons, that any interference with the single monetary standard now by law established in this country is open to the gravest objections."

This should put an end to the false idea under which the conference was first convened, that "concessions" of some kind or other would be made by us to induce other nations to favor a scheme of international bimetallism. The concession, moreover, which India was willing to make—a promise that she would keep her mints open to the free coinage of silver—is no longer possible, and the United States Congress has now definitely pronounced against the free coinage of silver. In these circumstances it would obviously be futile to call the conference together again, and it may be regarded as definitely dissolved.—*New York Sun*, September 17, 1893.

Still, we are told that an international agreement is the only hope. The Senator from Iowa told us in his speech that England will do something. With all these sneers, after twenty years of supplication and of petition

FOR THE RIGHT TO LEGISLATE

for the financial independence of this country, we get these rebuffs, and we are told we are still helpless and nothing can be done.

Mr. President, it appears to me that the Administration and the Administration Senators here have totally misapprehended the question of bimetallism. They do not appear to have any conception of the way to maintain the parity. Their idea seems to be that the way to do it is to sell silver and buy gold: that the way to put up silver is to sell it, beat it down, jam it in the market, treat it as pig silver, and destroy it.

The mode adopted by this and the previous Administration to maintain the parity is peculiar. In order to raise the price of silver and depress the price of gold, they buy gold and sell silver. I am not an expert in the matter of dealing in stocks, but I always supposed that the bears sold and the bulls bought. If you wanted to put up the price of silver, you would buy it; if you wanted to put down the price of gold, you would sell it. I supposed that was the rule; but

THERE SEEMS TO BE SOME MYSTERIOUS PHILOSOPHY

about the ways of the Treasury Department, and the peculiar excuse which is given for their tortuous course is that found in the Sherman act, a declaration that it is the established policy of the United States to maintain the parity of the two metals. Of course the two coins, so far as the parity is concerned, will take care of themselves. They have upon them the stamp of the Government, and they are worth the same. But we are told the policy is to maintain the parity of the two metals; and the Department says, in order to do this, we must buy silver as low as we can and buy as little as we can, and they put up all sorts of jobs to put down the price. They say we must not use silver coin as money; we must tell the people that it is pig-silver, that it is bad money, and that it is ruining the country. That is the way that the parity is to be maintained. They claim that the use of any silver at all would bring on a panic; they declare that it is bad money, and that is the way to maintain the parity!

BY WHAT PROCESS

was the price of silver bullion put down and the price of gold bullion put up? Germany sold a large amount of silver in order to buy gold. That depressed the price of silver. Other countries have been induced to sell silver and buy gold. That caused a great demand for gold and put up its price. It was by contraction of that kind that this colossal fabric, of which Gladstone speaks, was built up—silver was sold and gold was bought. Silver is excluded from the right of coinage, and so people are compelled to use gold whether they will or not.

There was an aggregate debt of $100,000,000,000, more than fifty thousand millions of which were bonded debts of governments and public and private corporations. These were payable in either gold or silver; but by excluding silver from the mints it could not be coined into money, and then the debtors were compelled to make payment in gold, for by that process these obligations, from being obligations payable in gold or silver, were converted into obligations payable in gold alone. By that process this great colossal fabric has been built up in England in the last fifty years, and it has

DOUBLED OUR OBLIGATIONS

and doubled the obligation of $10,000,000,000, which the outside world owes to Great Britain. Consequently it will take twice as much labor, twice as much property, twice as much wheat and cotton to pay the debt as it would have taken if it had been paid according to the contract—paid in either gold or silver.

THERE CAN BE NO NEW SUPPLY OF MONEY

from the gold mines. The entire output of gold is consumed in the arts. Mr. Giffen, the greatest statistician and gold monometallist in the world, admits that the entire output of the world is used in the arts. If these debts are to be paid in gold, with gold decreasing in quantity and increasing in value every year, disaster is inevitable.

Suppose the United States were brave enough and honest enough to adopt an independent financial policy, what a glorious opportunity would be presented to us. Never in the history of the world was such an opportunity offered to any people to secure independence and prosperity as is now offered to the people of the United States.

Let us open our mints; let us join the silver standard countries; let us sell our gold when it is high; and let us buy silver. If there is in this country $600,000,000 of gold let it go to-morrow, the quicker the better, and buy silver with it. Perhaps you can get eight or nine hundred millions of silver now, if you sell the gold quickly and buy silver, for silver is better than gold and is used by more people. Germany, when she rose to power and conquered France, used silver as the only standard; so with Austria, Holland, and nearly all the enlightened nations of Europe. France was bimetallic and nearly all the balance of Europe was practically on the single silver standard. Civilization has rested on silver from the beginning.

If you have the right to use either gold or silver as money—and that is all there is in bimetallism—if silver should become scarce, and it probably would at sometime, then we could use gold. We could use the cheaper metal, and that would be dear enough.

THERE WOULD NOT BE ENOUGH TO INFLATE PRICES;

there would not be enough for our uses; but we have the silver mines of Mexico and South America and the silver mines on this continent, and much could be done to bring about great prosperity, as I shall show further on. If the silver countries would but be true to themselves and to their interests, the gold countries would be compelled to change their policy, or they could not trade with the countries on a silver basis.

We do occasionally find something American. Of course, in the higher circles it is not fashionable, for there it is "all English, you know," but there are some Americans in this country who do not claim to belong to what are called "the higher classes." Of course nobody expects that the metropolitan press could be American, because they are dependent upon the English for money, and the newspapers must have money, and, of course, they will be "English, you know," or Germans, or foreigners of some kind. But here is the Journal of the Knights of Labor of October 5, 1893, which I think represents some of the people of this country. I shall not burden the Secretary with reading very much, but as this article contains a little of the American spirit, I should like to have it read.

The VICE-PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

[Journal of the Knights of Labor, Philadelphia, October 5, 1893.]

LET US DEMONETIZE GOLD—ADOPT A PATRIOTIC AND AMERICAN POLICY—IT IS OUR SACRED DUTY TO RESENT BRITISH DICTATION, AND REBUKE THE IMPERTINENCE OF BRITISH INTERFERENCE WITH OUR DOMESTIC AFFAIRS—ADOPT SILVER AS OUR MONETARY STANDARD OF VALUE.

It is always safe to do the reverse of what your enemies desire. Our dyed-in-the-wool enemy is England. A portion of her lower and middle classes may be friendly to us, but the higher, the influential classes, those who govern, those who shape and conduct her foreign affairs are, ever have been, and always will be inimical to us. At every turn of our national policy, whether at home or abroad, they antagonize us in a more or less underhand, secret manner.

Our raw, single-minded, square-dealing statesmen, when it comes to framing an international agreement with England, are no match for her diplomats, trained as these are almost from the cradle in all the arts of trickery, chicanery, falsehood, plotting, counter plotting, double dealing, and Iscariot flattery. They cheated us in the settlement of the Maine boundary by means of false maps, knowing them to be false; they overreached us in the Clayton-Bulwer treaty, whereby the Monroe doctrine was practically scattered to the winds; they wrested from us the Vancouver Island below the forty-ninth parallel of latitude, whence England may now and henceforth constantly menace our frontier coasts and Pacific commerce, and, coming down to the most recent instance of their consummate diplomacy, they so managed the Bering-Sea controversy that England secured more than she originally demanded, for the decision of the arbitrators not only destroyed our claim to an exclusive maritime control and possession of the seal, but also of the seal fisheries beyond the 3-mile limit, which all nations, excepting England, Canada, and ourselves, may now prosecute with impunity at any season of the year.

Only the stubborn patriotism of the United States Senate prevented the adoption of an extradition treaty which would have made us aiders and abettors of English despotism in Ireland, and only the patriotism of the same Senate saved us from sacrificing our fisheries to British greed and Canadian cupidity. How England behaved toward us during our civil war, how she acted in our squabble with Chile, and how she intrigued to prevent them to ratify our reciprocity treaties with South American States; are not these already matters of infamous history as well as indelible proofs of British enmity toward our people and of undying hostility to our growth, progress, and republican institutions?

The entire record from beginning to end of our industrial history shows that whenever English interference and dictation had the shaping of it, the result to us was invariably disastrous, yet highly beneficial to British interests. But whenever we spurned English interference with our domestic affairs—that is to say, when we acted as patriots and Americans—we were never more prosperous nor more heartily cursed up hill and down dale by the envious and discomfited English.

It was English influence that prolonged our civil war; it was English influence that demonetized our silver when at a premium over gold; it was English influence that precipitated the disastrous panic of 1873; it was English influence that created our free-trade tariffs whereby all our industrial concerns were closed, besides making tramps of many thousands of hard-working industrians; it was and is English influence that prevented and prevents the remonetizing of our silver; it was and is English influence that caused and continues our present disastrous monetary condition solely for the purpose of bulldozing us into adopting gold as our single monetary standard, over which England has supreme control and through which, if we obey her behests, we will become more tributary to her than ever was pictured in the wildest dreams of her crazy King George.

We do not follow the advice of even a bosom friend when it is the offspring only of his ignorance. How much more promptly and decisively, then, should we spurn the advice of a life-long, implacable enemy; an advice prompted solely by malice and a hungry longing for aggrandizement at our ruinous expense? The British Government achingly desires us to adopt the English single gold monetary standard. To fulfill this supreme desire it has intrigued against us for years; it has left nothing undone that bribery, trickery, promises, and menaces could accomplish; and these proving too slow for her impatience, she overwhelmed us with bankruptcy through the machinations of her Rothschild and other Jew allies, through the mendacity of a corrupt press, and clinched the nail by withdrawing many millions of gold just as its treachery had succeeded in giving public confidence here a reeling blow. Then England's journalistic parasites and paid panic-mongers, here and abroad, pointed to our distressed condition as a telling proof of the direful consequences of our adhesion to silver. If with silver still to depend on,

though imperfectively, we can be brought to this frightful pass because of England's control over gold, what terrible consequences may we not anticipate should we have no monetary standard to depend upon but that which is absolutely controlled by England and her Jew allies!

Now, the truth is that but for the United States Treasury notes, issued in payment of the silver bought under the Sherman bill of 1890, our present condition would have been far more deplorable. Those Treasury notes, that United States currency, helped to offset the treason of the Eastern national banks, which, dominated by the Jew allies of the British Government steadily reduced the bank circulation from three hundred and forty millions down to one hundred and twenty-two millions, and this during a period, when the constant multiplication and expansion of our enterprises demanded a steady increase of the currency. Is it surprising, then, that the traitorous conspirators in our midst, and their master, the British Government, should be furious against the Sherman bill and abuse it unstintedly for supplying us with one hundred and fifty millions of United States currency to replace the two hundred and eighteen millions of bank currency withdrawn at a critical period by the conspirators in furtherance of their dastardly scheme to rob us of our birthright in silver?

Thanks, however, thus far to the United States Senate, at least to the American, to the patriotic portion of it, we have still a bulwark between us and that subjugation as well as limitless spoliation, which constitute the ultimate prizes of the Benedict Arnold conspiracy of 1873, a conspiracy conceived, matured, and propagated by the British Government through its Jewish emissaries and our national banks; these, by means of New York banks, are become an adjunct of the British foreign office, by reason of the Jewish influence now paramount in our domestic and international monetary affairs. When the Jew bankers of New York celebrate a week-day holy festival the stagnation in our monetary affairs is like that in London on a Bank of England holiday.

Geographical and climatic conditions oblige European nations to adopt gold as a common monetary medium for settling balances due in an exchange of products, because their restricted range of territory prevents them from producing and raising many of the essentials of modern civilization; and hence they are each forced to meet the deficiency from outside peoples, who take all they can of the fruits of their neighbors' industries in exchange for their own, but the surplus bought on either side must be settled in a material or materials equally necessary and valuable to all parties. The precious metals, gold and silver, are usually the most acceptable materials for this purpose. Consequently, modern conditions conspire to endow these metals among European nations with immense economic importance for on them ultimately depends in a large degree the tranquility and happiness of the people, by furnishing them with remunerative employment in the manufacture of goods from domestic and foreign materials to meet the demands of civilization at home and abroad.

Now, as the economic importance of these metals rests on the national conditions just stated, it follows that gold and silver, as an international factor, ought to be of little moment to a people who possess, as we do, an immense territory extending from tropical to frigid regions, as well as from ocean to ocean, with every variety of soil and climate and abounding in exhaustless natural resources; so that the owners can gather, cultivate, and manufacture every conceivable requisite for their support, and for the sensuous as well as intellectual gratification of the most complex and exacting civilizations, without looking abroad for anything. Hence it is evident that we who are thus situated can not, without lasting injury to our welfare, copy or make ourselves amenable to the financial policies of nations whose geographic and economic conditions differ wholly from our own.

But not having heeded in its broadest sense Washington's admonition to have no entangling alliances with Europeans, we find ourselves mixed up with these people in monetary and commercial relations more or less intimate, and, as a result, are now called upon, after a footpad manner, by a leading European power, our hereditary foe, to stand and deliver our silver in exchange for her gold on such ruinous, extortionate terms as her absolute control over gold and her inborn hatred of us may dictate.

There is only one reply to this bullying, dictatorial, infamous proposition which we as a great self-respecting nation can make—demonetize gold—adopt silver as our monetary standard of value.

We can then dictate our own terms to the piratical nation which sought to enslave us in our infancy, and now in our youth strives, with every disreputable means known to the unscrupulous, to enslave us in a monetary net of her own weaving, out of which we will never escape except through sacrifices too great to contemplate.

For us to adopt gold as our monetary unit of value would be equivalent to surrendering our lives, our fortunes, and our freedom to the tender mercies of an English oligarchy, who, ever since we thrashed them for striving to grind us to the dust in our babyhood, have left no stone unturned to do us an injury on the slightest pretext and at every opportunity. The British Government, envious of our progress and dreading our growing power, seeks, through the only peaceful, potent weapon at its command, to subjugate us financially and industrially as she has almost commercially, and nothing now prevents the consummation of its iniquitous purpose but the patriotic stand taken by the able minority of the United States Senate.

WILLIAM HOWARD,
Washington, D. C.

Mr. STEWART. Mr. President, there can be no doubt of the fact that it was English influence which demonetized silver, and I have absolute proof of that assertion. It will be remembered that the Senator from Ohio, who was chairman of the Committee on Finance and had charge of the bill demonetizing silver from the beginning to the end, did not play fair and did not let the remainder of the Senate

KNOW WHAT HE WAS DOING.

That, however, he denies, but I think I have proved that his ways were peculiar. But no matter as to that. One thing is established by his testimony, and it will not be questioned. His testimony on this point ought to be taken. On the 6th of March, 1876, the Senator from Ohio made an elaborate argument against a resolution of the Chamber of Commerce of New York City in favor of repealing the resumption act of 1875. In the course of his remarks on that occasion he said:

Our coinage act came into operation on the 1st of April, 1873, and constituted the gold one-dollar piece the sole unit of value, while it restricted the legal tender of the new silver trade dollar and the half dollar and subdivisions to an amount not exceeding $5 in one payment. Thus the double standard previously existing was finally abolished, and the United States as usual was influenced by Great Britain in making gold coin the only standard. This suits England, but does not suit us. I think with our large silver producing capacity we should return to the double standard, at least in part, and this will constitute one of the means by which we will be enabled to resume specie payments.

I undertake to say that I have proved that silver was demonetized through the influence and instrumentality of Great Britain. I have also shown that Great Britain has manifested no disposition to allow us to remonetize silver. They sneer at our supplications; they ridicule our desire to meet in international conference to discuss the question; they speak of bimetallism as being a gift to us which we would thankfully receive, but on account of which we would lose respect for their wisdom if they would grant. But still we propose to continue to petition them for the right to mine and coin our own money.

There is another suggestion that we shall bring England to terms

IF WE WILL DO WHAT ENGLAND WANTS;

that we shall place England in a position where we can make her come to terms if we will just pass this bill, which England demands, and utterly demonetize silver. Then we shall bring England to her knees. Is not that a pretty cool proposition to present to us? We are paying England now from one hundred and fifty to two hundred millions a year in interest; we are selling wheat and cotton for less than the cost of production to pay that interest; and now we are told that we must borrow more money of England, and sell her our wheat and cotton still lower, and by that means we shall bring England to terms. She has an income from this country of two hundred millions a year, and we propose to enlarge that income, and by that means break her and make her beg of us to let go.

I have found but one case, which I think is a case in point, to illustrate our position and the position of England. I find it in a book written by a gentleman by the name of Derby. Some of you must have seen it; it is a work of very high authority, and illustrates the position of the United States and England and how we should stand, how we would hold her down and crush her by borrowing money of her, selling our commodities for next to nothing, and by getting further into her debt and more in her power. That is illustrated by this authority.

Mr. President, there was an editor down in San Diego, Cal., away back in the early fifties, when John Bigler was governor of California. The governor had some appointments to make, and this Democratic editor, who was known as Judge Ames, was an applicant for an appointment. This was in 1854, if my memory serves me, for I met Judge Ames in Sacramento on his visit on that occasion. He went there to obtain an office from the governor, and he took with him files of his newspaper to show his fidelity to the cause of Democracy. He left behind him Lieut. Derby to edit the paper. When Judge Ames started for Sacramento, Lieut. Derby changed the politics of the paper and made it a Whig paper.

I was stopping at the same hotel with Judge Ames, and I remember now the look of horror which came across his face when the paper arrived to find that it had been transformed into a Whig paper in his absence. Judge Ames, of course, did not get his office, and he went back very indignant. I have a description of the interview between him and Lieut. Derby which occurred on his return, which I think illustrates the position the United States would occupy in this tussle with Great Britain in trying to break her by borrowing more money of her. The statement of facts are:

The Thomas Hunt—

That being the name of the steamer—

The Thomas Hunt had arrived, she lay at the wharf at New Town, and a rumor had reached our ears that "the judge" was on board. Public anxiety had been excited to the highest pitch to witness the result of the meeting between us. It had been stated publicly that "the judge" would whip us the moment he arrived; but though we thought a conflict probable, we had never been sanguine as to its terminating in this manner. Coolly we gazed from the window of the office upon the New Town road; we decried a cloud of dust in the distance; high above it waved a whiplash, and we said, "the judge" cometh, and "his driving is like that of Jehu, the son of Nimshi, for he driveth furiously."

Calmly we seated ourselves in the "armchair," and continued our labors upon our magnificent capital pictorial. Anon, a step, a heavy step, was heard upon the stairs, and "the judge" stood before us.

In shape and gesture proudly eminent, he stood like a tower, * * * but his face deep scars of thunder had intrenched and care sat on his fated cheek; but under brows of dauntless courage and considerate pride, waiting revenge.

We rose, and with an unfaltering voice said:

"Well, judge, how do you do?"

He made no reply, but commenced taking off his coat.

We removed ours, also our cravat.

* * * * * * *

The sixth and last round is described by the pressmen and compositors as having been fearfully scientific. We held "the judge" down over the press by our nose (which we had inserted between his teeth for that purpose), and while our hair, was employed in holding one of his hands, we held the other in our left, and with the "sheep's foot" brandished above our head, shouted to him, "Say, Waldo," "Never!" he gasped—

"Oh my Bigler he would have muttered,
But that he 'dried up,' ere the word was uttered."

At this moment we understood that we had been laboring under a "misunderstanding," and through the amicable intervention of the pressmen, who thrust a roller between our faces (which gave the whole affair a very different complexion), the matter was finally settled on the most friendly terms, "and without prejudice to the honor of either party." (Phœnixiana, by G. H. Derby, page 112.)

I think we should be in about that position; we should insert our nose between the lion's teeth and hold him down if we attempted to borrow more money

IN ORDER TO CRUSH GREAT BRITAIN.

That is about all there is to it.

It may be interesting to review some of the learned writings of the Administration and the mode proposed by the President to crush the British lion and to ascertain the idea of the President in doing it. I hold in my hand his first letter on the silver question. It is as full of wisdom as any of his later productions, and is in the same line, inspired by the same sentiment of crushing the British lion by borrowing more money and having the same kind of money as has Great Britain. The contempt the President has for using our own money is shown in his various written communications. The one I now hold in my hand is his letter to Hon. A. J. Warner and other members of the Forty-eighth Congress.

To the Hon. A. J. WARNER
and others, Members of the Forty-eighth Congress:

GENTLEMEN: The letter which I have had the honor to receive from you invites, and, indeed, obliges me to give expression to some grave public necessities, although in advance of the moment when they would become the objects of my official care and partial responsibility. Your solicitude that my judgment shall have been carefully and deliberately formed is entirely just, and I accept the suggestion in the same friendly spirit in which it is made. It is also fully justified by the nature of the financial crisis which under the operation of the act of Congress of February 28, 1878, is now close at hand.

That act of February 28, 1878, was known as the Bland act. It was against the English policy. Under it we would use a little silver and it was a partial remonetization of silver; but anything which looks toward any independence on our part in rebelling against Great Britain, always produces a crisis, and the only way we could avoid a crisis would be by absolute submission to Great Britain. Then there would be always good times. The only crisis which really existed was produced

BY THE INFAMOUS ACT OF 1873,

to which the President does not allude. The crisis came when we surrendered our constitutional right to mine and coin money.

The letter of Mr. Cleveland continues:

By a compliance with the requirements of that law all the vaults of the Federal Treasury have been and are heaped full of silver coins, which are now worth less than 85 per cent of the gold dollar prescribed as "the unit of value" in section 14 of the act of February 12, 1873, and which, with the silver certificates representing such coin, are receivable for all public dues.

The President speaks of the gold dollar prescribed in the act of 1873—that darling act of 1873. He did not look at the act of 1878, which restored the standard dollar, which had been surreptitiously stricken down by the act of 1873. The President could not see that. He speaks of the standard gold dollar, although the title of the act of 1878 is "An act to restore the standard silver dollar."

That was the dollar of Jefferson and of Hamilton; that had been the dollar all along, until it was surreptitiously stricken down by the act of 1873, which the President did not recommend any legislation to restore; no legislation was available, no legislation could be expected but that obtained and established by English influence! That was the darling dollar, but no American dollar was good. That was the first starting off of the President. The President says that the gold dollar prescribed by the act of 1873, with silver certificates, representing it, are receivable for all public dues, as if the United States had not the right to coin the silver dollar and make it receivable for public dues.

Being thus receivable, while also constantly increasing in quantity at the rate of $28,000,000 a year, it has followed, of necessity, that the flow of gold into the Treasury has been steadily diminished.

I do not see that the surplus in the Treasury increased from that time on, but the gold in the next four years increased more than double, until it had become a matter of complaint that there was too much money in the Treasury.

In March, 1869, at the instance of the bondholders, the contract was changed in this Chamber and in the other House by making the principal of the bonds payable in coin. Gold and silver were coin. Then, on the 14th of July, 1870, Congress passed a law to refund these bonds, and in that law expressly provided that they should be

REDEEMED IN COIN OF THE THEN STANDARD VALUE,

that is, in a dollar consisting of 25.8 grains of standard gold or 412½ grains of standard silver. Thus the contract was absolutely made, and that is printed on all your bonds; but still the President says that they are gold obligations.

The President, in his letter to Mr. Warner, continues:

These are facts which, as they do not admit of differences of opinion, call for no argument.

Gold obligations! Who told the President that our obligations were payable in gold? Who misled the President before he had taken the oath of office? Certainly he could not have read the statute, or he would not have written that letter. The fountain-head of all our woes is that the executive department will not read the statutes; and if they do, they do not follow them. The statutes made no gold obligations. If the Government would pay its obligations according to the contract, its credit would be good enough. The only thing which injures the credit of the Government is the attempt and the custom of the Government

TO CHANGE THE CONTRACT,

and give the bondholder more than the law gives him. In all conscience, the law gives him enough; the law has been changed often enough in his interest. He has doubled up the value of his bonds until he has accumulated nearly all the property of the civilized world, until his power is almost omnipotent everywhere, until he can command the press, until he can make politicians bow, until he can elect Presidents, and can do almost all that he desires. He has power enough. It seems to me that the Executive ought to look to the people and see to it that they do not pay any more than the contract requires. The bondholder has made both sides of the contract. He has always had influence enough to control legislation, and when he has fixed it to suit himself, it seems to me the Executive ought to be satisfied to pay him according to the contract.

The President started out in his career saying to these bondholders, "the Treasury notes are payable in gold; they are gold obligations." That is not true. How was that? The principal of the original bonds issued by the United States was payable in lawful money, greenbacks. The act of 1869 made them payable in coin.

Mark this language:

Silver and silver certificates have displaced and are now displacing gold, and the sum of gold in the Federal Treasury now available for the payment of the gold obligations of the United States and for the redemption of the United States notes called "greenbacks," if not already encroached upon, is perilously near such encroachment.

If the President had read the statutes and been familiar with them, he would have known that there were no gold obligations of the United States; that by statute every obligation was payable in either gold or silver.

These are facts which do not admit of a difference of opinion! The President should have known better when the statute was before him. When he was speaking from his high place, with his great authority, which carries weight with the country, the country was honestly deceived by his statement. If the bonds are payable in gold, let them be paid in gold. The President says that is a fact not admitting of a difference of opinion. If he were not President of the United States, I should say that was not true; but of course you can not say that of the President.

They have been forewarned to us in the official reports of every Secretary of the Treasury from 1878 till now.

I should like to see the official report which says we have any gold obligations.

They are plainly affirmed in the last December report of the present Secretary of the Treasury to the Speaker of the present House of Representatives.

There is nothing of the kind in the reports.

They appear in the official documents of this Congress, and in the records of the New York Clearing House, of which the Treasury is a member, and through which the bulk of the receipts and payments to the Federal Government and of the country pass. These being the facts of our present condition, our danger, and our duty to avert that danger would seem to be plain.

The danger that we shall not have gold enough to pay silver obligations! That was a great danger—the danger that we should not have gold enough to satisfy the creditor, to satisfy the bondholder and rob the producer.

Mr. President, the extract I was reading continues:

I hope that you concur with me, and with the great majority of our fellow-citizens, in deeming it most desirable at the present juncture to maintain and continue in use the mass of our gold coin, as well as the mass of silver already coined.

"The mass of our gold coin" and the "silver already coined!" There was comparatively very little coined at that time. He was willing that that should remain in circulation for subsidiary coinage.

This is possible by a present suspension of the purchase and coinage of silver. I am not aware that by any other method it is possible.

It is possible to keep the silver that we have by the present suspension of coinage, and he is not aware of any other method possible. That was February 27, 1885. The coinage continued under the Bland act until 1890, and did no harm. It was possible to keep more afloat, and more was kept afloat.

The President was mistaken. He did not see any other method but the immediate suspension of the Bland act in 1885, in order to keep the silver that we then had afloat. That was a very limited view of bimetallism, when bimetallism allows you to use

either metal, to use the cheaper metal, and to throw the demand upon that, and thus bring the two metals to a parity.

It seems to me that that was pretty radical monometallism. It seems to me that that sentence was in accord with the desire of Great Britain, through whose influence silver was demonetized, and through whose influence the act of 1873 was passed. It seems that the President at a very early day had fallen into the rut and had fallen in the wake of the Senator from Ohio.

Let us go on further with this celebrated letter:

It is of momentous importance to prevent the two metals from parting company.

"Of momentous importance to prevent the two metals from parting company!" How could he prevent the two metals from parting company if he coined one and would not coin the other? If the mints were open to an unlimited market for one and were closed as to the other, how could he prevent them from parting company? You have an unlimited money demand for one and no demand for the other; and yet it is of "momentous importance!" How did they keep from parting company through all the ages? By treating them exactly alike, by allowing the owner of silver bullion or the owner of gold bullion to take his bullion to the mint and have it coined into money. As long as he could do that, a given amount of silver and a given amount of gold were equal in value, provided they would produce an equal number of dollars. The only way that you can prevent them from parting company will be to treat them alike.

Now, the President said before he was sworn in the first time—

It is of momentous importance to prevent the two metals from parting company.

If he was going to use only one for money what difference did it make what became of the other?

"MOMENTOUS IMPORTANCE!"

If it was going to be "pig silver," as one member of the Cabinet expressed it, what difference did it make about them parting company? "Momentous importance!" How momenteus? The two metals were parting company, and who was going to prevent them? No one. It could not be done by opening the mints to one and closing them to the other.

Parity had been maintained during all the ages because both metals had access to all the mints in the world. That is the way they have kept together. Now the President suggests the suspension of coinage of silver because it is of "momentous importance" to prevent them (the metals) from "parting company." Had the President at that time read the history of bimetallism? Did he know the history of the two metals? Did he know that during all the ages previous to 1873 the two metals had been kept together because both fully possessed the same royal prerogative of access to the mints?

To prevent the increasing displacement of gold by the increasing coinage of silver.

That is of "momentous importance." The "displacement of gold" by the coinage of silver is of "momentous importance." Of course, now, that is true. If you have any other money besides gold it supplements gold. During all the ages the two metals were kept together, and each did the duty of the other. Consequently, when the mines were producing and we had plenty of money we had exceedingly good times. But gold must not be supplemented, must not be displaced by silver at all! If it is not displaced by silver, if silver is not to be money after all, what difference does it make whether they part company or not? They will not part company as long as they are treated just alike.

To prevent the disuse of gold in the custom-houses of the United States in the daily business of the people; to prevent the ultimate expulsion of gold by silver.

Oh! what a calamity we should have by the "expulsion of gold by silver!" The two kinds of money kept together for three thousand years and more. One did not drive out the other. Sometimes one would get scarce and dear, and then the other would take its place and do its duty. The people in those times had money. When they could not get gold to coin they could get silver to coin, and when they could not get silver to coin they could get gold to coin, except sometimes when both the gold and silver mines failed. But it was a great relief to have the two metals so that they could keep company, because the people want money all the time. At times when both the gold and silver mines failed, then the world relapsed into barbarism. During the fourteen hundred years when the $1,800,000,000 of gold and silver in existence at the time of Augustus was being reduced to $150,000,000, the darkness of the dark ages increased, and the proud Romans were becoming slaves.

I tell you there is nothing like contraction to enslave men. There is nothing like contracting their money to make them cowards. How often I have seen in the mining camps such a case as this: A young man would come from the Atlantic States,

FULL OF HOPE AND VIGOR;

he would go out prospecting for mines of gold and silver, and find none; he would come in hungry; he would get credit for a little while; by and by, his boarding-house keeper would tell him he must pay or leave; in despair he would go out on the streets and would try to get a "grub stake," as they call it, to prospect with; he would fail; then he might, with all his high hopes, go into the saloons, which were the only places where he could stop; they were all open, as the saloons are always in the mining camps: he could get no money; he would sometimes be driven out from there into the streets and kicked. Then, by some chance, he would crawl back into the mountains and find a mine. Then he would come into town, himself again. He would stand erect.

NO MAN DARED INSULT HIM.

He would lay down his life for his honor. He was a man again; no longer a poor, cringing mortal, without a dollar. He was the bravest of the brave. How often have I seen such a case as that! Why, you can take any tramp, and you may kick him from your door. But you put $500 in his pocket, and you dare not do it.

The mode of creating slavery by contraction and taking money away from the people is the most insidious method imaginable. However brave a man may be, however independent he may be of others, however much he may be willing to defend his honor, you mortgage his farm and leave his family dependent upon him and his little children crying for bread, and he will submit, he will become a slave. Nations have been enslaved by loss of money. Brave men become slaves for their suffering families. They will submit to any condition that the money loaner may prescribe. They will bow down and submit to anything. That is the danger of this system of contraction going on to sap the courage of Americans and their manhood.

It will make this people submissive, as it made the brave Romans submissive. Who would have thought in the time of Augustus, with the Roman legions, before whom the world trembled, and before whom none could stand, that within a few generations they would be

REDUCED TO SERFS,

to be sold with the land? It did not come at once. It came by degrees.

I see now the greatest difference in our people. Go out now among the farmers, and you see them meek and submissive, trembling before the landlords. We see the tenant farmers increasing at the rate of 20 per cent in some States in ten years. We see the men, who have had the spirit of this country, being destroyed by this insidious enemy contraction. By the destruction of one-half of the money of the world the obligations are doubled. Men have their families to support and their obligations to society to perform, and they grow weaker and weaker. Contraction is the only way by which brave people can be enslaved. After fourteen hundred years of contraction it made the Romans slaves, and they were sold with the land.

One thousand four hundred years of contraction, and then light broke in the West. The New World was discovered. The gold and silver from the New World revived civilization in the Old. When men got money they again asserted their rights, and their dormant energies that had been crushed out by contraction in Europe were revived. They could go to conventions, they could go to conferences. Within fifty years

THEY PRODUCED A LUTHER

to shake the foundations of society by proclaiming the abuses of the times. Without money they could not have done that. They could go to conventions. Often at our silver gatherings we have received letters from farmers who say that it will take more than they can make from their crops to bring them to Washington this year. They can not come. They can not move. They are in that condition. While, on the other hand, there is this colossal fortune, this colossal fabric of wealth in London, of which Gladstone speaks, with its branch in New York and with its tentacles in every commercial city. Their influence is everywhere in politics, and makes the debtors crawl in the dust.

What do you propose? You propose to rivet the chains. How? How do you propose to rivet the chains so that they can not be broken? You propose to rivet them by discarding silver.

THERE IS PRACTICALLY NO FREE GOLD IN THE WORLD.

Gold is able to buy politicians, able to make debtors crawl in the dust, able to bring on a panic. What do you propose? How do you propose to rivet these chains so that they can not be broken? By the gold standard. There is practically no free gold in the world. It is held for war or extortion. It is not allowed to perform money duty. Between $500,000,000 and $600,000,000 are in the Russian war chest; paid out for nothing; held for war. Her circulating medium is flat money.

France has $800,000,000 or $900,000,000 which no man can take

away, because her obligations are the same as ours, payable in silver, and if you ask for gold for export she will pay you in silver. Her officers act for France, and not for the gold ring. They protect the people of France by paying with silver. Our officers prefer

TO SERVE GOLD EXPORTERS,

and pay in gold. You can see that they have no sympathy for the American people, nor have they had for twenty-five years. They have all been paying in gold, and have refused to pay in silver. They have given to the money-lenders, the bondholders, the option that the law gave to the United States. They have given it without consideration in every Administration since our delegation was at Paris in 1867 and joined with England to get nineteen nations to consent to monometallism.

Every official act since then has been in harmony with what Mr. Ruggles and the chairman of the Senate Committee on Finance did in 1867 in Paris. No matter what laws Congress passed there has been union and harmony between the gold ring and our officials. You can not show me any case where option has been given to the people that the officers of this Government have not taken it away and given it to the ring, not one instance in all that time, and it is getting monotonous. I am inclined to complain of it, and will complain of it early and late, if I have an opportunity.

I read further from the President's letter:

Such a financial crisis as these events would certainly precipitate, were it now to follow upon so long a period of commercial depression, would involve the people of every city and every State in the Union in a prolonged and disastrous trouble.

That is, if we should have any silver to supplement gold, if we go back to the teachings of the fathers, it is going to make everybody trouble. How that trouble would come I do not know, I can not imagine. No trouble came through all the ages when both metals were used. No trouble came to the people of this country, when we had both gold and silver, until that act of 1873 was passed. When that act was passed the same result was produced as if we had abandoned mining silver.

If we had been allowed to mine and coin them for ourselves we would have been independent of England. All along from the frozen North to the frozen South on these ranges of mountains there are the gold and silver mines of the world practically. They are all on this continent. If we had continued to open our mines on this continent we would have been the center of the commerce of this hemisphere and of the world. There would have been no limit to our wealth, if, through English influence, we had not struck down one of these metals and made ourselves dependent upon England and made ourselves an English colony.

Such a financial crisis as these events would certainly precipitate, were it now to follow upon so long a period of commercial depression, would involve the people of every city and every State in the Union in a prolonged and disastrous trouble.

That is, if we restore the money of the Constitution, if we have a little more silver, there is going to be a prolonged and lasting trouble. Where the trouble is to come from I can not imagine. Why did the President talk that way? Who told him? Where did he get that information that he gives to the country?

The revival of business enterprise and prosperity, so ardently desired and apparently so near, would be hopelessly postponed.

Why, Mr. President, every permanent revival of business is disturbed, as every student of history knows full well, while these processes of contraction go on. Every one familiar with the subject must know that there is nothing in the future but continued contraction with the single gold standard. Contraction means hard times, growing mortgages, misery, depression, and the final subjugation of the people.

I do not believe that our school system can be maintained twenty years longer with a gold standard. You abandon silver and you reduce the people to the single gold standard, and they will be in the same condition that they are in other countries where they are under the iron heel of this colossal fabric of concentrated wealth of which Gladstone boasted.

Gold would be withdrawn to its hoarding places, an unprecedented contraction in the actual volume of our currency would speedily take place.

If we should restore the money of the Constitution and supplement gold with silver, it would produce "unprecedented contraction of the currency!" That is, if you use both metals you would have an unprecedentedly less quantity than you would if you used gold alone. I do not know where such mathematics have been taught, but it seems that is not the kind that is taught or should be taught in our common schools.

This is a picture to which I desire to call your attention, Mr. President:

Saddest of all, in every workshop, mill, factory, store, and on every railroad and farm the wages of labor, already depressed, would suffer still further depression by a scaling down of the purchasing power of every so-called dollar paid into the hand of toil.

The gold standard would "scale down" the dollar "paid into the hand of toil!" Where are the gold dollars? Are they in the hands of toil? Are they not hoarded in Europe? As I said before, between $500,000,000 and $600,000,000 in Russia; about $150,000,000 in Austria hoarded; $350,000,000 in Germany hoarded; about $800,000,000 to $900,000,000 in France hoarded.

England is the only country that pretends to have an international gold coin which she will let go out. But she can afford to do it, though she stops its going out when she desires. She has an income from other countries of $500,000,000 a year. She has this colossal fabric of wealth, and when it goes away she can draw it right back. When she is paid $500,000,000 a year she can stand a little draw. That is the situation.

Who mourns constantly over being robbed by poor money? I want to know if you would complain of being robbed of gold if you were furnished silver or paper of any kind. Is that the way robberies take place? No, Mr. President, that is not the way. Robbery takes place by contraction

THAT DESTROYS PRODUCTION,

that depresses enterprises. A man goes long on property and short on money. But whether he borrows money or not, this enterprise is discouraged. This demonetization of silver means death to enterprise; it goes into the shop and drives labor out of employment; it gives nothing to the laborer in the shape of employment unless business is prosecuted.

Just look at the wages of labor after fourteen hundred years of contraction. There was no piece of gold or silver money sufficiently small for a man to earn by a day's labor on the continent of Europe at the commencement of the sixteenth century. Before the discovery of America the wages were so small that the laborers were serfs and were sold with the land. When the money famine occurred in this country between 1810 and 1850, by reason of the Spanish-American war, which cut off the supply,

WAGES FELL TO A MISERABLY LOW PRICE.

Eight dollars a month on a farm was first-class wages. We are getting back to that again. But when the gold mines of California and Australia were opened it raised the price of wages to fifty or sixty dollars a month. We are going back again by contraction.

The trouble is that the laboring man does not get the dollar. It does not shrink in his pocket; it does not get there. It is lamentable that any President of the United States should ever groan over the misfortunes of the laboring man on account of the depreciation of money. It has come to that again. It was the habit of Mr. Cleveland's predecessor. They have both been groaning over it. What they want is to have money appreciated. For whose benefit is it to appreciate money? Is it for the benefit of the poor who have no money or for those who own money and obligations payable in money, and who are absorbing the wealth of the world and grinding mankind to poverty? Every intelligent man knows for whose benefit it is. It is the Rothschilds, the bondholders who have money and calls for money, that President Cleveland and ex-President Harrison were groaning over so much for fear that the money the Rothschilds had would be depreciated

IN THE HANDS OF THE LABORER.

The laborer is not going to get enough to do him much good. The President himself is receiving the snug little sum of $50,000 a year. He does not want that depreciated. We would be satisfied if he would let it stay at the same value. I was here in this Chamber when his salary was put up from $25,000 to $50,000. I took the responsibility to vote for it. I am sorry for it. The President's salary was increased from $25,000 to $50,000; and it is more than $100,000 in its purchasing power compared with what it was at the time it was increased. Had it remained at $25,000 it would have been ample now. It is now too much. Fifty thousand dollars at that time was all right, and it would be all right now if money had remained at the same value. In 1873, if both gold and silver had been coined and the people had had money to do business on, and gold had not been appreciated 50 per cent, $50,000 would be all right for the President. It is now too much. It is exorbitant. I hope it does not have any influence on the President in making him desire

TO INCREASE THE VALUE OF MONEY.

But the $50,000 that goes into his pocket every year may have something to do with it. He has a deep interest in it; and if you pass this bill it will double up his salary again, and his $50,000 will be equal to $100,000 in a year or two in purchasing power. A man with $50,000 per annum for a year or two, if you can pass this bill, has to be paid in gold and he has a dead cinch.

Look at the farmers. The price of farm products have fallen 50 per cent. See the suffering there and the suffering of the laborers, and watch the millions out of employment starving for bread. Oh, Mr. President, if the President would have a little

more anxiety that the laboring man should get a dollar with which to buy bread, if he would have a little more anxiety that the laboring man should not be thrown out of employment, if he would have a little more anxiety that the farmer should not be sold out of his home, if he would only have a little more anxiety for the masses who are suffering, he would be a better man as well as a better President.

Mr. President, the President proceeds in his letter to Mr. Warner:

From these impending calamities it is surely a most patriotic and grateful duty of the Representatives of the people to deliver them.

I submit the entire letter:

ALBANY, *February 24, 1885.*

GENTLEMEN: The letter which I have had the honor to receive from you invites and indeed obliges me to give expression to some grave public necessities, although in advance of the moment when they would become the objects of my official care and partial responsibility. Your solicitude that my judgment shall have been carefully and deliberately formed is entirely just, and I accept the suggestion in the same friendly spirit in which it is made. It is also fully justified by the nature of the financial crisis which, under the operation of the act of Congress of February 28, 1878, is now close at hand. By a compliance with the requirements of that law all the vaults of the Federal Treasury have been and are heaped full of silver coins, which are now worth less than 85 per cent of the gold dollar prescribed as "the unit of value" in section 14 of the act of February 12, 1873, and which, with the silver certificates representing such coin, are receivable for all public dues.

Being thus receivable, while also constantly increasing in quantity at the rate of $28,000,000 a year, it has followed, of necessity, that the flow of gold into the Treasury has been steadily diminished. Silver and silver certificates have displaced and are now displacing gold, and the sum of gold in the Federal Treasury now available for the payment of the gold obligations of the United States and for the redemption of the United States notes called "greenbacks," if not already encroached upon, is perilously near such encroachment. These are facts, which, as they do not admit of differences of opinion, call for no argument. They have been forewarned to us in the official reports of every Secretary of the Treasury from 1878 till now. They are plainly affirmed in the last December report of the present Secretary of the Treasury to the Speaker of the present House of Representatives. They appear in the official documents of this Congress, and in the records of the New York clearing house, of which the Treasury is a member, and through which the bulk of the receipts and payments of the Federal Government and of the country pass.

These being the facts of our present condition, our danger and our duty to avert that danger would seem to be plain. I hope that you concur with me, and with the great majority of our fellow-citizens, in deeming it most desirable at the present juncture to maintain and continue in use the mass of our gold coin, as well as the mass of silver already coined. This is possible by a present suspension of the purchase and coinage of silver. I am not aware that by any other method it is possible. It is of momentous importance to prevent the two metals from parting company; to prevent the increasing displacement of gold by the increasing coinage of silver; to prevent the disuse of gold in the custom-houses of the United States in the daily business of the people; to prevent the ultimate expulsion of gold by silver. Such a financial crisis as these events would certainly precipitate were it now to follow upon so long a period of commercial depression, would involve the people of every city and every State in the Union in a prolonged and disastrous trouble.

The revival of business enterprise and prosperity, so ardently desired and, apparently, so near, would be hopelessly postponed. Gold would be withdrawn to its hoarding places, an unprecedented contraction in the actual volume of our currency would speedily take place. Saddest of all, in every workshop, mill, factory, store, and on every railroad and farm, the wages of labor, already depressed, would suffer still further depression by a scaling down of the purchasing power of every so-called dollar paid into the hand of toil. From these impending calamities it is surely a most patriotic and grateful duty of the representatives of the people to deliver them.

I am, gentlemen, with sincere respect, your fellow-citizen,

GROVER CLEVELAND.

Hon. A. J. WARNER
and others, members of the Forty-eighth Congress.

It seems to me that the deliverance he suggests would be the deliverance that the lion gives to the lamb. He suggests such legislation as would deliver the people over into the hands of the money lenders. It would deliver them over by closing their factories and deliver them by converting independent farmers into poor laboring men. That is the deliverance the President asked the representatives of the people to give before he took the oath of office in 1885. He would deliver them into the hands of Shylocks, take away from them

THE RIGHT TO MINE AND COIN THEIR OWN MONEY,

deprive them of their heritage that made the country great, deliver them, I say, to the miser, deliver them to the three-ball shop. That is the kind of deliverance that was asked of the American Congress by the President-elect in February, 1885.

He pursued the same policy in his message to Congress. During the summer of 1885, after he was sworn in, there was another monetary conference held in Paris. The Latin Union met there for the purpose of discussing monetary questions. The President directed Mr. George Walker, who was consul general at Paris, to appear at that conference and inform the delegates assembled there that the United States was about to repeal the Bland act and abandon silver.

When that information was imparted to the conference in Paris, the conference passed a resolution providing for the dissolution of the Latin Union at the end of five years; but it provided further that the resolution should not take effect unless some one of the five nations belonging to the union gave a year's notice. That notice has not been given, and the union has not been dissolved.

It was provided at that same meeting that in case of the dissolution of the union each one of the five nations belonging to it should redeem all its silver coin in gold coin. France held and holds now about $200,000,000 of the silver coins of other nations, of Italy, Greece, and Belgium, and I believe some in Switzerland. It is part of her silver reserve. By giving notice she could require the redemption of that silver in gold, and

MONOMETALLISTS HAVE BEEN URGING FRANCE

to give the notice. They have been urging her that these nations have joined Germany, and to get even by given notice and making them pay in gold; but the Government of France has said that inasmuch as there is $700,000,000 of silver in circulation among the people of France, such a movement as that would disparage silver and be prejudicial to the people, and France would neither give the notice nor demand payment in gold. She could get now $1.33 for all the foreign silver coin that she holds, but she does not do it.

But what is very peculiar is that when France was notified that the United States was going to abandon silver they passed a resolution dissolving the union and silver fell in the market about 10 cents an ounce on that proceeding. The President then in his message to Congress, December 8, 1885, communicated this fact and also further elaborated his views on the silver question. From that message I now read:

The very limited amount of circulating notes issued by our national banks compared with the amount the law permits them to issue, upon a deposit of bonds for their redemption, indicates that the volume of our circulating medium may be largely increased through this instrumentality.

Hostility to silver and leaning to the national banks. A very common union. That is a leaning which is very common in this country among those who have national bank stock. Of course the President is not thus affected, but I find that almost everybody with national bank stock leans to the national banks. It has even been rumored that it has had some effect in the Senate to destroy silver and create bonds

FOR THE BENEFIT OF NATIONAL BANKS.

That leaning is natural. A man will not realize it; but an interest in the national banks is a dangerous thing to legislation affecting national banks—I mean to produce impartial legislation. I hope it will be true that there is no member of the Senate who has any national bank stock. I proposed to investigate the matter. The investigation has not progressed: but I hope it is true that no member of the Senate is interested, because this bill involves that question.

This bill involves putting money in their pockets. This bill involves the issuance of bonds. This bill involves the issuance of bonds to buy gold to strengthen the credit, and issuing bonds and buying gold will make more national bonds for national bank stock, and it would be very beneficial to national banks. They are very anxious for it.

Nothing more important than the present condition of our currency and coinage can claim your attention.

Since February, 1878, the Government has, under the compulsory provisions of law, purchased silver bullion and coined the same at the rate of more than $2,000,000 every month. By this process up to the present date 215,759,431 silver dollars have been coined.

A reasonable appreciation of a delegation of power to the General Government would limit its exercise, without express restrictive words, to the people's needs and the requirements of the public welfare.

I wonder if the President intended by that to imply that the people had too much silver coin. He says a reasonable delegation of the power would restrict it to the needs of the people. I wonder if he ever reflected upon the fact that when the Constitution was formed it authorized the Government

TO COIN GOLD AND SILVER.

When the Constitution was formed it authorized Congress to provide for the coinage of gold and silver. Previous to 1873 it was left to the people to coin their own money, to take it to the mints and have it coined, and the only limitation that was placed upon the amount of money they might have was what they could get from the mines.

A reasonable appreciation of a delegation of power to the General Government would limit its exercise, without express restrictive words, to the people's needs and the requirements of the public welfare.

When in all this world did the people have more gold and silver than they needed? Will any man name the time? Let him name the time when it occurred.

Mr. HOAR. The Senator is not heard on this side of the Chamber.

The PRESIDING OFFICER (Mr. GALLINGER in the chair). Complaint is made that the Senator from Nevada is not heard. The Senate will be in order.

Mr. STEWART. I am glad the senior Senator from Massachusetts called attention to it, for I know of no one who needs instruction more than he does and I am anxious he should hear every word. I ask him to take a seat nearer to me; he is so susceptible of information and so much in need of it, particularly

on this question. He has gone far enough to know that gold and silver are a good thing. He held it up to us in a long speech, and then he told us, although it is good you can not have it; you must suffer on; we in New England can endure your suffering; we can endure the closing of the mines; we can endure the closing of the workshops; we can endure the falling of prices; we can endure hard times in the country; we live in the East; we are manufacturers; we are money lenders; and although it is right and proper and may be very unfortunate

WE CAN ENDURE A GREAT DEAL OF MISERY

on the part of our neighbors. That was about the way my kind Senator put his argument. It was a magnificent argument, but the outcome of it was rather gloomy. It was gloomy in the mountains where the mining camps are and the people are starving for bread. It was gloomy in the towns that are desolated, gloomy in the plains of Kansas, where mortgages are growing and the farms are being absorbed. It was gloomy in the factories that are closed, gloomy in the streets where the unemployed congregate. His conclusion was a terrible disappointment to me.

When I listened to his demonstration that gold and silver were necessary, and the employment of both in unlimited quantities was necessary for the use of man, when he told me that, although it was necessary, the people of the United States must do without it, that England would not agree to it, I was amazed.

He did not directly say that, but my friend from Iowa filled out the measure of our discomfort by saying we must drift until we can have another international conference, and get another international kick, and get

A LITTLE MORE ENGLISH CONTEMPT

for our imbecility, and a little more English arrogance and pride and a little more American humiliation.

The President proceeds:

Upon this theory--

That is, the theory that we must be restricted in our metallic money—

Upon this theory, the authority to "coin money" given to Congress by the Constitution, if it permits the purchase by the Government of bullion for coinage in any event, does not justify such purchase and coinage to an extent beyond the amount needed for a sufficient circulating medium.

He did have a glimmering of the situation in that expression. I think he must have read the Constitution, which did not contemplate purchasing at all. The plan of purchasing was an absurdity. Passing upon it in this Chamber was an absurdity. The whole theory of it is that nature alone shall limit the quantity. That is the only reason why we use gold and silver and why we submit to nature's limitation. The purchase, of course, is necessary under existing law, but if he had understood the full scope and meaning of the Constitution and the needs of the people he would say, "Stop your purchasing; give us back the laws as they existed; open your mints; coin your own money; stop borrowing from England, and have an American policy." He did not come up to that, although he had a glimmering that there was something wrong about purchasing.

The desire to utilize the silver product of the country should not lead to a misuse or the perversion of this power.

"The desire to utilize the silver product!" The President mistakes the desire of the silver men. They do not desire to utilize silver, but they do desire more money, or more money than gold can furnish. The want of knowledge of the money question or the want of a desire to furnish the people money puts the President in a very unfortunate position. He ought to know, if he does not, that it is the gold men and the national banks whom he serves who desire to destroy silver, to deprive the people of money, and reduce them to poverty. It ill-becomes the agent of the gold ring, who is betraying the people by a violation of the pledges upon which he was elected, to call hard names or to attribute unworthy motives. The platform of the President before election was

A LIBERAL SUPPLY OF MONEY,

and the coinage of both metals without discrimination against either. His platform now is to strike down silver, destroy property, and beggar those who are pioneers in the West. But what is the suffering and destruction of a million or two people compared with the subjugation of a nation, compared with the thousands of millions of loss to the farmers and planters of this country? What would be the destruction, I say, of all the intermountain States compared with the ruin, the paralysis that exists through this country, compared with the power delegated to a few to produce a panic, compared with the humiliating position this country now occupies, compared with the loss of our financial independence, compared with the degradation of being a financial colony of Great Britain? The people of the mountain States may be destroyed, they may be driven from their homes, they may starve to death, as many will; but that is nothing compared with

THE LOSS OF MANHOOD AND LIBERTY,

which the iron grasp of contraction is bringing upon this country. In fact, if we are chained to the gold standard, this civilization must go backward from this day.

Oh, how petty for a President of the United States to speak of the desire of the miners to sell their bullion in connection with this great question in which the hopes of humanity are garnered! Money is the life blood of civilization, and when we have so many repeated examples in the history of one nation after another lapsing into barbarism, poverty, squalor, and misery by the loss of its money, with all these examples before us, and when we see this great civilization faded, when we see the manhood destroyed from our country, when we see the power of concentrated capital, when we see the power in this capital, when we see the consolidated press of New York speaking of dissolving the Senate, riding rough shod over it, abusing honored men

FOR VINDICATING HUMAN RIGHTS,

how insignificant to talk about selling a few ounces of bullion! If silver was not the life blood of civilization, if it was not necessary for every man, if it was not necessary in order that we might have a circulating medium when we could have progress and prosperity if that was not the case we would not mention silver. Show me any advance in civilization when the mines have been closed.

Every nation when it lost its mines went into barbarism. We have it all explained to us in history. When explorations show that the Egyptians obtained their money at the time they built the pyramids from the land of Nubia, whose productive mines then existed, and from western Asia, where vast excavations were made by mining, we see the connection between ancient civilization and the precious metals. When the Phœnicians and Babylonians prospered they accumulated gold and silver from all the discovered mines of the world. When Greece was the cradle of learning and the university of the world, the luster of whose achievements in oratory, in science, and in art have not been surpassed, she accumulated gold and silver from western Asia and the mountains of Thrace.

Xenophon records their success in the mountains of Thrace. When we come to the grand Roman development we find that Rome robbed the nations she conquered of their accumulations of gold and silver. She then enslaved the armies she conquered and tore down the mountains of Spain and Italy to an extent without a parallel except perhaps in the hydraulic mining of California. Her gold and silver accumulated and she grew in strength, and by her conquering armies overran all Europe, northern Africa, and western Asia Her legions were supplied with gold and silver coins from the mines of Spain and Italy and from the accumulations she acquired from other nations, and as she increased in metallic money her enterprises advanced and her power and progress were irresistible.

BUT WHEN THE MINES GAVE OUT

then poverty came. When contraction came then came the strides toward barbarism and the Dark Ages, to the ages of poverty and slavery. There was no new money and all was darkness. Every home without money is dark. Every father who has not money to supply his family has a dark home, his children starve and all is despair. He must have this medium of exchange. This brings us to the present time.

Mr. President, I suppose the Senator from Tennessee [Mr. HARRIS], whose proposed amendment has just been read, has overlooked the fact that the market price has been abolished by the Secretary of the Treasury. It was necessary to abolish market price to violate the law and degrade silver. The plan of the Senator from Tennessee to purchase silver at the market price amounts to nothing while the Secretary of the Treasury holds that there is no market price. Mr. Preston, the Acting Director of the Mint, has invented a plan of making counter offers below the price at which any body will sell silver bullion and avoid buying any at any price.

By means of that plan the law is abolished, because he can always offer a lower price than anybody will take, and the law is annulled. The market price has been abolished and it is idle to introduce a bill to buy at the market price. The framers of the act of 1890 did not know at the time that it was possible the Secretary of the Treasury would dare abolish the market price to evade the law. But so it is. The letter from the Secretary of the Treasury is to the effect that he had abolished the market price; so I do not think we had better put market price in any more laws. The President continues:

The necessity for such an addition to the silver currency of the nation as is compelled by the silver-coinage act, is negatived by the fact that up to the present time only about fifty millions of the silver dollars so coined have actually found their way into circulation, leaving more than one hundred and sixty-five millions in the possession of the Government, the custody of

which has entailed a considerable expense for the construction of vaults for its deposit.

How childlike and bland the expression that there is a large amount of silver dollars in the Treasury! The President says that is conclusive proof that there has been too much coined. Did he ever reflect that it was some proof that he would not pay out those silver dollars?

THE LAW REQUIRES HIM TO PAY

them out to our Government creditors, but he has kept them in the Treasury. Does not that suggest that they have been violating the law? Why should these dollars be in the Treasury? It is because the Treasury Department will not pay them out; because that Department defies the law, and the President says because he has kept them there and will not pay them out we have got too much silver in the Treasury. Is that not childlike and bland? Is it not nice? I like such coolness, let it come from high or low places.

Why does he not pay silver out as the law requires? "Oh, because silver coin is not good enough for the bondholders. No matter how plainly it is written in the contract, he will not use silver; he will not pay it out; but he will build vaults for it; it is such a burden on our hands;" and the gold press howl about these standard silver dollars as an encumbrance. Every obligation of the Government is payable in gold and silver equally, but the London syndicate do not want us to use silver under any circumstances. They want to destroy silver and make the policy of our administrations the same as the policy of the English gold King. Both of them

PREY UPON THE PEOPLE

of the United States and both of them give the English creditor more than the contract calls for. Gladstone wants dear money because England is a creditor nation, and Cleveland wants dear money because the United States is a debtor nation, and they are in accord to rob the American people.

Against this latter amount there are outstanding silver certificates amounting to about $93,000,000.

Every month two millions of gold in the public Treasury are paid out for two millions or more of silver dollars, to be added to the idle mass already accumulated.

Why does he pay out the $2,000,000 in gold for silver? The law does not require it. Every line he writes show a contempt for the law or a misapprehension of law. What is the use of staying here to pass laws? Why are we sitting up nights here to repeal a law which has already been repealed by the abolition of the market price by the Secretary of the Treasury? He has nothing to do but to make counter bids and we get no silver. Why all this night work? Why talk about the Senate being destroyed if we can not repeal this void law when the Department has already repealed it?

WHY THIS GREAT EMERGENCY?

Why is the Secretary of the Treasury so anxious that the law shall be repealed when he has already destroyed it?

I have no respect for this clamoring for the repeal of a law the Secretary of the Treasury has already repealed. I do not know why Mr. Pulitzer in his European home should be worried over this law, which is now a dead letter. I do not know why Mr. Bennett should be disturbed in his sports in Paris or London over a thing that is as dead as this law is in the hands of the Secretary of the Treasury. I do not know why the young men in the galleries should sit up at night to speculate what is going to happen to this dead law. I do not understand it, but here we are, and we will work along and do the best we can.

Every month two millions of gold in the public Treasury are paid out for two millions or more of silver dollars, to be added to the idle mass already accumulated.

"Idle mass." Although the law has provided silver for the payment of debts, although it is the standard silver dollar and the dollar of the fathers, although it is a full legal tender, although it is the money of the contract, although we need money, the President calls it idle. Who made it idle? The legislative or the executive department? Who commanded the executive department to make it idle? Who was interested in making it idle? Great Britain; that colossal fabric,

THAT GREAT ABSORBENT OF THE WEALTH

of the world wanted to make it idle so as to make money dear. Who obeys the mandates of that colossal power? Congress has not fully obeyed. It is true that Congress was deceived in 1873 and through English influence, as we are informed by the Senator from Ohio, silver was demonetized; but Congress has been fighting to restore silver for twenty years against that English influence. It did in 1878 restore the standard silver dollar, but the executive department would not use the standard silver dollar and the President complains that it is lying idle in the Treasury.

If continued long enough, this operation will result in the substitution of silver for all the gold the Government owns applicable to the general purposes.

"If continued long enough." Why do you continue to hoard it? Why do you not pay it out and relieve the gold? Of course if you continue to disobey the law it will accumulate. Why does the President do that? He was not asked by Congress to do it. Congress provided that it should be paid out. Who made him continue that illegal process, Congress or the gold ring?

It will not do to rely upon the customs receipts of the Government to make good this drain of gold, because the silver thus coined having been made legal tender for all debts and dues, public and private, at times during the last six months 58 per cent of the receipts for duties has been in silver or silver certificates, while the average within that period has been 20 per cent.

Fifty-eight per cent of the duties has been paid in silver. Congress made it a legal tender for all debts, public and private, for that purpose, but still the President will not use it for that purpose; he will not pay public or private debts with it; he will hoard it and make it idle. For what purpose? Because he does not like silver. Why does he not like silver? Because England does not. Why does not England like silver? Because England is a creditor nation and wants to absorb the wealth of the rest of the world. That is all there is of it.

The proportion of silver and its certificates received by the Government will probably increase as time goes on, for the reason that the nearer the period approaches when it will be obliged to offer silver in payment of its obligations, the greater inducement there will be to hoard gold against depreciation in the value of silver, or for the purpose of speculating.

The nearer the time comes when he will have to pay out silver! If the laws had been fairly and honestly administered and silver had been paid out indiscriminately, there would have been no trouble with gold. France is not coining, but she pays out silver and that makes them respect it. Her officials obey the law. So do the German officials.

THERE WOULD HAVE BEEN NO TROUBLE

about this if it had been treated fairly in the Treasury Department. It would have been good money; but you hoard it and refuse to pay it out, and then you complain because it is there. You would not pay it out but kept it there and then complain.

This hoarding of gold has already begun.

Because for fear you will sometimes pay out silver, for fear that some Administration would come in and obey the law and pay out silver. That is the whole of it.

When the time comes that gold has been withdrawn from circulation, then will be apparent the difference between the real value of the silver dollar and a dollar in gold, and the two coins will part company.

I think he might try and see whether they would part company. If he would give the creditors some of it I think all the creditors would be interested in keeping the two metals together.

Gold, still the standard of value, and necessary in our dealings with other countries—

"Gold, still the standard of value!" How dare he say that if he had ever read the act of 1878 which restored the standard dollar? He pays no attention to the act of Congress. The act of 1878 restored the standard dollar, the old standard dollar, and still the President tells us that gold is the standard. He is very much in love with the act of 1873 all the while. He has stuck to that because that was procured through English influence. There is no doubt about that, because we prove by the Senator from Ohio that it was English influence. He is in love with that act.

Gold still the standard of value, and necessary in our dealings with other countries, will be at a premium over silver; banks which have substituted gold for the deposits of their customers may pay them with silver bought with such gold, thus making a handsome profit; rich speculators will sell their hoarded gold to their neighbors who need it to liquidate their foreign debts at a ruinous premium over silver, and the laboring men and women of the land, most defenseless of all, will find that the dollar received for the wage of their toil has sadly shrunk in its purchasing power.

It does not appear that either the President or ex-President can talk about silver, without lamenting the shrinkage of value of silver and the vast hoards of bad money. May they not be thinking of the money in the hands of the rich who are their friends, and not of the money which is not in the hands of the poor?

Ah, that is using the livery of Heaven to serve the devil in. They could very well agree to let the laboring man have gold money if he could get it. The rich have it, and the President wants to appreciate it in the hands of the rich. Why not stop such nonsense, such transparent humbug as that.

It may be said that the latter result will be but temporary, and that ultimately the price of labor will be adjusted to the change; but even if this takes place the wage-worker can not possibly gain, but must inevitably lose, since the price he is compelled to pay for his living will not only be measured in a coin heavily depreciated, and fluctuating and uncertain in its value, but this uncertainty in the value of the purchasing medium will be made the pretext for an advance in prices beyond that justified by actual depreciation.

Is it not melancholy that the President should pretend to favor the laboring man when he throws him out of employment and starves his family? Contraction, however much it may be resisted, degrades labor. Falling prices of property and falling prices of labor, which follow contraction to the gold standard, mean misery in the home of the laborer as certainly as night follows the day.

NO INSTANCE IN HISTORY

can be given to the contrary. Show me when there was a money famine and I will show you when labor was degraded. Show me when the mines were productive and we had plenty of money and I will show you prosperity and well-paid labor. In my own time I have seen labor degraded by a money famine that resulted from the failure of the mines in consequence of the Spanish-American wars, in the early part of the century. I have seen labor elevated, schoolhouses and churches, prosperity and happiness everywhere in consequence of more money. I have seen prices stimulate industries, because the people desired to acquire property; but if property is falling nobody wants to acquire property.

Nobody wants anything that is depreciating. When property is going up everybody wants it, and then everything is active. We know that is the case everywhere; and to pretend that the laborer is going to be benefited by contraction to the gold standard, and such an argument to come from a President of the United States of America, is insulting to the people.

The words uttered in 1834 by Daniel Webster in the Senate of the United States are true to-day: "The very man of all others who has the deepest interest in a sound currency, and who suffers most by mischievous legislation in money matters, is the man who earns his daily bread by his daily toil."

That is true. No man has suffered so much for the crime of 1873, no man has suffered so much by breaking down the money of the Constitution as

THE LABORING MAN IN THIS COUNTRY.

No man has suffered so much by the gold standard as the laboring man. Look at the condition wherever the gold standard prevails. Look at the condition of the Egyptian laboring man, look at the condition of the Italian, of the Austrian, and of the Englishman; look at the condition of the laboring man everywhere whose hard condition the President would make worse. A shrinking volume of money means falling prices, want of employment, gloom, and despair.

No man suffers as much as the laboring man from the result of contraction. No man suffers as much as the producer. How was $20,000,000,000 accumulated by the bankers of London? It was accumulated by just such legislation as the act of 1873, by making money scarce and dear. Who produced that $20,000,000,000? Labor. Who robbed labor? The conspirators who struck down silver. Who doubled the value of the property of the rich, who doubled the value of money, who doubled the obligations of contracts, who depressed labor, who doubled mortgages, who converted independent farmers into dependent farmers? The gold ring.

The act of 1873 destroyed half of the metallic money of the world and the President is advocating a confirmation of that act. He quoted the remarks of Daniel Webster to justify the crime of 1873, to justify the destruction of half the world's money, to justify a revolution which, if finally consummated, will relegate man back to barbarism.

Mr. President, I continue my quotation from the President's message of 1885:

The most distinguished advocate of bimetallism, discussing our silver coinage, has lately written:

"No American citizen's hand has yet felt the sensation of cheapness, either in receiving or expending the silver-act dollars."

No American citizen has felt the cheapness of the dollar. That is true; he has not felt the cheapness of the dollar; but he has felt most sorely the cheapness of his wheat and corn. He has felt most sorely the cheapness of farm products. He has felt most sorely the cheapness of his farm. He has felt the dearness of the dollar and the increase of its purchasing power. He has felt his obligations growing by reason of the increasing value of the dollar. He never felt the cheap dollar and our British rulers do not intend that he shall. We shall always have a dear dollar, but we will have cheap land, cheap wheat, cheap men, cheap trade. That is what the English syndicate wants. There never will be any cheap dollars as long as we are a financial colony of Great Britain, that is certain, and we certainly shall be a financial colony of Great Britain so long as the policy of the Treasury Department is managed as it has been for the last twenty years. There is no doubt that the position of Great Britain in our Treasury Department is stronger, if possible, than it is in the Bank of England.

IT IS ABSOLUTELY INTRENCHED THERE.

It is strong enough there to abolish market prices. It is strong enough there to use the Treasury Department for the benefit of speculators in Lombard and Wall streets, and always will be so long as we are a financial colony of Great Britain. I wish the American people would declare their independence of Great Britain. I hope they will; and let me tell them if they do not do it soon it will be too late.

I am glad this discussion has come about. I am glad that the sham pretense which pretends that the Sherman act has done harm has fallen through. I am glad that we are at liberty here to meet the apologists for the gold standard face to face. I am glad that the people will be brought to understand that this proposed repeal means a gold standard, contraction, poverty, hard times, and misery, and its defeat means more money, prosperity, independence, and liberty. It is one or the other. The issue is broad, and all the money of the colossal power that Gladstone describes can not hire enough newspapers to convince the people that times are good, that they get good prices for their farm products, and that there is prosperity.

Ah, they feel and know it. They are beginning to know that these newspapers and their agents and abettors told them falsely when they told them that $150,000,000 of Treasury notes had robbed them of their property. They begin to know that the gold men

HAVE RAISED A FALSE ALARM.

The President continues:

And those who live by labor or legitimate trade never will feel that sensation of cheapness. However plenty silver dollars may become, they will not be distributed as gifts among the people; and if the laboring man should receive four depreciated dollars where he now receives but two, he will pay in the depreciated coin more than double the price he now pays for all the necessaries and comforts of life.

How melancholy it is that the poor laboring man should always be brought in. Now, is not the laboring man better off with some money than with none at all? How is he going to get any money? The gold dollar for the laboring man? What laboring man has ever got a dollar? What mockery it is to talk about the laboring man being paid in gold! He is not such a big fool as to expect that. The President knows the laboring man does not get gold. The laboring man never gets gold in this country. He is glad to get paper; he is glad to get silver; he is glad to get money with which to buy a loaf of bread. This sporting with the misery of the laboring man it seems to me has gone about far enough.

Those who do not fear any disastrous consequences arising from the continued compulsory coinage of silver as now directed by law, and who suppose that the addition to the currency of the country intended as its result, will be a public benefit, are reminded that history demonstrates that the point is easily reached in the attempt to float at the same time two sorts of money of different excellence, when the better will cease to be in general circulation.

History demonstrates it! Where did history ever demonstrate that there was any calamity from floating silver or gold coin? Of course, when we had a right to use either, and make money out of either, and to use the one most convenient, times were good. That is what history demonstrates; and if one of the metals gives out, the other can be used. This appeal to history to demonstrate that you can not use both gold and silver is absurd.

WHAT HISTORY HAS THE PRESIDENT READ?

In history for three thousand years both metals were circulating, the coin of one equal to the coin of the other, and if there was any fluctuation in the bullion, the cheapest was used and the two were brought together. History demonstrates that both are necessary. History demonstrates that the destruction of one has produced calamity, and everybody in the country ought to know it.

The hoarding of gold, which has already taken place, indicates that we shall not escape the usual experience in such cases. So if this silver coinage be continued we may reasonably expect that gold and its equivalent will abandon the field of circulation to silver alone.

That is philosophical! Gold abandoning the field of circulation to silver alone, with the little amount that we have, when all the while gold is coming here! Gold can not leave until prices in this country are higher than they are elsewhere. Gold will go where it will buy the most, and it ought to go there; and this preaching that the movement of gold has any materiality in it is nonsense. All we want is money, and the money most convenient to get, whether it be silver or gold, is good money; we will use silver or gold. By telling the people that gold will go, you are attempting to degrade silver by this threat, this humbug. By scaring the people you hope to degrade and destroy three or four hundred million of dollars of silver belonging to the Government. You would destroy that for the purpose of repealing the act of 1890 which is already nullified by the Secretary of the Treasury.

So if this silver coinage be continued we may reasonably expect that gold and its equivalent will abandon the field of circulation to silver alone. This, of course, must produce a severe contraction of our circulating medium, instead of adding to it.

If gold goes out so as to produce contraction it will come back quickly, because it will go where it will buy the most. All this nonsense is

TO DECEIVE THE PEOPLE.

The President ought to know that gold could not go out and produce contraction, for if by contraction gold becomes dear and scarce, it will come here, as any other kind of money will come here, if there is contraction enough to make lower prices here than in Europe. It will go to the country where it will

buy the most, unless it is hoarded, and we do not propose to hoard it.

It will not be disputed that any attempt on the part of the Government to cause the circulation of silver dollars worth 80 cents, side by side with gold dollars worth 100 cents, even within the limit that legislation does not run counter to the laws of trade, to be successful must be seconded by the confidence of the people that both coins will retain the same purchasing power and be interchangeable at will.

Now, that is very important. He says that silver is worth only 80 cents, that a dollar is worth only 80 cents. I will give him 80 cents for all he coins. I will give him 90 cents for them. Everybody knows that the silver dollar with the stamp of the Government on it is worth 100 cents, and floats side by side with gold. Three or 4 per cent premium was paid for the silver dollar in New York a few days ago,

What is the President talking about? Is he falling into the common humdrum cant of the press? The silver dollar is worth 100 cents, and silver bullion would be worth as much as gold bullion if it were not for the infamous act of 1873 which the President is constantly indorsing.

A special effort has been made by the Secretary of the Treasury to increase the amount of our silver coin in circulation—

That I deny. There never has been any effort of the kind made. On the contrary, the effort has been right the other way. He has been trying to scare men so that they would not take it. The Secretary and the President, too, have been trying to keep it out of circulation, and they do not want you to get any silver coined. They will not give you subsidiary coin. They have power to buy and coin subsidiary coin, but they will not give enough for a circulating medium. I went over to Chicago, and on the way traveling on the cars I could not get $10 changed. I had to wait until I got near the city before it could be done. The people need the coin for change everywhere. The national banks, who are the organs of the Treasury Department, apologize to you as if they would commit a crime by paying you silver, and they try

TO PREJUDICE PEOPLE AGAINST IT.

I deny that the Secretary of the Treasury has attempted to put silver in circulation. I deny that any national banks, the agents of the Government, have encouraged silver. On the contrary, they have done all they could to depreciate and destroy it and keep it out of circulation.

I do not suppose the President knew all about this matter. I do not suppose he knew the Secretary had not made that effort or he would not have stated it. I do not mean to say that the President stated a falsehood, but I say the fact is not as he states it. I say the Secretary of the Treasury has made every effort he could to disparage silver and keep it out of circulation—

but the fact that a large share of the limited amount thus put out has soon returned to the public Treasury in payment of duties, leads to the belief that the people do not now desire to keep it in hand—

Of course it is paid in there when they get it. That is what they keep it for, to pay taxes with, and when it comes in it should be paid out again; but the Secretary would not pay it out on the obligations of the Government. He never has paid it out. So that is not true—

and this, with the evident disposition to hoard gold, gives rise to the suspicion that there already exists a lack of confidence among the people touching our financial processes.

As to lack of confidence among the people, he is sapping the confidence by saying that it is an 80-cent dollar, and talking about the want of confidence.

IT IS BUSINESS CONFIDENCE THAT WE WANT.

The Treasury Department is to administer laws, and with confidence enough that the Government will pay its debts according to the contract. He talks about confidence in money. The people have confidence in all the money. There is plenty of confidence in money; but the people have not confidence in the manipulations of banks. There is no doubt about confidence. He talks about the confidence of people in financial processes. I have no confidence in the financial processes in the Treasury Department. I have no confidence in a Department that abrogates laws by abolishing the market price, and the like of that. I have no confidence in it; the people have no confidence in it. There is a want of confidence in the Administration and not in the law.

There is certainly not enough silver now in circulation to cause uneasiness;—

I should not think there was. The only uneasiness they have is that they have not enough—

and the whole amount coined and now on hand might, after a time, be absorbed by the people without apprehension; but it is the ceaseless stream that threatens to overflow the land which causes fear and uncertainty.

"Ceaseless stream." Oh, if it could be only a ceaseless stream of the precious metals, uninterrupted by rascality, uninterrupted by intrigue, uninterrupted by clandestine legislation, falling prices would stop. If we could have that ceaseless stream

WE WOULD HAVE CEASELESS PROSPERITY;

but it is cutting off that stream, drying up that stream that has produced disaster in the country. Oh, give us the ceaseless stream of money! Oh, give us the bounties of nature, the development of the mines we have! Let it come from our own country. Do not compel us to get on our knees to Great Britain. That is what we are praying for—a ceaseless stream of good, honest gold and silver money as a basis for circulation and credit. The want of that stream and the pollution of that stream by rascality and fraud is what has brought paralysis upon the whole body politic. That is the trouble and nothing else.

What has been thus far submitted upon this subject relates almost entirely to considerations of a home nature, unconnected with the bearing which the policies of other nations have upon the question. But it is perferfectly apparent that a line of action in regard to our currency can not wisely be settled upon or persisted in, without considering the attitude on the subject of other countries with whom we maintain intercourse through commerce, trade, and travel.

Of course it can, because we allow other nations to make our laws for us. But why should we consider those who do not consider us? They pass their own financial laws; they have their own money, no matter what kind of money. What we have would not be money in their country—it would be a commodity. Why must we consider them? Our home commerce is 95 per cent of our entire commerce. Is it not important that we should have money that would settle contracts honestly between ourselves? Is it not important that we should have money with which to develop our own resources? Is it important that we should have money for export? If you export your money

YOU DEPRIVE THE PEOPLE

of the tool with which they do business. I have often said that international money is a national curse. Just see what condition a nation is in with international money. If we get on a gold standard with the little money we have, they have a string to it in London, and if they want to get us in any trouble, they will jerk it and bring on another panic. What could we do if we got into any trouble with international money? We would have to abandon it. We must have money at home. We must consider our own condition and have money at home. Point to me a nation that ever prosecuted a great war with international money. Gold is the meanest coward, for it always disappears in time of war. It comes back after the war is over to rob. It is the meanest of all money because it is international; because it goes from one country to pick up the wreck.

IT PRODUCES A WRECK

when it leaves the country, and it goes back to devour the carcass. Suppose that England during the Napoleonic struggle had had an international money, could she have maintained her rights? For twenty-two years she suspended specie payment and made the notes of the Bank of England the only legal tender in the country. She prospered then as no country ever did. Her foreign trade increased as it had never increased before. She traded with foreign countries, her power extended all over the world, with her national money. She had prosperity at home and a large foreign trade during those twenty-two years. Every Englishman who writes on the subject points to that period as the halcyon days of British prosperity. They had national money and nobody could take it away. They had it there as their tools with which to do business.

After the war was over she confiscated the property of the masses by resuming gold payments. She adopted international money, and confiscation and ruin followed. It is international money that destroys home industries. The balances are not settled in money; they are settled in commodities. It is the business of exchange

TO ASCERTAIN THE VALUE

of the money of one country and compare it with the value of the money of other countries. We had no difficulty in trading with other countries when we were in suspension. During the war our foreign trade was more prosperous, considering the circumstances, than it has been since. We built more railroads and developed the country more rapidly during the suspension of specie payments than at any other period. It is only when we used international money that our trouble commenced.

Mr. President, continuing the quotation from the message of the President in 1885, he says:

An acknowledgment of this fact is found in the act by virtue of which our silver is compulsorily coined. It provides that "the President shall invite the governments of the countries composing the Latin Union, so called, and of such other European nations as he may deem advisable, to join the United States in a conference to adopt a common ratio between gold and silver for the purpose of establishing internationally the use of bimetallic money and securing fixity of relative value between these metals."
This conference absolutely failed.

That is true. I agree with the President there.

This conference absolutely failed, and a similar fate has awaited all subsequent efforts in the same direction.

That is true. Now, the President is coming right square up to the facts, where there is no chance for controversy with him, and I am glad to agree with him that it failed. We may be thankful that we were not kicked any harder by Great Britain.

And still we continue our coinage of silver at a ratio different from that of any other nation.

Why would we not? We have been doing it for a great many years, and no harm has come from it. If they would not consult with us, why should we consult them? I do not see any trouble about that.

The most vital part of the silver-coinage act remains inoperative and unexecuted, and without an ally or friend we battle upon the silver field in an illogical and losing contest.

The most vital part of it remains inoperative! That is true, because he will not execute it, because he will not pay out silver. That is the reason.

Of course we are engaged, as the President says, in an illogical and losing contest in discarding silver. Suppose we had a little manly independence; suppose we should open our mints and have plenty of good silver coins and their paper representatives, and suppose we had a little prosperity in this country, would it hurt us? It is an illogical, a losing, and a humiliating game to allow Great Britain to demonetize our silver, and then to go there and beg of her to let us coin our own money. Of course that is an illogical and a losing contest. Sometimes the President is right.

To give full effect to the design of Congress on this subject, I have made careful and earnest endeavor since the adjournment of the last Congress.

To this end I delegated a gentleman well instructed in fiscal science to proceed to the financial centers of Europe, and, in conjunction with our ministers to England, France, and Germany, to obtain a full knowledge of the attitude and intent of those governments in respect of the establishment of such an international ratio as would procure free coinage of both metals at the mints of those countries and our own.

I made some comments upon this gentleman before. He is a peculiar gentleman; he has some peculiar ideas. This man, Edward Atkinson, believes the smaller the base the larger the superstructure may be with safety. He does not believe that it is necessary to have more than $5 in coin in the world, and that all the balance may be credit. He is a great man for wind, without base; he is one of the people who says the whole business of the world is done on credit, and never has discovered the fact that if you

MULTIPLY PROMISES TO PAY,

without anything to pay them with, sensible people become scared. The difficulty with all this bullion business is that you must pay without anything to pay with. The Government of the United States may promise to do impossible things. Suppose it should promise to make Lake Ontario discharge its waters into Lake Erie, would anybody believe in that promise? Suppose it should contract to deliver one thousand buffaloes, to be raised in this country within six months, would that promise be good for anything? Suppose it should promise to issue a lot of paper depending upon gold held in Europe and to be imported from there, which we can not get; if we should make a promise of that kind it is only a promise to be broken.

There is no use of this Government attempting to perform impossible things. You may inflate for a little while, you may have State banks and national banks for a little while; but if you promise to pay, pay day is bound to come some time, and that is what ailed the national banks. They got in a great deal of wind and loaned out money to such an extent that there was nothing to pay with. Then the people got scared and made a run on the banks, and many of the banks were broken. They were doing business on wind, on promises. That was the difficulty with the old State banks in 1857; and I recollect it very well. They were banks promising to pay in coin. Everybody was to be paid in coin if it was desired, if anybody wanted to be paid in coin. A Chicago bank was broken by a demand for a small amount of coin, and all the banks west of the Alleghenies collapsed at once.

It is an absurd idea to speak of having money in this country based upon gold, when the gold is hoarded and there is not a sufficient quantity of it in any event. The fact of it is that the whole of this business is

TO SATISFY THE GREED

of this colossal fabric of which Mr. Gladstone speaks.

They keep a string on all the gold they receive for interest, which amounts to five hundred millions a year. When they want to break you, they can call it in and smash you. If we submit to being a financial colony of England, we may be very thankful if they will permit us to live at all.

The President says he sent this distinguished gentleman to ascertain the views of Europe in regard to the international conference, as to the international coinage business, in which my friend from Iowa [Mr. ALLISON] has so much faith, and he is willing to drift along until we can strike the bedrock of international agreement.

The President in his message continues:

By my direction our consul-general at Paris has given close attention to the proceedings of the congress of the Latin Union, in order to indicate our interest in its objects and report its action.

The consul-general at Paris, as I remarked, represented our interest by stating in advance that we intended to repeal the Bland act. He made that kind of report.

It may be said, in brief, as the result of these efforts, that the attitude of the leading powers remains substantially unchanged since the monetary conference of 1881, nor is it to be questioned that the views of these governments are in each instance supported by the weight of public opinion.

"Unchanged." He says there is no chance for it; still we are waiting for it.

The President says in his letter to Governor Northen—which I shall come to later—that all the show we have is this impossibility, something which can not be done, of obtaining an international agreement, and here he tells us that he investigated it and there is no prospect of obtaining such an agreement. We have tried it since then, and got kicked each time, and got sneered at by Great Britain, and still we are willing to continue to expose our imbecility and our debasement to foreigners.

The President says:

The views of these governments are in each instance supported by the weight of public opinion.

I do not believe that; in fact, I know it is not true. The views of the Government of England are not supported by the weight of public opinion in England. Nine-tenths of the people of England are bimetallists: every writer on political economy of any importance at all in England is a bimetallist, except Giffen, the statistician. All the landed aristocracy of England to-day are bimetallists; also the manufacturing interests, the boards of trade; but those interests amount to nothing against the gold ring. This colossal power, which Gladstone admires so much, owns twenty or thirty thousand millions of bonds, which are controlled in that center, and ten thousand millions of indebtedness of foreign nations owing to the Kingdom of Great Britain. This great power controls the London press and stifles discussion, as I shall show before I am through.

Mr. HOAR. Does the Senator think it stifles discussion.

Mr. STEWART. It smothers it with the great mantle of darkness, leads my friend into the darkest regions, and makes him follow the most devious ways of any man of his immense learning. It is all on account of the mists, the haze of the gold atmosphere which surrounds him; otherwise he would be a good man; but these gold principles have overshadowed even his bright intellect, so that he can see no light through it, and his voice can not be heard at all.

The Senator says, although we have gone far enough to know that it is

NECESSARY TO USE BOTH METALS,

yet under the present condition of things, inasmuch as the commercial press, inasmuch as the Administration, inasmuch as his London friends, inasmuch as the powers that be are against us, we have to wait.

We can not have a good thing, we can not even have a view of the promised land, because so many of our friends are hungering after the flesh pots of Egypt. The President in his message continues:

The steps thus taken have therefore only more fully demonstrated the uselessness of further attempts at present to arrive at any agreement on the subject with other nations.

Well, we have had further attempts, and we have been left out again, but still, our friend from Iowa [Mr. ALLISON] says: "There is nothing to do but to wait, wait." I shall call attention, when I get to the speech of the Senator, about these beautiful things, this drifting into poverty. I tell him that I do not believe that the farmers of his State are entirely satisfied with the way we are drifting, and I think at some time his people will be heard from. I do not believe they are willing to drift into poverty. It is a strange idea that statesmen should say this great Government must drift along powerless and helpless.

The President continues:

In the meantime we are accumulating silver coin, based upon our own peculiar ratio, to such an extent, and assuming so heavy a burden to be provided for in any international negotiations, as will render us an undesirable party to any future monetary conference of nations.

We are told that the accumulation of too much silver will be undesirable. I tell you, Mr. President, the accumulations we have made thus far have saved us from bankruptcy. The $600,000,000 of silver in this country is all that stands between us and collapse.

But what is proposed? It is proposed

TO DISCARD ALL SILVER

and make all obligations redeemable in gold. You would have

a thousand millions of credit money and only one hundred millions of gold with which to redeem it, when you have repudiated the standard silver money, as the Treasury Department does. The Department will not regard it as standard money, and the President says that gold is the only standard money. If the silver in the vaults of the Treasury rests upon gold, it is no better than so much paper, and really paper would be better when you take from silver its standard character, which the President says it does not now possess.

I tell you, Mr. President, that what ails this country is that we are about to go to the single gold standard and discard six hundred millions of standard money. It is the fear of further contraction and falling prices that is causing the present distress.

EVERY BUSINESS MAN KNOWS

that when the standard silver dollars are discarded, that is, if the ultimate payment is to rest upon the gold alone, there must be a financial panic. Consequently there is distrust and a threatened revolution hanging over us. Every man who has any sense at all knows there must be a crash if this avowed purpose is accomplished.

"But, ah," you say, "we will strengthen the reserves." We hear that all around. How do you propose to strengthen the reserves? The answer is, "We will increase our obligations to Great Britain, we will issue bonds, we will give the banks more circulation, we will bid for gold, although we know we could not keep it if we got it, and we can get out bonds, we can get more credit stuff out." If you get two hundred millions of gold it will not stay, it will go right out again. Everybody knows

THAT BANKRUPTCY WILL BE THE RESULT

if such a course is persisted in. The repeal of the Sherman act means bankruptcy; it means the destruction of credit; it means the repudiation of silver as a basis of credit. Then, why struggle for gold when we know it is impossible to get it or to keep it? The only way you can keep gold when you get it is to hoard it; you can not use it as money. The only country in the world which can afford to talk about gold as international money is Great Britain. She has an income from other nations of at least five hundred millions, and consequently she can loan it out, and that is coming in to her all the while; besides the advantage she has in having the carrying trade and her other advantages, having dominion over all of Asia, and having 250,000,000 slaves in those countries, for they have in fact been reduced to slavery—with all these advantages and with an income from us of two hundred millions England can stand it, but even she finds trouble sometimes. A great many of her own people are discontented with her policy.

If the course proposed is adopted we shall have

THE BALANCE OF TRADE AGAINST US

more and more, for our products will sell for less and less, and we shall have less to buy with. This is the feast to which we are invited. This is why we were called in extra session, and this is why we are here to-night—the purpose of destroying the foundation of what credit we have. We are called here to act upon the repeal of the Sherman law. We are told that if the Senate resists the imperial will of our master that the Senate is disgraced as a legislative body. All these things we hear, and we hear homilies about them. There ought to be someone to resist this revolution. There ought to be some power somewhere to do it.

The President continues in his message:

It is a significant fact that four of the five countries composing the Latin Union mentioned in our coinage act, embarrassed with their silver currency, have just completed an arrangement among themselves that no more silver shall be coined by their respective governments, and that such as has been already coined and in circulation shall be redeemed in gold by the country of its coinage.

That is what I alluded to some time ago. After Mr. Cleveland sent Mr. Walker, the consul-general at Paris, to tell the French Government that we were going to abandon silver, they passed a resolution to dissolve the Latin Union; but in order to accomplish that, the nation desiring it had to give a year's notice, and in case the Latin Union was dissolved each nation had to redeem in gold its outstanding silver coin.

Mr. WHITE of Louisiana. Has the Senator the text of that resolution providing for redeeming in gold?

Mr. STEWART. I have not the text of it, but I am familiar with it.

Mr. WHITE of Louisiana. That is all right.

Mr. STEWART. The substance of the resolution was that at the end of five years the Latin Union should be dissolved, provided any one of the nations concerned gave a year's previous notice, and in the event of the dissolution each nation should redeem the silver that was held by the other in gold at the rate of $1.33 an ounce. France held, I think, about two hundred millions, and might have demanded $1.33 an ounce for it, but she declined to give the notice for reasons satisfactory to herself, and so the Latin Union, notwithstanding the report that the United States was going to abandon silver, has not been dissolved, although they passed a resolution whereby it may be dissolved by any of the nations concerned in it.

The resort to this expedient by these countries may well arrest the attention of those who suppose that we can succeed, without shock or injury, in the attempt to circulate upon its merits all the silver we may coin under the provisions of our silver coinage act.

Under free coinage we could get silver enough so that we should have an abundance of money, but not too much. Suppose we should let our gold go and get silver, it would take a thousand millions of silver before we should have a supply that would put up the price of silver to that of gold. Silver would be better than gold if we had any desire to be independent, if we had any desire to be American, if we had any desire to have a policy of our own, if we were not an appendage of Great Britain, and should open our mints at once.

What is the consequence of not doing it? Let any man travel through this country and see the poverty and distress which exists, see the poverty of the farmers of the West and the planters of the South, who have worked for twenty years for less than nothing, for there is no farmer who has made expenses in the last twenty years; if they have supported their families and kept out of debt they have done remarkably well. During that time the value of their farms has shrunk 50 per cent. Who has received the results of their labor? Where has the money gone which they earned? It has gone to build up the colossal fabric in London with its branch in New York, of which Mr. Gladstone boasts, this monster which is

ABSORBING THE SUBSTANCE OF LABOR

throughout the world. There is where it is; there is where the profit has gone.

I exhibited a table here showing that by the fall in the price of cotton alone, as compared to what it was previous to 1870, before silver dropped, the loss on cotton exported by the fall of prices was over $1,500,000,000 in five years—$300,000,000 a year. That comes out of labor. Where is gold? It goes into the money centers; it builds up colossal fortunes at the expense of the country. This is done by the cunning of the bondholder. This is the new civilization which is to grow up. We have had various devices to enslave mankind; the human race have struggled against the devices of cunning through all the ages, but the most cunning and most wicked is the device of manipulating the currency, the changing of contracts, and enslaving the masses.

Mr. President, again the President says:

The condition in which our Treasury may be placed by a persistence in our present course is a matter of concern to every patriotic citizen who does not desire his Government to pay in silver alone all the obligations as they should be paid in gold.

I would have been glad if the President had discriminated and told us what obligations should have been paid in gold. None of them are contracted to be paid in gold. All by the contract and by the law are payable in silver equally with gold.

What particular creditor should receive money in gold, I should like to know? Is he an American or is he a foreigner? I believe it has been the practice of the Treasury Department

TO DISCRIMINATE AGAINST THE AMERICAN PEOPLE

and in favor of foreigners who have driven hard bargains with the Government. I repeat, I should like to know what obligation should be paid in gold that have been contracted to be paid in coin? Certainly not the bonded indebtedness, because the bonded indebtedness was originally payable in greenbacks or lawful money. At the suggestion and solicitation of the bondholders, by act of Congress it was changed into coin, and then it was made definite coin of the standard value of July 14, 1870. That is as far as the bonds were concerned, and that is printed on the bonds. The greenbacks and Treasury notes are expressly payable in either gold or silver at the option of the Government. However, at the time it was written there were no Treasury notes. Greenbacks were payable in coin.

It would have been much more gratifying if the President had suggested what particular obligations should be paid in gold. I undertake to say that

EVERY OBLIGATION OF THE GOVERNMENT

ought to be paid in that money which is most convenient for the Government to pay it in. I undertake to say that the position which the Administration for twenty-five years has taken to give to the creditor the option which the law reserves to the Government has been in violation of law, and has brought great public trouble, holding out expectations that we had no right to satisfy, and degrading our own currency, robbing the people to enrich the bondholders beyond the contract.

Does anybody doubt that the gold interest on bonds has been sweeping the entire earnings of the whole country into the great fabric of credit, which has become so colossal that there will be

no civil liberty in this country if that fabric is allowed to increase by legislation beyond the contract? Here we have a President who advocates the increase of it by departmental construction. Why should the people of the United States be taxed to give the bondholders more than the contract calls for? Is that honest? Very well, we will leave that and see what the next sentence is.

Nor should our condition be such as to oblige us, in a prudent management of our affairs, to discontinue the calling in and payment of interest-bearing obligations, which we have the right now to discharge and thus avoid the payment of further interest thereon.

I do not know why the coinage of silver, which is good money to pay those obligations, will interfere. Those obligations are payable in silver, and why coining more silver will prevent the payment of them is a mystery to me.

THERE ARE SOME WONDERFUL THINGS

in this message and that is one of the most wonderful.

Will the coining of silver with which the Department has the duty and the right to pay these bonds prevent the payment of them and embarrass the Government in paying them? How does that come to be the case? But the fact is, as it always is, that when a great man gets on the wrong side of a question every step he takes he gets deeper in the mire.

The President started out all wrong when he undertook to destroy silver and put us on the gold standard. Consequently his reasoning is always wrong. That is why the gold men in this debate have been unable to do themselves justice. Is it not remarkable that we are called here to repeal the purchasing clause of the Sherman act to restore confidence, and neither the President nor one of his admirers, I say no Administration Senator, whether he be Republican or Democrat, has been able to even suggest what financial policy they would adopt? We have not had a word from them. The people inquire,

WHEN YOU REPEAL THE LAW OF 1890

What are you going to do? This will diminish your money. We have not enough now; we are on the verge of bankruptcy for want of money; we have great stringency; prices are falling; people are out of employment; the banks are taking out no more currency; there is a bounty on currency. The banks in New York are issuing spurious currency. They have put out thirty or forty million dollars of stuff as currency, but it is not currency. Everybody knows there is a currency famine, and here you propose to repeal the only law which gives us new money. No Administration Senator, whether he be Republican or Democrat, or whatever standing he may have in the gold party which absorbs the leaders of both, has the courage to tell us how he is going to get out more money to relieve the stringency. He has not deigned to tell us that.

They tell us to take this step and have faith in them. I have no faith in the Treasury Department. It has shaken my confidence in it

BY ITS CONSTANT DISOBEDIENCE OF LAW.

The Treasury Department has always found it necessary to sacrifice the rights of the people to the greed of the bondholder and give the option to the bondholder which Congress secured to the Government. It has always done that. I have not much confidence in anything the Treasury Department will do in the way of executing the laws. Its facility in nullifying laws is marvelous. The Treasury Department in one breath blew away the law that the President told us was mandatory and which he called us here in hot haste to repeal. We have all been talking about the law as mandatory, and with just one brush he blots it out and says it amounts to nothing. All he has to do is to bid less than anybody will sell silver for, and that is the end of the law. He abolishes the market price with facility. I should like to know, when there is so much legerdemain going on, if it is strange that we should inquire what is your plan.

Do they expect to inspire confidence in us with a plan they dare not disclose? We have some curiosity to know what the plan is. The Senator from Ohio, who is the great leader of the gold monometallists of this country, in 1867

MADE THE FIRST ARRANGEMENT WITH ENGLAND,

and joined them in a recommendation in Paris in favor of demonetizing silver. In 1876 he was the first man to discover and inform the people of the United that silver was demonetized through English influence. He is the great leader of the monometallists. He tells us that we must come up to the mark and show our strength; that we must go forward and issue bonds and buy gold. His theory is, if you will only have courage to load the people still heavier he will be satisfied. He can stand a great load for the people but not for himself. The greatest any person ever imposed upon them he stands with ease. He says issue bonds. My friend from Indiana intimated that he did not like to take that kind of a jump; he did not want to put more debt and taxes on the people. If you knock out this $600,000,000 or $700,000,000 of silver coin and provide it shall all be redeemed in gold

HOW ARE YOU GOING TO GET GOLD BY IT?

Where are you going to get it? Of England? It is locked up elsewhere. You can not get any from Russia: you can not get any from Austria. Austria has bought a lot of gold and can not let any of it go. Like the man who had hold of the bear's tail, she can not let it go. The exchange between her and Paris and London is from 1 to 25 per cent, and if she lets this $150,000,000 go, which is to redeem her circulation, it would leave her in a day. She must lock it up or lose it. The bondholders in London do not want us to get out of market for gold, because it will make gold cheaper. They want it all locked up, and when we buy we shall have to pay a good price for it.

We can not get any from Austria. We can not get any from France, because there all the obligations are payable in silver, and the French have some regard for the option. Germany is in the same fix. She has from $100,000,000 to $150,000,000 of silver still on hand. All her obligations are payable in silver, and she will not let any of her gold go. So we have to look to dear old England for gold, and we owe her enough, so that if we borrow $200,000,000 a year of her she can forego the interest a little to load us a little heavier. But she will not let us have any of the gold; she will keep it there and simply reinvest the interest in our bonds.

Mr. SQUIRE. How did we get the gold we have acquired now?

Mr. STEWART. We paid $1.50 for every dollar we got. We levied a contribution upon the producers of this country. We made them discount their wheat and cotton, and we have

CONSIGNED THEM TO POVERTY

to get it. We got it by robbing our own people. What we have we got by robbery. Go to the West and see how we got it. It is very nice for the bondholders to ask how we got it. We got it by advancing the price of gold, and compelling our own people to sacrifice their property. They have stood it manfully, until you have drawn pretty nearly the last drop of blood, and now you propose to continue the process and bid for gold and put up gold and put down wheat and cotton and labor. Oh, you can stand it! All can endure the burdens of others with a great deal of complacency. That is the way you got the gold. The people have suffered, as I have said, a loss of $1,500,000,000 in five years on cotton and a like proportion on wheat. That is the way you got the gold.

IT COST THE BLOOD AND SWEAT OF THE PEOPLE.

You sacrificed them to this gold king, and you propose to continue the sacrifice. You are not satisfied yet. How will you get it? I want no gold that enslaves my people. I will not sacrifice them on that altar. You have got to pay over $200,000,000 a year interest for the gold you have already borrowed, and all you can do is to pay the interest; and if England will take a few more bonds for interest and compound the interest and pile it up on us you will be pleased. That suits you because it makes gold dear and property cheap.

Friday, October 13, 1893.

Mr. STEWART. Mr. President, before proceeding in the line of argument I was pursuing last night, I will state that I am gratified to be able to call the attention of the Senate to the fact that the silver Senators have not pleased our masters in Great Britain, and therefore I think we may safely say we are right. I find that every movement for the demonetization of silver has been heartily approved by Great Britain, but I find a dispatch from London, October 13, as follows:

The Times, commenting on the action of the opposition in the United States Senate to prevent the repeal of the silver bill by a resort to continuous sessions, says:

"The determining of an economic question by an appeal to physical endurance is little removed from the mediæval ordeal of battle. Yet this Old World remedy is being applied in the center of the most essentially modern form of government."

I am informed that Great Britain is applying to us a very ancient method. She is applying to us all the most odious methods of usury that were so condemned in ancient times. I am glad the Times does not like this, because it is satisfied it is an American article. The Standard says:

The silver party's tactics are not very Democratic. They would have very hard names applied to them here.

Of course they would, and so will their associates here. I presume when we get the London Times of New York this morning we will find other things about us. I have no doubt all the gold ring will apply hard names. I like this:

The Daily Telegraph characterizes the proceedings as reducing legislation to an absurd stalemate.

The Daily Chronicle says:

"The spectacle is ludicrous and contemptible. If physical endurance is to be the legislative court of appeal, communities must hasten to get themselves represented by athletes."

I do not remember that comments of that kind were made by the London press when we were

RESISTING THE FORCE BILL.

They do not get angry at our proceedings except when we are resisting their schemes of aggrandizement and plunder. I call attention to this. It is particularly gratifying to me that there are some people in the United States who are not in harmony with the British scheme of plunder, and who are not entirely satisfied with the United States being reduced to a financial colony of Great Britain.

But before I proceed further with my remarks, I notice several amendments being offered to the pending bill looking to a further degradation of silver that are a good deal worse than the "makeshift" which was so much condemned by the Democratic party. I do not propose to vote for any scheme further to degrade silver. If silver must be killed, do not let it be strangled or poisoned; let it be killed squarely. A bill that limits the quantity to a certain amount and that has a termination of the purchases will be regarded the world over as a final settlement, as a compromise, and as the end of the silver question, and that silver is not to be used as money. I will not discuss those propositions now, but I merely say that I would prefer the center shot of the gold bugs and meet death to strangulation by any scheme further to degrade silver.

Mr. CAREY. I should like to ask the Senator from Nevada a question.

Mr. STEWART. Certainly.

Mr. CAREY. Does he want to be understood as saying that he will accept no compromise measure except the free and unlimited coinage of silver?

Mr. STEWART. Does the Senator from Wyoming wish to catechise me?

Mr. CAREY. No; I merely want to understand the Senator's position.

Mr. STEWART. I mean to say that I do not propose to vote for any bill that fixes the life of silver, that fixes the span upon its existence, because if it is to have only a lingering existence for a few years, it had better die now. If it is not money we do not want it. I have said all I care to state on that point. I will discuss the amendments when they come up.

Mr. CAREY. I thought the Senator was informing the Senate that the side which he represents would not accept any compromise in place of the pending measure except that which, of course, would not be a compromise, the free and unlimited coinage of silver.

Mr. STEWART. I said I would not accept a compromise that would degrade silver further and be another "makeshift," that would put us further down. I would not accept a compromise of that kind; I would rather have immediate death.

When the Senate adjourned last evening I was discussing the President's message of 1885 and had nearly concluded. I will resume, and read from the message. The President says:

The so-called debtor class, for whose benefit the continued compulsory coinage of silver is insisted upon, are not dishonest because they are in debt; and they should not be suspected of a desire to jeopardize the financial safety of the country in order that they may cancel their present debts by paying the same in depreciated dollars.

That is a remarkable statement, that they are not dishonest because they are in debt.

THE IRONY OF THIS SENTENCE IS SEVERE.

"They should not be suspected of a desire to jeopardize the financial safety of the country in order that they may cancel their present debts by paying the same in depreciated dollars." The President is very unjust to the debtor class. It is a very cruel expression. They never have asked such a thing. They have simply asked that the creditors might be paid in the money of the contract. It is the gold associates of the President who changed the contract. It is the legislation of Congress that struck down silver that changed the contract.

By all the authorities the money available for the payment of debts has been appreciated 50 per cent, and the debtor is not asking to pay in a depreciated currency; he is asking the privilege to pay in the currency of the same value he borrowed, which the President denies to him when he advocates the gold standard. This slur upon the debtor is unjust and cruel. When we look at the mortgaged farms, when we see the mortgages being foreclosed and the farms selling for 50 cents on the dollar compared with what they would have brought twenty years ago, when we see families being driven from their homes on account of the change in the contract wrought by legislation, we do not think it generous on the part of the President to make such a suggestion.

Nor should it be forgotten that it is not the rich nor the money-lender alone that must submit to such a readjustment, enforced by the Government and their debtors. The pittance of the widow and the orphan and the incomes of helpless beneficiaries of all kinds would be disastrously reduced.

If what? If the money of the contract was restored? What a plea. If this is to be made when money is appreciating at least 2 per cent per annum; when the burdens of the debtors are being increased; when widows and orphans are being driven from their homes by the usury wrought by legislation, it seems to me entirely heartless for the President to talk like this. Oh, Mr. President, it is a mockery to ask that debts be increased in the name of the poor. It is a mockery to ask that the burdens of debts be increased in the name of the widows and orphans who are being driven from their homes.

The depositors in savings banks and in other institutions which hold in trust the savings of the poor, when their little accumulations are scaled down to meet the new order of things, would, in their distress, painfully realize the delusion of the promise made to them that plentiful money would improve their condition.

What poor man, what depositor in a savings bank has asked that such legislation be passed to enhance the value of money.

THIS PLEA IS NOT FOR THE POOR MAN;

it is not for the depositor in the savings bank; it is for the gigantic fabric of wealth that Mr. Gladstone pictured, the like of which has never been seen in the world. It is the desire to augment that and to oppress the poor. Do not do it in the name of the poor nor in the name of the savings banks; for let me say with regard to the savings banks, as I said two years ago in the Senate, if this process goes on nine-tenths of the savings banks in this country will go into bankruptcy. Those who have security on real estate can not collect it.

I will not mention details, but I have information covering savings banks in many of the cities. Their securities will be worthless; and in order to pay any interest on the deposits they must make use of the money, and no safe use can be made of money by the savings banks that would save them from bankruptcy. It is only the great operators who take the railroads in and wreck them who can take care of themselves. The savings banks had to close their doors when our English friends produced the last panic. I hope it may be so arranged that it will be all right; but of course they must fail if this process of appreciating money is continued. They can not realize on their securities and they must close their doors. They are not interested in dishonest money.

We have now on hand all the silver dollars necessary to supply the present needs of the people and to satisfy those who from sentiment wish to see them in circulation; and if their coinage is suspended they can be readily obtained by all who desire them. If the need of more is at any time apparent their coinage may be renewed.

Why does he not say that we have all the gold that is necessary? Why does he not cut off the entire supply? Have all that is necessary! Did they have all that was necessary in the last three months? If so, why were they paying a premium on it? Why are prices shrinking? Why are thousands, yes, millions, of men out of employment because there is no money to conduct enterprise if we have all the money that is necessary?

That disaster has not already overtaken us furnishes no proof that danger does not wait upon a continuation of the present silver coinage.

Danger! What danger have we passed through? Was it too much money or too little? Was there any future danger of the wages from silver coinage? How does the President figure out danger? Who told him there was danger?

This went on for some years afterward. It has gone on up to the present time; and even in his recent message, which I shall review before I sit down, he in effect admits that there has been no harm yet, but it is a calamity howl for the future all the time; and this is done for the purpose of

DESTROYING ONE OF THE PRECIOUS METALS.

Senators talk about calamity howling. I should like to see some paper from some party of the calamity howlers that would furnish a parallel to these state papers.

Every utterance is of danger in the future. The charge against the Sherman law is that it is going to produce disaster in the future. That is what produced this panic, because it is liable in the future to produce disaster. We must repeal the law to quiet it. It says no matter whether the apprehensions are unfounded or not, to quiet the apprehensions, whether well founded or not, the law must be repealed. Of course no sensible man has any apprehensions that we will get too much silver. The world has never been thus blessed.

We have been saved by the most careful management and unusual expedients, by a combination of fortunate conditions, and by a confident expectation that the course of the Government in regard to silver coinage would be speedily changed by the action of Congress.

We have been saved by wonderful management! They managed to keep it all in the Treasury and would not use it as money. That is the way they have been saved. They have kept it in the Treasury and defied the law. A glorious commentary on giving the laws of Congress a chance to see how they would operate.

Prosperity hesitates upon our threshold because of the dangers and uncertainties surrounding this question.

That is, true prosperity hesitates and refuses to come because you have deprived the people of money, and because it is still uncertain whether the combination and conspiracy will be sufficiently powerful to continue to shrink the volume of money to continue to rob the people. That is why it hesitates.

Capital timidly shrinks from trade, and investors are unwilling to take chance of the questionable shape in which their money will be returned to them, while enterprise halts at a risk against which care and sagacious management do not protect.

Ah, capital hesitates to put money in property when it is falling, and you are contracting it. If you had more money, and property was going up, capital would take the risk. Capital always invests in property when it is going up. Then you have prosperity. From 1850 to 1873 property was rising, and

CAPITAL SOUGHT INVESTMENT IN PROPERTY.

It exerted every effort to create new property. The people did not hoard money. Since that time, since the crime of 1873, property has been going down and money has been hid. The miser can hide his gold or his silver in a vault and its purchasing power would increase enough to make him rich. It has increased more than 50 per cent in twenty years—2½ per cent a year—without any risk. Nobody wants property now because it is going down.

That is the rule. That is why it hesitates. It is idle for the President to tell us that capital hesitates to invest in property or to create property because it will not get good money for the property. Capital hesitates to go into property because property is falling. It is a rule of human nature to go short on falling property and long on property that is rising. Money is rising in value, and the miser goes long on it and puts it in his safe and keeps it there. That is the way it operates. Then the President goes on:

As a necessary consequence, labor lacks employment, and suffering and distress are visited upon a portion of our fellow-citizens especially entitled to the careful consideration of those charged with the duties of legislation.

Now, see how tender he is of our fellow-citizens who are entitled to labor. What has produced the millions of tramps in this country? Contraction. What makes it impossible to employ labor? Contraction.

WHAT MAKES CONTRACTION?

The destruction of one of the precious metals. What the President advocates has made the tramps. His theory has made millions of tramps in this country and it will make millions more. He is denying to enterprising men money with which to carry on enterprises. He it making property undesirable. He is making the creation of property unprofitable. He is shrinking the volume of money. He is inflicting upon the country all the evils of contraction.

All that is disastrous to prosperity, all that is cruel to human effort, all that breeds misery on earth is contained in the terrible word "contraction." When the President says, "I will destroy one of the precious metals and have contraction," let him not say that he wants to have the people employed. Why are not the people now employed all over the country? The President ought to have studied the first elements of political economy before he wrote this document. If he had he would not have written it. Of course he wrote it in good faith.

No interest appeals to us so strongly for a safe and stable currency as the vast army of the unemployed.

No interest appeals to us so strong for an ample, sufficient currency so that there will be money to give employment as the great army of the unemployed.

THERE IS NO ARMY OF THE UNEMPLOYED

when there is plenty of money. There never was in history at any time. That army is organized by contraction and it is kept in existence by contraction. When there was plenty of money there never was at any period in the history of the world an army of unemployed. But the President is organizing an army of that kind in this country more numerous than ever existed before, and it is multiplying daily.

I recommend the suspension of the compulsory coinage of silver dollars directed by the law passed in February, 1878.

He recommends the suspension of coinage for the purpose of giving employment to the people, for the purpose of relieving the army of the unemployed. A compliance with that recommendation relegates seven States and Territories to poverty and to starvation, throws their inhabitants out of employment, and deprives 2,000,000 people of the means of livelihood. The suspension of the coinage of the silver dollar at that time would have depreciated the price of products 25 per cent, the contraction of the currency resulting from it would have closed many workshops and have multiplied the army of the unemployed. So the President evidently wrote that message from a total misapprehension of the fundamental principles of political economy.

There is no writer upon political economy who could not have told him that contraction was not the way to encourage enterprise, not the way to give employment, not the road to prosperity, but was the dark and dismal pathway down which generation after generation had traveled to barbarism.

I have broken this message up in reading it and commenting upon it so much that I desire that it may all be printed so as to appear together in the RECORD.

The portion of the message of the President referred to is as follows:

[From the President's first annual message, December 8, 1885.]

The very limited amount of circulating notes issued by our national banks compared with the amount the law permits them to issue, upon a deposit of bonds for their redemption, indicates that the volume of our circulating medium may be largely increased through this instrumentality.

Nothing more important than the present condition of our currency and coinage can claim your attention.

Since February, 1878, the Government has, under the compulsory provisions of law, purchased silver bullion and coined the same at the rate of more than $2,000,000 every month. By this process up to the present date 215,759,431 silver dollars have been coined.

A reasonable appreciation of a delegation of power to the General Government would limit its exercise, without express restrictive words, to the people's needs and the requirements of the public welfare.

Upon this theory, the authority to "coin money" given to Congress by the Constitution, if it permits the purchase by the Government of bullion for coinage in any event, does not justify such purchase and coinage to an extent beyond the amount needed for a sufficient circulating medium.

The desire to utilize the silver product of the country should not lead to a misuse or the perversion of this power.

The necessity for such an addition to the silver currency of the nation as is compelled by the silver-coinage act, is negatived by the fact that up to the present time only about fifty millions of the silver dollars so coined have actually found their way into circulation, leaving more than one hundred and sixty-five millions in the possession of the Government, the custody of which has entailed a considerable expense for the construction of vaults for its deposits. Against this latter amount there are outstanding silver certificates amounting to about ninety-three millions of dollars.

Every month two millions of gold in the public Treasury are paid out for two millions or more of silver dollars, to be added to the idle mass already accumulated.

If continued long enough, this operation will result in the substitution of silver for all the gold the Government owns applicable to its general purposes. It will not do to rely upon the customs receipts of the Government to make good this drain of gold, because the silver thus coined having been made legal tender for all debts and dues, public and private, at times during the last six months 58 per cent of the receipts for duties has been in silver or silver certificates, while the average within that period has been 20 per cent. The proportion of silver and its certificates received by the Government will probably increase as time goes on, for the reason that the nearer the period approaches when it will be obliged to offer silver in payment of its obligations, the greater inducement there will be to hoard gold against depreciation in the value of silver or for the purpose of speculating.

This hoarding of gold has already begun.

When the time comes that gold has been withdrawn from circulation, then will be apparent the difference between the real value of the silver dollar and a dollar in gold, and the two coins will part company. Gold, still the standard of value, and necessary in our dealings with other countries, will be at a premium over silver; banks which have substituted gold for the deposits of their customers may pay them with silver bought with such gold, thus making a handsome profit; rich speculators will sell their hoarded gold to their neighbors who need it to liquidate their foreign debts, at a ruinous premium over silver, and the laboring men and women of the land, most defenseless of all, will find that the dollar received for the wage of their toil has sadly shrunk in its purchasing power. It may be said that the latter result will be but temporary, and that ultimately the price of labor will be adjusted to the change; but even if this takes place the wage-worker can not possibly gain, but must inevitably lose, since the price he is compelled to pay for his living will not only be measured in a coin heavily depreciated, and fluctuating and uncertain in its value, but this uncertainty in the value of the purchasing medium will be made the pretext for an advance in prices beyond that justified by actual depreciation.

The words uttered in 1834 by Daniel Webster in the Senate of the United States are true to-day: "The very man of all others who has the deepest interest in a sound currency, and who suffers most by mischievous legislation in money matters, is the man who earns his daily bread by his daily toil."

The most distinguished advocate of bimetallism, discussing our silver coinage, has lately written:

"No American citizen's hand has yet felt the sensation of cheapness, either in receiving or expending the silver-act dollars."

And those who live by labor or legitimate trade never will feel that sensation of cheapness. However plenty silver dollars may become, they will not be distributed as gifts among the people; and if the laboring man should receive four depreciated dollars where he now receives but two, he will pay in the depreciated coin more than double the price he now pays for all the necessaries and comforts of life.

Those who do not fear any disastrous consequences arising from the continued compulsory coinage of silver as now directed by law, and who suppose that the addition to the currency of the country intended as its result, will be a public benefit, are reminded that history demonstrates that the point is easily reached in the attempt to float at the same time two sorts of money of different excellence, when the better will cease to be in general circulation. The hoarding of gold, which has already taken place, indicates that we shall not escape the usual experience in such cases. So if this silver coinage be continued we may reasonably expect that gold and its equivalent will abandon the field of circulation to silver alone. This, of course, must produce a severe contraction of our circulating medium, instead of adding to it.

It will not be disputed that any attempt on the part of the Government to cause the circulation of silver dollars worth 80 cents, side by side with gold dollars worth 100 cents, even within the limit that legislation does not run counter to the laws of trade, to be successful must be seconded by the confidence of the people that both coins will retain the same purchasing power and be interchangeable at will. A special effort has been made by the Secretary of the Treasury to increase the amount of our silver coin in circulation; but the fact that a large share of the limited amount thus put out has soon returned to the public Treasury in payment of duties, leads to the belief that the people do not now desire to keep it in hand; and this, with the evident disposition to hoard gold, gives rise to the suspicion that there al-

ready exists a lack of confidence among the people touching our financial processes. There is certainly not enough silver now in circulation to cause uneasiness; and the whole amount coined and now on hand might, after a time, be absorbed by the people without apprehension; but it is the ceaseless stream that threatens to overflow the land which causes fear and uncertainty.

What has been thus far submitted upon this subject relates almost entirely to considerations of a home nature, unconnected with the bearing which the policies of other nations have upon the question. But it is perfectly apparent that a line of action in regard to our currency can not wisely be settled upon or persisted in, without considering the attitude on the subject of other countries with whom we maintain intercourse through commerce, trade, and travel. An acknowledgment of this fact is found in the act by virtue of which our silver is compulsorily coined. It provides that "the President shall invite the governments of the countries composing the Latin Union, so called, and of such other European nations as he may deem advisable, to join the United States in a conference to adopt a common ratio between gold and silver for the purpose of establishing internationally the use of bimetallic money and securing fixity of relative value between these metals."

This conference absolutely failed, and a similar fate has awaited all subsequent efforts in the same direction. And still we continue our coinage of silver at a ratio different from that of any other nation. The most vital part of the silver-coinage act remains inoperative and unexecuted, and without an ally or friend we battle upon the silver field in an illogical and losing contest.

To give full effect to the design of Congress on this subject I have made careful and earnest endeavor since the adjournment of the last Congress.

To this end I delegated a gentleman well instructed in fiscal science to proceed to the financial centers of Europe, and, in conjunction with our ministers to England, France, and Germany, to obtain a full knowledge of the attitude and intent of those governments in respect of the establishment of such an international ratio as would procure free coinage of both metals at the mints of those countries and our own.

By my direction our consul-general at Paris has given close attention to the proceedings of the congress of the Latin Union, in order to indicate our interest in its objects and report its action.

It may be said, in brief, as the result of these efforts, that the attitude of the leading powers remains substantially unchanged since the monetary conference of 1881, nor is it to be questioned that the views of these governments are in each instance supported by the weight of public opinion.

The steps thus taken have therefore only more fully demonstrated the uselessness of further attempts at present to arrive at any agreement on the subject with other nations.

In the meantime we the accumulating silver coin, based upon our own peculiar ratio, to such an extent, and assuming so heavy a burden to be provided for in any international negotiations, as will render us an undesirable party to any future monetary conference of nations.

It is a significant fact that four of the five countries composing the Latin Union mentioned in our coinage act, embarrassed with their silver currency, have just completed an agreement among themselves that no more silver shall be coined by their respective governments, and that such as has been already coined and in circulation shall be redeemed in gold by the country of its coinage. The resort to this expedient by these countries may well arrest the attention of those who suppose that we can succeed without shock or injury in the attempt to circulate upon its merits all the silver we may coin under the provisions of our silver-coinage act.

The condition in which our Treasury may be placed by a persistence in our present course is a matter of concern to every patriotic citizen who does not desire his Government to pay in silver such of its obligations as should be paid in gold. Nor should our condition be such as to oblige us, in a prudent management of our affairs, to discontinue the calling in and payment of interest-bearing obligations, wh ch we have the right now to discharge and thus avoid the payment of further interest thereon.

The so-called debtor class, for whose benefit the continued compulsory coinage of silver is insisted upon, are not dishonest because they are in debt; and they should not be suspected of a desire to jeopardize the financial safety of the country, in order that they may cancel their present debts by paying the same in depreciated dollars. Nor should it be forgotten that it is not the rich nor the money-lender alone that must submit to such a readjustment, enforced by the Government and their debtors. The pittance of the widow and the orphan and the incomes of helpless beneficiaries of all kinds would be disastrously reduced. The depositors in savings banks and in other institutions which hold in trust the savings of the poor, when their little accumulations are scaled down to meet the new order of things, would, in their distress, painfully realize the delusion of the promise made to them that plentiful money would improve their condition.

We have now on hand all the silver dollars necessary to supply the present needs of the people and to satisfy those who from sentiment wish to see them in circulation; and if their coinage is suspended they can be readily obtained by all who desire them. If the need of more is at any time apparent their coinage may be renewed.

That disaster has not already overtaken us furnishes no proof that danger does not wait upon a continuation of the present silver coinage. We have been saved by the most careful management and unusual expedients, by a combination of fortunate conditions, and by a confident expectation that the course of the Government in regard to silver coinage would be speedily changed by the action of Congress.

Prosperity hesitates upon our threshold because of the dangers and uncertainties surrounding this question. Capital timidly shrinks from trade, and investors are unwilling to take chance of the questionable shape in which their money will be returned to them, while enterprise halts at a risk against which care and sagacious management do not protect.

As a necessary consequence, labor lacks employment, and suffering and distress are visited upon a portion of our fellow-citizens especially entitled to the careful consideration of those charged with the duties of legislation. No interest appeals to us so strongly for a safe and stable currency as the vast army of the unemployed.

I recommend the suspension of the compulsory coinage of silver dollars, directed by the law passed in February, 1878.
